APPENDIX.

APPENDIX

TO THE

CONGRESSIONAL RECORD.

Salaries of Members of Congress.

SPEECH OF HON. JASPER PACKARD,

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES,

December 19, 1873,

On the bill (H. R. No. 471) to repeal the increase of certain salaries and to regulate the same, and to cover undrawn and returned balances into the Treasury.

Mr. PACKARD. Mr. Speaker, it is from no desire to prolong this debate that I ask to be heard briefly on the subject now before the House; but having voted for the appropriation bill of last March, which contained the provision for the change in the salaries of Senators and Representatives, and others, it is, perhaps, due to myself that I should say a word in explanation of the action I shall take now.

In regard to the retroactive feature of the legislation of the 3d of March last, I shall say nothing; it was but following a long line of precedents sanctioned by many of the very best men of the country, honored then and ever since. To go no further back, it will be remembered by all that there was retroactive legislation of this kind both in the Thirty-fourth and Thirty-ninth Congresses, extending in each case over a period of about eighteen months. The Senators and Representatives from Indiana, who participated in the benefits of that legislation, were, for the Thirty-fourth Congress, Jesse D. Bright, Graham N. Fitch, Smith Miller, William H. English, George G. Dunn, Will Cumback, D. P. Holloway, Lucien Barbour, H. D. Scott, Daniel Mace, Schuyler Colfax, Samuel Brenton, and John U. Pettitt; and for the Thirty-ninth Congress, Thomas A. Hendricks, Henry S. Lane, William E. Niblack, M. C. Kerr, Ralph Hill, John H. Farquhar, George W. Julian, E. Dumont, G. S. Orth, Schuyler Colfax, J. H. Defrees, and Thomas N. Stillwell.

The only real question was then, and is now, whether the increase made was wise and proper. The actual increase was very much less than has been popularly supposed; for if we include the franking privilege, the mileage, and other allowances, and add them to the old salary of $5,000, the pay now will not exceed the former average of pay by more than $1,000; or, if we disregard the frank in the calculation, the average increase is still less than $2,000 for each member.

My own view was that we ought to cut off all allowances, which have long been denounced, perhaps unjustly, but condemned nevertheless as abuses, and provide a salary that should be the whole of the pay. My short experience here had taught me that the pay ought to be somewhat increased, but I was willing to accept the slight increase represented by a fixed salary of $6,500, and for that amount I voted when it was introduced by the gentleman from California, then a member of this House. I believe it is bad policy to provide such salaries as will virtually exclude from official position many of the best men of the country, because fortune has not smiled on them as it has on others. Railroad presidents and rich capitalists could receive official honors and the pay be a matter of no consequence; but the country does not desire to confine legislation to that class of men, however worthy and capable they may be. Recent developments all over the country, and especially among the quiet, intelligent agricultural population of the Western States, must convince us that things are somewhat out of joint. Great monopolies and large moneyed corporations are believed to have obtained undue influence; and there seems to be a rigid determination to meet and check their growing power. So general a movement must have some foundation. There are abuses which it is determined to remedy. The laboring masses affirm that capital has more than its just share of representation. They demand recognition, and that they shall have a voice and a share in the governing power of the country. I believe there is much force and justice in such demands, and I thought it best to adopt such a policy in regard to salaries as would make it possible for the poor man—the laboring man—to come here at the call of his fellow-citizens, and be enabled, in order to his usefulness to his constituents, to forget for a time "the slings and arrows" of poverty; to come here and perform the proper duties of a legislator without being constantly hampered and crushed in spirit by the necessity of giving his best thoughts to the ways and means of providing the every-day necessaries of life.

My opinion is wholly unchanged as to the better policy of providing such a salary as will lift the man who must depend wholly on his salary above immediate and pressing want, and further enable him, with close economy, to save a little for his future necessities. To this end the present salary is not an excessive one, and no man knowing what we all know, who have had to live on the salary only, can say that $6,500 is a dollar too much; but I am compelled to believe that the majority of the people have reached a different conclusion, and as they are the paymasters, I am not prepared to deny their right to be heard. If the question involved great principles of moral right or wrong, I should inflexibly adhere to my own convictions of duty; but it is a question of expediency or policy only, in which I am ready to go to the very verge, not over the boundary, of injury to the best interests of the country, in order to assent to the wishes of the people. I do so the more readily, also, because at this time the country is experiencing the effects of financial depression. The wages of labor have been reduced, and in all the avocations of life men are expecting smaller rewards for their industry than they expected six months ago. In this condition of the country it is not inconsistent with our former action to fix the salary now at a lower figure than was insisted on last March.

I am opposed to the re-enactment of the mileage, preferring such a salary as shall be ascertained by adding to the old pay of $5,000 an equal proportion to each member of the whole amount of the former mileage and other allowances, so that we may have a definite fixed salary that everybody will understand. Let it be made $6,000, which I think is a fair equivalent for the old pay, taking no account of the franking privilege, or even $5,500; and I shall support either as I have opportunity.

Civil Rights.

SPEECH OF HON. M. I. SOUTHARD,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

January 7, 1874,

On the bill to protect all citizens in their civil and legal rights.

Mr. SOUTHARD. Mr. Speaker, in the twenty minutes allotted for the discussion of this question I cannot do more than take a very general and hasty view of the subject; but I feel constrained to interpose my objections, even in this imperfect manner, to the passage of this bill; and in doing so I would not be understood as desiring or attempting to prevent the enjoyment of civil rights or of opportunities of intellectual or moral culture and development to any class of citizens, be they white or black.

On the contrary, sir, I would maintain the just privileges and immunities of all, and would open wide the avenues of acquisition in the way which should seem most expedient and proper within the limits of the Constitution; for I believe in the principle of justice to all men, and in the virtue of educating the masses of the people. But whilst this is so, it yet remains to be demonstrated that the legislation here proposed will be conducive to these beneficent results. The civil and legal status of colored persons is fully protected by

the Constitution and laws now in force. The Constitution confers upon them the boon of freedom, the right of the elective franchise, and the honor and dignity of citizenship of the United States, with all the privileges and immunities attaching thereto. The act of Congress of 1866 provides that they shall be entitled to

> The same right in every State and Territory in the United States to make and enforce contracts, to sue, be parties and give evidence, to inherit, purchase, lease, sell, hold, and convey real and personal property, and to full and equal benefit of all laws and proceedings for the security of person and property as is enjoyed by white citizens, and shall be subject to like punishment, pains, and penalties, and to none other, any law, statute, ordinance regulation or custom to the contrary notwithstanding.

What more is needed? What further protection of rights?

But it is now proposed to supplement all this by a measure prohibiting any distinction whatever, whether by the States or people, on account of race, color, or previous condition of servitude

> In any public inn, or of any place of public amusement or entertainment for which a license from any legal authority is required, or of any line of stage-coaches, railroad, or other means of public carriage of passengers or freight, or of any public school supported in whole or in part at public expense or by endowment for public use.

And it is said these are privileges and immunities based as of right upon the Constitution itself. But I cannot yield my assent to the doctrine that the action here sought is but the legislative assertion of a right guaranteed to colored citizens under the Constitution. In my judgment, sir, neither the letter nor spirit of that instrument reaches to such extent. The rights claimed under this bill are not those comprehended in the national Constitution. But they are in the nature of local and social privileges, and as such belong to the domestic polity of the States and the people, and therefore not only do not have the warrant of the Constitution for their enforcement by Congress, but fall within its inhibitions, as I shall endeavor to show. The advocates of the bill rely upon the fourteenth amendment, which provides that—

> SECTION 1. All persons born or naturalized in the United States, and not subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

To determine how far this provision is applicable to the question before us it becomes necessary to inquire more closely into its scope and character. It is clear that its letter defines and fixes the citizenship of the colored race and secures to all equal protection of the laws. But what more? What interpretation shall be given to the clause which forbids any State "to make or enforce any law which shall abridge the privileges or immunities of citizens of the United States?"

What privileges and immunities of the citizen are covered by this clause?

Happily this is no longer a mooted question. It is settled by judicial decisions. It has become *res adjudicata* in my own State. It was passed upon by the supreme court of Ohio, at the December term, 1871, in the case of The State of Ohio, *ex rel.* William Garnes *vs.* John W. McCann and others.

The statute of the State provides for the education of the colored youth separate and apart from the white, and the action was brought to test the right of admission of colored youth to the public schools provided for white children, and was decided adversely to the claimant.

In passing upon the question the court say:

> This involves the inquiry as to what privileges or immunities are embraced in the inhibition of this clause. We are not aware that this has been, as yet, judicially settled. The language of the clause, however, taken in connection with other provisions of the amendment and of the Constitution of which it forms a part, affords strong reasons for believing that it includes only such privileges or immunities as are derived from or recognized by the Constitution of the United States. A broader interpretation opens into a field of conjecture limitless as the range of speculative theories, and might work such limitations of the power of the States to manage and regulate their local institutions and affairs as were never contemplated by the amendment.
>
> If this construction be correct, the clause has no application to this case; for all the privileges of the school system of this State are derived solely from the constitution and the laws of the State. If the General Assembly should pass a law repealing all laws creating and regulating the system, it cannot be claimed that the fourteenth amendment could be interpretated to prevent so grievous an abridgment of the privileges of the citizens of the State; for they would thereby be deprived of privileges derived from the State, and not of privileges derived from the United States.

A similar construction of the fourteenth amendment is given in what is known as the Slaughter-house cases by the Supreme Court of the United States, the highest and most august tribunal of the land. It is thus made perfectly clear that the privileges and immunities mentioned in the fourteenth amendment are such only as are derived from the Constitution of the United States, and not such as are derived from the constitutions and laws of the several States of the Union. These privileges and immunities, which are so derived from the Constitution of the United States, are fundamental in their nature, and belong as of right to the citizens of all free governments, but do not include every right, for many are peculiar to citizens under the laws of the States. The Constitution, as it was originally ordained and established, provides that, (article 4, section 2)—

> The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States.

At that time, nor until recently, were colored persons held to be citizens of the United States, and this provision of the Constitution therefore had no application to them, but was confined to white citizens. As such it received interpretation by the courts, and the privileges and immunities therein contained were held to include only those fundamental rights of all citizens of which I have spoken. Through the whole history of the Government, down until the adoption of the fourteenth amendment, this interpretation of the meaning, scope, and effect of the original provision was fully recognized by legal authority and judicial decision. The adoption of the fourteenth amendment so enlarged the Constitution as to confer citizenship upon colored persons; and by virtue of it the same rights, and none others, are now conferred upon them, in this respect, that were accorded to white citizens under the original instrument. Having, therefore, determined what these rights were under the original provision, we have settled the rights of colored persons under the fourteenth amendment. These rights are fundamental in their character, and have no relation to the peculiar and special privileges comprehended in the bill before the House. So much, Mr. Speaker, upon the question of the grant of authority under the Constitution.

But there remains to be noticed another and more important consideration, in view of the limitations and prohibitions of the Constitution. I do not propose at the present time to go into any refined speculations upon this subject, or to attempt to draw the exact limit where the powers of the General Government cease and those of the States begin, but only wish to point out some general principles and features bearing upon the present inquiry.

It is said—

> There are but few solid principles in the moral and intellectual world which lie back of everything, and which govern every operation of thought and emotion.

The same is true in the political world. A few solid and controlling principles lie at the basis of all constitutional government. Our federal system is the work of the large experience and transcendent genius of the revolutionary fathers, and its superstructure rests upon the principles of delegated and limited powers. Their theory and philosophy of just government they molded into practical form through the instrumentality of the national Constitution, and commended it to us for our approval, guidance, and protection. And, administered according to the letter and spirit of that instrument, I believe the Government approaches nearer perfection than any other system devised by human wisdom since the institution of governments among men. It is based upon the idea of popular right and personal liberty; it leaves the people free to manage and control their own domestic affairs in their own good way, yet contains ample power for the protection of life, liberty, and property, and for the perpetuation of its own existence and authority. Such is a general idea of the nature and character of our Government. It is written in the Constitution that—

> The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

Here is a clear limitation upon the powers of the General Government, and express reservation of the rights of the States and the people; and, but for the natural thirst of man for power and dominion, there need be no mistake about the relative rights and duties of the national and State governments and of the people. But under the doctrine of implied powers, there has been a constant struggle—on the one hand, for a stronger and more absolute government than is sanctioned by the strict letter of the Constitution; and, on the other, for the rights of the States and the people. Opposed to this doctrine of implied powers, in the beginning, stood Thomas Jefferson, the grandest of patriots and statesmen, exposing its fallacies, resisting its progress, and pleading for the rights of the people under the limitations of the Constitution.

These principles are as good now as they were in the time of Jefferson. They are as well adapted to a nation of forty millions as they were to a nation of three millions in the beginning of the Government. They are cardinal principles of the democratic party and of constitutional government; and to abandon them now is to abandon our institutions, to subvert the free system and vital principles of local self-government, and to build up instead a colossal fabric of centralized power.

In accordance with this doctrine of delegated and limited powers has been the general practice since the foundation of the Government. Hitherto the States have exercised the right to control their own local affairs. They have established public schools for the education of the youth, and prescribed the class of persons for admission to them upon the basis of age, sex, color, or intellectual acquirements. In many of the States separate schools for colored youth have long been established, with the like liberal opportunities for education that were afforded white youth. So, too, have the States been left free to incorporate companies for the purposes of carriage of freight and passengers; for purposes of public amusement and public worship; of sepulture and the like, and to fix the mode and manner of the enjoyment of the privileges thus conferred; to regulate the fisheries in waters navigable or otherwise within their territorial limits, and to confer peculiar and special privileges upon their citizens in that behalf; to prescribe the mode and manner of exercising the right of the elective franchise, and of taking and holding property under laws of descent and distribution. All these privileges, and many more of like nature, have been conferred upon citizens by State authority, and the exercise of them has been uniform in practice and recognized as right by a long course of judicial decision.

Now, sir, the rights claimed under the bill before the House are precisely similar in character, and many of them identical in kind, with those I have enumerated as belonging to the States. I submit, therefore, that the legislation here proposed is in plain violation of the prohibitory provisions of the Constitution and against the practice, the theory, and the philosophy of our federal system. It finds no justification on principle or authority. It is the offspring of that spirit of usurpation which has seized hold of Congress since the close of the war, and given direction and character to its force legislation against the South—legislation overriding State constitutions; dispersing State Legislatures; subverting civil governments, and putting in place the strong arm of military power to annoy, oppress, and impoverish the people. One more feature I wish to notice, which is the inexpediency and impropriety of this legislation.

It will be well here to note the distinction between or rights privileges in themselves and the manner of their enjoyment, and to bear clearly in mind that the effect of this measure is, not to secure the enjoyment *per se* of the rights named, but to secure that enjoyment in a particular manner, which is in social relation with the white race. However it may be disclaimed this is the real scope and effect of the bill. It seeks to confer, by force of law, social privileges—not civil rights as such. It compels to a social companionship in many of the relations of life that may be against the will and repugnant to the situation, disposition, and tastes of the individual. No matter how ample may be the provision for the education of the colored race; no matter how convenient or commodious their means of transit and transportation; no matter what their accommodations at places of public amusement or entertainment, separate and apart from the white race, still it is all not enough, according to the provisions of this bill, without the further qualification of the absolute right of individual participation and social fellowship. This is neither right in itself nor can it be beneficial to the colored race. The true dignity and development of that race depend, not upon acts of Congress declaratory of their equality with the white race, but upon their own conduct, their manly exertion, their high, noble effort, united with time, patience, and a generous forbearance. This social equality is not the subject of enforcement by law. It is not an element of civil or legal right, or of citizenship. "It can neither be created nor controlled by constitutions, legislative enactments, or judicial decisions. It is the creature of a higher and more subtle law than any or all of these.

"The *lex scripta* which prescribes, defines, and enforces it, is recorded only in the affections, the sensibilities, the intellectual tastes and affinities in the inner life of the man and woman."

God himself has set His seal of distinctive difference between the two races, and no human legislation can overrule the Divine decree. Legislate as we may, the race passions and prejudices, the social tastes and inclinations, will remain, and forever keep the two classes upon terms of actual inequality.

Believing, therefore, as I do, that this bill not only has no warrant of authority in the Constitution, but is in violation of its letter and spirit, and inimical to the highest and best interests of both races, I must withhold my support from it.

Civil Rights.

SPEECH OF HON. HIRAM P. BELL,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

January 7, 1874,

On the bill to protect all citizens in their civil and legal rights.

Mr. BELL. Mr. Speaker, I should be recreant to the trust confided to me by my constituents if I failed to oppose my voice and my vote to the passage of this bill. I do not propose to examine nor discuss its constitutionality. Its unconstitutionality has been unanswerably demonstrated by my distinguished colleague from the eighth district. [Mr. STEPHENS.] I invite the attention of the House to the expediency—to the question of policy involved. I approach its consideration with a profound sense of its importance.

The colored people, for whose benefit it is insisted this measure is to be passed, reside mainly in the Southern States of the Union; those who urge its passage represent a constituency among whom but comparatively few colored people reside and who will not, therefore; be materially affected by its consequences. The people of the South accepted the situation resulting from the war, and repledged their fidelity to the Constitution in the oath of allegiance imposed upon them. This pledge they have kept. All the rights secured to the colored people by the Constitution are respected by the people and enforced in the courts. This, at least, is certainly true in the State of Georgia. The great mass of the colored people in the South are quiet and contented; they neither know nor care anything about the provisions of this bill. It is no reply to the truth of this proposition that conventions have memorialized Congress upon this subject. We all understand who manipulate them and incite mischievous spirits to create excitement upon this subject.

It is unfortunate and unwise in the extreme, by this agitation, to disturb the good feeling and harmony now existing between the races.

The white people of Georgia, in common with those of the other Southern States, are now earnestly engaged in an effort to solve the great problem of free labor which emancipation thrust upon them—a question upon the successful solution of which, not only the material prosperity of the white race depends, but upon which the subsistence itself of the black race depends. Encouragement to visit places of public amusement, to travel on pleasure excursions, and join processions, is a sorry way to promote the pursuits of honest industry—the only means with them of support. Subsistence is indispensable; honest industry is the only legitimate means with them of obtaining it. And if not obtained in this way it is not difficult to conjecture how it will be procured; indeed, the number of convictions for larceny since their emancipation shows to what means they would resort to secure it. Justice to them, and a watchful solicitude over their interests, demand that they should be saved from the temptation to idleness which this measure furnishes.

Again, the southern people are exerting all their energies to develop the intellectual capabilities of these people, and for this purpose they have taxed themselves heavily to maintain a public system of education, to the equal benefits of which both races are alike entitled; and this, too, while the negroes have been organized into hostility to them and manipulated for partisan purposes by those who felt no real sympathy for them nor interest in them except in the mere question of how they vote. The greatest difficulty we have had to meet in our new relations with them has resulted from the spirit of antagonism inculcated by a set of adventurous creatures, destitute alike of patriotism and principle—vultures, who followed the wake of the Federal Army to satiate their hungry greed for plunder, wrung by robbery from a suffering and helpless people. Yet, surrounded with these difficulties, we have made in the South rapid progress toward their enlightenment and intellectual elevation. As to the right to participate in the benefits of our system of public education, they stand upon a footing of perfect equality in every respect with us; they have precisely the same kind of schools that we have, supported by a common fund raised by taxation which we in the main pay. This bill does not give them a single right in reference to their education that they do not now possess and enjoy upon terms of perfect equality with us. Except that this bill seeks to coerce an unnatural alliance between the races, unpleasant to them and disgusting to us, in our social relationships, it cannot be disguised that the object of this measure is to enforce social equality between the races, and that, too, by severe penalty. This is wrong in theory and impossible in practice; our social relations are controlled by laws peculiar to our social system, and independent of municipal regulations. The whole social fabric rests upon affinity, upon congeniality, upon those qualities of mind, heart, and person which challenge admiration, conciliate esteem, and beget affection.

Our fathers were wise enough not to interfere with the operation of these laws by legal enactment; but they left every one perfectly free to seek such associations as were agreeable—such companionship as taste and inclination might suggest as desirable. Those who oppose this bill would not deprive any one of the pleasure, and refining and elevating influence of negro association who may desire to enjoy it. But what we insist upon is, that it is a matter that ought to be left to choice. There being no municipal law forbidding or preventing it, of course those who desire it can enjoy it to the fullest extent.

Those who do not enjoy it nor desire it ought not to be controlled in their taste; indeed, they cannot be. You may pass this bill, secure convictions, enforce penalties, and inflict punishment, but you cannot control taste, revolutionize habits, nor change color by legislation. You may pass this bill, and divert the negro from the pursuits of remunerative labor and honest industry, and inspire him with hopes and aspirations for social position from which his habits, tastes, education, and color exclude him, and thus retard and not promote his legitimate elevation in the social scale; but you cannot benefit him by dragging the white race down to his degraded level, and enforcing the degradation by the infliction of penalties.

You may pass this bill, but when you do so you will find that it will not secure equality between the races. It will accomplish results, but not those contemplated. It will destroy those wise provisions and humane institutions established by law and supported by white men in the Southern States for the support, protection, and education of the unfortunate blind, lunatic, and deaf and dumb. It will destroy our general system of common education, supported by taxes paid by the white race, and to equal benefit of which all are entitled by law, without regard to race or "previous condition of servitude." This bill subjects us to the alternative of sending our children to mixed schools, or exclusion from an equal participation in the common-school fund, which we have furnished the money to provide and support. It denies to us the benefit of instruction for which we pay, unless we subject our children, male and female, to associations dangerous to their habits, disgusting to their tastes, and revolting to our sense of parental obligation.

Would you have us pay our money to support schools from which we are practically and to all intents and purposes excluded? Would you compel us to support a system of public or common schools by taxation, and in addition thereto educate our children at our private expense? No one, I suppose, can be so ignorant of the southern

people as to suppose for one moment that they will subject their children to associations in childhood—the period when character is formed for weal or woe—dangerous to their morals and repugnant to their tastes. Nor will they tax themselves to educate the negro children, and then educate their own at their private expense. The result of this bill is easily predicted, if it should become a law. College charters will be surrendered, endowments withdrawn, the common-school system abandoned, the white people who are able to do so will educate their children at private schools at their own expense, and the colored people will be left without the means of education.

There is another most formidable objection to this bill. If it become a law it will inaugurate a war between the races. When it is remembered that but a few years have elapsed since the colored people were recognized as property by the Constitution and laws of the United States, as well as the constitution and laws of the several States in which African slavery existed; and when it is remembered that the relations of the races involved servitude on the one hand and dominion on the other; and when it is borne in mind that bad men for selfish purposes have constantly incited the colored race to hostility to the white, the relations of concord and peace now existing between them is a wonder, and alike creditable to both races. This peaceful relationship and intercourse has resulted from the fact that the line of social distinction has been kept distinctly marked. The colored people have never sought to cross or obliterate it. This bill seeks to blot it out. This attempt at its abolition invites the negro to take his position in the social scale with the whites. This will be resisted at the very threshold by all classes, and will never be submitted to nor allowed, whatever consequences may result. The southern people have shown their patience under the infliction of wrong. They may languish in prisons, the remnant of their substance may be exhausted in fines, but they will perish before they will submit to the humiliating degradation of social equality with emancipated free negroes.

Civil Rights.

SPEECH OF HON. JOHN M. GLOVER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES.

January 7, 1874,

On the bill to protect all citizens in their civil and legal rights.

Mr. GLOVER. Mr. Speaker, up to this moment I have said not one word, by way of debate, in consumption of the time and attention of the House. But, sir, the bill now under consideration is one which so vitally affects the best interest of the white and colored races of the Southern States, where the evils of this bill are almost wholly to be felt, and one in which my constituents of all parties will feel so lively an interest, that I cannot refrain from giving expression to what I deem to be their objections to it. It is impossible, sir, to discuss the merits of this measure in the brief time of twenty minutes to the extent that its gravity demands. In the beginning of my remarks allow me to say that I am the friend of the negro race in this country, that I wish the negro all the good possible, with due regard to the rights and interests of others. But, sir, I would not elevate him by pulling down my own race. I would not widen the field of his privileges by narrowing that of the white man, who, I humbly submit, is entitled to some consideration at the hands of this Government and at the hands of his white brother. I would not teach the colored man that he is, of all other men in this country, the most important, and that he is the especial ward and pet of the nation, to whom forty millions of white men should pay tribute and admiration. I would not eternally parade him before Congress and the nation, and thus teach him to despise the State government under which he lives, and to look elsewhere for protection than to that ever to be cherished nursery of domestic virtue and civil liberty. I would not teach him to hate his white neighbor at the South; nor would I pass one law to that end. I would not teach him that all his tastes, habits, and desires are right, and that all who oppose them are necessarily his enemies. But I would teach him that to be respected he must first respect himself and others. I would teach him that human achievements in the way of individual elevation, moral excellence, social position, intellectual development, civilized life and its enjoyments, are not his merely by an act of Congress. And if he cannot reach the respective high planes upon which these glories have been won and are now enjoyed, each one for himself, he must not expect a crime to be committed through a so-called civil-rights bill, which would drag all these down into the low planes, upon which, unfortunately, the great body of his race in the South stand to-day. No, sir; I would leave all these things just as they are, as stimuli and rewards of personal merit for white and black. I would teach the colored race that civilization is not the result of a statute—a discriminating, leveling statute—but the result of ages of individual effort and sacrifice. The fourteenth and fifteenth amendments of the Constitution of the United States have brought the colored race of this country upon the same plane with the white race, and there the two races should be left, the individuals of each to work out their own destiny. Upon this view I base my opposition to this measure.

Sir, I have considered the bill in all its bearings. The first aspect is, that in its title it is a misnomer. It is not a bill to protect citizens in their legal and civil rights, but should be denominated a bill to regulate the associations, companionship, tastes, and feelings of the people. As such it is not a proper subject of legislation. I deny that any man, white or black, has a legal or civil right to force his association on any one who does not want him. I deny that any man whose brain is not crazed claims any such right. The laws of association and companionship belong to the tastes and feelings of the people, and cannot be created by legislation.

The bill implies the hopeless inferiority of the negro race, and proposes to cure this inferiority by an act of Congress. If this inferiority exists, Congress cannot change it by a statute. It may repeal its own laws, but cannot repeal the laws of God. If this inferiority does not exist—if the negro is equal to the white man or superior to the white man—if his intellectual powers and social graces come up to or above the white standard, they will soon make themselves felt, in an unmistakable way, by their own forces. And in that case there is no need of this bill. Sir, any legislation to counteract natural principles or to repeal natural laws or to obliterate natural distinctions, is impotent for good. Why does not some learned gentleman introduce here a bill to regulate the rain-fall and to provide for the movements of winds and tides? It would belong to the same class. Such bills do no good, but are pregnant with untold evils to the white and colored people of that section of country in which the bill is unmistakably designed to operate. My theory is, sir, that while the negro has liberty no more can be done for him; and a wise friend will not undertake to regulate, in his interest, the feelings, the companionship, and tastes of others. In this regard the same principle applies to white and black alike. But how stands this bill in this respect? It comes here in the undisguised and odious form of race and class legislation—a bill wholly for the benefit of negroes, to the exclusion of white men. When did the interests and rights of colored men come to be more sacred in the eyes of the law than those of white men? Since the foundation of the Government no such legislation has been instituted in the interest of white men. The gentleman from Massachusetts [Mr. BUTLER] asks:

> Now, then, who shall say that this bill ought not to pass? What is the ground of possible opposition to it?

I answer, I cannot conceive one solitary reason for the passage of such an alarming measure as this. I have no hesitancy in saying that this bill ought not to pass. I believe it will not pass, if only members will look at the appalling, sweeping powers and effects of this measure—the relative situations and conditions of the people of the South, by whom and upon whom the bill is to operate. Why, sir, without one single condition or qualification expressed in the bill, every railroad, stage line, steamboat, public school, college, university, every first-class hotel and theater, is at the mercy of any low-bred, vulgar self-degraded negro vagabond. He has only to apply for first-class accommodation, at any of these institutions, and if he be rejected he can instantly have at his back the marshals and courts of the United States, to be followed by the Army and Navy if necessary. The bill pledges all this. It is not to protect the cultured and civilized colored man, but clothes the disgusting vagabond with all these dangerous powers.

Now, Mr. Speaker, by common consent, by universal custom, understood and recognized by all, at those institutions which subsist by public patronage, the measure of accommodation is the measure of personal fitness, merit, or qualification to receive and use, and not an absolute, unconditional right. Three elements or ingredients have heretofore entered into the adjustment of these matters—the rights of the property-owners, the rights of those patrons upon whom these institutions hope to live and thrive, and the rights of the questionable third party in a given case.

Now, sir, what is to govern the question where there is a conflict of antagonistic rights, interests, and privileges? I answer, the preponderance of pecuniary interest and the preponderance of personal merits. Sir, is it not a civil right to keep a first-class hotel, a first-class theater, to provide first-class accommodations on railroads and steamboats, &c., for worthy, respectable, and congenial persons, and to protect them in the enjoyment of the same? But now, sir, under this so called civil-rights bill these just, convenient, necessary, and comfortable arrangements are no longer to exist; but in every public place where people of gentility may seek such accommodations and companions as are congenial to them, this civil-rights bill can seize the most revolting specimen of the negro race and thrust him in upon them, and there is no escape. When has it been that a white man who did not maintain respectability in appearance and conduct could force his way into a first-class hotel, into the dress-circle or orchestra of a first-class theater simply because he tendered the regular fare? Never, sir! To the proprietor or manager, by public judgment, has been conceded the right to determine who are admissible to the best accommodations, and the right to protect those from disagreeable intrusion. But by the potencies and plenitudes of this bill any negro—any negro who can boast the distinguishing qualifications of "race, color, or previous condition of servitude"—is alone a fit recipient of the highest and best accommodations, and

becomes the enforced associate and accompaniment of the most refined and accomplished ladies and gentlemen in the land. All this is pledged this gentleman of "color and previous condition"—and more. He is pledged, against all who dare offend him in his attempt to offend others, a suit for damages, and a further most gratifying assurance that his victim is subject to a fine in addition of from $100 to $5,000. And while all this is being enacted the white men must take back seats. Can the gentleman from Massachusetts [Mr. BUTLER] perceive no ground of possible opposition to it?

Under this bill, Mr. Speaker, it is possible within ten days after its passage into a law to close every respectable hotel, theater, free white school of this city and throughout the South. I humbly submit that the value of property, the value of business occupations, the tastes and comforts of refined people in this country, are entitled to some consideration. Where is the necessity of such a monstrous law? Who has demanded it; the white people North or South? I deny it. Is not the silence of forty millions of people on this subject of some significance? Had not Congress as well pause until it has instructions from all those States, north and south, which have separate schools for their white and colored people? Why close your fine hotels, theaters, and free white schools here, or degrade them?

But, Mr. Speaker, there is one inexplicable mystery about this question. Why do the supporters of this bill want a compulsory law to constrain them to do what it is their privilege now to do? I am in favor of retrenchment and reform. Hence I am totally opposed to calling into requisition the whole power of the courts of the United States, the Army, and the Navy, to compel the gentleman from Massachusetts [Mr. BUTLER] to do what he wants to do, but which he has not yet succeeded in doing, into full social and civil equality with the colored people. I want him to have the grace to do that without compulsion. As every law must have the approval and sanction of the people, why can we not have a few examples of compliance with the terms of this bill by some of its most enthusiastic advocates before it becomes a law?

Mr. Speaker, it has been admitted in all times the world over that teaching by example is the best evidence of sincerity and comports best with the purest ethics. The President of the United States has recommended "the enactment of a law to better secure the civil rights which freedom should secure to the enfranchised slave." In the face of such a precept from such high authority on so delicate a subject, has not the country the right to expect that the Chief Magistrate of the nation would give his approval by practice of an act which he has commended to the observance of others? But where are we to find the illustrious example?

When has President Grant chosen to take his children from a white school and send them to a colored school? When has he seen fit to leave his box at the theatre and go to the pit or the gallery to get in contact with those who cannot come to him? If the mountain cannot come to Mahomet, why does not Mahomet go to the mountain? Why have we never witnessed the "civil rights" advocates setting one solitary example of the propriety, the advantage, and the excellence of a law which they propose to enforce against their remonstrating countrymen with fire and sword? Why don't we see them leaving Williard's and going to some colored hotel? Why do we not see them, by a delicious choice, going to worship in a colored church and sending their children to negro schools? Why, sir, do they not do what they say is all right and proper, before they attempt to coerce us into compliance with an act the most monstrous that has yet been brought before the American Congress, and one which should be resolutely opposed by every means known to honor and loyalty by every brave and self-respecting citizen in the land? Now, I exhort the House to look at the character of this bill, with its sectional hostility, originating in Massachusetts, but designed to vent its fury on the people of the South.

To the better understanding of the bill, in its effects upon every part of the country, allow me to direct attention to the relative race populations of the North and South, and in the sections:

Massachusetts has 1 colored person to 103 whites; Connecticut, 1 to 54½; Illinois, 1 to 90; Indiana, 1 to 69; New York, 1 to 80; Maine, 1 to 389; New Hampshire, 1 to 547.

This will show the House how insignificant will be the effects of this law in the Northern States, many of which, like us in Missouri, have separate white and colored schools, and, having them, do not consider themselves criminals.

How different is the showing in the South. South Carolina has 126,147 more colored persons than white; Louisiana, 2,155 more colored persons than white; Mississippi has 61,304 more colored persons than white; the State of Alabama, alone, has 236,283 more colored people than there are in all the 20 so-called Free States. Representatives from the North can form some conception with what horror we regard this bill as matters stand in the South to-day.

Mr. Speaker, my remarks are predicated, not upon the idea that this bill, if it becomes a law, is to be a dead letter, but that, as pledged upon its face, it is to be enforced with extreme severity against the white people of my section. The gentleman from Massachusetts [Mr. BUTLER] is in favor of State-rights but is opposed to State-wrongs. Has it never occurred to him that while, in his judgment, so many States are so liable to the commission of "wrongs," that the Federal Government may commit a wrong? How is it that men in Congress are infallible and the representatives in State governments are so erring? He calls lustily upon us to obey the Constitution of the United States. I commend to him and the people of his own State to observe that sacred injunction. But have they always done so? Is this bill constitutional? In my humble opinion it is most grossly unconstitutional. When and where has it been given to the Federal Government to stalk into the States, institute police regulations, seize upon and control their local corporations, and regulate or destroy their public free-school systems?

But it is not my intention to discuss the unconstitutionality of this question, as that has been ably done by other gentlemen. Now, sir, is it not a pertinent question to ask the advocates of this bill, right here, what great and distinguishing acts of generosity and magnanimity they have ever performed for which they can be regarded as the benefactors of the colored race? Will they tell the colored race and the country to-day what they have done, out of their own resources, above and beyond all others? We know what the colored people have done for them. Who are the true, liberal, and magnanimous benefactors of the negro race in this country to-day? They are the despised and persecuted and impoverished white population of the South, who are sought to be made the victims of this bill. Millions upon millions of money have they provided from their own resources to educate and protect these poor but ungrateful people, who are ever ready to vote them into degradation and dishonor. In my own State, sir, without any suggestions from New England, we first emancipated our slaves; then we gave them the ballot; then by constitutional enactment we provided for their education; and all this without reconstruction acts.

But, sir, after mature deliberation in my State, we have separate schools for white and black. We think we are competent to decide that question for ourselves. We think it is our constitutional right. We know what is best for the white and black children, and we do not intend to surrender that sacred trust at the behest of any power. But now comes this leveling, destructive, so-called civil-rights bill, and says, you shall unite these schools or you shall have no public free schools for white or black children. Do the friends of this measure mean to take the responsibility of destroying all means of education for colored children in the South? Let me say to these gentlemen that the separation of the schools in my State has received the indorsement of all our people of all parties. Let me say to them that they do not understand the sullen temper of the two million people whom I have the honor in part to represent, if they suppose even the power of the Army and Navy are adequate to the task in hand. They can destroy free schools for negro children; but to unite the schools, never! Now, in conclusion, allow me to say I am opposed to this bill because it is virtually an abolition of the States—a centralization of all power in the hands of the Federal Government. I am opposed to this bill because it is destructive of the value of property and business occupations of the people. Because it destroys the civil and legal rights of the many for the few. Because it proposes to degrade and brutalize our children. Because it plants anew the seeds of discord between the white and black races at the South, where there ought to be peace, harmony, and earnest co-operation. Because it tends to destroy the industry and material prosperity of the South, in which we of the West and Northwest are so much interested. Because I fear, whether so designed or not, it will have the effect to induce the corrupt and designing demagogues to seize upon the ballot-box and to drive the people into revolt, or to submit to the destruction of all their liberties.

Civil Rights.

SPEECH OF HON. ROBERT M. KNAPP,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

January 7, 1874,

On the bill to protect all citizens in their civil and legal rights.

Mr. KNAPP. Mr. Speaker, upon yesterday I offered the following as an amendment to the civil-rights bill:

That the declaration of intention to become a citizen of the United States, when made by any person in good faith according to the statute in such cases made and provided, without distinction of race or color, shall, *prima facie*, entitle such persons to the protection of the Government of the United States, and, when desiring temporarily to absent himself from the territorial area of this Government, to the proper passports, fully guaranteeing such protection in all respects as though he had been regularly naturalized; and all laws and parts of laws or regulations in conflict with this act be, and the same are hereby, repealed and rescinded.

I now desire to say I know of no more appropriate occasion than the present to consider this amendment. The tendency of the age looks to and encourages the release of the individual from despotic restraints. It makes but little difference to me whether the precedents of diplomatists chiefly under the control of despotic governments are or are not against a fair construction of the amendment. I know only that in its results it will work a blessing to the great mass of mankind, and will, at the same time, give additional impetus to the development of the unworked resources of this vast country, the sooner enabling us to reach those proportions which will give us the power

to dictate destruction to all despotic control over the individual and the emancipation of the human race.

During the last week I was called upon by one of my constituents to secure a passport for a German who through years of toil had amassed a sufficient sum to bring himself and family to this country. Circumstances had occurred that made his presence in his native state an imperative necessity. He has declared his intention to become a citizen of the United States; has renounced all allegiance, under the solemn sanction of an oath, to his native prince; has, in pursuance of such intentions, by industry surrounded himself with the comforts of a home; and yet, by a diplomatic decree, whenever he leaves our shores this Government, instead of affording him protection, proclaims him beyond the pale of its laws, and offers him a sacrifice against the policy of our state and country and the decrees of an advanced civilization.

Mr. Speaker, I have the honor in part to represent a State whose already developed resources make her a magnate in our system. Rob us of the results of the labor of the Irishman, the German, the Swede, and of the immigration that has flooded our country from the more densely populated districts of the Old World, and the consequence would be the destruction of more than half our wealth.

The national banks and class legislation, protecting wealth and more favored industries, are exhausting too much of the time of our national Legislature. Is it not due to the age, to the interests of the country and humanity, that the blood, bones, and muscle of the people for whom we are supposed to legislate should receive at our hands some consideration? As one of the Representatives of the State of Illinois, a large mass of whose citizens are not native-born, I demand the abolition of these cruel and inhuman decrees awarded by cowards to the greedy demands of despots. The situation of an alien inhabitant, after having renounced the protection of his native prince, and until his final naturalization here, is truly an anomaly under the regulations of our State Department. He is merely a waif and an outlaw, beyond the protection of the one by his own act and not yet within the protection of the other.

While we are manifesting so much anxiety to secure the largest liberty to the colored citizens of the country, let us, by the adoption of this amendment, do something practical for our foreign-born residents, in compensating them somewhat for the sacrifices they have made in leaving the country of their nativity and renouncing their nationality. To illustrate that this doctrine of American nationality is not a new one in this country, allow me to furnish a single extract from the letter of Mr. Marcy, while acting as Secretary of State under the administration of Mr. Pierce, in reply to Mr. Hulsemann, who had addressed a note to our Government on behalf of the Austrian government in reference to the Martin Koszta case, then pending. Mr. Marcy says:

> It is not contended that this initiatory step in the process of naturalization invested him with all the civil rights of an American citizen; but it is sufficient for all the purposes of this case to show that he was clothed with an American nationality, and in virtue thereof the Government of the United States was authorized to extend to him its protection at home and abroad.

By the adoption of this amendment let us retrace our steps from the paths into which they have wandered, and once more intrench ourselves on this broad ground of human rights and security for personal liberty.

Cheap Transportation.

SPEECH OF HON. WM. LOUGHRIDGE,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

January 10, 1874,

On the bill to regulate commerce between the States, and to provide for fixing reasonable charges for carrying freight in transit from State to State upon railways.

Mr. LOUGHRIDGE. Mr. Speaker, on the 15th day of last month I introduced in this House a bill "to regulate commerce between the States, and to provide for fixing reasonable charges for carrying freight in transit from State to State upon railways;" which bill was referred to the Committee on Railways and Canals, and which, or some bill having the same object in view, will, I trust, be soon brought before the House for its action.

The President called the attention of Congress to this subject in his message to the third session of the Forty-second Congress, and in his recent message again refers to it as a very important subject.

I undertake to say that in all the range of questions pressing upon us for consideration there is no one of more importance, as bearing upon the prosperity of the country, than that of cheap transportation of the products of the country; more especially is it an important one to the producers of the West.

For years the farmers of the West have been oppressed by the extortion of the railroad companies. The charges for carrying western produce to market have been unreasonable and oppressive; and the legitimate profits of their toil, instead of going into the pockets of the producers, have gone to swell the fortunes of railroad kings.

The railroad companies having been controlled in that respect by no law, having the regulation of their rates absolutely in their own hands, the tariffs have been so regulated that the farmers have received but the actual cost to them of their produce, counting their labor at a cheap rate. And this makes the relation between the farmers and the railroads one of extreme hardship to the farming class. The market of the farmer is at the sea-board; he must send his produce there. The railroad company is the carrier, and, in the necessity of things, must be. The farmer's surplus must be sent to the sea-board by rail—for it is worth nothing at home—and the amount of profit to be realized by the farmer is thus entirely within the discretion and will of the railroad companies.

In the business of life, as a general rule, both parties to contracts have some voice and option; but here is a peculiar case in which one of the parties has the absolute dictation. The railroad companies being controlled only by the old maxim, "Never kill the goose that lays the golden egg," and acting upon this, have so regulated their tariffs as to enable the producer to subsist, by the exercise of industry and great economy. And when I so speak I am not exaggerating, for I speak what I know when I say that there is not on the face of the earth a more industrious people than the farmers of the Northwestern States, toiling in seed-time and in harvest, in summer's heat and in winter's cold; exercising the most rigid economy and self-denial, industry and economy, which ought to insure for them, as a class, wealth and opulence, and surround them with the comforts and luxuries of life; and yet, as I have said, the mass of them do not much more than obtain a living, and, instead of increasing in wealth, they do not more than make ends meet at the expiration of the year; while we see tens of thousands of non-producers, "who toil not, neither do they spin," and yet "Solomon in all his glory was not arrayed like one of these;" wealth pours into their coffers, and luxury is the portion of their lives.

Now, sir, the fact that the great class of producers of the country obtain so small a portion of its increasing wealth is evidence that something is wrong.

The producer of the country is the creator of all its wealth, and if any class is more entitled than another to a large share of that wealth it is the producer. Yet the great producing sections and populations of the country are comparatively poor, and the surplus wealth flows to the cities. The reason of this unjust condition of affairs is found in the existence of the monopoly in the transportation business of which I have spoken.

The important question, then, is, what is the remedy for this state of things? It is not in competition; for the capital invested in railroads is so immense that it can control any and all roads that may be built by private means, and the interest of the existing lines is so strongly in the direction of keeping up the rates that they will not permit competition to reduce them materially or permanently.

There is but one certain and reliable remedy, and that is the law. The strong arm of the Government should be evoked and brought to the aid of the people. I would have the law interpose and regulate the tariffs and charges upon railroads for carrying freights, fixing the compensation at such rates as would be just both to the producer and to the carrier, giving the carrier a reasonable compensation, and protecting the producer against extortion.

As to the power of the Legislature of a State to regulate the charges of railroad companies for carrying freight and passengers within such State, there can be no doubt on principle, unless the Legislature is prohibited from doing so by the constitution of the State. The railroad is a public corporation; it exists by virtue of public law; it exercises through the authority of the State the sovereign power of eminent domain, taking without the consent of the owner private property for its use, and it has attached to it the qualities of a public corporation, which bring it within the control of the law, for the safety and rights of the public.

Again, on the grounds of necessity, the Legislature has this power, on the same principle that the Legislature exercises the power to regulate the price of the use of money. Money is power, more peculiarly so than any other species of property, and he who has it has the means, at times, of oppression; and, therefore, to protect the borrower, the law, by virtue of a power conceded by common consent, regulates the price, and prohibits under penalties the sale of the use of money for a higher price than thus fixed by law.

But a great difficulty arises in relation to the regulation by State laws of the charges upon freights going from one State into and through another and different States. The produce of the farmer of Iowa goes through the States of Illinois, Indiana, Ohio, Pennsylvania, and New Jersey to the market at New York. The laws of Iowa, although they may regulate the charges while the freight is in transit within that State, cannot extend beyond the borders of the State, and the Iowa farmer is then at the mercy of the railroad, or has to depend upon the uncertainty of the protection of the laws of five different States. So that practically there can be no reasonable prospect of adequate relief and protection by State laws. To give adequate relief, there must be some power that can follow the commerce in its transit through all the States. I have no doubt in my own mind that Congress has the power under the Constitution to pass laws to regulate the charges upon railroads for carrying freights from one State to another or through different States.

The provision giving that power is in section 8 of article 1 of the Constitution, which reads as follows:

The Congress shall have power * * * to regulate commerce with foreign nations, and among the several States.

If this power to regulate amounts to anything, it clearly gives the right to protect the people against unreasonable charges and impositions which might amount to an embargo upon internal commerce.

Upon this question we have had the opinion of an able committee of this House. The Committee on Railways and Canals, in the second session of the Fortieth Congress, being instructed by the House to examine and report as to whether Congress had the power to regulate the charges on railroads engaged in commerce between the States, made a full and exhaustive report, sustaining the power, from which report but two of the committee dissented.

This question was also raised in the Supreme Court of the United States in the case of Gray *vs.* The Clinton Bridge Company, in which Justice Miller, in giving the opinion of the court, used the following language:

For myself, I have no doubt of the right of Congress to prescribe all needful and proper regulations for the conduct of this immense traffic over any railroad which has voluntarily become part of one of those lines of interstate communication, or to authorize the creation of such roads when the purposes of interstate transportation of persons or of property require it.

Thus, sir, both upon reason and upon authority, does it appear that Congress possesses this jurisdiction over this subject; and, possessing this power, I insist that it is of the highest importance that it should be exercised. It is not to be much longer endured that, upon all the immense commerce from the West to the sea and from the sea to the West, soulless corporations should have the absolute power to levy such contributions as suit their pleasure or satisfy their cupidity. I do not pretend to say at what precise rates railroads ought to carry the freights of the West or what would be reasonable charges; I am not sufficiently informed; but the proper and just rates could be ascertained without difficulty by a board of experts. This I do know, that as a general rule the farmer of Iowa has to give one-half of his grain to get the other half to market; and if railroads cannot convey at any lower rates, then there should be another and cheaper means of transportation provided by the Government.

I trust, sir, that the committee having this subject in charge will give it a thorough and exhaustive examination, and give us the proper information upon which to act upon some line of relief. It is the policy of a wise government to encourage by all proper means its internal productions and to remove all burdens from the industries of the people.

To this end I am in favor of an extensive but wise system of internal improvement by the Government; a system not confining its benefits to any locality, but extending them over the whole country, north, central, and south. I desire to see great lines of transportation, penetrating into all sections, connecting together the North and the South, the East and the West. Let the energy, industry, and capital of the nation be turned in this direction, and the Government give its aid and its assistance, and thus insure to the millions of producers of the country cheap transportation and easy access to good markets. Then, sir, the people will be prosperous and contented; and then mighty industries will soon lift the country from its financial embarrassments and remove its burden of debt. And how much more wise this course than to expend the resources of the nation in the direction of conquest and of military power and glory.

I do not care much, Mr. Speaker, what this system of internal improvement may cost, so that it is done wisely and prudently; for, cost what it will, it will soon be repaid by increased prosperity; and it can be done without any actual expenditure by the Government, by means of the issue of its bonds, the interest to be paid by the revenue arising from the works.

There are several different projects, the most of which have merit. I do not desire now to speak of them in detail, nor to do more than to speak of the general question, and of the duty of the Government, and wait for the rest until bills are introduced by the proper committees.

And I desire to say, in conclusion, that I trust this Congress will take a proper view of the magnitude and the importance of this subject; for it is one of paramount importance, and one in which the interests of every laboring man in this broad land are involved. It is emphatically a question in which the people are interested as against corporations and monopolies. It is, in short, the people *versus* monopolies. It is a question that reaches further into the future, and has more bearing in its influence upon the stability and prosperity of our country, than we are apt to imagine. When I look at the map of the United States and see the intricate web and net-work of railroads extending into every section of the country—when I reflect that substantially all of the immense products of the country must pass over those roads to get to market, and that the toll to be exacted from the producer is entirely at the option of the owners of the roads; that it is for them to say whether they will leave the producer a reasonable profit, or whether they will take all and leave to the producer but the pittance for his labor; and when I reflect that this great net-work of railroads is controlled substantially by half a dozen corporations, the controlling power of which centers in a few eastern cities—I confess, sir, that I look with concern upon the future. The true condition of a free, happy, and prosperous people is, that the wealth and power should be fairly distributed among the people and sections; I do not mean absolute equality, but I mean the absence of great extremes of wealth and of poverty. Wealth is power; and the tendency of wealth, as of power, is to creep from the hands of the many into the hands of the few; and of all the schemes ever devised the corporations of this country tend the most strongly to this result.

Look at the facts as they now exist. The entire assessment of all the property in the United States, of all kinds and descriptions, real and personal, in 1870, was $30,000,000,000; and of this the assessed value of the railroads and their fixtures was $3,000,000,000, or one-tenth of the whole. There is rising here, and growing rapidly, a money power which will give great trouble in the future unless controlled by the strong and restraining hand of the Government. Against this power, now so immense, the people in their individual capacity cannot contend; to its will they must submit in the matter of their fortunes and their subsistence, unless the Government will come to their relief. This they ask; this they expect; this they have a right to demand, and do demand.

The mutterings and rumblings of popular discontent have been and are being heard among the people of the great Northwest, and they are but the prelude of the coming storm; they are the just complaints of the laboring classes; men of strong arms and patriotic hearts; men who love their country, and have given freely of blood and treasure to save this Government; men who will ask nothing but what is right, and will not always submit to what is wrong. And, sir, if this Congress is wise it will give this great question patient and thorough investigation, and take such action as the interests of the people and the prosperity of the country require.

Dekota Indians, War of 1862.

SPEECH OF HON. M. K. ARMSTRONG,

OF DAKOTA,

IN THE HOUSE OF REPRESENTATIVES.

January 16, 1874.

On the bill (H. R. No. 209) to provide for the adjustment of the Dakota War Claims of 1862—

Mr. ARMSTRONG. Mr. Speaker, nearly three years ago I presented to the Forty-second Congress a bill to provide for the payment of an Indian war debt of $28,137.17, which the United States Government has justly owed to the Territory of Dakota since the great Sioux outbreak of 1862, whose ravages extended over Western Minnesota and Southern Dakota.

This claim has been long since carefully examined and reported upon by the territorial auditor, and the report approved by the territorial Legislature, which latter body has repeatedly memorialized Congress for the payment of the debt. By an examination of the legislative report and memorial, which have already been printed and laid before this House, it will be found that the claim is one of singular merit and moderation in comparison with that for similar services rendered by other Territories.

By a proclamation of the governor of Dakota, bearing date at Yankton, the capital of said Territory, August 30, 1862, the entire population subject to military duty was called into active service to protect border settlements against the impending invasion of the hostile Sioux Indians, who had but recently murdered, in cold blood, several hundred innocent men, women, and children in the adjoining counties of Minnesota.

In response to this proclamation some three hundred men in the Territory immediately left their fields and workshops and enrolled themselves into militia companies for the protection of life and property, furnishing their own arms, subsistence, clothing, &c., for a term of two months. By distributing themselves through the several counties these self-equipped companies of pioneers succeeded in holding the Indians in check and preventing an open war until the Federal Government could spare reenforcements to be sent to the frontier from the field of the southern rebellion.

Not, however, were these faithful pioneers relieved from their posts and vigilant duties until their ripening and neglected harvests had become wasted and ruined in their fields; two farmers had been savagely murdered while attempting to gather their crops within a mile of the village of Sioux Falls; the town was attacked by a war party of Indians, the citizens shot at and driven from the place, and the village afterward burned to ashes; a mail-carrier between Sioux Falls and Yankton was waylaid and robbed; a stage-driver on the public highway from Fort Randall was shot dead, and his horses stripped from the stage and driven to the plains; two unarmed citizens were attacked and shot in their wagons at a public ferry, within three miles of the capital of the Territory. In Yankton County the farmers were driven from their fields and shot at in their doorways, until forced to retreat to the town for safety. Neither did these troubles end until two years after the Government had sent re-enforcements to the beleaguered border. Even while United States troops were patrolling the settlements in 1864–'65 the emboldened and daring Sioux dashed

upon a party of farmers, making hay near Richland, in Union County, killing one man, wounding another, and fleeing to the plains upon their victims' horses. Another party of murderous savages crossed the Dakota border into Nebraska, twelve miles below Yankton, and after committing horrid outrages and butchery upon an unprotected family of five children, they eluded the United States cavalry, recrossed the river into Dakota, and escaped up the Vermillion Valley.

Upon the first outbreak of this great Sioux Indian war in the autumn of 1862, and when the territorial militia were called to arms by order of the governor, all the farming settlements and exposed towns were quickly abandoned, some sending their women and children to the neighboring States for safety, while others resorted with their families to the capital of the Territory to unite with the villagers for mutual protection. Above Vermillion a skirmishing war party for a time prevented travel upon the stage-road. At Yankton all the citizens in the surrounding country had assembled and joined with the militia in throwing up hasty fortifications around half a dozen buildings for shelter in the center of the town. Within these rude barracks the citizens remained under arms day and night, until United States troops began to arrive and the Indians retreated from the embargoed settlements. The people then ventured back to their devastated homes and fields to glean a winter's subsistence from their damaged havests and scattered herds.

Now, Mr. Speaker, the neighboring State and Territory of Minnesota and Montana have both been reimbursed by the Federal Government for similar services and expenses borne by them in repelling Indian invasions within their borders. Dakota has repeatedly, through its Legislature, petitioned Congress to refund to the Territory the small amounts so justly due the members of the Dakota militia for their timely services, given when the nation needed all its men in the southern war, and when the women and children of the frontier were left to the mercy of a barbarous foe.

These pioneer militia are obliged to come to Congress as their last and only resort for reimbursement. In the early part of the Forty-second Congress I made application in their behalf to the Secretary of War, but was informed by him, under letters of March 22, 1871, and March 20, 1873, which I hold in my hand, that, notwithstanding the "apparent merit" of the claim, he possessed no power to pay the same until authorized to do so by Congress under a special appropriation for the purpose, inasmuch as the governor of the Territory should have first asked and obtained permission from the Government before calling the territorial militia into service. I then introduced a bill into the last Congress, asking a special appropriation for the purpose of $28,137.17, and also sent back to the Territory and procured evidence, which was submitted to the Committee on Military Affairs, explaining that the scene of the Indian outbreak was, at the time, several hundred miles distant from the nearest railroad station or telegraph office; and that the first murders, and the consequent panic, fell upon the settlements so suddenly, and without warning, that the governor found it necessary to rally the militia to arms at once, and accordingly quite a force of armed men was put upon duty before nightfall of the same day.

In the midst of the excitement and imminent danger the governor was of opinion that his appointment by the President as governor and commander-in-chief of the militia gave him full authority to call out the militia force in case of emergency or public danger.

Upon the evidence presented with this bill to the Military Committee of the House in the last Congress, that committee reported back a bill, which passed the House, authorizing the Secretary of War to examine the accounts and report to Congress the amounts found justly due and necessary to be paid. This bill was also examined and reported upon favorably by the Military Committee in the Senate, March 1, but among many other bills it was not reached on the Calendar before the final adjournment of last Congress.

Hence I have brought the bill again before the present Congress, and I now again ask that justice be done this handful of territorial militia of 1862, who periled their lives in defending the outposts of western civilization and settlement. In reference to the fairness of the claim the Military Committee of the last House, in their published report, speak as follows:

> The action of the governor in calling out the troops, and of the citizens in responding promptly in the emergency, seemed to be all that could be done, and the only thing that could be done, for the defense of the people of the Territory, since no troops of the General Government could come in time to the rescue, and it seemed madness to wait till the authorities at Washington could be reached and could furnish military aid.
>
> The accounts seemed to have been carefully examined by the commission and to have met the approval of the auditor, and are set out in full, with the items. The sum, $28,137.17, seems to be a reasonable and fair one, and we feel justified in recommending its payment.

The report of the territorial Legislature gives the names of three hundred and thirty-six persons as entitled to pay, making the aggregate amount of $28,187.17, or an average of about $87 to each claimant.

The following is a recapitulation of the auditor's report to the Legislature:

Pay, commutations, &c., of Company A, Dakota militia, of Yankton County, for two months	$4,629 00
Pay, commutations, &c., of Company B, Dakota militia, of Bon Homme County, for two months	2,206 00
Pay, commutations, &c., of Company C, Dakota militia, of Clay County, for two months	4,811 00
Pay, commutations, &c., of Company D, Dakota militia, of Union County, for two months	3,128 00
Pay, commutations, &c., of Captain Fuller's Company, (mounted rangers,) for two months	2,027 00
Recruiting service and pay of staff, for two months	3,320 82
Quartermaster's department for two months	2,312 85
Commissary department for two months	5,095 75
Surgeon and hospital expenses for two months	406 75
Incidental expenses for two months	200 00
Total	28,137 17

Mr. Speaker, it is unnecessary for me to recall to the attention of this House the manifold perils and hardships, wrongs and sufferings, exposures and cruelties endured by the early pioneer families of the great West. I would be met by the old and oft-repeated argument of philanthropists and theorists that "the white man is always to blame." This declaration, sir, is thoughtlessly made by men who look at and admire the "noble red man" as pictured in the distance through the romance and poetry of enthusiastic and imaginative authors. Of all races of men upon the globe it is a historical fact that those who are the most ignorant and uncivilized are everywhere the most depraved and barbarous. But, notwithstanding this acknowledged rule of mankind, we find many prominent Christian statesmen and distinguished philanthropists of the present enlightened day so blinded by sympathy for the heathen races that they openly avow their belief that the wild and superstitious tribes of the West, who grope in their predatory dens, beyond the light of Christianity and civilization, are among the most noble and praiseworthy creatures on earth. This opinion to a great extent pervades in the Halls of Congress and at the Departments of the Government, and in accordance therewith millions of dollars of the people's money are annually appropriated to feed and clothe these "noble red men" of the West, including all tribes, the good and the bad alike. Wild and speculative reports as to the exaggerated population of the wild tribes to be clothed and fed are annually received and acted upon, and large supplies shipped into the wilderness, based upon a census of thousands of Indians who do not exist.

But the white settler is obliged to go into the far West to hew out his home and sustain his wife and little ones upon the resources of his own industry; and these defenseless settlers are the ones who first fall beneath the avenging tomahawk of the red man whenever a wild tribe becomes enraged at the neglect or tardiness of the Government in supplying their promised subsistence.

Such was the cause and the terrible effect of the Dakota war of 1862. The helpless and innocent women and children of the frontier were indiscriminately murdered to avenge the wrong and deception practiced by the General Government in making the promised payments to the neighboring Sioux of Minnesota. In proof of this I need only to cite the fact that prior to the Sioux troubles which broke out in Dakota in 1862, the frontier settlers of the Territory had experienced no serious annoyance from the Indians; while tourists, fur-traders, and scientific explorers had for half a century previous been accustomed to travel unharmed among all the wild tribes of the Territory from the Missouri River to the Rocky Mountains. And as a further evidence that the most friendly relations existed between the early settlers and the Indians of Southern Dakota, I need only to repeat that no murders or depredations were committed upon the lives or property of the pioneer immigrants until the neighboring Sioux of Minnesota were provoked into open and savage war upon all whites by the faithless treatment received at the hands of the Federal Government.

Ever since 1859 all of Southern Dakota has been formally open to immigration and settlement. In that year the Yankton-Sioux Indians delivered up to the Government their possessions of lands in this section, in accordance with a treaty concluded at Washington the previous year, by the provisions of which treaty they are guaranteed by the United States the sum of $1,666,000, to be paid in annual installments for fifty years, in addition to a reservation of 400,000 acres. In the following year the United States Government commenced the survey of its newly-acquired landed purchase, and proclaimed the country open to immigration, thereby inviting colonization and settlement under the ample protection of the laws of the United States.

In 1861 Congress even went further, and gave to the people a territorial government in order that they might feel the fullest protection afforded by the strong arm of the Government to all its citizens engaged in the peaceful pursuits of industry. But how have they been protected? I need not again detail the wrongs and sufferings, rapine and murders, sustained by the early pioneers at the hands of a horde of enraged savages precipitated upon them from a neighboring State, at a time when they were living upon terms of peace and friendship with their own neighboring Indians, the Yanktons. Neither does it seem necessary for me to inform this House of the fact that while in the midst of these Indian troubles the pioneers of Dakota enlisted and furnished from their own thin ranks two full companies of cavalry for the United States Army.

And what grand results have they accomplished since the organization of that Territory? Sir, they have maintained the outposts of frontier civilization from 1862 to 1865, while harassed by Indians in their fields, at their homes, and upon the highways. They have, by steady and unceasing industry, overcome their disasters, and are fast becoming a productive and prosperous people. They have subdued the plains, opened farms and thoroughfares, established schools and

churches, founded most beautiful villages, and organized many flourishing counties. They have built railroads and telegraph lines without Government aid; they have constructed bridges and established steam ferries, and have built depots of trade, and induced boats of traffic to the navigable rivers of the Territory. They have converted the wild prairies into blooming grain-fields and lovely homes, and have advanced from a handful of struggling pioneers to a population of forty thousand people, producing their annual millions of grain and paying taxes upon their assessed millions of wealth. What people, I ask, sir, have done more or deserve better at the hands of Congress?

West Virginia Contested Elections.

SPEECH OF HON. G. W. HAZELTON,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

January 21, 1874.

The House having under consideration the resolutions reported from the Committee on Elections on the West Virginia contested-election cases—

Mr. HAZELTON, of Wisconsin, said:

Mr. SPEAKER: I am aware how irksome to the House the discussion of such a question as this is likely to be, and I shall endeavor in the remarks I have the honor to submit to be as brief as I can consistently with the ground which it is necessary to travel over.

I am sorry to say, as a member of the Committee on Elections, that this case comes before the House in such a broken condition, with such a want of harmony of view on the part of the Committee on Elections, that it becomes the duty of every member upon this floor to examine this case and to decide it upon his own judgment and his own individual responsibility. It is true that by a majority of one the Committee on Elections incline to hold that the October election was the valid election. But it is also true that one of that number files, with his concurrence in the report of the majority, a protest against the October election, which more than neutralizes the significance of his assent to the majority report. It is also true that, of the remaining five, three affirm in the most emphatic manner possible that they are not willing to rest their concurrence upon the ground set forth and embodied in the report of the learned chairman of the committee; and so they have attempted to fortify and prop up that report by a sub-majority report of their own.

It is usual in similar cases, Mr. Speaker, for members of a committee who concur in the conclusion to which the majority arrive to sign the report of the majority, while withholding their assent to all the reasons by which such conclusions may be reached, and to wait until the discussion of the case upon the floor of the House in order to state their peculiar views in detail. But the learned gentlemen who prepared the sub-majority report have seemed unwilling that this case should go to the House and the country upon the argument and the reasoning embodied in the majority report. They have seemed, if they will pardon the expression, to regard the report of the learned chairman of the committee as a bane to be accompanied by an antidote; and so we have in support of the October election eighteen pages of legal lore for the purpose of sustaining a proposition which we are assured is almost a self-evident one. Now, Mr. Speaker, when a half dozen able gentlemen sit down to deliberate upon a case, and resolve in favor of a common proposition, and no three of the number are able to render a reason for their opinion, which satisfies, I will not say the public mind, but which satisfies the other three, it is fair to infer that there is some inherent weakness in the position itself. And such I affirm to be the fact here. The circumstance that we have such an amplitude of argumentation, such a display of legal acumen and legal research and ingenuity on the part of the majority, is not due to any spirit of vainglory on the part of any of the gentlemen constituting the majority of the committee, nor is it due to any want of ability on the part of the chairman of this committee to do ample justice to the question under consideration. It springs from another cause. It springs, Mr. Speaker, from the inherent and insurmountable infirmity of that position. It springs from the difficulty there is in explaining to the common understanding how, under a law which provides that members of Congress shall be elected at a general election for State and local officers, they may just as well and just as properly be elected two months after such general election has transpired. That is the difficulty with this position which the majority of the Committee on Elections assume.

Now, Mr. Speaker, with all deference, it seems to me that this case is in a very narrow compass. It is not necessary to go far to find it. I beg to call the attention of the House to the language of the two sections of the code of West Virginia of 1869, which embrace the law involved in this discussion; and I ask gentlemen who do me the honor to listen to me, if they have one of the reports before them, to look at the language as quoted on page 19 of the minority report. It may facilitate their investigation upon this subject; for, as stated by the minority report, this question really turns upon the construction to be given to the two sections of the West Virginia code. The first section reads as follows:

SECTION 1. The general elections for State, district, county, and township officers, and members of the Legislature, shall be held on the fourth Thursday of October,

The following is the second section:

SEC. 2. At the said elections in every year there shall be elected delegates to the Legislature, and one senator for every senatorial district. And in the year 1870, and every second year thereafter, a governor, secretary of the State, treasurer, auditor, and attorney-general of the State; a prosecuting attorney, surveyor of lands, recorder, and the number of assessors prescribed by law, and a Representative in the Congress of the United States, for the term beginning, &c.

"At the said elections." Now, then, what is the meaning of that phrase? I may stop here to say that in quoting this law the authors of the sub-majority report, when they came to this provision of the second section, found a difficulty in their way. The law as it stands, and as it was written, does not read to suit them. But they are by no means discouraged by so slight a circumstance as that. Instead of changing their views to correspond with the law, they adopt the other course of changing the law to correspond with their views. And so at the end of the words "at the said elections" they interpolate a whole sentence which does not stand in the law at all.

Mr. LAMAR. Mr. Speaker, if the gentleman will allow me——

Mr. HAZELTON, of Wisconsin. The gentleman will pardon me for declining. He will have an opportunity to be heard.

Mr. LAMAR. The gentleman does not mean to say that we misquoted the section?

Mr. HAZELTON, of Wisconsin. No; I do not mean that. I say that if any gentleman will look at the sub-majority report he will see that in their construction of the second section of the code, after the words "at the said elections," they interpolate, "to wit, on the said fourth Thursday of October." They read that section of the code as if it contained those specific words, and then ask the House to pass upon the meaning of that section as thus amended.

Now, Mr. Speaker, although it might be well enough, if we had time, to discuss here what the law might be under certain circumstances, it seems to me altogether more pertinent to consider what the law is. What is the significance of this language? I ask members of the House to consider the force of the word which introduces this sentence, "*at* the said elections" members of Congress shall be elected. At what said elections? Why, at the elections referred to in the first section of the code—"the general elections for State, district, county, and township officers, and members of the Legislature." It is that election at which members of Congress are to be elected. And the whole difficulty with those who champion the October election has grown out of the impossibility of showing to an ordinary mind how members of Congress who are required to be elected "at the general elections" may just as well be elected two months after the general elections. No amount of legal ingenuity can overcome that insuperable difficulty in the way of those who assume that position.

What is meant by this word "at?" To my mind it has a wonderful significance in this sentence. It is a word which signifies something to be done in conjunction with some other thing. It is a word which signifies the matching of one event with another event. It is a word which we do not apply to a day in the calendar, nor to a day of the week. We do not say, "at the fourth Thursday of October;" "at the first day of the week." But we uniformly and always apply that word to an occasion; as, for instance, "at the beginning of an epoch;" "at the assembling of Congress;" "at the dawn of the day." We use this word "at" to imply an occasion in conjunction with which we locate an event.

Mr. SMITH, of New York. Permit me to ask a question.

Mr. HAZELTON, of Wisconsin. I beg the gentleman's pardon. He had his time extended for ten minutes, and I must be allowed to proceed without interruption. I say this with all respect to my learned friend, the chairman of the committee.

Now, then, I insist that from this second section of the code it appears that it was clearly the intent of the Legislature of West Virginia to fix the occasion of electing members of Congress at the time of the general election in that State. I say it appears from the language of the section itself, from the general language of the section. The section provides that the State and local officers, *and* members of Congress shall be elected at this general election. I infer this, also, from the specific language of the section, from the use of the term to which I have adverted, "at the said general elections."

Now, it does seem to me that the other construction destroys the entire meaning and significance of the first and second sections of this code.

Let me employ an illustration. In some of the States the laws provide that the county boards in the several counties shall meet on the first Wednesday after the general election; and also provide that at such meeting the votes cast at the general election immediately preceding shall be canvassed and the result declared. Now, I ask any fair-minded lawyer on this floor, if the time of the meeting of that board should be changed by an act of the Legislature, should be postponed for a week, would it not be the understanding that when that board convened under the law that duty which they were required to do *at their meeting* would then devolve upon them?

Take another illustration, which I have mentioned in the report of the minority. Suppose, for instance, that the first section of a law

should provide for fixing the time of the annual assembling of the Legislature in the State. Suppose it should provide that the annual meeting of the Legislature shall be on the fourth Thursday of October. Suppose, now, that the second section should provide that *at the said meeting* the governor shall deliver his annual message. What would be the meaning of those two sections, as they stand thus related? Why, sir, the first points out an occasion upon which a certain thing mentioned in the second is to be done, and the two are necessarily connected. Now, suppose the time of the meeting of the Legislature shall be postponed for a month; will it be contended that the message of the governor, which he is required to deliver "at the said meeting" may just as properly be delivered a month before that meeting occurs? The language does not bear that construction.

Now, I need only add further that there was no general election in October at which members of Congress could be elected. Therefore, if the election which transpired in August was not a general, legal, and valid election, then no valid election was held in that State that year. And it cannot be claimed, in my judgment, that any person was legally elected to a seat in this House from West Virginia unless at the general election which did occur in August. To this point I shall recur in a moment.

But before proceeding it may be well right here to allude to the burden of the argument of the learned chairman of the committee, [Mr. SMITH, of New York.] He seems to have predicated the larger part of his speech upon the fact that the word "district" is employed in the election law of West Virginia, and that in the schedule to the new constitution that word is omitted. In reply to that I may say that this point which the chairman raises and insists upon with so much pertinacity, was not raised upon the argument of this case at all. It was not suggested by either of the learned and distinguished counsel who appeared before the committee. It was not suggested, so far as I know, by any of the local attorneys or by the parties interested up to the time of submitting this case and the conclusion of the arguments upon it. But this fact furnishes no reason why the argument should not be fairly considered. It does seem to me, however, with all respect to the chairman of the committee, that when the Legislature of West Virginia used the term "district officers" in a law making provision for the election of assessors, of senators, of delegates, of judges——

Mr. SMITH, of New York. Will the gentleman allow me to correct him? Does he mean to assert that assessors are district officers?

Mr. HAZELTON, of Wisconsin. I do mean precisely that—that assessors are district officers.

Mr. SMITH, of New York. Assessors are county officers under the constitution of West Virginia. So many assessors are to be elected in each county as there are districts in the county.

Mr. HAZELTON, of Wisconsin. But I think the chairman will find that assessors are recognized as district officers.

Mr. SMITH, of New York. They are county officers.

Mr. HAZELTON, of Wisconsin. The chairman is in error, or I am; but there are district officers under the election law of the State of West Virginia besides assessors; and I insist that it is not a fair inference from the employment of that language in the law of the State that the Legislature intended to embrace the officers of another government, namely, members of Congress; not only because they are officers of another government, but because they are not necessarily district officers at all. A member of Congress may be elected by a State at large, as many members of this House have been elected. Members of Congress may be elected by the Legislatures of the States, as they were in some States in *ante bellum* times. They may be elected in one district to represent another district. So that I submit the employment of the words "district officers" in the election law of the State of West Virginia does not raise any fair legal inference that the framers of that law meant to include as district officers members of Congress.

[Mr. HAZELTON here gave way to a motion to adjourn.]

January 22, 1874.

Mr. HAZELTON, of Wisconsin, (resuming.) Mr. Speaker, when this question was under consideration yesterday, it was objected by the chairman of the Committee on Elections [Mr. SMITH, of New York] that assessors in the State of West Virginia are not by the code of 1869 district officers, as stated by me. I desire to send to the Clerk the code of West Virginia, from which I ask the Clerk to read two sections which I have marked.

The Clerk read as follows:

SEC. 2. When there is more than one district in a county the board of supervisors may by ordinance lay off and change the boundary between such districts; but in laying off or changing the said boundary, no township shall be divided. But this section shall not apply to the county of Berkeley.

SEC. 3. The authority and duty of an assessor shall not extend beyond his district, except to grant license for a privilege which may lawfully be exercised in or out of the district.

Mr. SMITH, of New York. Will my colleague on the committee allow me to call his attention to the close of section 1, which provides that the voters of each county shall elect one assessor for every district therein? The point I made was that the assessors are county officers within the meaning of the constitution, and of section 1 of the law.

Mr. HAZELTON, of Wisconsin. It is on that point that I take issue with my friend. The code of West Virginia says they are district officers; and it seems to me it is conclusive upon this subject; so that we have in my view not only this class of district officers, but also senators, delegates, and judges, all of whom were district officers under the election law and under the code of 1869.

Now, then, the chairman of the committee in his remarks yesterday desired, he said, to hear from his colleague from Wisconsin (referring to myself) as to whether certain district officers and circuit judges were to be elected in 1874, under existing laws, on the fourth Thursday of October or at some other time.

It is perhaps unnecessary for me to consume my time in adverting to this subject. I only do so for the purpose of reminding the chairman of the committee that by looking critically at the constitution of West Virginia he will find that circuit judges hold their office for a term of eight years; and that by the common understanding of all parties in that State interested in the election of 1872 those judges were all elected at the August election for that period of time; and as a matter of course there can be no election of circuit judges in 1874 in that State.

Now, Mr. Speaker, in the remarks I hurriedly submitted to the House yesterday I undertook to demonstrate that the October election, as it is called, cannot in any possible view be maintained as the valid election of that State for that year.

Mr. SMITH, of New York. Let me say——

Mr. HAZELTON, of Wisconsin. I decline to be interrupted. The chairman has already had more than an hour in which to express his views; another member of the majority is to follow me; and I desire to proceed with my argument.

In further support of my proposition that the October election was clearly invalid in any point of view, I call attention to the fact that the new constitution, which in terms, as well as by legal effect, repealed all laws inconsistent with its provisions, provided expressly that the election for 1872 should be held on the fourth Thursday of August; and after that year on the second Tuesday of October; thus repealing the statute which designates the fourth Thursday of October as the day of the general election. Whatever may be said as to the August election it seems to me as clear as a mathematical demonstration there was no law in existence for an election of any kind on the said fourth Thursday of October. I undertake to say in my judgment there was no earthly power in that State which could move the machinery for holding a general election on that day. There was no obligation resting on any one of the election officers to lift a finger holding an election or making returns of election on the fourth Thursday of October in that year.

Now, sir, with this I dismiss this part of my argument, and pass to the other question, namely, was the election on the fourth Thursday of August in that year a valid election for Representatives in Congress? Up to the fourth Thursday of August, 1872, the law stood as already quoted. The new constitution, prepared in the winter of 1872, simply struck out "October," in the first section of the code, and inserted "August." It is not denied it was entirely competetent for the constitutional convention to do this. There is no question raised here as to the plenary power of the constitutional convention to deal with that subject. The day of the election at which the Legislature had declared Representatives in Congress should be elected was transferred, transplanted, by competent and proper authority from October to August. This being done, we are only giving effect to the language and the clear intent of the Legislature, when we insist that Representatives in Congress should be elected at said election. To me the argument seems conclusive. I cannot understand wherein it is faulty. If gentlemen will observe again the second section of the code, to which I called attention yesterday, they will see it applies with precisely the same force to the election in August as if it had remained in October. "At the said election," to wit, the election of State and local officers, whenever the same may be held pursuant to law, Representatives in Congress shall be elected. This will be still more manifest if we refer to the old election law of West Virginia, the law of 1863, which, strangely enough, is quoted here in the majority report for the purpose of supporting the views of the majority, that Representatives in Congress must be elected on the fourth Thursday of October, whether the general election should occur on that day or not.

Now it will be seen that, when the codification of the laws of West Virginia was made in 1869, there is a significant omission of the terms of the law of 1863, which limit the election of members of Congress to a specified day. Those words are eliminated from the law as if for the very purpose of leaving the second section of that code unembarrassed in case the occasion of a general election should be in the history of the State at any time thereafter changed by competent authority from the fourth Thursday of October to any other day.

But it is objected that under this theory the convention, and not the Legislature, prescribes the time. Not at all. Here, in my judgment, is precisely where our adversaries fall into error. The Legislature stated in the plainest terms it could employ that Representatives in Congress shall be elected at the general election; and when that general election was changed, no matter by what competent authority, the voice of the Legislature was still heard repeating its edict, and it is still repeating its edict to-day, that Representatives in Congress shall be elected at the general election. That, it seems to

me, is the whole argument in regard to the August election. The Legislature having prescribed that Representatives in Congress shall be elected at the general election for State and local officers, when that general election is transferred from one period to another, by lawful authority, the election of members of Congress follows the general election precisely as the shadow follows the substance, as the incident follows the principal.

But it is insisted on the part of our adversaries that the August election was not the general election. Now, Mr. Speaker, I do not think it is important for me to spend much time on that objection. It is conceded that all the officers from the governor down to the lowest town officer were elected in August, and that they qualified in due time and entered upon their functions, and are still discharging their duties as officers of the State of West Virginia. There is no feature of a general election which this August election does not meet and answer in every particular. It was an election to provide the entire official staff of that State. It was an election under the general election laws of that State. It was an election which, had it been held two months later, every gentleman on this floor would concede was the general election. Therefore, call it what you will, it was precisely that thing which, had it transpired two months later, everybody would regard and recognize as the general election, and which when it occurs on the second Tuesday of October next year everybody will recognize as the general election.

I have before me, Mr. Speaker, a ticket, which I find in the Wheeling Register of the date of August 10, 1872, which is the leading democratic paper for the State of West Virginia. This newspaper, responding to several inquiries which had come up from different parts of the State as to the form of ticket to be used at the August election, furnished its readers and the public with a sample ticket. And I find on looking over this ticket, headed "Democratic State Ticket," that it included every officer from governor down to constable. It included the governor, the attorney-general, the auditor, the treasurer, the superintendent of schools, judges of the supreme court, judges of the circuit courts, and all the local officers, and also Representatives in Congress; and that ticket was furnished to the people of that State as a sample of the ticket to be employed at the August election.

I say, therefore, that there is no view, no fair view of this objection, which can recognize in it any force or significance whatever. If this was not a general election no general election was held that year in that State. If it was not a general election no general election will be held in that State in 1874, because nothing will be done on the second Tuesday of October, 1874, to constitute a general election, which was not done on the 4th of August, 1872.

But it is again objected that, conceding that this was the general election, the time was not sufficiently prescribed. Now, Mr. Speaker, I will not dwell long upon that objection. It does not seem to me, in view of the precedents in this House, which are spread over a history of forty or fifty years, that it is necessary to go into any elaborate discussion of that question. When the Constitution of the United States requires that the time for holding an election for Representatives in Congress shall be prescribed by the Legislature, I suppose it simply means that the time shall be designated or fixed by legislative authority; or in pursuance or under the sanction of legislative authority.

Now, so far as this term "prescribe" applies to the election in August, if I understand the legal force of terms, there was ample legal prescription. The new constitution and schedule were, if ratified, to be in full force and effect during every part of the fourth Thursday of August. That constitution was the law of the State, therefore, when the polls were opened on the said fourth Thursday of August; it was the law of that State because it was subsequently ratified in whole and in every part, and thus made the law by the sovereign voice of the people having ample authority to so determine and elect. Before a vote was polled, therefore, the law was in full force which made that day the time for electing Representatives in Congress. This was a sufficient prescription.

But, Mr. Speaker, even if there were any doubt on this subject, as an original question, it has been settled by the uniform rule and practice of the House. It is too late, therefore, to say that such a prescription of time was not within the Constitution of the United States.

The authorities are so uniform and so conclusive upon this subject, that I only need advert to them, and then I will dismiss this branch of my subject.

The constitution of California was, without any enabling act, framed on the 13th of October, 1849. It was ratified on the 13th of November, 1849. The eighth section of the schedule contained these words:

> At the general election aforesaid, namely, the 13th day of November next, there shall be elected a governor, lieutenant-governor, members of the Legislature, and also two members of Congress.

On the 9th of September, 1850, the State was admitted and the Representatives took their seats.

The State of Arkansas framed a new constitution in 1868, which was submitted for ratification or rejection on the 13th day of March, 1868, and on successive days; and at the same time the people were authorized to elect "members of the House of Representatives and State officers."

In 1867 the State of Louisiana framed a new constitution, which was submitted to the people on the 17th and 18th days of April, 1868. The schedule provided for the election of State officers and "congressional Representatives" on the same days.

Precisely the same thing occurred in the States of Minnesota, Mississippi, South Carolina, Nebraska, Nevada, Alabama, and Texas.

Now, Mr. Speaker, I submit, with all deference but with great confidence, that it is too late in the history of this country, it is too late in the history of this House, upon this identical question, to insist that the prescription thus afforded the voters of that State was not an adequate and legal prescription. It seems to me that these cases settle that proposition beyond any question.

But, Mr. Speaker, I will not dwell longer upon the law of this case, for I see my time is rapidly expiring. I insist that the facts which surround these election cases are significant, and that this House cannot pass upon this question without looking these facts squarely in the face. It is not denied that at the August election almost 45,000 votes—in exact numbers 44,918 votes—were polled, while at the October election, or so-called election, there were but 22,177 votes polled.

Mr. SMITH, of New York. Am I to understand my colleague to mean that he will not yield for any question?

Mr. HAZELTON, of Wisconsin. That is precisely what the chairman of the committee is to understand. I give him the aggregate vote of the State, not the vote of these two districts; but as bearing upon the question of fact herein involved it is material to be considered.

Now for the facts in these two districts. I desire to send to the Clerk's desk, to have read, a call, duly published, of the democratic executive committee of the first district for a convention in August to put in the field a candidate for Representative in Congress from that district.

The Clerk read as follows:

> The delegates appointed to nominate a democratic candidate for the first congressional district are requested to meet at Clarksburgh, on Tuesday, August 6, for the performance of that duty.
>
> A. J. PANNELL,
> J. W. GALLAHER,
> JOHN BASSELL,
> WILLIAM P. THOMPSON,
> *Democratic Executive Committee for First District.*

Mr. HAZELTON, of Wisconsin. In pursuance of that call Mr. Wilson was placed in nomination, and by himself and his friends entered upon an active canvass of that district, following it up until the very night preceding the August election, on one occasion at least he and his competitor in that canvass having a joint discussion upon the political issues involved. Both candidates went through that canvass and submitted their names to the electors of that district. When the votes were polled and canvassed it turned out that a larger vote had been polled for the candidates for Congress in that district than had ever been polled before; some 4,000 larger than had been polled at the election two years previous. More votes were polled for Representative in Congress than were polled for the State treasurer, the State auditor, and for several other candidates on the respective party tickets.

Not only that, but two days after that election had transpired, when it was believed that Mr. Wilson had been elected, when the returns received seemed to point to his election, the Wheeling Register, an old democratic paper in that State and district, came out with the announcement, under the proper head-lines, as follows:

> There seems to be no reason to doubt that Colonel Benjamin Wilson has been elected to Congress in this district over Hon. John J. Davis, the latter running largely behind his ticket in many of the precincts heard from.

Right in this connection, I desire to have the Clerk read the remarks of Senator Jacobs, a democrat, never a republican, and never acting with the republican party, a prominent citizen of Wheeling, and as high-minded and honorable a gentleman as there is in that State. These remarks were made in the senate of West Virginia, at the time a certain bill was under consideration, directing the secretary of state to certify the election of Wilson and Martin as Representatives in the Forty-third Congress.

The Clerk read as follows:

> Senators on this floor complain that the governor did not give certificates. The governor did give the certificates. As to the proper day for the election, there was a great difference of opinion. Some said the 22d of August was the day, others, equally entitled to respect for their opinions, thought it was in October, but there had yet been no decision of the question. The schedule of the new constitution provided that the general election for county and State officers should be on the 22d of August. In the first district both parties agreed before the election that the 22d of August was the time to vote for members of Congress, and nominations were made and the candidates voted for just as though it was all settled that that was the day. The leading democrats all agreed that the 22d of August was the day, and I did not hear of a dissenting voice to that proposition till after the election and the result was ascertained. There never would have been a word said if Hon. J. J. Davis had not succeeded. Davis beat Wilson, and then the cry was raised that the day was not right. That was the trouble. It was not that the day was not legal, but that the right man was not elected! There was another election held in October, when only a few more than 4,000 votes were given. And the fact that the people did not turn out then shows that they had settled upon the 22d of August as the day of voting for members of Congress.

Mr. HAZELTON, of Wisconsin. This testimony of Senator Jacobs is, that he never heard the question raised as to the legality of the August election until after it had become known that Mr. Wilson had been defeated in that contest. He says, furthermore, that it was agreed between those parties, between the opposing candidates, that the election in August should be taken as the regular and valid elec-

tion; and that they entered upon their canvass with that understanding. Mr. Jacobs resided at Wheeling, the center of political influence in that district as well as in the State. And when he says, as he does here, that he heard no question raised at all until after it was ascertained what the result of the August election was; when he says that no question was raised as to that being the regular election, it does seem to me that he states a fact which ought not to be overlooked, and which cannot be ignored in passing upon this case.

We have, then, these facts: A contest or election held on the fourth Thursday of August; a contest between these opposing candidates; a joint discussion between them; a larger vote polled in that district on that day than had ever been polled before. We also have the statement made, which it seems to me is entitled to credit, that no question was raised by anybody after these nominations were made, and when this canvass was entered upon, as to that being the legal day of election for that year.

I wish to know if this House of Representatives is prepared to say that it will deny a seat to the gentleman regularly and fairly elected in that contest, and open its doors to a gentleman who, being repudiated by the people on a full vote in August, ran alone on the fourth Thursday of October, when there was no general election, and who, if elected at all, was elected upon an aggregate vote of 4,179, at a so-called election, when but that number of votes in all were polled? I do not believe that this House is prepared to take that course.

Now, so far as the second district is concerned, I have only a word to say. It seems that a smaller vote was polled there, a much smaller vote than was polled in the first district. Mr. Hagans ran in that district without the benefit of a regular party nomination. It would seem that rival candidates, demagogues, and interested parties labored together to keep the vote for Representative in Congress as low as possible. But running as an independent candidate on the republican ticket, Mr. Hagans, without the aid of a party indorsement, received something like 4,000 votes.

Mr. SMITH, of New York. He received some 3,400 votes.

Mr. HAZELTON, of Wisconsin. He received over 3,400 votes at an election where the aggregate vote was larger than at the election in the first district in October, under which Mr. Wilson claims a seat. Therefore it does not lie in the mouth of any gentleman who seeks to seat Mr. Wilson upon the vote he received to say that Mr. Hagans did not receive a fair and adequate vote in the second district.

Mr. SMITH, of New York. As the gentleman's time has expired, perhaps he will permit me to ask him whether there were not eleven counties in the second district in which there was not a vote cast in August for Representative in Congress?

Mr. HAZELTON, of Wisconsin. I do not know whether that is true or not; we have no evidence in the case upon that point. The gentleman may take as true statements which are floating around in newspapers if he sees fit; but we have not one scintilla of evidence upon that subject before the House, as I understand it.

Mr. SMITH, of New York. I beg the gentleman's pardon. It was stated by counsel, and was uncontroverted, that in eleven counties not one vote was cast for Representative in Congress.

Mr. HAZELTON, of Wisconsin. Possibly that may be true; but there is not a particle of evidence of it; and certain it is the vote was not more sparse in the second district in August than in the first district in October, under which the chairman of the committee seeks to seat Mr. Wilson.

The Currency—Specie Payments.

SPEECH OF HON. JOHN B. GORDON,

OF GEORGIA.

IN THE SENATE OF THE UNITED STATES,

January 20, 1874.

The Senate having under consideration the following resolution, reported by Mr. SHERMAN from the Committee on Finance:

"*Resolved*, That it is the duty of Congress during its present session to adopt definite measures to redeem the pledge made in the act approved March 18, 1869, entitled 'An act to strengthen the public credit,' as follows: 'And the United States also pledges its faith to make provision at the earliest practicable period for the redemption of the United States notes in coin;' and the Committee on Finance is directed to report to the Senate, at as early a day as practicable, such measures as will not only redeem this pledge of the public faith, but will also furnish a currency of uniform value, always redeemable in gold or its equivalent, and so adjusted as to meet the changing wants of trade and commerce;"

The pending question being on the amendment submitted by Mr. FERRY, of Michigan, to strike out all after the word "resolved," and insert the following:

"That the Committee on Finance is directed to report to the Senate, at as early a day as practicable, such measures as will restore commercial confidence and give stability and elasticity to the circulating medium through a moderate increase of currency"—

Mr. GORDON said:

Mr. PRESIDENT: I propose to discuss this question of finance chiefly as it relates to the agricultural interests of the country, which are the foundations of all other interests; and as the basis of the remarks which I shall make I submit three distinct propositions, the truth of which I think will not be denied, and which are so nearly self-evident that they may be regarded as axioms of political economy.

First, when in any agricultural country, such as the United States, the cultivation of the soil ceases to be remunerative; when its profits are, year by year, absorbed by others than the tillers of the soil; when the producer grows poorer and the non-producer grows richer; when wealth ceases to disseminate itself among the producers of the wealth and concentrates in the hands of a few, *then* there is a fundamental evil, a *radical wrong*, either in the financial system or the legislative polity, or both, of such agricultural country.

The second and third propositions are correlative to this, and may also, I think, be regarded as axioms of economic science. They are these:

Secondly, that when in any large agricultural community, such as ours, an inconsiderable number of its citizens possess the power to divert from the ordinary purposes of trade a sufficiency of the circulating medium to depress or inflate the prices of commodities at will; or,

Thirdly, when the price paid for the use of the circulating medium is for successive years so excessive as to be altogether disproportioned to the profits made by the producer, then in each and all these cases is the evidence infallible of a wrong, a false system of finance.

I shall not consume the time of the Senate by an array of facts to prove that the state of things I have hinted at does exist in this country at this time. There are facts, sir, which are so notorious that the bare mention of them carries conviction to the mind as forcible and thorough as elaborate proof.

It is a notorious fact that the cultivation of the soil in this country is not remunerative. It is a notorious fact that its profits are year by year absorbed by others than the tillers of the soil. It is a notorious fact that the price paid for the use of money is and has been for years so exorbitant as to make it rather a burden than an aid to the producer. It is a notorious fact that wealth disseminates itself less and less, and that the power of concentrated money is fast becoming so measureless that, like Omnipotence, it has but to speak and it is done; but to will, and values expand and diminish according to its will; but to stretch forth its arm, and the wheels of industry stand still. And I verily believe if this system of finance, unaltered, unmodified, with its rigidity of volume, with its non-elasticity, with the ability, therefore, of capitalists to control it, is to continue, the day is not remote when *concentrated money* will dictate the profits on every industry and enterprise of this country; will hold in its own hands the material interests, if not the private rights and personal liberties of the citizen; will dictate the legislation that is to be had in both wings of this Capitol, as it does now in some of the States, and will in no small degree become the arbiter of this experiment of representative government.

Sir, are these things true? Who doubts them? And why are they true? Why, in a country so new as ours, so vast, so limitless in its resources, is it possible for such an anomaly of industry to exist? Let the apologists of our unfortunate system—unfortunate as manipulated—explain the recent panic as they may, or fail, as they will, to find any satisfactory explanation, it is still true that the recent commercial convulsion, the disasters from which no scales can measur- and no mathematician can calculate, which has changed in a day opulence to ashes, and, what is of infinitely greater moment, has deprived the laborer of his daily toil and his daily bread, is no inexplicable financial catastrophe. It is but the legitimate outgrowth of the same fundamental evil which has bred and fostered all the other evils of which I have spoken. It is but the crowning effort of a system which can be perfected, but which is far from perfect at present.

How vain are the efforts to explain this recent disaster upon any other hypothesis! Some of these efforts at explanation would be absolutely amusing if the subject were not so serious.

Says one, the system is good, but the banks in New York have certified too heavily the checks of the stock brokers. Well, now, Mr. President, I do not stand here as the apologist of the stock brokers; but I believe the facts are that of the thousands of millions of dollars so held at risk, no single bank in New York has lost any considerable sum by the certification of the check of any single member of the stock exchange.

Another says the panic is caused by our producing and exporting too lightly and importing too heavily, and that we have thus built up against us large foreign balances. Well, now, Mr. President, it would doubtless have been better for us if we had produced and exported more, and imported less. But can this account for the absence of money from the trade of the interior? Sir, what are the facts? Providence has been propitious. The soil has bountifully yielded her increase; and I believe that the ratio of our exports to imports as compared to years free from panic has been rather in our favor, and the most important of our foreign balances, the gold bonds, have been driven abroad by the system itself. Do you ask how? I will explain how. The farmer or the merchant having in hand his gold 6 per cent. bond, and forced to borrow money, found that it cost him, not 6 per cent., but 12, 18, or 24 per cent. He could not therefore hold his bond, and when he offered it upon the market the holder of the greenbacks who could invest found in turn that his greenbacks could be lent at from 12 or 18 to 24 per cent. The 6 per cent. bond, therefore, was forced to seek a market abroad, where 6 was above the average per cent.

"But," says another, "the system is good; the people have only lost confidence." And he sighs for some one with voice loud enough and potential enough to be heard and respected by the whole country to sound the word "confidence."

What sort of confidence has been lost, Mr. President? Certainly

not the confidence in the value of the money. Otherwise there could have been no hoarding; otherwise the bankers of my town could not have developed the fact which they did, that gold could be more easily borrowed than greenbacks; otherwise debts would have been paid with commendable promptness; otherwise money would have rushed into investments all over the country. O, no, Mr. President; whatever loss of confidence there has been, sir, has been the loss of confidence in the *quantity* and not in the quality of the money. If greenbacks had been as plentiful as confidence in the greenbacks, we should have had far less of panic.

Another says we have built too many railroads where they are not needed; but this has been so fully answered that I shall not repeat it.

The last effort at explanation which I shall notice is that reported to have been made by the honorable Senator from Massachusetts, [Mr. BOUTWELL,] the late Secretary of the Treasury. And if an apology be needed for introducing upon this floor words not spoken in this Chamber, I trust it will be found in the importance which the country will naturally attach to any expression of opinion upon finance by so distinguished a legislator and so able a financier. The honorable ex-Secretary is reported to have attributed in one of his recent speeches to the public much of the recent disaster to the overmanufacture of cotton goods. I am at loss to understand how the honorable Senator can reconcile such an opinion with the fact that the raw material bears nearly the same relation to the manufactured article that it has hitherto borne; or with the fact which exists in my State, at least, namely, that the manufacture of cotton is still, of all our enterprises I believe, the most profitable, paying annual dividends of from 10 to 20 per cent. upon the capital invested.

I have referred to these efforts at explanation only to show their fallacy, and to call the attention of the Senate and the country to the real evil. Those who seize upon these as sufficient explanation for the recent panic grasp but the bubbles upon the surface and have not sounded the deep undercurrent of the evil, which is found stated in the rigidity of volume, the non-elasticity, and therefore insufficiency of currency.

I wish I had the time to analyze all the objections which I think lie against the present system. I think it would be easy to prove that, by the very operation of the law which lies at the bottom of the system, it does induce at seasons undue flow of money to New York and to the great centers.

That these accumulations do encourage speculations, and speculations create panics.

I think it would be easy to show that its very rigidity of volume, its non-elasticity, its insufficiency make it the subject of control by heavy capitalists, and thereby place at the mercy of Wall street the profits on the legitimate industries of the country.

That it prevents competition, and thereby insures a high rate of interest, which is death to the debtor and to the producing sections.

That it brings of necessity the Treasury into competition with Wall street in the sale of gold, and thus makes it not only a speculator in its own promises, but an absorber of the currency already insufficient for the people.

It changes, in a word, the Government into a gigantic banking establishment which, in violation of every principle of equity, and unmindful of its effects upon the morals of the people, demands payment in one currency, while it makes payment in another.

It thus sets an example whose pernicious influence is fast debauching the people and changing the nation into a nation of speculators and gamblers.

Mr. President, these are evils which I think exist in this system, and evils which can be easily, and I hope will be, remedied by the legislation of this Congress.

I come now to the most important question, the question of remedies. And here in the application of these remedies we cannot afford to make mistakes. How are we to avoid mistakes? It is a great question. How, in the multiplicity of the conflicting plans, are we to determine which plan will bring present and permanent relief to the country? What is to be the standard that is to try these plans? Is it to be your opinion, or mine, or the opinions of any number of Senators or financiers, however infallible? Nay, but every proposition, every plan, every theory, must be tested by the plummet, not only of reason, but of experience and of the history of other countries as well as ours. Whatever plan, whatever suggestion is not supported by this test of experience must forever perish. Let every theory, however warmly embraced or venerable with age, be silent in the presence of controverting experience and of contradicting facts. Let experience, let history, let facts stand; let all else perish in the investigation of this great subject.

With this simple rule, which no Senator will deny is a just one, let us come to the examination first of the theory so ably defended by the honorable Senator from Vermont, [Mr. MORRILL,] by the honorable Senator from Massachusetts, [Mr. SUMNER,] by the honorable Senator from New York, [Mr. FENTON,] and by other able Senators, and more recently by the able chairman of the Finance Committee, [Mr. SHERMAN,] namely, a speedy return to specie payments.

This, sir, is a remedy hoary with age; but, as I shall show, hoary with failure also.

In all that I have to say on this subject I trust I shall not be understood as opposing specie payment when consistent with the best interests of the producing classes of this country; but I do wish to be understood as taking issue, broad and emphatic, with the position that a speedy return to specie payment under our circumstances, or any forced return at any date which this Congress could set, will relieve the country, is practicable, just, or expedient.

First, can it relieve the country? The honorable Senator from Michigan, [Mr. FERRY,] in his able remarks on this question, referred to the well-known fact that specie payment never had prevented disaster when it existed; and it is true. In 1837 the suspension of specie payment followed, and did not precede, the commercial difficulties of the country. Suspension was the consequence, not the cause, of the disaster. Our whole commercial fabric was shaken from turret to foundation before a solitary bank in the United States suspended. The honorable Senator from Indiana [Mr. MORTON] showed clearly the additional fact that a return to specie payment had never been successfully resorted to to relieve commercial disaster. Absolutely the reverse is true. Suspension has been the remedy. It has been so in this country; it was so in England and everywhere.

Senators seem to have forgotten the good old adage that an ounce of prevention is better than a pound of cure; but the force of their logic would lead us to conclude that an ounce of cure was better than a pound of prevention. For if existing, established specie payments could not prevent a coming disaster, how—will Senators tell us how—can a prospective resumption cure an existing disaster? I leave to the ingenuity of Senators to reconcile such incongruous logic and bring it to the apprehension of the Senate.

I am unable, Mr. President, to see the wisdom of insisting on a programme which, as has been shown, has never prevented disaster when it existed, has never cured disaster when resorted to, and which cannot relieve the country, and is neither practicable, just, nor expedient.

Is it practicable? Can we return to specie payments within any short period? The honorable Senator from Vermont [Mr. MORRILL] said in his remarks that it was not a question of the ability of the Government to redeem its currency in gold, but a question of will; and he facetiously added that "we might pardon the inability to pay, but who could defend the lack of will?" The honorable Senator will pardon me for suggesting that if a day were now set by this Congress upon which the Treasury of the United States should begin the redemption of its greenbacks, and proclamation made thereof, in an incredibly short time thereafter the speculators on Wall street would control every dollar of gold in that Treasury, or that is likely to be in the Treasury within any given time. I think I could show this if I had time, but I hasten on.

Mr. President, this is not a question of whether Mr. A or Mr. B shall receive at the Treasury five dollars for his five-dollar greenback when it is presented, but it is the infinitely greater question of whether the tens of thousands of holders of greenbacks all over this country shall be subjected to irretrievable loss by having the Government undertake to redeem when it cannot redeem, and thereby leave the millions of greenbacks dishonored in the pockets of those who fail to secure redemption.

But, if forced resumption were practicable, would it be just? If my surroundings were those of the honorable Senators from Vermont, Massachusetts, and New York, if the people who sent me here were creditors, as are their constituents, instead of debtors, then I, too, might look upon this proposed change in our financial status with some degree of philosophic complacency.

But, sir, the people of the South and of the West are debtors; and their obligations were formed, mark you, when gold was at 110 to 150; and now to force them to pay in a currency equal to gold would be simply to increase their debts by the amount of 10 to 50 per cent.

But if it were both practicable and just, would it be expedient, would it be consistent with the best interests of the producers, to return to specie payments within any limited space of time? This is the great question, after all. I apprehend that there are but two roads with a government currency to specie payments. One is by contracting the currency, as proposed here, to within a certain relation to the specie which you may hold in the Treasury, which would bring bankruptcy to the country; the other by giving vitality to production, which can only be done by giving facilities for production. To give facilities for production we must give money at low interest in order that our exports, our trade, internal and foreign, may be built up, and that we may enhance individual as well as national wealth.

Which of these two roads shall we take? That is the question on which the Senate is to vote. Shall we contract, or shall we give to the country more currency? Here the battle is joined; here the roads diverge. I ask which shall we take? To my mind, supported, as I think I am, by experience and history, the latter is the shortest, surest, easiest, and best. We cannot pay gold for greenbacks until we get gold; we cannot get gold until we bring it back to this country; we cannot bring it back to this country until our exports and our sales bring it to us. We cannot increase our sales until we increase our productions; we cannot increase our productions until we increase our facilities for production, by giving to the producers money at low interest—not an inflated or redundant currency, as Senators would term it—but a sufficiency of low-rate money.

Sir, I want no inflation, which means a volume unduly swollen beyond all the legitimate wants of the country; but I make bold to say that when a people are burdened with debt, when every enterprise languishes, when every industry is prostrate, when wide-spread blight

is upon us, even inflation, which, like the stimulant to the enfeebled pulse, may give new life and vigor, is better than insufficiency. I repeat, I want no inflation. Do you inflate the sick man starving for food by furnishing to him the nutriment which shall bring blood to his veins, flesh to his bones, and vigor to his whole system? Inflation is one thing; sufficiency is a very different thing.

Much has been said in this debate, particularly by the honorable Senator from Ohio, [Mr. SHERMAN,] as to the relative amount of currency in this country, and in France and England. Now, sir, our population, by the statistics of 1870, was, in round numbers, 38,500,000. If we calculate that the population will double every thirty years, it would now be, in round numbers, 42,500,000. Our circulation is in round numbers about $700,000,000, and if you deduct the reserves and the amount absorbed upon occasion by the Treasury in its sales of gold, the average available currency cannot exceed $560,000,000, or about $13.17 *per capita*. England has statistically $19.48; but when you make allowance for short-time bills, for the amount of gold in currency and change, it cannot be less than $25 per head. In France, during the war her currency was at one time $40 *per capita*, and it cannot now be less than $32 *per capita*. Now, sir, I ask is it inflation to give to the people of the United States an amount of currency approximating the amount which the most conservative nations in the world have demonstrated is essential to healthy trade? If the experience of England demonstrates, as it has done, that twenty-five dollars is not too much for her people; if the experience of France demonstrates that thirty-two dollars is not too much for the French, how is it that the enlightened statesmanship of the United States has discovered that $13.17 is enough for us? Are our necessities any less than the necessities of England and France? I apprehend they are greater—always greater in a sparsely settled country—for circulation—it is a rule of currency—is more rapid in densely populated countries. If therefore a five-dollar bill pays ten debts per day, it is equal in value as a circulating medium to a fifty-dollar note which pays but one debt per day. I argue, therefore, that when we take into consideration the small amount allowed to us as compared with France and England, and the additional thought that we need even more *per capita*, we have not in reality more than half the currency actually needed. I believe that to be the truth.

But Senators talk of the idea of increasing the currency at all as a subject of alarm. Mr. President, are the teachings of history and our own experience to go for naught in solving this important and complex problem? Have Senators forgotten what history and our own experience have taught us upon this point? Let me repeat that mere theory should be silent when facts and history talk. Why, sir, look at Scotland, within the short space of twenty-five years nearly quadrupling her wealth after doubling her currency. Look at France, with her currency more than doubled, I believe, or quite doubled during the war. Notwithstanding her devastation she has been able, by quickening her enterprises and her industry, to pay her indemnity of one thousand millions in gold to Germany, to keep her interest at 6 per cent. per annum, to make her paper money receivable for all dues to government and individuals alike, and now confronts us with the overwhelming argument of this increased volume at par with gold. These are stubborn facts, Mr. President. Look at England, too, again and again, in times like these, by an act of government, suspending specie payment and authorizing an increase of the currency, even at the cost of the suspension of the most solemn enactments of the British Parliament. What was the effect there? Are the effects here to belie the effects everywhere else in the universe? What were the effects there? They were absolutely magical, as I intend to show. Panic subsided immediately; failures abated; commercial confidence was restored; and, what is a most significant fact, gold flowed into the country. Hear what a distinguished writer upon this subject has to say. I read from Thornton, a distinguished member of the British Parliament. Speaking of the increase of exchequer bills authorized by the government when the panic was at its height, he says:

> This expectation—

Mark that, if Senators please—

> This expectation cured in the first instance the distress in London, and then it lessened the demand for guineas in the country through the punctuality in effecting London payments which it produced and the universal confidence which it thus inspired. The sum permitted by Parliament to be advanced in exchequer bills was £5,000,000, of which not one-half was ever taken.

But what say the committee appointed by Parliament to investigate the effect of this increase of currency upon the finances and industrial interests of England?

> The advantages of this measure—

Say the committee—

> were evinced by a speedy restoration of mercantile transactions, which produced facility in raising money that was presently felt, not only in the metropolis, but throughout the whole extent of Great Britain. Nor was the operation of the act less beneficial with respect to a variety of eminent manufacturers, who, having in a great degree suspended their works, were enabled to resume them, and to afford employment to a number of workmen who must otherwise have been thrown out of employment.

Therefore, Mr. President, the relief which this expansion gave to England was not even delayed until the money reached the hands of the people; the very expectation of the money's coming gave relief; and I make the prediction here to-day that if this Senate and the other wing of the Capitol should announce by a vote that they intended to give more money to the people, and give it flexibility, the very hour that the electric telegraph bore the intelligence to the country, that very hour would relief be practically inaugurated, and it would bring millions of hidden greenbacks from the safes of the hoarders. I have no question about it. History does not belie itself. The people of England are not unlike the people of this country. The same disasters which were cured there by certain remedies can be cured here by the same remedies, and in no other way.

But, sir, it is worthy of note—and I want the speedy resumptionists to stick a pin just there for future reference—that though the panic was created in England by a dearth of gold, (which is not true here,) by an overdemand for guineas, it was not cured by a supply of guineas. Hear what this author says on that subject. He says that it was the "expectation of the increase of exchequer bills." A panic created absolutely by the dearth of gold was not cured, as these speedy resumptionists propose to cure this, by a supply of gold. No, sir; but by *exchequer bills*, and relieved by the very expectation of the exchequer bills.

Mr. President, *history* ought to be worth something in the investigation of this subject.

But now I wish to examine the effect of the opposite course—the course so eloquently pleaded for by the speedy resumptionists. I have shown what was the effect of expansion; now what was the effect of contraction? They tried that in England, too. At a later day, when commercial disaster approached, they did contract and they did resume; but did they cure the panic? Did they bring relief to the country? Nay, sir; hear again the facts:

> It is clear at least that it did not in the more recent instance succeed, by the diminution of notes, in curing the evil which it aimed to remedy.

Where is the Senator who will answer these facts? But I have read enough upon that subject.

Now, sir, I believe it is conceded that no portion of English history furnishes a parallel in prosperity to the twenty years of suspension of specie payment; but I am not going into that question. I think our own experience teaches precisely the same lesson. Why, sir, at the South during the war, with one dollar of gold worth sixty dollars of southern money, there was less of financial distress in the country than there is to-day. And what was the truth at the North? Prosperity reigned everywhere, notwithstanding your young men were in the Army. Do you tell me that it was the mere semblance of prosperity; that it was a mushroom growth of wealth? Nay, sir; it remains there still, in your improved lands, in your railroads, in your bonds, in your banks, and your brown-stone fronts.

But what was the effect of the opposite course of contraction in this country? At the end of the war there were about $900,000,000 in all of currency, seven-thirties and compound-interest notes—so estimated. The Secretary of the Treasury began a course, which has been much applauded by the specie resumptionists, of contraction, of calling in the seven-thirties and the compound-interest notes; and then, as was stated on this floor a few days ago, within two months contracting $16,000,000. What was the effect? Interest became high, agriculture began to languish, and disaster has followed.

Now, Mr. President, in view of all these facts is it wise to refuse to the people the currency which experience and history and reason demand should be furnished? To give currency to industry is a course, the wisdom of which is suggested by reason, sustained by experience, and demonstrated by history.

But, again, this contraction, which was inaugurated by the former Secretary of the Treasury, was inaugurated at the most inopportune time. It was just when the South was being restored to the Union, without a dollar of currency, without a bank, with more than $5,000,000,000 of her property gone down forever in revolution; and with four millions of her newly emancipated population all paupers. It was therefore a time for more currency rather than less.

Before taking leave of this subject of specie payment, permit me to say that I was impressed by the remark of the honorable Senator from Indiana [Mr. MORTON] in his opening speech on this subject. He said that he was not so much of a hard-money man as he once was. When, a few years ago, business engagements turned my attention to the investigation of this subject, I set out, as he did, with the idea that gold and silver were the only basis for currency—the only basis of a credit. I was born into that idea. It strengthened with my boyhood, and grew stronger with all of my political associations. But upon investigation, upon mature reflection, I have found the position less and less tenable, less and less supported by the experience and financial history of all countries. That specie is a good basis, no one denies. That it is the only basis, I do emphatically deny. That it is even the best basis which this Government can find I think will be seriously questioned before the country is much older. Why, sir, the suggestion that our houses, and our lands, and our crops, and our cattle upon a thousand hills would lose any portion of their value, or that their value would be less ascertainable if gold were banished from this country, occurs to me as the most irrational of propositions. All the gold of the universe could not pay for the property of the people of the United States; and if it were brought here and molded into a monument it would stand in one corner of this Chamber, and would not then make a respectable monument to the absurdity of such a dogma. If every dollar of gold now in the Treasury or in the pockets of individuals in the United States were banished from this country, and every gold and silver mine upon the continent were obliter-

ated by Jehovah's fiat, or sunk by an earthquake, it would not make one farthing's difference in the productive value or the prosperity of this country, provided in lieu thereof we had a currency universally recognized; a currency universally receivable by Government and individuals alike; a currency founded upon the good faith and the stability and the revenues of the Government itself. Why, sir, some of the most beggarly countries in the world are countries where there is nothing but specie payment. Look at Spain, and Portugal, and Mexico. While some of the eras of greatest prosperity, as I have shown, in many of the leading countries of the world have been eras of the suspension of specie payment.

Mr. President, it seems to me difficult to determine which is the more irrational, the laws of old Sparta that forbade gold coming into the country, or of modern Spain that forbade gold going out of it; but, more irrational than either is the effort of the United States to bring gold in and keep gold in the country by stifling industry, which is the surest way to keep gold out of it.

A sufficient supply of circulation of cheap money—cheap money which insures productions and enterprise; enterprise and productions which insure exports and domestic traffic—these are the links of natural consequence in which the blessedness of commerce lies. These are the links of natural consequence which lead to specie payments, too. Show me a country without cheap money—and I mean by cheap money, cheap interest for money—and I will show you a country where agriculture languishes. Cheap money is the one thing needful for the agricultural and productive interests of this country; and let the debt-burdened West and the debt-burdened South heed it. Cheap interest is what we want. If you will show me a country that pays, as we do in the South, from 15 to 26 per cent. per annum for its currency, I will show you a country where prosperity is dead or dying, and every industrial interest prostrate. High interest is *high* evidence of *low* prosperity. It is at the same time the evidence and the cause of the destruction of the prosperity of any community.

Mr. SAULSBURY. Will the Senator allow me to ask him a question?

Mr. GORDON. Certainly.

Mr. SAULSBURY. I ask him if that high rate of interest did not occur under, and if it was not the result of, the very system which he is advocating?

Mr. GORDON. I am glad the Senator has asked me that question. When I inform the Senator, as I intended to do further on in my speech, that the South has a little over two dollars of these greenbacks for each man, he will understand very readily how that two dollars *per capita* are insufficient for the demands of the industries of the South, and must of consequence command these exorbitant rates of interest. But I will come to that directly. I will inform the Senator in advance that I am not advocating greenbacks under the present system, but under a system which I shall indicate directly, and which I hope this Senate will adopt.

Now, sir, talking of the South, I trust the Senate will bear with me one moment while I discuss very briefly the high rate of interest and its effect upon the cotton culture, as well as the rate at the West and its effect upon the grain-growing. I affirm whereof I do know when I assert that the South is poorer to-day than she was the day Lee surrendered at Appomattox Court-House. Her lands, which after the surrender commanded from ten to thirty dollars per acre in the cotton-belt, can be bought to-day at from two to five dollars per acre; and the cotton-planters are so hopelessly involved, that unless this Congress gives them speedy and permanent relief, nothing but utter ruin and bankruptcy await them in the near future. Burdened with debt, each succeeding year, with its oppresive interest, adds to the burden.

May I hope to arrest the attention of the Senate and the country by inquiring why these things are so? Why, in a section so blessed by nature, with such a staple, with a climate unrivaled, with a soil fertile, with the balmy skies which a benignant God still bends above us—why is it possible for us to have descended to this low estate? It is largely due, of course, to the disorganization of labor; but that is not enough to account for it. It is patent to every man who has lived in the South, and observed the energies of our people and the progress of our agriculture, that the high rates of money are the prime cause of the disasters upon us. Why, sir, who could conceive of a cultivator of the soil borrowing money at the rate paid in Georgia? The ruling bank interest is from 1 to 1½ per cent. per month, and has been ever since the war, and that discounted from the face of the note and compounded every thirty or sixty days; so that at the end of the year it amounts to from 24 to 27 per cent. I ask Senators what industry on the face of the earth can survive such a rate of interest? Did any ever do it in any country, however blessed of Heaven? Sir, this rate of interest has so impoverished us, that if the old laws of imprisonment for debt were in force, and I owned the debts, I could turn the jail-keys within six months upon seven-tenths of the cotton-growers of Georgia.

Am I asked why we borrow money at this exorbitant rate of interest? I will answer that question when I am told how our people, without a dollar, without a bank, without mules to plow, without food to feed the laborer, could begin their enterprises without borrowing; and each year's interest has not only eaten up the profit, but has brought the planter deeper and deeper into debt, and subjected him year after year to the necessity of additional loans and increasing loans.

I referred a few moments ago to the fact that the South had $2.98 *per capita* of currency—that is shown by the Comptroller's report—while New England has thirty-one dollars and over *per capita*. Am I asked why the South did not take more currency when it was offered to her, when she had the opportunity? Why, sir, we were without money to invest in the bonds, and if we had the money, under the system of requiring deposits, every bank that we formed reduced the circulation from 25 to 35 per cent. Mr. A, and Mr. B, and my neighbor C, and eight others, have $10,000 each—$110,000. That is $110,000 in circulation. They propose to form a bank. They give that $110,000 for $100,000 of bonds. There is 10 per cent. gone. Upon that $100,000 of bonds there are issued $90,000 of currency. Of that $90,000 they are forced to deposit 15 per cent., leaving us, after the bank is formed, instead of $110,000 with which we began, only $76,000 for circulation; so that the more banks we formed the less currency we had.

But, Mr. President, we are told that as a means of relief we must diversify our labor. No man is more impressed with the importance and the necessity of diversity of labor than I am; but I shall appreciate that advice, so kindly given and so kindly meant, much more if Senators would also tell me how the people, without any money, with interest already at from 18 to 25 per cent., are to live, much less inaugurate new enterprises. Give us the means, give us a sufficiency of circulation to make interest cheap, and we will diversify our labor. Give us the means, and we will seize upon all the advantages which nature has given us. Give us the means, and we will soon wake up from our mountains, from their long sleep, our coal and iron, those twin sons of Hercules, whose stalwart arms will assist to lift us from our low estate. Give us the means, and we will improve our water-powers, until the murmurs of discontent shall be lost in the chorus of the water-wheel and the music of the spindles—until our very atmosphere shall revel and thrill and tremble with the triumphs of our industry. Give us the means. This is what we ask of Congress. Give us a financial system which shall secure to us money at rates which rule in England and France.

But, sir, to return for one moment to the subject of cotton culture. It is a truth, which the national Legislature would do well to note, that cotton has been grown in the cotton-belt since the war at a loss. This cannot continue, of course. We can cease to make cotton and learn to make the grain and the meat which we now purchase from our brother farmers in the West; but we cannot continue to make cotton, which loses us money every year. The four million bales must soon give place to the three millions, the three to the two, and the two to the one. Already a convention of the farmers of Georgia have, by formal resolution, declared that they will not plant during the next year more than one-third of their crop in cotton; and the planters of Alabama have determined the same thing, I believe, as well as the planters of other States. Sir, it is time that this great industry were rid of its burdens.

Do you tell me that it is a local interest, and therefore cannot be considered in the discussion of a great question like this?

Mr. President, no industry that gives food, or clothing, or employment to the people, that adds to our exports or to the revenues of the Government, however insignificant it may be, is unworthy of the attention of the proudest statesman and the lordliest intellect in this Chamber or in this Union.

Is it a local industry which employs in its production four millions of people and in its manufacture over twenty-five millions, whose yearly wages amount to over $37,000,000?

Is it a local interest which gives motion to over $133,000,000 of the machinery of the United States?

Is it a local interest which furnishes the mills of the East with employment and the farms of the West with a market?

Is it a local interest which, according to a late Secretary of the Treasury, prevented commercial disaster to the whole country at the end of the war, and now, to use his own language, "maintains its supremacy as an article of export?"

Is it a local interest which, like the ligament which bound together the twins of Siam, so unites the sections of this country that you cannot separate it without bringing disaster to all?

It is time, I repeat, that the national Legislature looked to this interest; at least that the national Legislature should relieve it of its burdens of high money. Do this, or England will drive this—your heaviest export—from every market of the world. Already by her wise policy she has become an exporter of cotton. In the years 1862, 1865, 1867, 1871, and 1872 England absolutely exported an average of two hundred and fifty million pounds of cotton. Already she gives her money at low interest, and by her enterprise, by her appropriations of a thousand millions of money poured into the lap of India, she has almost driven us from the markets of the world; and now she stretches out her hands to Turkey, to India, to Prussia, to Austria, to Italy, to Brazil, to Peru, to Portugal, to Spain, to Egypt, and to Africa, and even Morocco and Greece are held in reserve for a last final assault upon the cultivation of cotton in America.

Sir, it is high time that the agriculture of both the South and the West were relieved of 25 per cent. money. It is high time that the agricultural interest, which is the foundation of all other interests, should have some special attention of this Government. Both the South and the West are prostrate. With money to the farmer at 18 and 25 per cent., with cotton below the cost of production at such a per cent. for money, with grain unable to pay its freights to market,

with a financial system which places the productions of the country at the mercy of speculators, which in the striking language of the gifted Frenchman, Le Play, is "the art of oppressing the people," is it any wonder that this interest has at last aroused to a sense of its danger, and has combined for its protection?

Why should it not combine? Has not every other interest combined? Is not the money power of the country combined, and did it not dictate the financial policy of 1862, which has brought such disaster to the producer, and does it not now even at this very hour while I speak, by its delegations from Boston, from New York, and elsewhere, block the doors of this Chamber to influence the vote of this body? Labor combines, and receives at the hands of Government an eight-hour law. The fisheries combined, and received from the Government a bounty. Manufacturers combine, and receive a high protective tariff. The iron-mongers combine, and, unlike the farmer's pigs which must be fed from his own crib, they have their iron-pigs fattened at the Government crib. Railroads combine, and by Government bounties and Government grants they scale the mountains and link with bands of steel our eastern and western oceans. But, sir, this great interest, which lies at the foundation of all other interests; this interest, without which no other interest can survive; this interest, which numbers among its subjects near 25,000,000 of the 40,000,000 of the population of this country; this interest, which bears on its Atlantean shoulders the wealth, the commerce, the manufactures, and the very civilization of the country, has to-day less influence in shaping the legislation of the country than the fishers of salty cod-fish on the shores of New England. Sir, it is time, I repeat, that this were changed; it is time that agriculture was heard.

But, sir, I have already occupied so much more time than I had anticipated that I shall not be able to finish the discussion of the remedies which I wanted to propose. Suffice it to say that I hope we shall give to the people more money. I hope we shall give to the money elasticity by the issue of convertible and reconvertible bonds, and I hope we shall do so without delay.

If we require the Secretary of the Treasury to prepare bonds, bearing say 3 per cent. interest, in which greenbacks may be invested, and require that these bonds shall be reconvertible at the option of the holder, we shall give at once the elasticity to the currency which is essential to move it beyond the control of speculators. If we will then require the greenbacks, which are converted by the voluntary action of the people into these bonds, to be immediately reinvested by the Secretary of the Treasury in 6 per cent. bonds, we shall increase the volume of circulating medium, and, at the same time, rapidly reduce the public debt. If this be true, who can doubt the wisdom of this course? It requires no argument to show that, if the greenbacks which are received by the Treasury for 3 per cents be reinvested in 6 per cents, the interest of the public debt is being reduced at the rate of one-half the present interest. But would the people invest in 3 per cent. bonds? Fortunately it is not a question to be demonstrated. When the opportunity was offered the 3 per cents were taken. They would be taken again. Nor would they be returned to the Treasury for exchange for currency except under the most extraordinary circumstances. I challenge dispute to the proposition that, if any Senator upon this floor had $10,000 due him, which he expected to retain in his safe for thirty days, he would prefer to be paid in 3 per cent. bonds rather than in greenbacks. These bonds would command a premium. They did command a premium when, under a former Secretary of the Treasury, fifty-seven millions of 3 per cent. bonds were issued and made reconvertible at the option of the holder. It is a fact of history that none of these bonds were reconverted, but were at a premium in the hands of the holders. So that these bonds, sir, would take, in large transactions, the place of currency, and if made available to the banks as reserves would turn loose the greenbacks now locked up in the bank vaults, and the reinvestment of the greenbacks so received by the Government for the 3 per cent. bonds, would keep these greenbacks in circulation also. Again, sir, the great desideratum to the agriculture of the country, to wit, cheap interest, would be secured. The Government rate would become the ruling rate. It would give to us money at little above the Government rate.

It would make the money so elastic that it could no longer be made to subserve the purpose of heavy combinations to depress or inflate the prices of productions.

It would make panics impossible.

It would reduce rapidly the public debt.

It would, in a word, if we will but take one additional step, which I desire to see taken, solve the financial problem of America, and give to American agriculture and American enterprise an "Independence Day" which would be celebrated for all time to come.

The other step to which I refer is to strike from the laws the words "except duties on imports," and make Government money receivable for all dues to Government and to individuals alike. Do you desire to see the currency at par with gold? You will not see it as long as the Government dishonors its own currency, by making it a legal tender to the citizen, and refusing it for dues to itself. I should be glad for any Senator to answer how Government money can be kept at par with gold while the Government itself repudiates its own money? Sir, to this serious mistake—not to use the juster phrase, crime, against the people—is directly traceable all the depreciations of the currency, all the speculations in gold, all the "corners" to control the price of gold, and much of the disaster which has followed. The day we take this step the demand for gold will cease. It will be no longer needed for purposes of domestic trade or by Government. Relieve the merchants of the necessity of buying gold to pay duties, and that day the occupation of the Wall-street gold kings, like Othello's, is gone. Gold being no longer needed for individual purposes, or by Government save to pay interest, would cease to be in demand, and the whole coin of the country would be upon the market without buyers. It must of necessity therefore fall to par, and if we continue this course would remain so forever. The amount of coin needed to pay interest would be largely supplied by the mines and receipts from abroad. If more were needed, let it be purchased abroad and not here. Free the farmers from the merciless claws of the speculators and the burden of high interest, and their exports will soon take care of foreign balances.

Mr. President, the day we take the step I have indicated, that day we shall proclaim a new Declaration of Independence—a declaration of the independence of our industries from the effects of our own money-changers and "combiners," and of foreign intermeddlers with our currency. Let a dollar mean a dollar and not a promise to pay a dollar.

But I see upon the faces of some of my friends around me an expression of surprise that I should give utterance to such sentiments. Sir, these views are not new, nor are they untenable. In my efforts to determine the value of these opinions, which I have long entertained and have before given expression to, I have been in no small degree strengthened by some of the great men who have preceded us, and whose opinions I have in the volumes before me.

Mr. Calhoun, in his speech on Treasury notes, in this Chamber, September 19, 1837, said:

> It appears to me, after bestowing the best reflection I can give the subject, that no convertible paper, that is, no paper whose credit rests on a promise to pay, is suitable for currency. It is the form of credit proper in private transactions between man and man, but not for a standard of value to perform exchanges generally, which constitutes the appropriate functions of money or currency. * * *

Again, he says:

> Believing that there might be a sound and safe paper currency, founded on the credit of the Government exclusively, I was desirous that those who are responsible and have the power should have availed themselves of the opportunity.

In his speech of October 3, 1837, he used this language:

> I hold *credit* to possess, in many respects, a *vast superiority over the metals themselves*. I object to it in the form which it has assumed in the banking system, for reasons that are neither light nor few, and that neither have nor can be answered. The question is not whether credit can be dispensed with, but what is its best possible form, the most stable, the least liable to abuse, and the most convenient and *cheap*. I threw out some ideas on this important subject in my opening remarks. I have heard nothing to change my opinion. I believe that Government credit, in the form I suggested, combines all the requisite qualities of a credit circulation in the highest degree, and also that Government ought not to use any other credit but its own in its financial operations.
>
> We are told the form I suggested is but a repetition of old continental money—a ghost that is ever conjured up by all who wish to give the banks an exclusive monopoly of Government credit. The assertion is not true; there is not the least analogy between them. The one was a promise to pay when there was no revenue, and the other a promise to receive in the dues of Government when there is an abundant revenue.

In his speech of March 22, 1838, he maintains the constitutional powers of Congress to use such money "according to the most rigid rule of construing the Constitution."

If I had the time I should be glad to read extracts from the writings of Jefferson, which show that he too desired to suppress all paper circulation except that issued by the Government alone, or else to force all banks to redeem in specie or in Government notes, as in Great Britain, thus placing the Government circulation on a par with gold.

But sir, more potent than the opinions and the name of the great Jefferson; more overwhelmingly convincing than the logic of Calhoun, is the testimony of history. Once again, and finally, let me repeat that, in the investigation of this great subject of finance, which Burke so justly denominated "the state," all theories must be condemned which are not supported by experience. Let facts stand—let all else perish!

I challenge successful refutation of the following facts: The old North State, (North Carolina,) from which my friend upon my left [Mr. RANSOM] I believe is proud to come, issued, after the Revolution and prior to her connection with the Union, a very large amount of paper, which "was made receivable for all dues to her." This money continued to circulate for, I believe, twenty years or more after North Carolina came into the Union; and although it was not based upon gold—was no promise to pay—it was always at par. It was at par solely because it was based upon the credit of the State and receivable in dues to the State, although not more than one dollar in five was needed for this purpose.

Russia, in 1827, maintained at par with gold a paper circulation of near $120,000,000, with a revenue amounting to less than half that sum. She maintained it, I believe, without fluctuation, solely because based upon the credit of the government, and receivable for all dues to the government.

But why need we go beyond our own experience? I appeal to that. Is it or is it not true that the sixty millions of notes issued by the United States during the war and made receivable for all dues to Government were constantly at par with gold? Was there ever an hour while these notes were in existence when every dollar of them was not at par? Did they or did they not rise as gold rose, until they were all absorbed by duties to the Government?

Mr. President, no sophistry can explain away the significance of these facts. No logic can answer them. You may theorize forever; but the arguments of these facts will remain unanswered. Their power will be appreciated by the people, and they will yet demand that the currency upon which the rewards of their toil depend shall be taken from the control of Wall street and the monopolists. They will override the power which the *money-changers* can command, and *rebuke the lobbyists of the gold rings which beleaguer this Capitol.* Equal rights to all demand a currency which gives equal benefits to all. From out of the black pall of smoke from the burning grain on the western prairies and the desolation of agriculture all over the land the murmurs of discontent are already ominous. In their right to regulate wrong by the ballot the producers, despising party lines and party associations, will, sooner or later, rid the country of a system which, by its discriminations, but perpetuates their bondage to poverty.

And now, sir, I am done. I rejoice that in the discussion of this, the most important subject which will come before this body, party politics have no place. If, in the course of my remarks, I have said anything which had better been left unsaid, I trust it will be set down to the credit of mere pleasantries in debate. If I have strongly criticised measures which have been popular, it was because I felt that the gravity of the ills which followed them demanded it. I have uttered no opinion of the correctness of which I am not fully persuaded, nor have I "set down aught in malice." I trust that such action will be had upon this great question as will lead to the relief of my overburdened section and to the general welfare of the whole country.

The Currency—Specie Payments.

SPEECH OF HON. GEO. S. BOUTWELL,

OF MASSACHUSETTS,

IN THE SENATE OF THE UNITED STATES,

January 22, 1874.

The Senate having under consideration the following resolution, reported by Mr SHERMAN from the Committee on Finance:

Resolved, That it is the duty of Congress during its present session to adopt definite measures to redeem the pledge made in the act approved March 18, 1869, entitled 'An act to strengthen the public credit,' as follows: 'And the United States also pledges its faith to make provision at the earliest practical period for the redemption of the United States notes in coin;' and the Committee on Finance is directed to report to the Senate, at as early a date as practicable, such measures as will not only redeem this pledge of the public faith, but will also furnish a currency of uniform value, always redeemable in gold or its equivalent, and so adjusted as to meet the changing wants of trade and commerce;"

The pending question being on the amendment submitted by Mr. FERRY, of Michigan, to strike out all after the word "resolved," and insert the following:

"That the Committee on Finance is directed to report to the Senate, at as early a day as practicable, such measures as will restore commercial confidence and give stability and elasticity to the circulating medium through a moderate increase of currency"—

Mr. BOUTWELL said:

Mr. PRESIDENT: On the 14th of the present month the Senator from Missouri who sits on this side of the Chamber [Mr. SCHURZ] was pleased to arraign me for the opinions incidentally expressed upon financial questions in this Chamber, and perhaps more at large stated elsewhere; and he was pleased also to characterize those opinions as "the do-nothing policy." In that he did me undeserved honor, inasmuch as he chose to personify in me opinions which for five years have been the opinions of the people of this country. Moreover, these opinions have been illustrated in a policy which was alike the policy of the legislative and executive branches of the Government.

I have been reluctant to take part in this discussion; and but for that arraignment, which was not much in itself, I should have been silent except upon incidental questions that might have arisen in the course of the debate. I am not sure, however, that it is not due to the opinions I entertain, whether I entertain them alone or whether they are the opinions of the country, that I should make a statement of those opinions and enforce that statement by such argument as I can command.

We have passed through—I say "through"—a financial difficulty. That financial difficulty has taught us a lesson. As a lesson it is to be considered, as a teacher it is to be respected; but as a dictator, or as a reason for abandoning a policy that has been tried, or as a reason for entering upon a policy which has not been tried, it is the most dangerous of authorities. If it be true, as it is true, that in private affairs, excitement, fear, any of the passions, are the worst of all possible monitors, and lead with invariable exactness to disastrous results, is it not more conclusively true that in the performance of public duties, public men should never act under the influence of the passions or of apprehensions arising from an extraordinary condition of things?

To my mind, the recent difficulty neither is nor has been serious in its general results. It has, to be sure, disturbed the interests of three classes of persons. First, it has involved in utter ruin several leading commercial and banking houses. They were foremost in great undertakings, and they and their undertakings have fallen together. I do not condemn the class to which these representative men belong. They are the pioneer men of the country; they engage in enterprises which ultimately bring great results, enterprises which more careful and conservative men would not undertake; and even though they sustain losses, ruinous losses, yet upon the whole it may be considered an open question whether their careers are not advantageous to the public. But at any rate I have no words of censure for them, but rather feelings of compassion and sympathy. They are, however, the exceptional men of the country; they are few in number. The interests which they have undertaken and carried forward for awhile, if they be important interests, will be taken up by others, if not again by themselves, and finally brought to a successful conclusion. The number of failures in the country has not been large. In the State that I represent I know not one of any considerable magnitude. The evil, then, affecting this class, serious to individuals, is not general in its results.

There is a second class of men, the business men of the country, who have not been injured in their capital, and who at the worst were only filled with lively apprehensions as to the possible consequences of the sudden change in financial affairs. These men are solvent; are prepared to take up the business of the country, and they will enjoy in the future full profits. To them the panic was only a postponement of gains for a few weeks or a few months.

The laboring classes have suffered, and are still suffering, from reduction of wages and loss of labor. They are most entitled to the consideration of the country; and to their interest, I think, Congress should address itself. I hope to be able to show, to the satisfaction of some minds at least, that an inflation of an irredeemable paper currency is an inevitable way to disasters which, however they may affect other and more fortunate classes, inflict substantial and lasting evils upon laboring men.

I attribute the panic to the inflation of the currency locally; and when there is an inflation of the currency, whether it be a paper currency or a metallic currency, it is always local. It may be local to a city; it may be local to a State; it may be local to a country; but with reference to the great field of the world in which currency performs an important part, inflation is always local. During the last season there was no inflation of the currency of this country appertaining to the whole country, but there was inflation of the currency limited to the city of New York; and the example which that city furnishes in the crisis through which it passed, from the month of April to the month of December, is a living and vivid illustration of the evils of an inflated currency, whether affecting a city, a State, or the nation itself.

The processes by which the currency of the city of New York was inflated are generally well understood. The statistics show that the deposits of the banks of the city of New York, including the national banks and the banks established under the laws of the State, were increased $50,000,000 between the month of April and the month of September. Four banks in that city were indebted during a portion of that period of time to the extent of more than $50,000,000. The presence of this vast sum of money in New York, accumulated by unnatural processes, brought upon that city, and then upon the whole country secondarily, the evils which we are now called to consider.

There is a natural process, which no legislation can interrupt permanently, by which currency, whether paper or coin, used for the purposes of business in a particular place, when it has performed that function, flows naturally and necessarily to the source from whence it came. Therefore it is, and ever will be, that when you have exhausted all legislative power for the purpose of distributing currency over this country you will then have failed. Obedient to a law of its nature money returns to the hand of its owner when the particular duty on which it was sent has been performed. If the State of South Carolina is indebted to New York, money sent into the former State and used in the purchase of cotton soon finds its way back to New York; and legislation is, and ought ever to be, futile to arrest the process. That tendency is strongest in the summer months of the year. In the absence of general active business the capital of the country, as far as it is represented by the currency, flows to the places where it belongs. Therefore it naturally accumulates in the city of New York. Superadded to this natural tendency, which in itself would produce some difficulties in the active months of the autumn, is the general practice of the banks of that city, of paying interest upon deposits. The result was that money which belonged in Chicago and Saint Louis, and in all the intermediate places, flowed into the city of New York. Fifty, sixty, or seventy million dollars were there accumulated subject to call. Of course judicious, careful men would not loan money so acquired upon paper payable at a time future and certain. Hence they went into Wall street and loaned it to brokers and speculators. If you look at the prices-current you will see that stocks advanced considerably during this period. The failure of a great house on the 18th of September merely made that day memorable rather than some other day which would have soon followed if the disaster had not come on that day. The failure was merely an occasion of the difficulties, but in no sense the cause of them. When the owners of this money in the West, when those who owned it in the East, and who desired to use it for the purpose of moving the crops from the West and the South, made their demands on the banks of the city of New York they were unable to respond, and this from the very nature of the case.

Consider how evil this practice is. If a man give a note payable on time, three or six months hence, that note matures by the operation of time; nothing can change it except the consent of the parties; but a note given on call matures when the party holding the note sees fit to make the demand. He makes the demand under the pressure of his own wants, or he makes the demand from apprehension or fear; and when he makes the demand from apprehension or fear, every other man who is similarly situated makes a like demand under the influence of the same apprehension or passion. Therefore when demand notes have been given in large sums there is a demand at the same time for the same reason, and generally the parties on whom the demand is made are alike unable to respond. At any rate such was the condition of things in the city of New York on the 18th of September last.

If, therefore, anything can be inferred from the experience of the last autumn it is this: that the accumulation of currency in the city of New York by artificial means produced an inflation, led to speculations, to excitement, disaster, an ruin; and I deduce from this, as I think with unerring certainty, the conclusion that a similar inflation of the currency for the country will in time produce substantially the same results. Therefore I am opposed to any increase of the volume of paper money.

On the other hand, I am opposed to any contraction of the currency. And this leads me to make the remark that a depreciated currency is not in itself a serious evil. By that I mean to say, that if the currency of the country be depreciated, and if it be held at a particular point for so long a time that the business of the country, the prices of labor, and the products of labor shall have become accommodated to the existing condition of things, then there are no substantial evils. I do not mean, however, to say that there are any particular advantages affecting the general prosperity of the country which can be stated. In this connection I will deal with a point argued by the Senator from Missouri and stated previously by writers on political economy. As far as I know, the authorship of it belongs to Massachusetts, but for myself I have no disposition to claim it as an additional glory to my State. The proposition is, that in consequence of a depreciated currency, the farmers of the West, whose products in whole or in part are exported to foreign countries where the currency is coin or notes redeemable in coin, are in a worse condition relatively than they would be if the currency of this country were coin. I hope I shall not be mistaken at this point by the assumption that I am now speaking of a depreciating currency. I am speaking of a depreciated currency; but of a currency stationary in its volume. If, as an example, you consider the article of wheat, which is a great product of the West, you may assume, as a fundamental proposition in regard to its price, that it can never be less at any point in this country than its price in Liverpool, less the costs and profits of transportation. If that be so, then the price of a bushel of wheat at Saint Louis, measured in coin, the currency of England, is less than the price measured in coin at Liverpool by the cost of transportation there, and only by that, and this result is entirely independent of the fact as to the depreciation of our own currency. For our present purpose we deal in the currency of the world, and if wheat be worth fifty pence a bushel at Liverpool, and the cost of transporting it there, profits and all, be ten pence, it is worth forty pence in coin in Saint Louis; and it is worth that because a party in Saint Louis can send it to Liverpool and can get his coin in Liverpool, and after paying all expenses he will have forty pence in hand for his bushel of wheat.

Now, if this person wish to buy sugar or coffee in return, he can buy his sugar or his coffee with coin in the markets of exportation; and if the cost of a pound of sugar in coin laid down in Saint Louis, brought from Havana and paid for in coin, is ten cents, he has established the relation between his product exported and the necessaries of life imported, and that upon a coin basis. What, I now ask, is the business of trade, of commerce, between one country and another, and this without regard to the currencies of the different countries? It is to resolve all questions of currency, all questions of expense, all questions of custom-house duties, into coin; and the remainder, after all these expenses are paid, represents the cost in coin of the article imported on the one hand, and the value in coin of the article to be exported on the other.

Therefore I say, and I say it with great confidence, that the producer in this country is not disturbed in his relations, for the reason that what he can do by following the process through for himself, and upon his own responsibility, is done by the artisans of trade, whose business it is to do that particular thing, and they do it effectually; and the price of gold, whether it be 8 or 10 per cent., does not disturb the relations between the products of our own industry and the products of the industry of other countries. To what the man sells, measured in coin, is added in currency the difference between coin and currency in commercial value, and to what he buys is added the difference between coin and currency in their commercial value; and he neither loses nor gains by the process.

Mr. HOWE. I understand the Senator to be speaking now of the results following from the use of a currency merely depreciated, but stable in its value, and not a currency both depreciated and unstable in its value.

Mr. BOUTWELL. Yes, sir. I may as well submit the observation here, that so far as the value of our paper changes while these transactions are going on, then the operator might lose or gain, and that is one of the elements which the merchant who both exports and imports or the merchant who exports, and the merchant who imports, are required to take into the account.

One of the objects sought by theorists is what is called elasticity of the currency. By that I understand an automatic elasticity, by which, without special intervention, the public will have more money when more is needed and will have less when less is needed. The experience of commercial countries is precisely the opposite. The elasticity of the currency when left to the operation of any system, without special intervention from the authorities, is this: that you have much currency, when little is wanted, and you have little when much is needed. This is the elasticity of every system of currency, whether coin or paper, that is left to the operation of law without special intervention by authority, and it is in the nature of the case that it should be so. If you have a given sum of money in a country, whether it be coin or paper, and there is little use for it, many persons desire to lend it; but let a panic arise, as occurred in September last, and every man holds what he has and gathers up what he can reach, for he apprehends that at some day future, but not certain, he may need this augmentation of his immediate resources. Therefore it is that every system, when left to its operation under law, produces the result of which I have spoken.

There are three ways, or certainly two ways, of affording the desired relief, but neither is automatic.

When we had the State bank system, and distress overtook the commercial classes, there was immediately a struggle between the merchants and the banks for self-preservation, it being inevitable that one class or the other must go to the wall. So long as the banks stood firm and paid specie for their notes, the merchants went to the wall, and one after another were ruined; but when the banks, generally acting in the end under the influence of commercial ideas and mercantile necessity, suspended specie payments and issue without limit, there came relief to the merchants, who paid their debts in a less valuable currency than that in which they had contracted them. That was a relief; but it was a relief worked out of necessity. It was not by the automatic operation of a system, but rather a proceeding in violation of the law on which the system was founded, and in violation also of the natural law on which the system ordinarily acted.

When there is a crisis in England, as in the year 1857, and again in the year 1866, the Bank of England, which holds not only the reserve for all the financial interests of Great Britain, but to a large extent the reserves for the financial countries of continental Europe, intervenes under the authority of the ministry and makes loans largely in excess of those which it had been accustomed previously to grant. In 1857 the loans of the Bank of England in a very few days were increased to the extent of $60,000,000; in 1866 they were increased in a like period of time to the extent of $75,000,000; and thus relief was afforded to the mercantile classes, and consequently to the financial interest of all Europe. This is another and a different process; but it is not an automatic process. England has never been able to discover any means by which relief under such circumstances can be attained without the personal intervention of men possessing power, by which they depart from the ordinary course of things and establish new relations between debtors and creditors by force. In no other way can relief be obtained.

Mr. MORTON. Allow me to ask the Senator a question right there, rather in explanation of what he has just said. The statement was, that in 1857 the Bank of England increased her loans $60,000,000, and in 1866 $75,000,000. I ask the Senator if that was not an inflation of the currency, by putting out money that was not in circulation before? Was it not temporary and sudden inflation?

Mr. BOUTWELL. I do not so understand it. I understand the process to have been not by the department of issue, but by the banking department, and showed itself in increased loans and discounts, probably, for the most part, given to the customers of the bank, and passed to their credit on the books of the bank.

Mr. SHERMAN. By a diminution of her ordinary reserve.

Mr. BOUTWELL. Of course the reserve wasted.

Mr. MORTON. But I ask the Senator if those loans were not made of money that was not in circulation before the panic, but was in reserve?

Mr. BOUTWELL. To some extent, certainly.

Mr. MORTON. And therefore the currency for the time was inflated to that extent.

Mr. BOUTWELL. No, sir; not to the extent of the increase of the loans. The banking department of the Bank of England held certain reserves in Bank of England notes. Although I am not prepared to state from any examination, yet, undoubtedly, the amount of those reserves was largely diminished during the panic; but the greatest relief was furnished by discounts granted by the banking department of the Bank of England to customers of the bank, to private bankers and banking associations throughout England, bywhich their balances were increased and they themselves made secure for a certain time in the future and relieved from apprehensions. Thus the panic was allayed.

Mr. SHERMAN. I will ask my friend whether the banks of New York did not precisely that thing during the recent panic?

Mr. BOUTWELL. They did.

Mr. SHERMAN. And to a greater extent than the Bank of England ever did.

Mr. BOUTWELL. I do not know to what extent; but the same process, in principle, was applied to the then existing condition of things.

Mr. SCHURZ. If the Senator will permit me, the bank act was suspended, but there were no additional emissions of credit by virtue of the suspension of the bank act, as far as I am aware.

Mr. MORTON. The Senator must bear in mind that while they did not make new currency, these new loans of $60,000,000 and $75,000,000 were made of money that was held in reserve and was not in circulation before; and therefore it was increasing, for the time, the circulation to that extent.

Mr. BOUTWELL. The Senator from Indiana, I think, in his statement covers two facts which coexisted. One was that the reserve of the banking department was diminished by the drafts that were made upon it, and so far the active circulation of the country was increased.

Mr. SCHURZ. If the Senator will permit me an increase of discounts and loans does not involve an increase of the currency.

Mr. BOUTWELL. Certainly not; that is the statement I have been trying to make. The other part of the transaction was an increase of discounts and loans which were shown upon the books of the bank to the credit of persons to whom the discounts were made, but it did not involve necessarily and immediately an issue of notes. Many of these balances were consumed by the payment to the Bank of England of paper which was then maturing and afterwards matured.

In this country, for four years of the last five, the Treasury Department has acted under an authority of law which, I think, ought never to have been questioned, but which has been questioned. I allude to the right of the Department to issue the $44,000,000 of reserve, as it is called. This debate, if the claim were open to inquiry or controversy before, has settled, I think, the legal right of the Treasury Department to use the $44,000,000 reserve; but if it be not settled by an examination of the law, nor by the opinion of the Supreme Court of the United States, I suppose it must remain open for those who desire to participate further in the controversy. But the Treasury Department has acted upon the idea that it had the right to use the $44,000,000 whenever an exigency occurred, bearing in mind always that it was not to be added permanently to the volume of currency in the country, but that it was to be restored to the Treasury at the earliest moment practicable. I trust that this idea will take possession of the Government and the people of the country in reference to theissue that has been made since September last, and that we shall devise means by which what has been issued shall be restored to theTreasury without delay.

Mr. SCHURZ. I desire to put a question to the Senator, if it is not inconvenient to him. I think it is of interest to the Senate to get at the idea of the Senator correctly. As I understand him, he maintains that the Treasury had the legal right to issue the $44,000,000. Does he also think that the Treasury has the legal right, or that it is in any way bound, to withdraw the $44,000,000 again, and keep them again in the Treasury as a reserve?

Mr. BOUTWELL. You mean as a matter of policy.

Mr. SCHURZ. Well, in the first place, as a matter of lgal right; and, in the second place, as matter of policy.

Mr. BOUTWELL. Keeping in view the legislation of Congress in reference to the volume of currency, it is the duty of the Treasury, not in consequence of any specific legal direction, but as a deduction from the whole policy of the country, to restore the forty-four million and to hold it as a reserve for emergencies. It is the policy of the country to keep three hundred and fifty-six million currency in circulation as the permanent volume; and any excess can only be justified by an exigency. When the exigency has passed, it is the duty of the Treasury to use whatever power it possesses to reduce the volume to three hundred and fifty-six millions.

Mr. SCHURZ. As I understand the Senator, the legal right of the Treasury to issue the forty-four millions was derived from the original act limiting the issue of the currency to four hundred millions. Was it not?

Mr. BOUTWELL. There were several acts.

Mr. SCHURZ. And then, by an act of Congress, the Secretary of the Treasury was directed, or authorized—I do not remember the exact language of the act—to withdraw currency at the rate of four millions a month.

Mr. BOUTWELL. Mr. President, I think I will rest this part of my argument upon a quotation which I did not intend to read, but which I will read, from an opinion given by the Supreme Court; and those who take a different view of it can have an opportunity to discuss it at their leisure. In the case of The Banks *vs.* The Supervisors, (7 Wallace, 26,) the Chief Justice said:

> The act of February 25, 1862, provided for the issue of these notes to the amount of $150,000,000. The act of July 11, 1862, added another $150,000,000 to the circulation, reserving, however, fifty millions for the redemption of temporary loan, to be issued and used only when necessary for that purpose. Under the act of March 3, 1863, another issue of one hundred and fifty millions was authorized, making the whole amount authorized four hundred and fifty millions, and contemplating a permanent circulation, until resumption of payment in coin, of $400,000,000.

That opinion was indorsed by the Supreme Court, after the passage of all the laws, I believe, to which the Senator from Missouri has referred.

Mr. SHERMAN. Will the Senator give the date of that opinion?

Mr. BOUTWELL. I have not the date. It will be found in 7 Wallace, page 26. Acting upon that authority, and keeping in view the declaration of Congress that the minimum circulation of the country was to be three hundred and fifty-six million, the Secretary of the Treasury in September last and subsequently has used of this forty-four million the sum of $27,000,000, leaving only about seventeen million not yet put in circulation. This action was in its effect, and in the nature of the proceeding substantially what is done by the government of Great Britain through the Bank of England. The Secretary furnished temporary relief, not precisely in the same way, by loans, because the Government of the United States is not engaged in making loans, but by adding to the circulation of the country, diminishing its value unquestionably in its integral parts, and changing the relations of debtor and creditor. In fine, it was an act of the highest character in reference to the finances of the country; but an act in the exercise of a power authorized by law, and, in my judgment, consistent in a high degree with the public interest. Clothed with authority by law, seeing the evils which had been brought upon the country by a policy for which the Government was responsible, the Secretary of the Treasury could not sit silent and inactive while ruin was blasting the prospects of many and creating the most serious apprehensions in all parts of the country. It was a great responsibility; but it is a responsibility which must be taken by men who are clothed with the authority; and they are clothed with the authority that they may take the responsibility when the exigency arises.

Mr. FERRY, of Michigan. Will the Senator from Massachusetts allow me to put a question to him?

Mr. BOUTWELL. Yes, sir.

Mr. FERRY, of Michigan. I would ask him to state to the Senate his view of the action of the banks in trenching upon the reserve; and to say whether, if the banks had not irregularly, trenched upon that reserve, the whole forty-four millions would have been sufficient to meet the exigency of the panic?

Mr. BOUTWELL. I cannot go into that. It may be, in the mind of the Senator, important.

Mr. FERRY, of Michigan. Allow me once more. I wish to state this fact, which I believe is generally admitted: The amount of reserves of all the banks was one hundred and fifty millions, and it has been stated, I believe, by a good observer, that that reserve was reduced to seventy millions. Thus, the banks irregularly issued the difference between $70,000,000 and $150,000,000, the regular reserve.

Mr. BOUTWELL. I do not care to enter upon the discussion of the point raised by the Senator from Michigan; I am dealing rather at this stage of my remarks with the course of the Government—the Government during four of the last five years.

Mr. SCHURZ. I hope the Senator will permit me, before he passes from that point, to make a suggestion to him which I think may be of interest to the Senate. He says that the Secretary of the Treasury took a very great responsibility in issuing any part of the forty-four million reserve. At the same time he argues that the Secretary ot the Treasury had the legal right to do so. Now, it seems to me that in executing a legal right the Secretary of the Treasury did not take any responsibility at all.

Mr. FRELINGHUYSEN. Certainly it was an exercise of discretion.

Mr. SCHURZ. I think the history of the case is rather this: that when the crisis broke out the $44,000,000 reserve, nor any part of it, was not issued at all; but that the $44,000,000 reserve came out as the revenues of the Government fell short of the expenditures, and it was used in paying daily expenses after the panic was over to a very great extent.

Mr. BOUTWELL. Well, it is not worth while for the Senator from Missouri and myself to enter into a critical inquiry concerning facts which are so related to each other that they cannot be separated. On the 18th day of September the Treasury had in hand between $13,000,000 and $14,000,000, called currency balance, being accumulations entirely independent of the $44,000,000 reserve. The President and the Secretary of the Treasury must have known perfectly well that if they used the $14,000,000 for the purchase of bonds, as the $14,000,000 were used for the purchase of bonds, with the impending fact that the revenues of the country in consequence of the panic would be immediately reduced, they would be obliged to use the $44,000,000 for the current expenses of the Government. Therefore the use of these $14,000,000, for the purchase of bonds and the relief of the business of the country, was substantially the same transaction—and the Senator from Missouri must comprehend it—substantially the same transaction as though they had held the $14,000,000 currency balance for the ordinary expenses of the Government and taken $14,000,000 out of the $44,000,000 reserve to purchase bonds. Is not that so? Has the Senator from Missouri any criticism to make upon the proposition that, in a business point of view, and with reference to the duty of the Government, it was substantially the same transaction?

A word in regard to the responsibility. There is a responsibility in exercising discretion, although the law may have vested the discretion in an officer of the Government. It was understood, and had been for four years, that it was the policy of the Government to limit the volume of paper money to $356,000,000. All the business of this country rested upon that idea. Every transaction between debtor and creditor implied the existence and the perpetuity of that policy

on the part of the Government. Now, when the Secretary of the Treasury came in and issued a portion of the forty-four million, however small, he changed the relations of debtor and creditor. If that were not a great responsibility in a country of forty million people, with various interests locking and interlocking with each other, then I know not what responsibility is. It is not a legal responsibility, but it is a business and a moral responsibility of the highest character.

And now that I have touched upon the moral aspect of this question, perhaps I had better not depart from it lest I may never return to it. There is, in all these propositions, a moral question which we are bound to consider. If by forced contraction, by legislative power directly applied, you contract the volume of currency below $356,000,000, you have required the debtor to pay something more to the creditor when he pays his debt than he would have paid if you had left the volume of currency untouched. But there is not in this aspect of the case a moral consideration of the importance that attaches to the converse of this policy, the policy of inflation. I ask what excuse, in the absence of the sternest necessity, can be offered to the country if you add to the volume of currency and enable debtors to pay their debts with less value than would have been required under the currency that existed when the debts were contracted. In the war we had an excuse; it was a valid excuse. The country was in peril; every interest was in jeopardy. Individual rights under such circumstances are comparatively unimportant. Necessity, stern necessity, is the excuse; it is the defense. But in time of peace, when the country, notwithstanding the present disaster, is prosperous, when its resources are great, when its future is bright, I ask what excuse have we to offer to ourselves or to the country if we add to the volume of the currency, and change the relations of debtor and creditor to the injury of the creditor?

I know it is sometimes said that the creditor class is a prosperous class; that its members are opulent; that it is unnecessary to consider their interests or rights. These are views which we ought not to tolerate, and which an honest man can only exhibit to condemn. The question is a question of right between man and man.

The Senator from Missouri, in an undertone, makes a remark which calls to my mind what he said upon the floor of the Senate on a former day—I think it was the Senator from Missouri—that there was no debtor class as an independent class, and no creditor class as an independent class. That is by no means a truthful statement. With deference to the author, there is a creditor class, there is a debtor class; and there is a large class of business men who at the same time are both creditors and debtors. It would be difficult upon any particular day to state whether they belong rather to the creditor or to the debtor class. There is, however, a large agricultural population in the country who owe much and have nothing due to them. They constitute a debtor class. There is also a considerable number of persons who have much owing to them and who never owe anything; they are a creditor class. Therefore there are three classes of people. But if there were but two, we have no right morally, except in the presence of a stern necessity, to change the relations of these classes, whether they compose a hundredth, a twentieth, a tenth, or a half of the population of the country.

During the war we were in the presence of a necessity; we acted under the influence of that necessity. Such was the order of events. But the injustice of the proceeding was considered. We offered to the creditors of the country who held notes without interest the opportunity to exchange those notes for bonds bearing interest; and by the policy of the Government and the purposes of the people those bonds have become as valuable as coin. Therefore the creditor class that was at first compelled to receive in payment of debts currency less valuable than that which existed when the debts were contracted, by investing the moneys which they thus received in the securities of the Government, transferred the loss first imposed upon themselves to the country as a whole. Considering the creditor class of the years 1862, 1863, and 1864 together, they suffered nothing by the transaction. But how will it be if we now inflate the currency for the purpose of furnishing means to carry on the Government? We change all the relations of debtor and creditor without a sufficient reason; and we leave the creditor class to bear a burden which, if it is to be imposed, if it is to be borne by any, should be borne by the country itself. The expenses of maintaining the Government should be borne by the country, and, as I shall have occasion to say before I close my remarks, they can be fairly borne only through the purpose, the resolution, the act of Congress to furnish the means by taxation for carrying on the Government. Every scheme which adds to the volume of currency has in it the element of immorality and the quality of injustice.

Mr. President, something has been said from time to time of the pledges that were given to the country. With the exception of the pledge given to establish a sinking fund by the act of February 25, 1862, which was not fulfilled till far into the year 1869, I know of no pledge which has been given by Congress to the country or to the world that has not been, in good faith, redeemed. I speak this in the presence of the statements and arguments that have been made upon the point that the refusal of the Government, at the present time, to allow holders of greenbacks to convert them at will into Government bonds is a violation of the public faith. The public faith upon that point was sufficiently met by the act of March, 1863, in which it was declared that the holders of United States notes might, at any time between that month of March and the 1st of the following July, convert the legal-tender notes of the United States into United States bonds. The Government was prepared during all that period of time to allow that to be done which by previous acts of Congress had been authorized and permitted.

If I am, as I am, in favor of the resumption of specie payments, with such limitations as were set forth in the annual report of the Secretary of the Treasury for 1872, I may be asked why not come at once to specie payments? The statement has been made here that during four years no progress has been made toward resumption. I am incapable of comprehending the value of facts if considerable progress has not been made. In 1868 the average premium on gold was 39½ per cent.; in 1869 it was 32¼; in 1870 it was a trifle less than 15; in 1871, a little less than 12; in 1872 it was 12.4; and in 1873 it was 13.84. Consider, if you please, four years. In 1869 the premium on gold was 32¼, and in 1873 it was 13.84.

Do not these facts, in themselves considered, open to explanation of whatever sort, demonstrate conclusively that in these four years we have made an advance toward resumption, unless the delusion has taken possession of men's minds that it is of no consequence whether, commercially considered, paper and coin are substantially at the same value or not when we consider the ability of the country to resume specie payments? If the theory be abroad that it is of no consequence whether the premium on gold be much or little, that the ability of the country to resume specie payments is substantially the same in each case, then I can only say that those who entertain that opinion are beyond the reach of any argument which I can present.

Mr. MORTON. Will the Senator allow me in this connection to ask him a question?

Mr. BOUTWELL. Yes, sir.

Mr. MORTON. I ask him to give his opinion, if he will, to the Senate as to the cause of the decline in the price of gold from March, 1869, to March, 1873, and how much of that decline does he attribute to the influence of the act respecting the public credit passed in March, 1869?

Mr. BOUTWELL. I attribute great importance to that act, because it was an initial step in a policy by which the public credit was established—a policy by which up to this time the public credit has been maintained. When that act was passed the credit of the United States in Europe was substantially that of Italy, Spain, Turkey, and the dishonored countries of Europe that for a generation have been struggling under the weight of heavy debt and have not yet received those ideas by which the resources of nations are developed.

From the passage of the act of March 18, 1869, which declared the purpose of the country, followed as it was by the collection of the public revenues and the appropriation of the surplus to the payment of the public debt, the credit of the country steadily and rapidly advanced, until in all the markets of Europe it has been the equal of that of any other nation. For three years our bonds have been sold in more markets of Europe than the bonds of any other state, and commanded as high a price as any. But the depreciation in the price of gold, due largely to that fact, was not due exclusively to it. It was due also to the fact that the business of the country increased, that the uses for money were enlarged, that the field in which money circulated was extended; and it is to further similar progress, which is a natural progress, supported, as I should hope it might be, by such legislation as would develop the resources and increase the business of the country, especially with reference to its commercial marine, that I look to the ultimate, and not distant, equalization, commercially, of the value of paper and coin. Until that time arrives, I say advisedly, until that time arrives, any policy looking to a resumption of specie payments by direct and specific legislative action is fraught with the greatest danger to public and private interests.

There are two ways of securing specie payments. One is by a contraction of the currency. By contracting the currency you can diminish the volume, so that a dollar in paper, commercially, shall be of the value of a dollar in coin. But that process of force will prostrate the business of the country, close up our factories and workshops; not only reducing the wages of labor, but driving hundreds and thousands of men from employment in every part of the land. Believing this, I of course cannot consent to any policy by which the power of the Government is to be applied directly in the contraction of the currency. Not apprehending merely, but believing, knowing even, as far as I can know anything in the future that is not capable of absolute demonstration, that results like those which I have stated, or results kindred to them are sure to follow, I cannot take the responsibility imposed by a policy of direct specific contraction. On the other hand, I am certain that the development of the resources of the country, the increase of its business, the addition of uses to which currency can be applied, will certainly and without great delay close the slight difference that exists between the value of paper and the value of coin.

Mr. GORDON. Will the Senator allow me to ask him a question?

Mr. BOUTWELL. Yes, sir.

Mr. GORDON. The Senator referred a moment ago to the fact that our paper had gradually approached the price of gold. I should like to ask the Senator whether the prosperity of the country, particularly the producing classes of the country, has proportionately increased as we have approached the par of gold?

Mr. BOUTWELL. I am of opinion that the process of holding the currency inflexible and allowing the business of the country to grow up to the volume of currency is a natural, in a certain degree an insensible process, which does not interfere appreciably with the general prosperity. I believe that the country has never from the beginning of the Government enjoyed five years of such undisturbed prosperity as it has enjoyed during the last five years. And if it be true, as the Senator from Georgia has asserted, that there is an absence of prosperity in the South, I apprehend, from the observations I have been able to make, that it is due to circumstances entirely independent of the policy of the Government. I call the Senator to witness that the cities of Charlotte in North Carolina, Columbia and Charleston in South Carolina, Jacksonville in Florida, Savannah, Macon, and Atlanta in Georgia, Chattanooga and Knoxville in Tennessee, are all more prosperous now than they were at any period before the war—that in all these cities there has been an increase of population, an increase of business, and an increase of wealth for the purposes of business.

Mr. GORDON. That is true.

Mr. BOUTWELL. That is true.

Mr. GORDON. But that does not answer my question. My question was as to the producing classes in the country, not as to the growth of cities.

Mr. BOUTWELL. Cities are the outgrowth, the evidences of general prosperity. They exist only in the sunshine of general prosperity; and when you have demonstrated that a city is prosperous, increasing in numbers and wealth through months and years, you have established incontrovertibly the fact that that city is situated in a prosperous community. Nothing can be truer; else all history is false, and all observation of no consequence. If the Senator from Georgia will pardon me, I will allude to a remark which he made in this Chamber touching the condition of the South. There are two classes of people in the South, as I have learned from observation. There are men who before the war were large land-holders, and the possessors of immense estates in personal property and slaves. The fortunes of war divested them of all property except the land. They now hesitate to sell the land. Taxes are high, and they are unable to procure the capital for the economical and successful culture of their fields, and they are day by day growing poorer. Naturally they ask for some relief. There is also in the South a class of people, both black and white, a large and constantly increasing class of laborers who, either upon lands that they lease or upon lands that they have bought, are producing to the acre larger products than were realized under the old system. The aggregate products of the South demonstrate incontestably the fact that the South is prosperous as a whole.

Mr. GORDON. The Senator will pardon me; I dislike very much to interrupt him; but I cannot permit that remark to go unnoticed. The increased production of cotton does not come from the fields formerly cultivated in cotton. It comes from a different area entirely. It comes from labor and from land heretofore not appropriated to the cultivation of cotton at all. The increased production of cotton, therefore, is not due to any great facilities that have been furnished to the production of cotton, but it is due entirely to the fact that new fields, new areas, higher latitudes, heretofore appropriated only to the growth of grain and grasses, are now used for the cultivation of cotton, and the cotton lands proper have, as I stated in my remarks, so depreciated in value that they are no longer regarded as security for debt.

Mr. BOUTWELL. The statement made by the Senator from Georgia is undoubtedly true. It is, if I do not misunderstand him, the process that was going on before the war. When lands were impoverished the owners abandoned them and sought new fields. That is what the owners of lands are doing now. But the general fact remains undisturbed that the South is a prosperous section of the country as compared with any previous condition of its history. Before I pass from this branch of the subject, I wish to call the attention of the Senate to a remark made by the Senator from Georgia, which he submitted as a means of relieving the distresses which he imagined were afflicting his section. He demanded with emphasis and with repetition, "cheap money," "cheap money." If he meant by that demand to secure additional circulation of paper money for the purpose of cheapening it, I advise him to recall what must be to some extent his own experience in the South during the war. If we are not misinformed the South then had cheap money, an abundance of it; so cheap that a householder would go to market in the morning with a basketful of currency and carry home his dinner in his waistcoat pocket. [Laughter.]

Mr. GORDON. I will not interrupt the Senator any more if he will just allow me to state what I meant by cheap money. I did not mean cheap money as the Senator understands it. I meant cheap interest upon money—money lent cheaply.

Mr. BOUTWELL. That is what I supposed the Senator might say in reply; otherwise I should have commenced this part of my speech at the other end. [Laughter.] If an increase of paper money diminished the rate of interest, then there would be one view of this subject which I could take with some degree of complacency. The theory on which an increase of paper money is demanded is, that it stimulates business, inspires activity, opens new avenues for enterprise. Who does not see that the very processes alleged to be beneficial upon which we are invited to accept the theory of inflation demonstrate conclusively that by the operation of those processes the price of interest must continually advance? But I ask gentlemen to consider further. Suppose a man wishes to deal in flour, and he can buy one hundred barrels of flour, as a stock in business, for $800. He wishes to borrow the money, and he can borrow the money for 8 per cent.; and with that capital invested in one hundred barrels of flour he can proceed with his business, and at an annual interest cost of sixty-four dollars. Suppose the country enters upon a system of inflation, and the volume of paper currency is increased 50 per cent., and by an inevitable law prices advance 50 per cent., so that in order to buy one hundred barrels of flour he must have $1,200 of money. Everybody else is in the same condition. At what rate must his interest be in order that he can avail himself of capital to pursue his business as he would have pursued it under the old system? Twelve hundred dollars must be hired for sixty-four dollars in order to place him in the same condition that he would have been without inflation—that is, 5⅓ per cent. The reverse, then, is the truth. The rate of interest increases when you inflate the currency. The interest on the capital required to do a particular business is not only greater from the fact that additional capital is required, but it is greater from the fact that every dollar of the capital so required demands and will obtain a higher rate of interest. Therefore the operator, whether he be a farmer owing for his farm, a manufacturer or a merchant who depends upon borrowed capital to enable him to conduct his business, is impoverished by each and both of these processes.

Mr. FERRY, of Michigan. Will the Senator allow me to put a question?

Mr. BOUTWELL. Yes, sir.

Mr. FERRY, of Michigan. The Senator has stated that the rate of interest runs parallel with the volume of currency, as I understood him; that if the volume is greater, necessarily the rate of interest is greater. Do I misunderstand the Senator?

Mr. BOUTWELL. That may be the conclusion of the Senator's mind; it is not exactly what I said.

Mr. FERRY, of Michigan. I would now ask the Senator how he accounts for the fact that during the summer months, when there is a redundancy of currency in New York, the rate of interest is much below the rate in the winter, when there is a scarcity of currency. Why, sir, currency goes begging in New York during the summer when there is that redundancy, and during the winter money can hardly be obtained there, which is the fact to-day.

Mr. BOUTWELL. Mr. President, one of the difficulties in dealing with every financial and economical question is, that there are many influences at work the effect of which cannot be measured; and therefore it is that what is called statistical information is so untrustworthy. The inquiry made by the Senator from Michigan leads me to reflect upon one of those influences, operating temporarily in the city of New York.

If you look at the price of money in that city on the 1st day of July, you will find it very low. If you look at the price of money on the 1st day of September, you will usually find it very high; and probably on the 1st day of September there is as much money in the city of New York as there was on the 1st day of July, as the demand for means to move the crops does not usually commence till about or after that time. The people of New York have a custom of taking a holiday in the month of July. That is a social fact, and yet it has a bearing upon the financial question which the Senator from Michigan has chosen to put. Money accumulates in the city of New York by natural and artificial processes during the month of July; but the operators, the merchants, the speculators are taking recreation, and they are giving very little attention to the price of money. They have squared their accounts on the 1st of July; they have gone to the watering-places, or to the country, or to Europe, for recreation. But when the 1st of August comes, and these men return to their stores and their banking-houses, speculation begins; the prices of stocks advance; fortunes are made; the rates of interest increase; when, finally, in the month of September or October, there is an active demand for money to keep the margins good on the stocks that have been bought by irresponsible people and a demand also by responsible merchants for money to move the crops. Then and thus the borrowers are ground between the upper and nether millstone. This is the process that takes place every year, and is a satisfactory explanation of the phenomenon stated by the Senator from Michigan.

Mr. President, there are various bills before the Senate looking to resumption. I purpose to examine those bills before I close, but I wish to deal further in the way of statement, if not of argument, with the subject of resumption in the present condition of the country; and when I speak of the present condition of the country, I refer to its condition from 1861 to the present time.

The difficulty in the way of resumption can be expressed in one word, which I have never yet had the courage in this connection to use. That word is "poverty"—not individual poverty, but national poverty; not that poverty which deprives citizens of any of the necessaries, comforts, or luxuries of life; not that poverty which puts it out of the power of a people to maintain in good faith all their obligations at home and abroad; but I speak of that poverty which is incident to a new community, to a society that requires the accumulations of other countries in other times or in other centuries for the development of natural resources. This is the poverty of which I speak; it is the poverty which this country suffers—hardly suffers—experiences; as compared with the wealth of England, the accumulation of many

centuries of industry, the results of great national prosperity, of a vigorous commerce which has been cherished by a wise government through ages until it has taken control of all the oceans of the world and of the islands of the sea; a wealth which has gathered up from every clime the results of the labor of every people, poured them into the lap of Great Britain, and so stimulated the city of London, for example, that its growth from the year 1861 to 1873 measures, in its population and in its structures erected, the entire population and material presence of the city of New York. The wealth of London is so great, that if her four million people were to suspend labor, and the income of the investments which have been made were to continue unimpaired and to be equally distributed for the support of the inhabitants, they, and the generations that are to follow them, could live on in idleness and in comfort. This is the wealth of which I speak—the accumulated wealth of generations. I contrast it with the condition of this country, and in the difference of condition I find the solution of the difficulty under which we labor. England is a creditor country; we are a debtor country. She derives revenue from capital invested in America, North and South, in Africa, in India, in Australia. We contribute—every nation contributes; she receives. Her financial strength is at once the foundation of her naval power, and the source of that commercial greatness by which she holds a large part of the industrial world in her embrace.

The poverty of which I speak does not affect individuals. If the Senators from Iowa will allow a reference which is not invidious in its purpose I can illustrate the point that I am now endeavoring to present. In all the privileges and advantages of domestic and social life the people of Iowa are the equals of the people of Massachusetts, and I am not sure that their average condition in these respects may not be even better. Nevertheless the State of Iowa, as a State, is poor in accumulated wealth when compared with the State of Massachusetts. Poor, because she is new; because she has only the earnings of the living generation. We have the accumulations of two centuries and a half, and during those two centuries and a half our people have been a prosperous people; they have been an industrious people; they have been an economical people. As one evidence of their wealth I mention the fact that the deposits in the savings-banks amount to $175,000,000. Other evidences of wealth might be adduced. In those days when commercial pursuits were prosperous our ships traversed every sea. In those days the merchants of the town of Salem, in the county of Essex, for example—a town now deserted, whose harbor is bare of ships—were princes in wealth. They gathered riches upon the coast of Africa, on the island of Madagascar, in the Chinese seas, and in every quarter of the world. These are the evidences of the accumulations and the means by which some of these accumulations were made. In the nature of things it is not to the credit of the people of Massachusetts, nor to the discredit of the people of Iowa that this difference exists. When Iowa has had a life of two and a half centuries, with her immense resources, when compared with those of the State of Massachusetts, likely enough she will be even more wealthy than Massachusetts will be at that distant time. But the fact remains that, as between States and as between nations, there is wealth and there is poverty; and poverty, in the sense in which I am speaking, is the reason why we cannot immediately resume specie payments and permanently maintain resumption. To resume and then fail is to involve the country in difficulties from which, happily, we are now free.

It has been customary—not here, but elsewhere—to speak disparagingly of a theory that sometimes has been offered to the public; the theory that we must wait until the balance of trade is in our favor. I am compelled to accept this theory as in some degree a truthful one. It has also been said that the balance of trade is against Great Britain, and nevertheless she is a prosperous country, and maintains specie payments.

Mr. SCHURZ. With the permission of the Senator, I desire to say a word in explanation of a remark of mine thrown into the speech of the Senator from Illinois [Mr. LOGAN] the other day. I said that what is commonly called the balance of trade is against Great Britain. I wish to state here that I know very well that the real balance of trade is not against Great Britain.

Mr. BOUTWELL. This is another instance, Mr. President, of the uncertainty of trusting statistics implicitly. Taking the five years closing with the year 1872, the returns show that Great Britain imported £1,579,000,000 sterling of the products of industry, and that she exported in the same period of time £1,307,000,000 sterling of the products of her own industry; exhibiting a balance of trade in these five years, against Great Britain of £172,000,000 sterling. The natural inference would be, from the statistics, that Great Britain was importing more than she exported. The explanation is very simple. We make up our returns of imports from the market value of the articles at the places of exportation. The imports into Great Britain are valued in the markets of Great Britain, including the charges of importation, and including whatever of profit there may have been to the importer. The exports are found upon a home valuation. These facts alone solve the difference which appears upon the tables furnished by the Statistical Bureau.

But in addition to the statement already made there is a consideration which I urge upon the Senate and upon the country, showing, or tending to show, the importance of cherishing our commercial marine. These vast quantities of the products of the industry of Great Britain were sent out on British bottoms. The equally vast quantities of the products of the industry of other people in all sections of the world were brought into the ports of Great Britain mainly upon British bottoms. The usual estimate is that 8 per cent. of the value of articles carried upon the water across the Atlantic is consumed in the expenses of transit; but if you allow but 6 per cent. as the expense of carrying the exports and the imports of Great Britain, you have wiped away entirely the difference between the value of the imports and the value of the exports, without regard to the consideration I have already suggested—that the valuation is a home valuation instead of a foreign one. The balance of trade in favor of Great Britain is shown by the fact that during these same five years there was imported into Great Britain £90,000,000 sterling in coin, equal to $90,000,000 a year. The theory that Great Britain imports more than she exports is utterly false; false in the nature of the case, false upon the demonstration I submit to the Senate.

If our own trade upon the ocean were in American bottoms, so that the earnings and profits of that business inured to the people of this country, and could be felt in its influence upon foreign exchange by the credits that would arise in other countries of the world, the balance of trade against us would disappear. The carrying trade between this country and other countries of the world is worth, at least, $100,000,000 a year, of which until the last year we enjoyed but 24 per cent. and the people of other countries, chiefly the people of Great Britain, enjoyed 76 per cent. During the year 1873, under the influence of a measure which, if it did not originate with the then Secretary of the Treasury, was encouraged and advocated by him, in reference to remitting the duties upon articles used in the construction of American vessels, we have gained 3 per cent. A small matter, to be sure; but if we could inaugurate a policy by which our commercial marine should be placed upon a substantial basis, so that it could earn five-eighths of what is paid by the people of this country for the transportation of their own products abroad, and the importation of the products of other countries for their use, we should wipe out the balance of trade against us, and advance to a condition where we could resume payments in specie without fear and without dependence upon others.

And do not consider, Mr. President, that this is a matter of no consequence. The old doctrine of supply and demand comes in to determine the price of gold. The actual demand, chiefly in the city of New York, is $5,000,000 a week; partly to pay duties on goods imported, and partly to meet the demand abroad. I may be met by the suggestion that for the last two months the balance of trade has been in our favor. That is very true, owing to extraordinary circumstances. The depression in business in this country during the autumn months had something to do with it; the scarcity of the harvest in Europe had more to do with it. This probably is a temporary condition of things to be followed by large importations within six or twelve months, and a considerable demand for specie to go abroad. We cannot enter upon the business of resumption until this relation between the United States and other countries is changed permanently in our favor; nor until that change is wrought into the business and the policy of this country and other countries, so that it is an accepted fact. Then the demand for specie will diminish or cease altogether, and we can take up the business of resumption without trouble.

We are referred to the history of England during and following the Napoleonic wars. For more than twenty years specie payments were suspended. Many efforts were made, but, as a matter of fact, the resumption of specie payments in England was not due to legislative enactments directly applying to the subject-matter under consideration, but to the growth of the country, to the increase of its business and its wealth, when finally the time arrived that the resumption of specie payments could be taken up without producing any trouble to the business world. We have to consider further that the great debt of England was due exclusively to her own people. There was no interest account running against her payable to countries abroad.

The case of France within the last two or three years is an illustration on this point. During the last three years, when France was broken down by the consequences of the war, when her people had been drawn into the ranks of the army, and her industry disturbed, the imports of France nominally exceeded her exports only to the extent of $20,000,000 a year. With that slight demand upon the immense resources of France in precious metals she issued three milliard and one hundred million francs of paper money, equal to about $600,000,000, and yet her currency did not depreciate exceeding 2½ per cent. Since then, by a reduction—and this is to the point of contraction, because we have the recent and positive experience of France—by a reduction which she has made of 400,000,000 francs in her circulation, she has brought paper and specie comparatively together, so that for commercial purposes there is no difference.

Mr. FENTON. Mr. President, if I do not inconvenience the honorable Senator, I will thank him to answer me two questions. First, referring to the statement a few moments since in regard to resumption in England, after the long suspension, does the Senator believe that England would have grown up to specie payment in 1822 without the aid of Peel's bill, or some like measure? Second, does the Senator believe it possible to maintain a stationary condition, with an irredeemable currency, a sufficient length of time to enable us to grow up to the specie basis? In other words, if we attempt to do nothing—simply try to wait for the country to advance to a specie condition—can we

carry a steady hand, can we withstand the pressure which tends to carry us up to-day and down to-morrow?

Mr. BOUTWELL. Well, sir, I am so much of a heretic that I do not attribute any considerable importance to Peel's bill. Legislation, unless it operate upon the business, unless it develop the resources of a country, is impotent with reference to a financial question such as England was called to consider during the first quarter of this century.

As to the other point, whether I suppose it is possible to maintain a depreciated currency in a stationary condition, I offer our own experience as the best evidence to that fact.

Mr. MORTON. Will the Senator allow me to suggest a correction right there? Was not that bill in regard to specie payments passed in 1816, at a time when notes were only at 2½ per cent. discount, giving five years to get over that discount of 2½ per cent.? The bank succeeded in doing it in 1819, in three years, but it resulted immediately in very hard times and general bankruptcy.

Mr. FENTON. The bankruptcy resulted in 1825 from other causes, owing to a remarkable expansion of the currency from 1824 to 1825.

Mr. BOUTWELL. Thus, Mr. President, I have presented the considerations which influence me to do what I can to hold the Government of the country to its present policy, believing that a forcible contraction of the currency will end in disaster, believing also that the expansion of the currency, however it may be effected, will lead to the evils which we have experienced temporarily during the last autumn, and which are the necessary result of every local expansion of a currency, whether it be of paper or of coin. The Senator from Missouri, I think, must bear witness to the fact that the accumulation of coin in Germany has compelled the government to be constantly on the alert to prevent the evil results of inflation.

Mr. SCHURZ. If the Senator from Massachusetts will allow me, it is not the accumulation of coin particularly, but it is a very remarkable inflation of the paper currency in Germany which has led there to a disturbance of business. If I remember correctly, in 1852 the aggregate volume of paper currency in Germany amounted to something like 92,000,000 thalers, while at the present moment it is 485,000,000, or even 500,000,000 thalers, so that an unusual amount of paper currency is afloat there.

Mr. BOUTWELL. It is all redeemable in coin.

Mr. SCHURZ. Of course.

Mr. BOUTWELL. So that it is due to an accumulation of coin and to the increase of paper consequent upon the accumulation of coin. And this leads me to make a remark bearing upon our old system of banking, and having, as I trust, some relation to the questions that are before us. It is possible to have a depreciated currency, and yet the paper in circulation be nominally redeemable in coin. Such was the condition under the old banking system. When communication with Europe was less expeditious than it is now, and when credits were more usually employed in the transaction of business between this country and Europe, it was common for merchants to buy goods on credit to be shipped one month, two months, three months, and to be paid for in four, five, or six months. The consequence often was that large engagements for the payment of money in Europe would arise with reference to the future, while the present demand for that purpose would be little or nothing. During that period of time banks nominally paying specie went on increasing their circulation; there being no test applicable to them for the purpose of determining the question whether they could pay or not. Prices advanced in consequence of the inflation of the currency. The revenue laws became inoperative in the way of protection, as the cost of goods to the importer was measured nominally in the currency of this country; but when the payment was made it was made in gold, and the gold taken out of the country for the purpose of meeting obligations thus incurred finally brought the banks to suspension, as in 1837 and in 1857. It is the result of this experience that you may have an inflated currency, and yet that currency may nominally and for a time be redeemable in coin; for until there is a considerable demand for coin, you have no test that you can apply.

It is, therefore, for I will not disguise what I think to be the truth, one of the happy incidents of the present condition of things that we have a test that is every day applied and that solves the question of the value of the currency. I do not mean to say "every day" without qualification, for there are days when under excitement or by the force of combinations, the premium on gold is advanced beyond a natural point; but it is the result of my observation that the average price of gold for a year measures the depreciation of the paper money. But if it does not measure it with accuracy, it is the only test—it is certainly the best test—that we have, and every article of property is in the course of business subject to this test, and whether it be of foreign or domestic production, it is resolved into a coin value by its practical application. Therefore, for all the purposes of business, however much you may theorize and maintain that the depreciation is more or less than the real difference between coin and paper, the actual market difference is the measure of the depreciation of the paper. Apply practice: You can take a certain quantity of paper money on a given day and in the market you can purchase a certain quantity of coin; and, therefore, for the purposes of that transaction the difference does measure the depreciation of the paper, and for that day that difference measures the appreciation of every article of merchandise in the whole country—domestic products and foreign products alike.

Mr. SCHURZ. If the Senator will permit me, I wish to correct the statement I made a moment ago. I have looked in the mean time at the figures. In the year 1851 there were in all Germany, Austria excluded, 98,000,000 thalers of government and bank currency, and last April there were 481,000,000 thalers of bank currency and 60,000,000 of government paper currency; in all 540,000,000 thalers.

Mr. BOUTWELL. Mr. President, kindred to the view I have just taken is another which I wish to present bearing upon the subject of free banking. I think it is a common idea that if the ultimate payment of a note issued for circulation is secured, you may go on indefinitely with the issue, if there be an arrangement by legislation which requires the party issuing to redeem the notes in coin. The remarks that I made in reference to our old system of banking apply with equal force to what is known as the free-banking system. We have $1,722,000,000 of United States bonds, and the proposition is to allow free banking, based on these bonds, provided the bankers are under obligations to redeem their notes in coin. Who does not see that under such a system the currency of the country might be vastly increased? I think it would be increased, and we are bound to deal with the possibilities of the scheme. The temptations offered by the Government would lead many persons to purchase bonds, organize banks, issue notes, promises to pay in specie; but before the time came for redemption the quantity issued would be so vast that when there was a demand upon the country for specie, as in the case of the opening of the Austrian-Prussian war in 1866, or the opening of the French-German war in 1870, when there was a call for $15,000,000 or $20,000,000, the banks would be unable to respond. Poor consolation is it under such circumstances that there is security, to wit, the bonds of the Government which can ultimately be converted and applied to the redemption of the notes. You have all the evils of an inflated currency in the first place, and you have the certain assurance that the time will come when a demand will be made for the redemption of notes which the banks themselves will be unable to meet.

When I have said that I am opposed to the contraction of the currency I have, of course, said in substance that I am opposed to the proposition of my colleague, [Mr. SUMNER,] which is the earliest, I believe, on the files of the Senate. This is a proposition to convert all the outstanding legal-tender notes into compound-interest-bearing notes, having, I suppose, three years to run, convertible at the end of two years into 5 per cent. bonds. Who does not see that this proposition works a contraction of the currency of the country? These notes bearing compound interest would very soon be hoarded. As they were hoarded, the currency of the country would be contracted by unknown processes to an extent which nobody could foresee, and therefore with results which nobody could predict. I have this to say once for all, that if we are to contract the currency as a means of placing the country in a condition to resume specie payments, let us do it openly; let us say that the Secretary of the Treasury shall contract it to a certain extent per month, so that every merchant and business man in the country may see what is going on, and judge for himself as to what the results will be. But when you have issued $356,000,000 of 6 per cent. compound-interest notes, having three years to run——

Mr. SUMNER. My colleague will observe that by the bill the issue is to be gradual—only a certain sum per month.

Mr. BOUTWELL. Twenty million dollars a month; but if we deal with the whole we deal with its parts in a case like this; and the whole of this is to be put out in the space of eighteen months, or $20,000,000 a month. The moment the interest accumulates the holders of these notes have two inducements to retain them. One is, that there is a certain amount of interest already accumulated which they do not wish to lose by passing the notes to the next man; the other is, that at the end of two years they can exchange them for gold-interest-bearing bonds of the United States. The result of this measure is, that in the period of two years the whole volume of United States notes is to be withdrawn from circulation and nothing substituted in its place.

The Senator from Vermont, [Mr. MORRILL,] and the Senator from New Jersey, [Mr. FRELINGHUYSEN,] have each introduced a bill, the substantive parts of which, as far as I desire to deal with the measures, are the same. The Government is to borrow gold in the markets of the world with which to redeem the outstanding legal-tender notes. There are two facts within our own observation that bear upon this proposition, of one them known to everybody, and the other known to me as an officer of the Government.

When the negotiations were going on in London for the sale of the largest amount of United States bonds that have ever been sold there at one time, it was foreseen by the Bank of England that a quantity of coin would accumulate as the proceeds of these bonds to the credit of the Government of the United States. As a matter of fact there was an accumulation of about $21,000,000. The Bank of England, foreseeing that there would be an accumulation of coin to the credit of the United States which might be taken away bodily in specie, gave notice to the officers of the Treasury Department of the United States that the power of that institution would be arrayed against the whole proceeding unless we gave a pledge that the coin should not be removed, and that we would reinvest it in the bonds of the United States as they were offered in the markets of London. We were compelled to comply. It was in the interest of the Government that we should do so, because we did not want the coin; and we did want the bonds.

But it shows the feeling that animates that central financial power of Great Britain, and it shows a policy on the part of that institution, and of every kindred institution on the continent of Europe, sustained by all the banking and commercial classes, by which, if it were necessary, and this proposition should become a law, the bonds of the United States would be excluded from the stock markets of every financial city. There are in the nine great banks of Europe only $600,000,000 in specie. That specie is held as a reserve with reference to their local business and with reference to the great transactions that take place between the countries of the continent of Europe and Great Britain. I may say, without disparaging the authors of these propositions, that it is useless for Congress to waste time upon legislation looking in that direction.

There is another fact, known to all. We recovered at Geneva an award against Great Britain of $15,500,000. When this claim was maturing the banking and commercial classes of Great Britain induced the government to interpose, and by diplomatic arrangements through the State Department here, operating upon the Treasury Department, secured the transfer of securities and thus avoided the transfer of coin. In the presence of these facts, is it to be assumed for a moment that we can go into the markets of the world and purchase coin with which we can redeem four, three, two, or one hundred million outstanding legal-tender notes?

Mr. MORTON. I should like to ask the Senator whether, in his opinion, the legal-tender notes can be brought to par value in gold by the contraction of a part of them?

Mr. BOUTWELL. I have no doubt of it. The recent history of France furnishes sufficient evidence of that.

Mr. MORTON. Without making any provision for the redemption of the balance?

Mr. BOUTWELL. Yes, sir; undoubtedly.

Mr. MORTON. That a currency which is irredeemable can be maintained at par simply by its contraction?

Mr. BOUTWELL. I have no doubt about it, with the Government of the United States behind it.

Mr. MORTON. That redeemability is not necessary to par value?

Mr. BOUTWELL. Redeemability would be a consequence, of course. When you ask me if they could be brought to par in coin, that implies redemption.

Mr. MORTON. No; I beg the Senator's pardon. Suppose, for the sake of the argument, we contract one hundred and fifty millions of our legal-tender notes and cancel them, will that have the effect to bring the rest of them to par value unless there be first some arrangement made by which the rest of them may be redeemed in coin upon the demand of the holder?

Mr. BOUTWELL. If we should go on redeeming and destroying these notes in monthly installments, other things remaining the same—war, famine, or pestilence would affect the result—the premium on gold would gradually disappear, and persons, without any action on the part of the Government, would accept the notes, and the Government would receive and pay out notes or coin without considering that there was any difference between them, and resumption would be practically taken up without any legislative action whatever. Its maintenance would depend upon the prosperity of the country as shown by its foreign trade balances.

Mr. MORTON. I ask the Senator, as he has evidently given much more attention to this subject than I have, if any bank could bring its currency to par, when it had suspended specie payments, by the simple contraction of the volume of currency, without making preparations and announcing them for the redemption in coin of the balance of them?

Mr. BOUTWELL. The case of an individual bank is different. We are now considering the wisdom and effect of a policy of contracting the volume of currency for the whole country, and not the effect of contraction by a bank which could have no perceptible effect upon the whole volume.

What I have said upon free banking is applicable to the bill submitted by the honorable Senator from Connecticut, [Mr. BUCKINGHAM.] His bill contains a proposition to create a system of free banking with a possible capital of $1,722,000,000. It is also an incidental proposition that the system of reserves shall be given up. The United States notes are to be redeemed in coin or with 5 per cent. bonds as the Treasury may decide, and United States bonds are to be exchangeable for notes; and it is with this proposition, which is a new and different proposition submitted by the Senator from Connecticut, that I desire to deal. It is a proposition which has taken large hold in one form or another of the public mind. By many it is thought to be possible to establish a system by which with safety, with advantage, the United States shall issue bonds bearing 3.65, or 5 or 6 per cent. interest in exchange for notes, and that persons holding these bonds shall have the opportunity to obtain the notes for them. Notes and bonds are to be interchangeable, and the bonds when out are to bear interest at some fixed rate.

The time was when there was neither the financial capacity in means and probably not the disposition, to form great organizations against the Government for the purpose of making money; but, unhappily, that time, if it ever existed, has passed away. The fortunes that were accumulated during the war, and the prosperity which has attended individual undertakings in some of the great cities, have at last put it in the power of men to organize themselves for the purpose of preying upon the business of the country for the advancement of their own interests. They have made the attempt repeatedly. They have failed sometimes, and sometimes they have in a degree succeeded. It is not an exaggeration to say that it is possible in the city of New York for men—I do not say unscrupulous men, but men having a desire to add to the fortunes they have already accumulated—to mass for the purposes of speculation ten, twenty, or thirty million dollars. What are the facilities which this system opens to these men? Take the month of July, for example, when currency is abundant and the demand for it slight. They accumulate twenty, thirty, or forty million dollars. They place it in the Treasury and take three sixty-five bonds for it. What is the Government to do with the money? Note the processes. Is the Government to be stakeholder of the surplus money which capitalists may have? Is the Treasury, when money is not needed for the purposes of business, to take any surplus which capitalists may have on hand and pay interest, either 3.65 or 5 per cent.? Is this the purpose of the Government? Is this the duty of the Secretary of the Treasury and all his servants in all sections of this country as officers of the Government and under pay of the Government? I think not. But suppose it were undertaken, and speculators mass in the month of July twenty-five or forty million dollars in the city of New York and take three sixty-five bonds; shall the Government hold the money, or shall it buy 6 per cent. outstanding bonds? There is a difference of opinion upon this point among the friends of the policy. Suppose, however, you buy 6 per cent. outstanding bonds. The volume of currency is thus restored to what it was before the deposit was made, and the Government has redeemed 6 p per cent. bonds and has issued three sixty-five bonds which it may be called upon to redeem at any moment. Resting here, the organization of speculators has secured a control of the volume of currency to the extent of the bonds held by them. Thus you grant to unknown men a power which you now hesitate to trust to the officers of the Government.

Suppose, further, these people wait until the month of September, when persons engaged in business and in speculation begin to be anxious as to the means by which they are to meet their liabilities. The speculators then mass fifteen, twenty, or thirty million dollars, withdraw it from the channels of business, and deposit it in the Treasury. The fact is known. They make the fact known to the country without delay. A panic ensues; prices fall. With other means at their command, they enter the market and speculate upon disasters which they themselves, under the authority of the Government, have produced. The Secretary of the Treasury, stimulated to perform what merchants and bankers think would be a proper discharge of duty, advertises immediately for 6 per cent. bonds. He is compelled by the force of public sentiment to put this hoarded money again in circulation. He advertises, and in three days, or six days, he is able to buy bonds and put the money which has been forced into the public vaults again into the channels of trade. Relief comes. The organization first speculated upon an adverse condition of things which they themselves produced; and they still have on hand the three sixty-five bonds that can be converted into currency at will. First, they have by this process reduced the volume of currency, and then by the force of circumstances it has been restored to its original condition; and at last they go to the Treasury and demand the redemption of the millions of three sixty-five bonds. Thus they precipitate an additional volume of currency on the market. Prices are temporarily inflamed, and the speculators profit by the sale of stocks at enormous prices which they have bought at low prices, taking advantage of both conditions brought about by their own conduct under the authority of law. Thus does the proposition of the Senator from Connecticut [Mr. BUCKINGHAM] place the business and finances of the country at the mercy of irresponsible speculators.

Mr. SHERMAN. I should like to ask a question of my honorable friend upon this very point. Does not the whole weight of his argument rest upon the assertion that these persons who combine to convert their notes and bonds can present their bonds for payment at their own pleasure?

Mr. BOUTWELL. Yes, sir.

Mr. SHERMAN. But let me put this case: Suppose they could only convert their notes, when they chose to convert them, into a bond which was redeemable at the pleasure of the United States after several years; in other words, into a bond that is not due for years, in the nature of a permanent investment. I ask him to carry out his argument and see how it would apply in such a case. Would they have the power then to combine against the Government?

Mr. BOUTWELL. No, sir; but that would be a contraction of the currency; that would be open to the objections I made to the other proposition.

Mr. SHERMAN. Then let us suppose that immediately under the general authority conferred by the same law, the Secretary of the Treasury has a right to go into the market the next moment and buy 6 per cent. bonds, and this operation should continue until $1,200,000,000 6 per cent. bonds were converted into 5 per cent. bonds.

Mr. BOUTWELL. The Senator is referring to his own proposition.

Mr. SHERMAN. Yes, sir.

Mr. BOUTWELL. I will not forget it.

Mr. FERRY, of Michigan. I should like to put a question to the Senator from Massachusetts if he will allow me. The Senator, as I understand him, has stated a case, where, for instance, in the city of

New York—though I do not know that he named New York, because my attention was called otherwise—by a combination of capital a contraction of the currency might be made by which speculation might follow. I ask the Senator if this currency was funded, or, rather, converted into bonds, scattered throughout the land, would there be a possibility of creating such a contraction when at the West the bonds could be reconverted into currency to meet the emergency? As an example let me cite to him a fact coming within my own knowledge. In the late panic in New York a bank at the West, unable to draw its balance from that bank, was enabled to save itself from suspension and insolvency by resorting to a certificate provided for by law, by which the western bank drew from the Government on its certificate of deposit $10,000; drawing on a certificate of deposit from the sub-treasury in New York, saved the bank from insolvency or suspension when it could not draw its balance due it in a New York bank.

Mr. BOUTWELL. That is just the question which I endeavored to dispose of a few minutes since, and I restate it: Should the Government be the custodian of the money either of individuals or of banks which for the time they do not wish to use, or should they be left to take care of it in their own way and get what income they can from it? If it is the business of the Treasury of the United States to take care of the money of the banks, pay interest on it, and see that they do not deposit it where they cannot get it again, then the plan of the Senator from Michigan may do.

Mr. FERRY, of Michigan. I only cited it as an instance to show that where the surplus currency of the country was converted into a bond of the Government it was safer in that bond than it was accumulating in the banks in New York.

Mr. BOUTWELL. I have no question about that.

Mr. FERRY, of Michigan. That is the point I made.

Mr. BUCKINGHAM. I understood the Senator from Massachusetts to say that by a combination of capitalists they might put a large amount of money into the Treasury and draw from it bonds; and after they had so done, it would be the duty of the Secretary of the Treasury to go, or he might go into the market and buy the 6 per cent. bonds of the Government, and therefore flood the country with currency and enable these men who had commenced a circle of speculation to complete it. Now, I would ask if there is anything in the bill which I introduced authorizing the Secretary of the Treasury, under such circumstances, to buy 6 per cent. bonds?

Mr. BOUTWELL. I think, Mr. President, I stated in the alternative what the Secretary of the Treasury might do. He might hold this money and the Government would be paying the interest on it, without any return; or he might invest it in bonds; and I endeavored to state the consequences of either course, that they would be disadvantageous to the Government, and in one case disastrous to business.

Mr. BUCKINGHAM. Whether the Government shall be a stake-holder of its own indebtedness may be a question of propriety and expediency. What has the Government out against it? The circulation of a large amount of money; they have promised to pay; and now when I go and ask the Government to pay and it refuses to pay, why should it not become a stake-holder of its promise and pay me interest until it can redeem it?

Mr. BOUTWELL. The inquiry of the honorable Senator from Connecticut includes an assumption which I thought had been disposed of in this body, as to the immediate duty of the Government under the law to redeem these notes at a stated time. It is the duty of Congress to provide for their payment when in its judgment it can be safely done. That is the obligation. If it be admitted that there is no other or different obligation resting on the Government, then the inquiry of the Senator from Connecticut falls.

The proposition of the Senator from Michigan as modified is, as I understand, merely a proposition for a moderate increase of the volume of the currency.

Mr. FERRY, of Michigan. The Senator will understand that that is the question before the Senate now. "The Senator from Michigan" has not withdrawn from what he proposed in the earlier stages, except as to the question immediately pending now before the Senate.

Mr. BOUTWELL. Then I will reserve what I might be disposed to say upon the original proposition of the Senator until it is actually before the Senate.

Mr. FERRY, of Michigan. I will state to the Senator that in modifying my proposition, (and I think the Associated Press has done me injustice in stating that I had withdrawn from the proposition I originally made,) I stated most fully and clearly I think, as the RECORD will show, that I merely waived it for the time being, and rested now upon the primary question of relief, and that was an increase of currency. As it is modified now, it stands "a moderate increase of currency."

Mr. BOUTWELL. I shall content myself with two observations. One is, that so much of what I have said in regard to the proposition of the Senator from Connecticut and to the general proposition as relates to the interchangeability of bonds and United States notes is applicable to the original proposition of the Senator from Michigan. His present proposition is open to the objection which I have made in various forms of speech, that it is an inflation of the currency, that it is calculated to inflame prices, promote speculation, lead people to engage in hazardous and unprofitable undertakings, and in the end to bring upon the country a panic and all the evils that flow from panics; and just in proportion as his "moderate increase" of the circulating medium is increased, just in that proportion will the evils to which I have referred follow.

If we are to cut away entirely from all idea that the precious metals are the standard of value; if we are to revoke the practice of the world through all historical times; if we are to deny the wisdom of practical and theoretical men in all countries and in all ages, by saying that we can abandon absolutely all reference to the value of the precious metals, and go on increasing the volume of paper money, then we enter upon a policy that can be appreciated; and the country and the business men of the country will do well to take notice of it, and prepare themselves for the disasters that await all private and public undertakings. And now that we have a depreciated currency, and should be struggling by such means as are at our command to return to a specie basis, I hold it to be unwise in a high degree to do anything which tends in the opposite direction. Therefore I am entirely opposed to the proposition of the Senator from Michigan.

I come next to the resolution reported by the honorable chairman of the Committee on Finance, and with great diffidence I utter anything in the way of criticism or opposition; but facts which cannot be kept out of sight had better be accepted and treated. The proposition is that "a currency of uniform value shall be furnished, always redeemable in gold or its equivalent;" and the Senator, in the remarks he made, said that two things, each equal to a third, were equal to each other. That, as a proposition in geometry, is true. But we are not dealing with propositions in geometry, and we are dealing with actual facts in finance.

There are three great domains of thought, two of which are open to examination, and the third is as yet beyond the reach of human inquiry. The first (and it includes all subjects of human consideration) is an inquiry into the existence or organization of things, and the second is an inquiry into the laws and the operation of laws by which things that are *are*. In matters of finance we must deal first with the facts; and in examining these facts we generally ascertain something of the laws by which they are controlled. A fact, a patent fact, is that gold has no equivalent. Every man either thinks it better or worse, more valuable or less valuable, than something else. That condition of the mind is the origin of all trade. Otherwise the business of the world would come to a stand-still; nothing would be done. If you go into a shop and buy a hat for seven dollars in gold, you take the hat because you consider it better than the gold; the merchant takes the gold because he thinks it better for him than the hat; but if the next person who goes into that shop is told by the merchant that you took a hat and gave him seven dollars, and that you thought the hat was more valuable than the gold, and therefore he should do the same, the second man may, and probably would, refuse the hat upon the terms proposed. He might say "I have no use for a hat, but I have use for the gold." There is no equivalent for gold in the affairs of men. Every exchange proceeds upon the idea that something is more valuable or less valuable, in the estimation of one of two people, than the other thing.

What I have said of the ordinary transactions of life is equally true in regard to the Government bonds. To some persons, under some circumstances, they would be worth more than gold. Under different circumstances, or to other persons, they would be worth less than gold. Therefore the committee ask us to instruct the committee to do that which manifestly cannot be done.

The expression in the concluding part of the resolution comes within the scope of some observations which I have already submitted in regard to an elastic currency "so adjusted as to meet the changing wants of trade and commerce."

But, passing from the resolution, I come to the proposition which was submitted to us by the Senator from Ohio. I have not the bill before me, and must deal with his proposition from recollection. If I err in the statement of facts I shall consider it a favor to be corrected. It is, in substance, that the Government upon demand shall issue a 5 per cent. bond in exchange for United States notes, and that those notes shall be applied by the Secretary of the Treasury to the purchase of 6 per cent. bonds.

Mr. SHERMAN. I will state the proposition a little differently, if the Senator will allow me. It is, that the Government of the United States will redeem its notes after a certain time, either in coin, or, at the option of the Government, in a United States bond bearing interest at 5 per cent., and that the Secretary of the Treasury shall issue the notes as the needs of the Government require to pay its current expenses, if they are more than the revenue receipts, and with the balance purchase or pay off 6 per cent. bonds. That is the general proposition I submitted last year.

Mr. BOUTWELL. That is, shall pay the notes in a year in coin or 5 per cent. bonds.

Mr. SHERMAN. Yes, sir.

Mr. BOUTWELL. That proposition submitted to the country by Congress would produce in the public mind one of two impressions or a condition of doubt. Some might believe that at the end of a year these notes would be redeemed in coin; others might believe that they would be redeemed in 5 per cent. bonds; and others would remain in doubt as to what would happen. Uncertainty in the policy of a Government in reference to finance is one of the worst of public evils. If you can mark out a policy, if it be not the wisest policy that could be devised, if, nevertheless, it is a clear and positive policy, if it opens to the public mind the ideas of Congress and the course that

is to be pursued, men at once adapt themselves to it. Business is flexible; it accommodates itself to the law; and the business of the country would go on with a degree of prosperity affected favorably or adversely by the legislation of the country.

The first objection, then, that I make to the proposition of the Senator from Ohio is, the uncertainty in which for twelve months the public mind of the country would be placed. Suppose, however, that the larger part should accept the idea that these notes would be redeemed in coin. Coin to-day is 11 or 12 per cent. premium. Immediately every person in possession of United States notes would act upon the expectation that in a year the notes would command the coin. The opinion might, and I think would, prevail, that the Government of the United States could not stand the strain that would be made upon it, and that after the payment of twenty, or fifty, or one hundred million dollars at most, the Treasury would be obliged to close its doors and suspend specie payments, and that specie would then advance in price. Who does not see that the prevalence of that idea in the public mind would produce the withdrawal from circulation of the entire volume of greenbacks, to be followed by all the disasters which I have attributed to the plan of my colleague?

But suppose none of those things should happen, and you proceed to the point of action, and the Government should do, what I imagine upon that proposition it would do—offer to the holders of United States notes 5 per cent. ten-forty bonds. The currency received would be paid out by the Secretary of the Treasury for five-twenty bonds. The 5 per cent. bonds would be issued by the Government and sold at par. Operators would take their tables, which are open in every banking-house in the country, and having found the value of a ten-forty bond to be par in legal-tenders, would at once resolve the question of the value of the 6 per cent. five-twenty bonds.

Mr. SHERMAN. Will my friend allow me there. I do not wish to interrupt him, because I know how troublesome it is; but I will say that the value of the 6 per cent. bonds is now limited to par in gold because of the right of the United States to step into the market and buy in all the 6 per cent. bonds now at par in gold. Hence there is a maximum beyond which we cannot be required to pay for our bonds. If, therefore, the 5 per cent. bonds now being issued are worth 99½, as they are to-day, presuming that it will not be changed by the operation of this bill, then the Government would have to pay one-half of 1 per cent., the difference between the par value of the 5 per cent. bond and the legal value of the 6 per cent. bond, which cannot rise above par in gold, because we have the right to pay it off in gold. That is an element that I desire the Senator to consider.

Mr. BOUTWELL. This is an element which I should not have introduced into my argument except upon the suggestion of the Senator from Ohio. But will he not see that without a reserve of coin, such as cannot be commanded from the revenues of the Government during the next year, and in view of the position which I have taken and I think demonstrated, that it is not possible to borrow coin in other countries for the purpose or redeeming these notes, that when he has issued 5 per cent. ten-forty bonds and taken in exchange the United States notes, he has then nothing with which he can redeem the five-twenty bonds outstanding, and that the result of that policy is to convert the entire volume of United States notes outstanding into ten-forty 5 per cent. bonds, and work a contraction of the currency? The only escape from the difficulty in which the proposition now lies is in following the suggestion I was about to make, that the Secretary of the Treasury be allowed to go into the markets of the country and buy the 6 per cent. bonds at the market price with the United States notes which he has received into the Treasury for the 5 per cent. bonds.

Mr. MORTON. I should like to have the Senator's opinion upon one point in connection with that. The theory of the Senator from Ohio is, that by authorizing United States notes to be converted into a 5 per cent. bond, which is now at par, he will bring the notes up to par. I wish to ask the Senator from Massachusetts a question in regard to that. The 5 per cent. bond being now barely at par, when it can only be purchased from the Government in gold at par, would that remain at par when you authorized the conversion into it of a currency which is at 10 per cent. discount?

Mr. BOUTWELL. I will not undertake to state the results of two hypothetical propositions. My belief is that gold would be, at first, at some premium, notwithstanding the power of conversion.

I was about to say that the only escape from the position in which the country would be placed, if the power of the Treasury were limited to the redemption of the 6 per cent. five-twenty bonds in coin, is to be found in granting to the Secretary of the Treasury authority to buy 6 per cent. bonds with United States notes and at the market value of the bonds. Otherwise the machine would not work; but working upon those propositions, let us see what would be the result. Five per cent. ten-forty bonds being worth par in United States notes bankers would at once fix the value of a 6 per cent. five-twenty bond in United States notes. Bonds of the latter class could not go below that price. The process goes on; it might go on until the 6 per cent. five-twenty bonds outstanding were all thus redeemed. What would be the result in the end? The interest on our debt would be 5 per cent.; the interest on each $100,000 would be less; but the capital of the debt would be increased by the difference multiplied by the number of bonds sold and purchased between 100, the par value of the ten-forty bonds, and the market price of the five-twenty bonds purchased; so that in the end you would owe a larger sum of money, bearing substantially the same aggregate amount of interest. The percentage of interest would be reduced, but the volume of interest would remain the same, as the capital of the debt of the country would be increased proportionately. We should in the end, be with reference to specie payments, if the thing could be done in a day, precisely where we are now. We should have just as many dollars of United States notes in circulation as we have to-day, and should be in the same condition with reference to specie payments.

I have thus, Mr. President, dwelt on the various propositions that have been submitted——

Mr. FRELINGHUYSEN. I have avoided interrupting the Senator from Massachusetts, and have listened to every word of his argument with great pleasure. I wish now to ask him a question. I understand him to maintain that it is demonstrated that you cannot make an accumulation of gold in the Treasury, because it would provoke hostile legislation and hostile measures on the part of other countries; that even the bringing here of fifteen millions to answer the award was guarded against. Now, the bill which I had the honor to introduce fixes no time within which the accumulation of gold shall be made, and consequently the Secretary of the Treasury would buy the gold when he could get it and not when he could not; it would be done deliberately, and so harmonize with the interests of the country. We at one time had $100,000,000, without that derangement being produced; and the present product of our mines is $40,000,000, and it is estimated that it will be $60,000,000 the coming year; and it is agreed on all hands that there are $100,000,000 of gold hoarded in this country. I ask my friend whether the fact of there being no time fixed and these considerations do not at least leave it an open question, and not a demonstration, that the gold cannot be accumulated.

Mr. BOUTWELL. Of course, if there is no time certain as to when a thing is to be done, nobody can say that it cannot be done, because time is an element in the doing of everything. Unless you have a limit to the time there is no assurance as to what may happen.

The suggestion made by the Senator from New Jersey, as to the products of our mines, leads me to recall his attention to what I said in regard to the balance of trade. The products of our mines have been thus far consumed by the demand at the ports of export to meet the balance of trade against us; but if the time should come, as I trust it may come, and that speedily, when the balance of trade shall be in our favor, or not materially against us, then the products of our mines accumulating in the Treasury of the United States and in the banking institutions of the country will furnish a safe foundation on which we can resume specie payments. If the Senator from New Jersey does not contemplate resumption until that times arrives, I am surely with him, and nothing that I have said militates against the position which he appears to occupy.

I was about to say that, having made such observations as I thought the circumstances required upon the various propositions that have been submitted, I have in the end to lament that the Senator from Missouri did not submit a proposition to the Senate. Through a labored, and ingenious, and exceedingly acceptable argument he asserted and stated that the thing could be done; that specie payments could be resumed. I remember that it was said by a person of high authority that if a thing could be done, an ingenious man could tell how, and I did hope that the ingenuity of the Senator from Missouri would be sufficient to enable him to tell us how the thing is to be done. I did not listen to all of his speech, being absent at the commencement of it, but what I did not hear I read.

I find that the first part was devoted to an arraignment of the Senator from Massachusetts for a declaration made by him, as was asserted by the Senator from Missouri, which on a subsequent day, with entire propriety and without any feeling on my part, he retracted, in regard to the duty of the Government to redeem the United States notes whenever it was able. Therefore, that part of his speech was disposed of by what he himself said on the subsequent day.

A part of his speech was devoted to a statement of the evils of an inflated currency. Upon that point I agree with him entirely.

Another portion of his speech was devoted to the duty of resumption, which he stated with precision and argued with force.

But the fourth and last part of his speech contained an admission which, in my opinion, was an entire refutation of all that he had said in regard to resumption—that he did not look for it within the next two or three years.

I think I have a right to insist that if the Senator from Missouri is in favor of resumption he shall show us how it is to be done. If he believes that it can be done by legislative processes, those processes, in the nature of things, must take effect at a specific time. Let him name the time. I have observed here a strong disposition to put more confidence in days future, of which we know nothing, than in the days present, of which we have some means of judgment. I am reminded of those credulous and incredulous old gentlemen who make their wills and devise their property to their grandchildren whom they have not seen, not daring to trust their children whom they have seen.

Mr. SCHURZ. Will the Senator allow me a word?

Mr. BOUTWELL. Very well.

Mr. SCHURZ. All I have to say in reply to what the Senator from Massachusetts has just stated is this: We are now discussing a resolution to instruct the Committee on Finance to report to us certain bills. We are not discussing specific remedies for the present difficulties, nor any specific measure for the resumption of specie payments. As soon as the Committee on Finance shall have reported,

then it will be time to discuss the specific bills also. But then there are two parts to this business. In the first place we want to prevent inflation, and there the Senator is with us; and when we have prevented inflation, then I think we shall discuss further what is to be done.

Mr. BOUTWELL. I remember that the Senator from Missouri the other day, in some interlocutory remarks that we had, said he had been endeavoring to satisfy me that the true way to prevent inflation was to go for contraction, and that those of us (if I am allowed to say "us" in this connection) who think that the strong point is to stand on the present policy of the country and resist contraction on the one hand and inflation on the other, are really in the interest of the inflationists. Further, that the strongest position we could occupy was to step off from this platform, to abandon this citadel, intrenched as we are in the settled policy of the country, and enter upon a contest outside; and then, in case we should be defeated by the inflationists, try to regain our position and hold to the old policy of the country. I am not sure that this may not be military strategy. There is certainly a great example in that direction. There was a student at West Point by the name of Derby, known to the literary world as "John Phœnix." While a student there, it is said that a professor demonstrated, according to his ideas of demonstration, that a city or a citadel closely besieged could not hold out more than sixty days. That being demonstrated, he turned to the class, addressing them as a whole, but expecting answers of course by individuals, and said, "Young gentlemen, what would you do if you were commanding a force in a citadel subject to close siege?" "Well," said Derby, "upon the proposition that you have demonstrated, I would march out of the citadel, and let the enemy in, then I would besiege it closely, and in sixty days I would take it and reoccupy it." [Laughter.]

We have a citadel, and we had better keep in it. If we are driven out, we shall then only be in the position which the Senator from Missouri advises us voluntarily to accept. If those who are in favor of contraction and those who are in favor of the present condition of things, that is, a permanent volume of $356,000,000, are together unequal in the contest with those who demand an addition to the currency, I do not see how, even with the oration of my friend the Senator from Missouri, those who are in favor of contraction alone will be able to maintain their position.

But there is a difficulty before us which seems to me more serious than any that we have encountered. There has been an inflation of the currency, growing out of events with which we are familiar, amounting now to $27,000,000. The aggregation due to that inflation shows itself chiefly in the city of New York. Already the men accustomed to speculate have become active; stocks have advanced in some instances to within 1 per cent. of the highest point reached during the year 1873. If this process of inflation goes on, I am not sure if it goes no further than the issue of the forty-four million, it will inevitably be followed by events corresponding in character to those which occurred in the month of September last. Therefore I advance the position that it is the duty of Congress to so legislate, and to legislate immediately, as to arrest this danger and avoid the evil to the extent that it is capable of being avoided. It will not do to rely upon the Treasury Department. The Treasury Department is under orders. You have made appropriations for the fiscal year ending the 30th day of next June. You cannot revoke your orders in season to avoid the dangers to which we are tending. Nor is it, in my judgment, wise or proper to borrow money either by the issue of three sixty-five bonds or 5 per cent. or 6 per cent. bonds.

I ask if, after five years of struggle, in which I have had some humble part; if after five years of struggle to establish the credit of this country, to put it upon such a foundation that it is respected in all financial centers; if after having made provision for the payment of the national debt, and by its payment inspired anew republican ideas on the continent of Europe in the example we set of the power of a republic and of a free people to perform faithfully and to their full extent all their obligations, we are now in time of peace and in comparative prosperity, not substantially disturbed by the events that have taken place, to go into our own markets or into the markets of the world begging for money to pay the current expenses of this Government?

The present system of revenue is inadequate, and a revival of trade will not furnish the means of supporting the Government and paying a reasonable sum annually upon the public debt. Our experience under the present system justifies the opinion that we shall fail to meet our obligations under the act establishing the sinking fund.

There then is but one remedy. The remedy is not here; but I can speak to the people of the country beyond these walls. There is but one remedy for the existing condition of things, and but one means by which we can ward off the evils which menace us—the remedy is taxation. I do not say on what, either of persons, classes, or property; but taxation there must be, or else the evils of an inflated currency, or the disgrace of borrowing money to pay the current expenses of the Government, will fall upon the people. Moreover, a loan does not redeem our pledge to maintain the sinking fund. The inflation of the currency, which is one way, and a poor way, of borrowing money, does not redeem our plighted faith to the world. When we have exhausted every resource in the matter of economy, as it is our duty to exhaust every resource, then, as between taxation and borrowing, as between burdens and disgrace, I will put burdens on the people; but I will not consent to disgrace them.

Cuban Belligerency.

SPEECH OF HON. JOSIAH T. WALLS,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

January 24, 1874,

On the joint resolution declaring the right of the Cuban republic to recognition as a belligerent.

Mr. WALLS. Mr. Speaker, I feel moved to press the adoption of this joint resolution in obedience to what I understand as the prevailing sentiment of the American people—that sentiment which soars above the selfishness of traditional dynasties, or the soulless ordinances of international law. The progress of the human family is indicated all along the line of its march by bright epochs, embodied in the heroic endeavor of peoples in the upbuilding effort of self-government, and in opposition to the pernicious habit of government under the extinct prerogative of divine right. Experiments in the establishment of governments of the people have met with almost uninterrupted failure in the past, down to the time when the continental patriots of our own land arose in their honesty, their might and majesty, and their devotion to truth and justice, to throw off the yoke of a tyranny less odious than that under which the Cuban patriots suffer at this moment, and pledged their lives, their fortunes, and their sacred honor to the maintenance of the principle that "all men were created equal," and entitled to life, liberty, and the pursuit of happiness; and that when governments are subversive of these ends, they ought to be altered or abolished. The grand emotion of liberty enkindled in the hearts of the brave men of America in the resolution which spoke the nation into life touched a responsive chord in the hearts of patriots the world over; and following in our exemplary path, under the lead of the peerless La Fayette and other bright spirits of France, came that memorable revolution of the people of that country, which planted the germ of republicanism, the growth of which has made the tenure of kingcraft and imperialism of doubtful duration. And it must not be forgotten that in the dark hours of our struggle for independence such men as La Fayette and Kosciusko, willing to lay down their lives for the principle of liberty, as were the brave Crittenden, Ryan, Fry, and their compatriots, who, educated in the school of the Republic, and appreciating the immeasurable advantages of a government of the people, by the people, and for the people—inspired with nerve, valor, and devotion to humanity—went to the rescue of the intrepid patriots of the Cuban republic.

It is a fact beyond controversy, that the erection of a republic on this continent placed the possessions of European powers on our soil beyond the possibility of rehabilitation, and created the desire for liberty in the hearts of all peoples to whom the glad tidings went, that in this endless waste of the western world, whither the star of empire takes its way, the full fruition of the hopes of mankind was fully realized. Even in the breasts of chattel slaves of Hayti, supposed to be brutalized by the oppression of centuries, the divine inspiration sprouted into patriotism, and out of the revolt there came a brain-power and a capacity which successfully secured emancipation, enfranchisement, the defeat of the great Napoleon, and the final establishment of the Haytian Republic.

Then came the struggle of the peoples of the Spanish possessions in South and Central America to throw off the yoke of the tyranny under which the Cuban republic now suffers without encouragement or assistance.

These republics, under the genial influences of the sympathies of this and other great governments, came to the front in the struggle for national existence; and by the proffer of belligerent rights, which came to them as the spontaneous offering of the great nations which are the guardians of human rights, achieved their independence and were bidden God-speed in the march upward to the glory and grandeur of equal liberty.

The Greek rebellion is another instance of the revolt of the people against oppression—in which a people struggled heroically for seven years, under untold suffering and privation—for the boon of liberty. The tyranny of the Turkish government toward the Greeks bears a strong resemblance to that of Spain toward the Cubans. The Greeks, like the Cubans, exhibited the noblest qualities of character—bravery, patience under suffering, and unconquerable resolution. The blood shed at Constantinople, the execution of the patriarch, and the massacres of Scio, find their adequate parallels in the repeated and cold-blooded murders of non-combatants, foreigners, women and children, by the Spanish authorities in Cuba. But here the comparison ceases. These acts of the Turkish government toward the Greeks created a profound sympathy for them throughout the world, and summoned to the cause of Greek independence brave spirits and lovers of liberty from every land. Contributions of money, the necessaries of life, and the munitions of war went out to them from all parts of civilization; and our own land was not lacking in this grand benevolence. Under the magnetic influence of the eloquence of Clay, Webster, Everett, and other statesmen of that time, the nation was equal to the occasion, and the moral effect of her sympathy and recognition contributed greatly toward the final result, decisively accomplished at the battle of Navarino by the destruction of the

Turco-Egyptian fleet by the combined fleets of England, France, and Russia.

Thus was the independence of an oppressed people—greatly tyrannized over by a so-called paternal government, but less brutally governed than are the Cubans by Spain—achieved mainly through the aid, comfort, and tangible assistance rendered by governments which created the precedents and conditions of international law, but upon whom its requirements are powerless when in conflict with the God-given privilege of self-government.

In these later times, when the space of a century stands between us and the struggle of the fathers for liberty, and the heroism and sacrifices of our own patriots are falling unto forgetfulness, and the conditions of neutrality still the best impulses of the heart and paralyze the strong arm that was ever ready to protect the weak and assist the oppressed to a higher plane of manhood, it seems that history has ceased to repeat itself; and we have forgotten the grand principle which underlies our institutions; ceased to have a "manifest destiny" have given the "Monroe doctrine" to the winds of heaven; while upon our own soil continued atrocities are committed in violation of every principle we have enunciated in the past. While we honor the fearless commander of the British gun-boat Niobe, and are grateful for his timely and noble defense of our flag, and his protection of the lives of our citizens at Santiago de Cuba, we can but feel the humiliation, and earnestly pray for the time to come when this great Government will return to the duty of protecting its own flag and citizens.

For every effort to achieve independence throughout the world, in the century of the existence of this Republic, the nation is measurably responsible by the proud example of July 4, 1776. And the sympathies of this great people have not been lacking, neither has the government of the country been tardy in recognizing the efforts of peoples striving to attain the form of government proved by trial in the crucible of adversity to be the best instituted among men.

That this Congress will immortalize itself by following the traditions of the past, and obey the behests of civilization and humanity, by conceding belligerent rights to the republic of Cuba, there is little doubt; and the friends of Cuban liberty and emancipation are willing to rest their case and trust to the magnanimity and love of equity, individually and collectively characteristic of the war-making power of the land.

Aside from the claims of the brave patriots of Cuba, battling for national existence, there are half a million of people whose race this American nation has started on the high road to equality, and whom they are teaching the world to respect as citizens of the best government on earth, suffering under the galling chains of an abject serfdom, upon which we have placed the stamp of our condemnation in our land, and which continues in all its horrors under Spanish rule in Cuba, in spite of the kindly offices of Christian nations and in flagrant violation of the most sacred treaty obligations.

The course of Spain in the matter of emancipation has been one of continued duplicity and fraud, and the institution of slavery is as flourishing to-day in the Spanish possessions in America as before the time when God, in His mercy, waked this nation to light and life. Existing a foul blot at our doors and a disgrace and a reproach to the institutions of which we are representative, and a foul stigma upon the civilization of the time, Spain has reveled in the blood-bought wealth of this heinous traffic for more than three centuries; and even now, when Russia and even Brazil have followed in our footsteps in the noble work of emancipation, the Spanish government insults the Christian world by perpetuating human slavery.

The Cuban patriots first incurred the hatred of Spanish officials, and incited their persecution, by their outspoken hostility to the African slave trade, which Spain had solemnly agreed with Great Britain to prohibit, and their advocacy of emancipation in some shape.

As early as 1848 an assemblage of Cuban planters, all slave-owners themselves, declared the time had come for the illicit traffic in African slaves to cease, and characterized it as "the scorn of the civilized world, a hideous abyss in which was buried all hope of security and future welfare;" and requested the inflexible prosecution of those engaged in the traffic. "Finally the commissioners from Cuba and Porto Rico, elected by the city councils of those islands, and sent to Madrid to report upon the reforms which their constituents claimed, demanded, on January 29, 1869, that the African slave trade be declared piracy." In 1865 a private association of Cubans was formed in Havana to suppress the traffic; and the members pledged themselves on their honor not to acquire property, from the date of joining the association, in any African slave landed on the island subsequent to January 29, 1869. And in a constitutional convention assembled at Guaimaro, the provisional capital of the republic of Cuba, in the first year of the declared independence of that republic, a constitution was unanimously adopted, the twenty-fourth article of which provides that "all inhabitants of the republic of Cuba are absolutely free!"

The contest in Cuba is waged on the part of Spain for continued supremacy in her possessions on this continent, pride in the prospective dominance of the Latin races in America, and the perpetuation of African slavery in the western world as a continued menace to our institutions. The existence of the so-called republic of Spain, professing to be inspired by the *magna charta* of American liberty, which pronounced "all men created equal," is a travesty upon humanity and a libel upon civilization while it extends the protection of the Spanish government to the most pronounced slave oligarchy that has ever existed among men.

If, for this reason alone, this Government were to forcibly remonstrate with the Spanish maladministration in Cuba, and, as an act of humanity in consonance with the common law of nations, grant belligerent rights to the young republic of Cuba, Christianity would condone and civilization justify the act.

We have reached the proud position occupied by the Republic today by a course which some construe as above the law, yet none will regret that the foul blot of slavery has been removed from our bright escutcheon, and the nation placed in the foremost rank of the nations of the civilized world above the law, according to the technical construction of those who tolerate the violation of all law, human and divine, if a captious selfishness furnish a pretense. International law is a compact of precedents, the majority of the parties to which are opposed to human progress, and the construction upon its requirements construed to subserve the ends of governments constructed upon the violated rights of the people. The comparatively new idea of republicanism necessitates a new construction of the ordinances and rescripts of the indefinite provisions of international law, and a republic in its intercourse with the nations of the earth should, while observing equity, pursue a policy which would comport with the dignity of a great nation and conserve and propagate the principles upon which it is founded.

The farce of emancipation has been indulged in by Spain through a series of years, to satisfy the remonstrance of civilization and quiet the conscience of the Christian world.

The so-called emancipation act of the Spanish Cortes in 1870 is an insult to all peoples of all countries who have striven to have their institutions conform with the requirements of the age by elevating their peasant classes to the plane of manhood equality. This act provides that all those shall be free—

First. Who are born after the publication of the act. (Art. 1.)

From what we know of Spanish honesty and fair dealing, it is just to presume that either the law was not promulgated in the Spanish sense of publication, or there have been no African children born in Cuba since the publication of the act.

Second. Those who have served in the Spanish army, or have assisted the troops during the present insurrection. (Art. 3.)

Of course the Spanish officers in power in Cuba will decide in the fullness of their benevolence who have served in the Spanish army or assisted the troops in the present insurrection, and how far this act will relieve them from the chains of slavery, and general emancipation will ensue.

Third. Those who at the date of the publication of the act, may have attained the age of sixty years, and others when they attain that age. (Art. 4.)

In plain terms, as long as the slave retains capacity to be useful, he or she is under sixty years of age, and cannot be emancipated under the act. When so old as to be unable to earn bread for subsistence, then he or she is considered over sixty, and is emancipated under the act.

Fourth. The slaves of the government and those known as *emancipados*. (Art. 5.)

It is rather a reflection upon Spanish officers who have no regard for the lives and property of American citizens, with the protection of this Government shadowing them continually, to give them credit for entertaining consideration for the liberty of the chattel slave in whom every Spanish official considers he has common property. Neither is it probable that *emancipados*, declared free by treaty with Great Britain, but who have been held in slavery in defiance of treaty obligations, will be benefited more than others supposed to be emancipated by this fraud called a law.

Fifth. Those who have been cruelly punished, and their owners are punished by law for the offense. (Art. 17.)

This is cool, in view of the fact that slaveholders in Cuba are not held accountable for the most hideous barbarities practiced upon their slaves, or punished for their murder.

Sixth. Those who are not registered as slaves in the census to be taken December 31, 1870. (Art. 19.)

If a grain of comfort could be extracted from the preceding provisions, this clause would invalidate all that goes before. The census, as a matter of course, was in the hands of the Spanish officials, whose sympathies and inclinations are all on the side of the slaveholders, and whose interests required, in their narrow view, the continuance of the institution of slavery in Cuba.

If any one was emancipated by the act promulgated June 23, 1870, we would do gross injustice to these officials if we did not concede their willingness to register every man, woman, and child of the African race within Spanish jurisdiction as slaves, in the register of the census taken December 31, 1870, without the slightest uneasiness of conscience, and by that act invalidate the provisions of the so-called emancipation act, which was prepared and passed for foreign consumption, and not for home use.

This legislation of the Spanish Cortes is an excellent sample of the buncombe and subterfuge which attempt to foist upon the world a bastard republic, which, under the plea of Spanish pride, tolerates the most horrible crimes against humanity, and protects with all the

power of the government an institution repugnant to every sense of decency and right.

Thus much for Spain in her record on a question upon which all the civilized nations of the earth have placed themselves right; and I repeat, if for this reason alone this Congress would concede belligerent rights to the Cuban republic as a means of peace and emancipation, it would be fully justified in the eyes of the world and vindicated in history.

But, in addition to this, we have on record, to be placed to the account of Spain, the heinous crimes running through a series of years, committed by the accredited agents of Spain in the suppression of a rebellion which the Spanish government persists in declaring does not exist—the violation of the laws of war and the laws of God and man. These atrocities even antedate the Cuban rebellion. The dance of death opened more than twenty years ago with the assassination of the gallant Lopez and the cold-blooded murder of the brave Crittenden and his followers, and is appropriately supplemented by the thousands of brutal outrages and murders committed in recent years, and is a fitting preparation for the massacre of the school-children two years ago at Havana, the crowning horror committed upon the Virginius prisoners at Santiago de Cuba, and the gross insult to the flag, the honor of which every American ought to defend with his life if need be.

Spain insists that there is no war in Cuba, and proceeds to place her construction upon international law as applied to neutrals in a state of war, and gracefully permits us to rehabilitate her navy, furnish arms and ammunition, and legal opinions if you will, to enable her to prosecute a war which is no war, and suppress a rebellion which is no rebellion. The tide of events so well developed by the gallant Cubans persuades us there is a war of some dimensions in Cuba, to suppress which Spain has repeatedly violated the rules of civilized warfare, and to exterminate the men who dare to die rather than accept a questionable liberty under Spanish tyranny, and reforge the chains of slavery on the limbs of half a million human beings who will never bask in the sunlight of freedom till this Government asserts in its power that no slave shall exist upon this continent. While the republic of Cuba is struggling against the fearful odds of the wealth and munitions of war freely furnished Spain by the peoples of the world without hinderance, with no sympathy but that cheap and safe kind which emanates from mass-meetings and is couched in resolutions; shut out from the light of the world, as it were; fighting like Spartans in the fastnesses of Cuba; decimated and dying, but never surrendering; the footsteps of her sympathizers are dogged by Spanish spies—even followed within the jurisdiction of neutral powers, and on the high seas captured and murdered in cold blood for the crime of sympathizing with the heroic struggle of a brave people who demand liberty or death.

The Spanish government has continued to suppress the Cuban rebellion, which they persist is no rebellion, every year since its inception, at the cost of twenty thousand lives and hundreds of thousands in treasure; and if no argument and no plea will reach this Congress from the voice of the struggling patriots or of the oppressed slaves of Cuba, in God's name let us interpose to save Spain and the so-called Spanish republic. If the continued violation of all law, the confiscation of the property, and the imprisonment of American citizens, and their indiscriminate murder; the unblushing protection of the institution of slavery in its most repulsive form, repugnant to every instinct of free government; the insult to our flag, and the brutal murders of women and children without the forms of law, do not arouse this nation to duty and to action, then, in the name of the Spanish republic, if such an anomaly can exist in the present state of affairs in that unhappy country, I appeal to this Congress to relieve her of one of the insurrections on her hands so that she can have a fair trial in her new-found republican experiment.

Grant belligerent rights to the republic of Cuba, and aside from the inestimable boon of liberty conferred upon a million of people who are with us and of us, we relieve a European republic of entangling alliances, and give their scheme a fairer chance among the crumbling dynasties of the Old World. As a representative in part of the people of the State of Florida, I join my feeble effort with the earnest appeal of the present governor of that State, who, in his last annual message, refers to the Cuban question as follows:

> There is a very large, rich, and beautiful isle, only eighty miles from the shores of Florida, whose good people have constant commercial intercourse with us, many of whom have fled to Florida and are residing here from the persecutions of a despotic European power, and a large majority of whose people have been for several years and still are engaged in a severe and bloody revolutionary struggle, as our forefathers once were, for liberty from the tyranny of foreign domination and freedom from the chains of slavery.
>
> As our great and beloved national Government has constitutional control over the entire subject of our foreign affairs, it may not become me to say more than that, in common with the whole of our country, we do most heartily sympathize with every people, and especially with our neighbors, in any of their efforts to be free.

I also submit the following memorial and resolutions adopted by the Legislature of the State of Florida:

> Whereas the people of the island of Cuba have been and are still struggling for their national existence, and are striving to establish a free government for themselves and their children; and whereas the war waged by the Spanish government has no parallel, for its inhumanity, in modern times, and should not be permitted by any civilized nation: Therefore,
>
> *Be it resolved by the people of the State of Florida, represented in senate and assembly*, That the Congress of the United States is requested to adopt such legislation as may be necessary to enable the national Government to extend such aid to the people of Cuba as becomes a great republic, whose people so ardently sympathize with an oppressed nation.
>
> *And be it further resolved*, That our Senators and Representatives in Congress are requested to present these resolutions to their respective bodies, as expressive of the sense of the people of Florida.

With the submission of these earnest declarations, and the facts presented, I commend the question of Cuban recognition; the emancipation of the slaves in the Spanish possessions in America; the guardianship of the free institutions of an advanced civilization; the protection of our citizens, and the vindication of our flag, to the favorable consideration of the Forty-third Congress.

Finance—Currency.

SPEECH OF HON. C. L. MERRIAM,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

January 24, 1874,

On the legality of the forty-four million reserve.

Mr. MERRIAM. Mr. Speaker, the authority of the Secretary of the Treasury to issue any portion of the legal-tender notes, known as the forty-four million reserve, has been under discussion by the press and the people of our country for some three years.

The Finance Committee of the Senate has made two reports, the majority report being adverse to the ruling of the officers of the Treasury, while the minority report sustains the legality of their action. The House of Representatives, just before the close of the Forty-second Congress, instructed the Committee on Banking and Currency to examine and report upon the same subject, but owing to the multiplicity of business at the close of the session they were unable to present a report, although a sub-committee thoroughly examined all the laws bearing upon the issue and cancellation of legal-tender notes.

During the present Congress distinguished gentlemen upon this floor have expressed as their opinion that there was no authority for its issue; and the distinguished gentleman from Kentucky [Mr. BECK] in his debate upon the naval appropriation bill declared that the Secretary of the Treasury had issued some twenty-three millions of the reserve in direct violation of law. Notwithstanding this is a question of vast importance in itself, as affecting the business interests of our country; and notwithstanding this is a question affecting the integrity of an executive officer of our Government, and hence bearing upon the dignity and stability of our laws in their strict observance, yet neither the gentleman from Kentucky, with his well-known disposition to treat public matters and public officials with entire candor and fairness, nor any other gentleman in either branch of Congress, has (as was their duty if they had reason to believe the Secretary was "directly violating the laws of Congress") brought in either a bill to impeach or a resolution to define the law, and thus relieve the anxiety of the country and the embarrassment of the Secretary. I submit this is an injustice unworthy the accusers.

The honorable gentleman who has so unmistakably made these charges, bearing upon the honor of the administration of one of the most important branches of our Government, and affecting the morality of administration, could not expect action to be taken by those who have, with great care, examined all the laws bearing upon the issue of United States notes, and who believe that a true construction of the various acts fully justifies the Secretary—nay, imposes it upon him as a duty—to use "in times of public exigency" any portion of the forty-four million reserve, not in lending it to banks or bankers, but in paying the maturing obligations imposed by authority of Congress whenever the revenues of the Government are inadequate. The question of the policy of intrusting such vast powers in the hands of any one man, as would enable him at his will to contract or expand the currency, and, if he were not true and honorable, enabling him to speculate with undue advantage over the legitimate transactions of business, may well invite the thoughtful consideration of Congress. Fortunately for the credit of our nation and the confidence of our people, no man has, thus far, the least suspicion of the integrity of our financial ministers. The late Secretary, who first issued from the reserve, was returned to the Senate of the United States from a proud and sensitive constituency, and we might argue their acquiescence in the legality and necessity of the issue, from the fact that, as a class, they are bullionists, "hard-money men," and that by the election of the late Secretary to one of the highest positions within the gift of the people of this Republic, they indorsed his action.

And although I appreciate the possible danger and am opposed to the continuance of such power vested in any one man by the continuance of a reserve, it is well that we examine with entire candor and bring to bear upon it the common sense of plain and practical business, that we may comprehend the motives of those legislators who framed the law. It is the habit, especially of men of our day, to decide even grave matters at once and without analysis, either in accordance with their own personal wishes or their own preconceived ideas of the safety or the policy of the act.

Those who have studied the necessities of our Treasury during and since the war, and who have considered the importance to the people of building up and maintaining the credit of the nation, realize the wisdom of those patriotic and able financiers who carried us through peril to safety; and few measures aided them more than this provision of a fund always available for use to meet public exigencies—not only in war, but when industry struggled for the rewards of peace. It is evident that their sagacity anticipated a contingency like the recent financial crisis which so affected the revenues of our Government.

I will assume that no citizen of this country, in or out of Congress, would be willing to see the credit of this nation blackened by default.

An acquiescence in the continuance of the reserve, as such, by Congress—when aware of its use in the past and probable use in the future, "if public exigencies seemed to require it"—ought to be a full justification of the action of the Secretary; for we all know that a resolution of three lines and the action of a few hours could have prevented its use forever; and I now submit to Congress that the dignity of legislation demands its immediate determination; but in justification of past action, let us not forget that the cash account of the treasury of a nation is in one sense like the cash account of a merchant or banker—all have large daily receipts and large daily payments. If large payments must be made next week or next month, all who are prudent financiers will provide in advance to cover contingencies. The Secretary of the Treasury especially must provide money in advance, or endanger the nation's credit; for he has no authority to borrow. Either at one end or the other of his cash account must stand a reserve; if it is not in a fixed sum, like the forty-four millions, he must provide it at the other end of the account by selling gold and hoarding currency to meet expected and unexpected demands. Now, I submit to this House and the country that the ability to use from this forty-four millions during this crisis has gone far toward the restoration of confidence and business, without which we could not hope for the return of adequate revenues to meet our obligations, and it has at least illustrated the wisdom of the framers of this law of reserves for a contingency like the present. The panic broke upon a country fat with the wealth of industry. In an hour, banks, merchants, and manufacturers went down in a crash. In an hour the hum of a million spindles was hushed; willing labor walked idle in the streets; universal financial distress threatened a nation at the hour of its unequaled prosperity. The nation's revenues shrank far below its immediate necessities. The reserve—wise at least in this emergency—came to our relief. By its use confidence, which is greater, broader, and more powerful than gold, is surely and rapidly, day by day, hour by hour, coming back to us. Manufacturers are again giving work to thousands and thousands of willing hands, who joyfully earn bread and happiness for their families. The great wheels of busy industry are again being put in motion, and men are no longer scared at phantoms of financial dissolution. Except for the reserve, we must have sold our gold for currency; and gathering it up, intensified and lengthened the distress, which would have still more endangered law and order in our large cities by an accepted excuse for riot and mischievous communism.

The use of the reserve, it is true, is an expansion, with all its present effects. The sale of gold would have been a contraction, and one at this moment more dangerous than any Wall-street lock-ups, which have caused such frequent distress to the commercial community in years past. In consideration of our recent and present experiences, and what is greatly due to a people suspicious from the charges that have been made, and to an officer whom we all believe to be honest and who desires to perform his duty, I crave your indulgence while examining the law that justifies his action; for nothing can be gained to our honor or credit as a nation by a passionate verdict upon so important a question, about which good men disagree. It is not in justification of Mr. BOUTWELL or Mr. Richardson I would do it, but in justification of the administration of an important branch of our Government.

Let us, then, examine if the Secretary of the Treasury has had the power to issue United States notes in amounts within the $44,000,000, which form the difference between the minimum of aggregate circulation ($356,000,000) fixed by the act of February 4, 1868, and the maximum ($400,000,000) prescribed by the acts of February 25, 1862, July 11, 1862, and March 3, 1863, and affirmed by the act of June 30, 1864.

In other words, can the Secretary, under the laws regulating the original issue, the reissue, and the retiring of United States notes, make an issue of notes to replace such as have been retired and deducted from the aggregate circulation; or has the retiring of United States notes imposed a limit upon the aggregate circulation allowable, which is final so far as the power of the Secretary is concerned, and cannot be exceeded, except under a new authority from Congress?

After a careful review of the acts of Congress involved, and of the circumstances and financial condition under which they were passed, I have reached the conclusion that an issue of United States notes, which in effect restores to the circulation a sum previously retired, does not exceed the powers of the Secretary, so long as the aggregate of $400,000,000 is not exceeded, but is warranted by law within that limit, whenever, in the judgment of the Secretary, strong considerations of public interest require it.

The claim is that the general authority conferred upon the Secretary, by law, to reissue United States notes extends to notes which have been retired, and continues in full force to the present day. The objection is, that, even conceding the existence of the power while the Secretary was retiring notes at his discretion, and that he might, without positive direction of law, but upon his own knowledge of the fiscal situation, restore retired notes when necessary to meet an increased demand for circulating medium, still this power ceased when Congress intervened (by the acts of 1866 and 1868) to determine the amount of notes to be retired; that these acts, in effect or by implication, repealed any authority to restore retired notes to circulation, which might, previously, have been deduced from the laws authorizing reissues.

The laws authorizing issues and reissues of United States notes are the following:

The act of February 25, 1862, chapter 33, section 1, (12 Statutes at Large, 345.) This act, after authorizing the Secretary to issue $150,000,000, (fifty millions thereof to be in lieu of demand Treasury notes theretofore authorized,) expressly declares that—

> Such United States notes * * * may be reissued from time to time, as the exigencies of the public interests shall require.

There are no expressions making it obligatory upon the Secretary to issue the notes or all of them, or to maintain the full amount at all times as a circulating medium; nor any expressions limiting the power of reissue to mutilated or destroyed notes and notes paid into the Treasury in course of dealings with the Government, or to cases in which a reissue should be required for the service of the Government.

The act of July 11, 1862, chapter 142, section 1, (12 Statutes at Large, 532.) This act, after again authorizing the Secretary to issue, in addition to the amounts previously authorized, one hundred and fifty millions, declares that—

> The Secretary of the Treasury * * * may reissue the notes so received in exchange; may receive and cancel any notes heretofore lawfully issued under any act of Congress, and in lieu thereof issue an equal amount in notes such as are authorized by this act.

There are no expressions requiring the Secretary to maintain a uniform aggregate of circulation, or restricting him, in reissues, to replacing worn-out notes, and placing notes paid in at the Treasury again in circulation.

The act of March 17, 1862, chapter 45, section 4, (12 Statutes at Large, 370.) This act provides—

> That in all cases where the Secretary of the Treasury is authorized by law to reissue notes, he may replace such as are so mutilated or otherwise injured as to be unfit for use with others of the same character and amount.

This language implies that there were, previous to the act, more cases than one in which the Secretary of the Treasury was authorized to reissue notes, and that the exchange of mutilated notes for new ones was not one of those intended; for such exchange is now spoken of as newly authorized.

The act of March 3, 1863, chapter 73, section 3, (12 Statutes at Large, 710.) This act, after authorizing the Secretary—

> If required by the exigencies of the public service, for the payment of the Army and Navy, and other creditors of the Government, to issue on the credit of the United States the sum of $150,000,000 of United States notes—

(To include an amount previously authorized by joint resolution,) declares that—

> Any of the said notes, when returned to the Treasury, may be reissued from time to time as the exigencies of the public service may require. And in lieu of any of said notes, or any other United States notes returned to the Treasury and canceled or destroyed, there may be issued equal amounts of United States notes, such as are authorized by this act.

Here, it will be observed, the original issue of the notes authorized, is directly confided, as respects amount, to the official judgment of the Secretary, and a reissue is allowed upon the simple fact that notes have been returned to the Treasury and either canceled or destroyed.

The act of June 30, 1864, chapter 172, sections 1 and 2, (13 Statutes at Large, 218.) This act (after authorizing an issue of Treasury notes—a matter not material to a question involving only the amount allowable of United States notes) declares that—

> The Secretary of the Treasury may redeem, and cause to be canceled and destroyed, any Treasury notes or United States notes heretofore issued under authority of previous acts of Congress, and substitute in lieu thereof an equal amount of Treasury notes, such as are authorized by this act, or of other United States notes.

And it then declares in a proviso—

> Nor shall the total amount of United States notes issued or to be issued ever exceed $400,000,000.

The acts reviewed in their connection, and construed in the light of the fiscal condition of the country, and the actual management of the national finances during the period covered, clearly confer upon the Secretary a power to reissue notes previously withdrawn or withheld from circulation. For it should be carefully borne in mind that the period was one during which the Government was endeavoring to readjust, as rapidly as consistent with the general commercial prosperity, an immense mass of obligations contracted under the exigencies of war.

The majority of the Senate Committee on Finance, in their report upon the power of the Secretary to issue United States notes, &c., made January 14, 1873, exhibit the general facts attending this

course of legislation in a very clear and striking manner. They say that the power of issuing United States notes, conferred by the acts of February 25, 1862, July 11, 1862, and March 3, 1863, above mentioned—

> Was felt to be a dangerous one, liable to abuse, and was carefully limited and guarded. Though the war continued two years and more after the passage of the act of March 3, 1863, and immense sums were borrowed upon various forms of security, the limit of United States notes was not enlarged.
> The close of the war was followed with measures by both the executive and legislative branches of the Government to still further limit and reduce the volume of legal-tender notes.

These measures are then rehearsed, showing that Secretary McCulloch in his annual report in December, 1865, expressed the opinion that the circulating medium of the country was altogether excessive and urged measures for a reduction; and that the House of Representatives passed a resolution, introduced March 15, 1866, to the effect that—

> This House cordially concurs in the view of the Secretary of the Treasury in relation to the necessity of a contraction of the currency, with a view to as early a resumption of specie payments as the business interests of the country will permit, &c.

These facts corroborate and explain the permission given to the Secretary in the express terms of the acts already quoted, to reissue notes. The general policy of the acts was that the smallest amount of notes necessary for the public service should be issued in the first instance; that whenever causes should arise diminishing the volume of circulation required notes were to be retired; that a reduction or contraction in the aggregate amount was desired, and was anticipated from the course of action indicated to the Treasury Department; and that the variations in amount of circulation needed from time to time, and any evils consequent upon retiring too large a quantity of notes at one date, were to be met and relieved by a reissue of such sum as the Secretary might perceive to be temporarily needed by the country.

An executive power to reissue notes is indispensably necessary to the safe and harmonious operation of any system of rapid and continuous contraction of paper currency.

If the act of retiring notes is made absolutely final, and they can in no event be restored to the circulation without authority of the legislative body, there is then no timely remedy for grievous inconveniences which may result if the process of retiring is at any time, or from any cause, pressed too rapidly forward.

It is clear, then, that the acts in force prior to April, 1866, authorized the Secretary to reissue notes which had been retired, when he should ascertain that the public interest required it. Has this power been impaired by subsequent legislation?

The acts of Congress indicated as depriving the Secretary of this power are the act of April 12, 1866, chapter 39, sections 1 and 2, (14 Statutes at Large, 31,) and the act of February 4, 1868, chapter 6, (15 Statutes at Large, 34.)

Neither of them contains any expressions abating or affecting the power to reissue. The first contained provisions modifying the duties of the Secretary in disposing of bonds, and in applying the proceeds of bonds sold, and contained the following proviso:

> That of United States notes not more than $10,000,000 may be retired and canceled within six months from the passage of this act, and thereafter not more than $4,000,000 in any one month.

And the latter simply declares that—

> The authority of the Secretary of the Treasury to make any reduction of the currency by retiring or canceling United States notes shall be, and is hereby, suspended; but nothing herein contained shall prevent the cancellation and destruction of mutilated United States notes and the replacing of the same with notes of the same character and amount.

These acts, then, imposed first a check, (1866,) and then a prohibition, (1868,) upon the process of contraction; they restricted and at last forbade the retiring of United States notes. But a prohibition upon retiring notes affords no just or reasonable implication against a power to restore them. The acts in question do afford ground for the inference, that, in the judgment of Congress, the Secretary of the Treasury had, in a period immediately previous, retired more notes than a prosperous condition of the money affairs of the country would justify or permit; but this inference points to and encourages a restoration of some of such retired notes to the circulation, rather than discourages it.

The Secretary had retired more notes than was expedient. Congress directed that he should do so no longer; leaving his power to reissue them untouched. The natural construction is that Congress might even have directed a reissue, if they had not known the power to be vested in the Secretary, and believed that, if increasing stringency required, the power would be promptly and faithfully exercised, in deference to the clear will of Congress, though contrary to the previous policy of the Department.

But it is said that the act of 1868, in effect, prescribes the aggregate volume of United States notes allowable, and thereafter the executive officer must not increase it. Nothing in the act, and nothing in the policy disclosed by previous acts, indicates any purpose to prescribe an aggregate actual amount of circulation. The three acts authorizing three issues of United States notes (February 25, 1862, July 11, 1862, and March 3, 1863) do indeed prescribe a limit which the Secretary must not exceed; but they do not prescribe an actual aggregate. The first two impliedly, and the last explicitly, make the aggregate actual circulation depend upon the official judgment of the Secretary.

It is entirely clear that under the act of March 3, 1863, the aggregate actual circulation might have been increased from time to time to any amount between three and four hundred millions, according as the Secretary found the issue of notes required for the payment of creditors of the Government.

This is irrespective of any power to reissue. The aggregate might also be diminished—prior to 1866—indefinitely by retiring notes; and it might be restored again by reissuing.

The act of 1864 carried the allowable limit up to $400,000,000 (additional to those required for redemption of temporary loan;) but it did not fix four hundred millions as the aggregate circulation. The sum to be in circulation always depended upon the judgment of the Secretary, acting under the authority given by the law, (act of 1863,) and controlled only by the statement of a specific sum as a limit. The amount of notes in circulation never became four hundred millions, unless by some determination, or successive determinations, of the Secretary, that an issue of notes to that amount was requisite to the payment of the creditors of the Government; and there was no requirement of law that the actual amount should continue at any specific sum, but it might be varied by subsequent exercise of the power to retire and reissue.

The act of 1868 betrays no intent to change the settled policy of the Government in this respect, by fixing a permanent amount for the circulation of United States notes. It operates simply to fix a minimum limit below which the Secretary cannot carry a reduction; just as the act of 1865 fixes a maximum which he must not exceed. Between these two limits, the actual amount remains dependent, as it was under the act of 1865, upon the official judgment of the Secretary, exercised upon occasion for retiring or reissuing notes, as the varying condition of affairs may require.

The formal and emphatic manner in which Congress, by the act of June 30, 1864, fixed a maximum of issue has not been paralleled in any subsequent enactment relating either to an expansion or a contraction of the currency. "Nor shall the total amount * * * ever exceed," &c., is the phraseology employed; and although the word "ever" is to be qualified by the words "at any one time," understood, yet no language could have more clearly expressed the deliberate intent of Congress to fix a permanent limitation of issue.

No language so forcible and direct as this is used in any subsequent act bearing on the question of limitation. The Secretary "may at his discretion issue," &c., (act of March 3, 1865,) "not more than $4,000,000 in any one month," may be thereafter retired, &c. (Act of April 12, 1866.) "The authority of the Secretary to make any reduction of the currency * * * is hereby suspended," &c. (Act of February 4, 1868.) In all these later enactments the language used is well fitted to indicate provisions of a temporary character or the exercise of a discretionary power, but not to change an arbitrary limit enacted in the most express and positive manner possible. All inferences, therefore, drawn simply from the text of the different statutes cited, are necessarily to the effect that Congress, by the act of 1864, fixed, beyond peradventure, a positive limitation of issue which it has not since, in any direct mode, or by any direct words, altered or reduced.

It is further to be remarked that, at the very time the act arresting contraction was passed, (February 4, 1868,) and which is claimed to fix both the maximum and the minimum at the exact amount then outstanding, there were more than thirty millions of fractional currency outstanding and redeemable by law in United States notes, for which, if that construction be correct, no provision whatever was made. Moreover, Congress (March 2, 1867) authorized the issue of fifty million 3 per cent. certificates, subsequently (July 25, 1868,) increased to seventy-five millions, all payable in lawful money on demand. Without a reserve, how could these certificates be met if they came in suddenly, as, in fact, they did in September, 1869, when the Secretary was obliged to issue a million and a half of the reserve of $44,000,000 to meet the demand? There was then no other reserve in existence, the one of fifty millions, mentioned in the acts authorizing four hundred and fifty millions in all, being applicable only to a particular class of temporary deposits, known as temporary loans. These had all been paid, and the issue made for that purpose being above the permanent limit, *i. e.* four hundred millions, had all been redeemed and canceled according to law, so that that reserve no longer existed when the act restraining contraction was passed. But the fractional currency was still outstanding, and an issue of fifty millions of 3 per cent. certificates, (afterward increased to seventy-five millions,) payable on demand, had in the mean time been authorized by Congress.

It has undoubtedly always been the opinion of the Department, the Secretary, the Treasurer, (General Spinner,) and the First Comptroller, whose decisions are, by law, to a certain extent authoritative in the Treasury Department, and who can have no personal interest in the law or in the way it should be construed, that between the maximum of four hundred millions, as fixed by the laws authorizing the issue of United States notes, and the minimum of three hundred and fifty-six millions, at which the process of contraction was arrested, the difference, forty-four millions, constituted a reserve which, in the language of the act of February 25, 1862, "may be reissued from time to time as the exigencies of the public interest may require." In these views, it seems to me, impartial minds must concur.

West Virginia Contested Elections.

SPEECH OF HON. R. MILTON SPEER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

January 27, 1874.

The House having under consideration the resolutions reported from the Committee on Elections on the West Virginia contested-election cases—

Mr. SPEER said:

Mr. SPEAKER: I shall not follow the bad example of the gentleman from Massachusetts [Mr. BUTLER] by injecting into this discussion a partisan appeal. I know that the House of Representatives is not in its organization a judicial body. But there is nothing in the relative strength of the political parties on this floor, and there is nothing in the cases now pending, that should excite party feeling, or that should lead the members of the House away from their plain, sworn duty, fairly to judge of the elections of these claimants to seats here.

In 1872 there were two elections for Congressmen held in West Virginia, one on the fourth Thursday of August, and the other on the fourth Thursday of October. They were both regularly held by the officers duly authorized to hold elections, as appears by the certificate of the governor of the State. There is no allegation of fraud, violence, or intimidation. Every legal voter in that State had the full right to deposit his ballot if he wished so to do; hence, whether the vote at the one election or at the other election was large or small, it resulted not from anything connected with the conducting of the election itself, but from the indisposition of the voters to vote, and to some extent from doubt as to the legal day.

If the October election was the legal election, then Messrs. Wilson and Martin beyond all question are entitled to their seats. If the August election was the legal election, then Mr. Davis is and Mr. Hagans may be entitled to his seat. If neither was the legal day of election, then neither set of claimants are entitled to seats.

Before I proceed further let me say a word upon the merits of these cases. It is true that in the first district the vote polled in August is much larger than the vote polled in October. This results from the fact that there was an exciting contest then over the adoption or rejection of the new constitution. It was warmly supported upon the one side and warmly opposed upon the other. The whole State was aroused upon that single issue. Subordinate to it was the election of governor and other State officers. The names of the candidates were upon one slip of paper, forming but a single ticket; and many persons, doubtless, voted the ticket without knowing that they were voting for Congressman at all. This accounts for the large vote cast in August in the first district.

But I desire this House, in justice to Mr. Wilson, to know and remember that, believing the legal day of holding the congressional election was the fourth Thursday of October, he did not intend to be voted for in August; but his friends urged him, as a matter of safety, to enter the August canvass, with the understanding that, even if elected then, he was also to run again in October, as Mr. Hereford did in the third district, and thus avoid any shadow of question as to getting his seat here. But it was now so late that he could not have tickets with his name on distributed throughout the entire district, which was territorially very large, and on this account and for this reason only he lost more votes than would have elected him. As it was, he was beaten but 413.

I hold in my hand the affidavit of Mr. Leonard, who was a member of the constitutional convention from Wirt County, which sustains my statement on this point, and I ask the Clerk to read it.

The Clerk read as follows:

WEST VIRGINIA, *Wood County, to wit:*

This day personally appeared before me, David D. Johnson, a notary public in and for the county and State aforesaid, D. H. Leonard, who, after being sworn in due form of law, says that he was a resident of Wirt County, West Virginia, at the time of and for several years before the election for State, county, and other officers on the fourth Thursday of August, 1872; that before said election, and when the democratic committee for said Wirt County were about to have the tickets printed for said election, they asked deponent (he having been a member of the State constitutional convention from that senatorial district) if it was necessary and proper to have the name of Colonel Benjamin Wilson, the democratic candidate for Congress, printed on said tickets to be voted for at said August election; deponent told them it was not necessary to do so as there would not be, in his opinion, an election for member of Congress until the fourth Thursday in October, and that is the opinion of the members of the convention. And for this reason Wilson's name was not printed on said tickets with other candidates, and was not voted for at said election in said county.

D. H. LEONARD.

Subscribed and sworn to before me this 20th day of November, 1873.
Witness my hand and notarial seal.
[SEAL.] DAVID D. JOHNSON, *Notary Public.*

Mr. SPEER. While the other democratic candidates received in this county about 550 votes, Mr. Wilson received only 163, showing a loss to him, by reason of the belief that August was not the legal time for the election, of nearly 400 votes, or about the number by which he was beaten in the district. The same state of facts existed at different polls in other counties. In those counties where the tickets with his name on were fully circulated he ran ahead of his party vote.

At the election in October a much smaller vote was polled than in August. There were no candidates voted for but members of Congress; and, coming so soon after the exciting struggle over the new constitution, it was not to be expected that a full vote would be cast. But Wilson was voted for in every one of the fifteen counties composing his district. In August there were over 36,000 less votes polled in the State for the candidates for Congress than were cast for and against the constitution, thus showing that that number of voters present at the polls and voting refused to participate in the election of Congressmen on that day, evidently from the belief that it was not the legal day.

I have thus referred to the facts in the first district, not because I believe they affect the question upon which this contest turns, but for the purpose of correcting an erroneous impression which has pervaded this entire discussion.

But what are the facts in the second district? There the leaders and representatives of both political parties met in convention before the August election; and after discussing the question as to when Representatives in Congress should be elected, both conventions concluded that the fourth Thursday of October was the legal day; and therefore they adjourned without making any nomination for Congress. Of one of these conventions Mr. Hagans, now one of the claimants for a seat from that district, was a member. After the adjournment of his party convention, for the reason that August was not the lawful time for holding the election, Mr. Hagans, on his own account, and without a nomination from any party or convention, and without the knowledge of either party in several of the counties, had his name printed on the slip containing the names of the republican candidates, and was voted for in only four out of the eighteen counties composing the district. He received 3,441 votes in a district that, at the same election, gave the republican State ticket over 14,000 votes; and of the 3,441 he got 2,919 in two counties—his own and an adjoining one on the line of the railroad. In eleven counties there was not a single vote cast for any person for Congress at this election. The district embraced a large extent of territory, and in many parts of it the voters of both parties were blissfully ignorant that Mr. Hagans, even in imagination, was a candidate. His candidacy and pretended election were a fraud—a palpable fraud upon the people irrespective of party. Now, in view of these facts, unanswered and unanswerable, he claims a seat on this floor. In my judgment, he is no more entitled to admission here, either in law or justice, as a Representative of the people of the second congressional district of West Virginia, than is the king of the Ashantees. If successful, his success may be fitly described, in the language of the Berkeley Union, a republican journal of his own district, as the "larceny of the position," to which he was never legally chosen. So much for the merits of these cases.

In my argument upon the law, I shall reverse the order of time, and consider the October election first. And just at this point permit me to say that it appears to me much confusion and misapprehension have been introduced into this discussion all the way through by forgetting the fact that the Legislature of West Virginia, in providing for elections in that State, acted under authority derived from two separate and distinct sources. When it provided for the election of State officers, it was carrying out the authority which it derived from the State constitution. When it provided for the election of Congressmen, it was exercising authority derived, not from the State constitution, (because the State constitution could not confer it,) but derived from the national Constitution. Hence, if in a separate section the Legislature of West Virginia had provided for the election of State officers in execution of its authority under the State constitution, and then in another section had provided for the election of Congressmen under the authority derived from the national Constitution, and had in each section prescribed the same day, there would have been no question left then as to the proper construction of the statute. It has, however, done substantially that very thing, except that it has blended the execution of its dual authority into a single section, or, to speak more accurately, into two dependent sections.

I trust that this distinction will be borne in mind, because it has an important bearing on the argument in this respect: When the constitutional convention, as is alleged by the advocates of the August election, changed the time of holding the general election, it had jurisdiction over only the State election. The authority of the Legislature to prescribe the time for the congressional election had not been derived from any constitutional convention, and such a body had no jurisdiction over it. It had no authority to fix it as against an existing provision of the Legislature on the subject, and no authority to change it. And if it had no authority to change it directly, it had no authority to change it indirectly or by implication. Hence, in construing the provisions of the constitution which it framed relative to elections, the fair and legal inference is, in the absence of express words to the contrary, that they refer only to such elections as the convention was competent to authorize, and not to those whose regulation as to time, place, and manner is placed by the Federal Constitution in the State Legislature.

What, then, was the legal day for holding the congressional election in West Virginia in 1872? To answer this question, is to determine this case. The majority of the committee believe, and have so reported, that the day prescribed by law was the fourth Thursday of October. Upon the other hand, two members of the committee hold that the

legal day was the fourth Thursday of August; and two other members hold that there was no time legally prescribed for the election of Representatives in Congress in 1872.

I maintain that the Legislature of West Virginia prescribed the fourth Thursday of October as the day, and that no competent authority has changed or attempted to change the day.

The Federal Constitution, article 1, section 4, provides that—

> The times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

Observe the language. The *times "shall* be *prescribed"* "by the *Legislature;"* not "*may* be," leaving it to legislative discretion. The grant of the power is mandatory, not permissive; and devolves a *duty*—upon whom? The *Legislature*, composed, of course, of two houses. To do what? To *prescribe*, establish, make known beforehand, the *time* of electing Representatives in Congress. This *duty shall* be performed by the Legislature in advance of the election.

Having imposed this obligation, the Federal Constitution goes a step further, and requires in article 6 that—

> The Senators and Representatives before mentioned, *and the members of the several State Legislatures * * * shall be bound by oath or affirmation* to support this Constitution.

Having granted the power and imposed the duty, it enjoins the faithful execution of that power and the faithful discharge of that duty by the most solemn sanction known to the law. Mr. Webster, in the Massachusetts constitutional convention of 1820, declared that "whatsoever was enjoined on the Legislature by the Constitution of the United States the Legislature was bound to perform."

And, right here, let me say that the doctrine that a constitutional convention can exercise the power of prescribing the time for congressional elections, as against an existing provision of the Legislature, seems to me as dangerous as it is unwarranted. The members of a constitutional convention are not required to be sworn to support the Constitution of the United States; and if they have the power to do what it is not made their duty to do, they are a law unto themselves in its exercise. If the convention may prescribe the time, it may deny to the Legislature the power to prescribe it; and having taken from the Legislature the right to fix the time, may refuse to fix it itself; and, without the violation of any legal obligation, may, at its pleasure, leave the State absolutely unrepresented in Congress. Such a doctrine rests upon the theory that the Federal Government has sown in its very womb the seeds of its own destruction.

With its duty plainly before it, the Legislature of West Virginia, on the 13th of November, 1863, passed "An act to regulate elections by the people," which, in section 1, provides:

> And on the fourth Thursday of October, 1864, and the same day in every second year thereafter, a governor, secretary of state, treasurer, auditor, and attorney-general for the State; *a Representative in the Congress of the United States for each congressional district, for the term commencing on the 4th day of March next after the election;* and a prosecuting attorney, surveyor of lands, recorder, county treasurer, and the number of assessors prescribed by law for every county.

Here was a specific day named, to wit, the fourth Thursday of October; and had this law remained unchanged in its letter this contest could not have arisen. But how came the letter of this section to be changed? In the same year that it was passed the Legislature passed "An act to provide for revising, collating, and digesting into a code, the statute laws now in force in this State." The title shows its object and purpose to be, not to enact new legislation, but to codify existing laws. The work provided for under this act was completed on the 29th December, 1868, and adopted as the code of West Virginia.

The preamble is as follows:

> Whereas it is necessary and expedient that the general statutes of this State should be reduced into one act, and divided into proper chapters and sections, in order that omissions and defects should be supplied and remedied, and the whole rendered concise, plain, and intelligible——

The language of this preamble shows most clearly that it was not the intention of the Legislature to alter and repeal statutes, but to arrange, simplify, and systematize them. Turn to chapter 3 of the code relating to elections, and read its title: "The officers to be elected and the *time* of their election"—not the "occasion."

And this brings me to the existing law.

The first two sections of chapter 3 of the code of West Virginia are in these words:

> 1. The general election of State, district, county, and township officers, and members of the Legislature, shall be held on the fourth Thursday of October.
>
> 2. At the said elections in every year there shall be elected delegates to the Legislature, and one senator for every senatorial district. And in the year 1870, and every second year thereafter, a governor, secretary of state, treasurer, auditor, and attorney-general for the State; a prosecuting attorney, surveyor of lands, recorder, and the number of assessors prescribed by law, and a Representative in the Congress of the United States, for the term beginning on the 4th day of March next after the election, for every congressional district; and in the year 1870, and every fourth year thereafter, a judge of the supreme court of appeals for the State, and a clerk of the circuit court, and a sheriff for every county; and in the year 1874, and every sixth year thereafter, a judge for every circuit.

These sections are dependent and inseparable, and the one must aid in the interpretation of the other. The office and purpose of the first section is to prescribe the time of the election. The existing law fixed the fourth Thursday of October, and provided that on that day a Representative in Congress should be elected in every second year. The code separating the time of the election from the designation of the officers to be elected expresses in two sections what the election law of 1863 expressed in one. All that is in the section of the old law above cited is incorporated in the new, with the addition of certain officers whose election is also provided for. The act of 1863 prescribed a day certain, by name, for the election of Congressmen. The code, abbreviating the language, but not intending to change the law, provided in section 1 that the general election should be held on the fourth Thursday of October. There is no change in the day, and there is no change in the officers whose election was provided for on that day. But the first section ends after naming the time. That is its specific and only purpose.

Section 2 then follows with a designation of the officers to be elected. When? On the day prescribed in the first section. The second section is introduced with the words "at the said elections;" but this phrase is a mere form to connect the sections; the second section does not fix or change the time of the election; but it, *ex necessitate rei*, refers to the time already named in the first section. When it requires a Representative in Congress to be elected in every second year, it means that the day of his election shall be the fourth Thursday of October. The words, "at the said elections," used to introduce the second section and connect it with the first, do not mean at the general election *whenever* held, because that would not be "the said election" named, but another. The "said election" is the one held at the "said" *time* designated. If held at another time, and under another authority, it may be a general election, but it clearly is not "*the* said election" prescribed by the code, to which the second section refers.

Again, the words "at the said election," occur but once in the second section, and then their office plainly is to connect it with the first. They are not found in the sentence providing for the election of Representatives in Congress. The language is:

> There shall be elected * * * in the year 1870, and every second year thereafter, a * * * Representative in the Congress of the United States, for the term beginning on the 4th day of March next after the election, for every congressional district.

Observe, he is to be elected for the term beginning on the 4th of March next after the election; not after the general election, *whenever* it may be held, but after the election required to be held on the fourth Thursday of October. If the time of the election had not been regarded as definitely fixed, the commencement of the term of service would not have been designated by reference to the election, but by naming a specific date. For if the time of the election is ambulatory, unsettled, subject to occur in the first or the last month of the year, then the term of service may be rendered uncertain in its beginning, if not in its duration.

Time is an essential requisite in all legal elections. In this case the Legislature was bound to prescribe it. It named the fourth Thursday of October, and substantially provided that on that day Congressmen should be elected. If the code had left the law in one section as it found it, does anybody suppose that the language of the section would have been changed? Not at all. There was no thought of changing the day of holding the congressional election. But the codifiers, in arranging the various sections of the election law, had to transpose the words occasionally, in order to secure grammatical accuracy. They were not drawing a new act, but simplifying, as they thought, the old.

Is not, then, the fair reading of the first and the second section of the code this? "The general election shall be held on the fourth Thursday of October; and on said day, in every other year Representatives in Congress shall be elected?"

It cannot affect the provision for the congressional election that the election of various State officers is provided for in the same section; for all that relates to these may be omitted and the section stand complete.

The sense of the second section may be more fully seen by inserting after the words "at the said elections," the words "namely, on the fourth Thursday of October;" and the two sections would then read:

> SECTION 1. The general election shall be held on the fourth Thursday of October.
>
> SEC. 2. At the said elections, namely, on the fourth Thursday of October in every second year, Representatives in Congress shall be elected.

Numerous instances of this exact phraseology may be found in the legislation of the various States.

In view of the duty of the Legislature to prescribe the time, and in the light of the history of the legislation of West Virginia upon the subject, the legal construction of the code is, in my judgment, that the day, and not the "occasion" of the congressional election, is prescribed.

But it is claimed, on the other hand, first, that the Legislature prescribed the time for the general election, and provided that at the general election, whenever held, members of Congress should be elected; and, secondly, that the new constitution changed the day for holding the general election in 1872 to the fourth Thursday of August, and hence carried to that day, *ex vi termini*, the election of Congressmen.

The first position assumes that the Legislature discharges its duty, under the Federal Constitution, of prescribing the time, by prescribing an "occasion" or event. That the Legislature may legally make the date of the election of Congressmen depend upon the happening of an event, may be admitted, so long as the Legislature controls the event itself. But when the claim is that the Legislature has fixed the time by making it dependent upon an event which it cannot control, then the statute should not be so construed unless its terms ab-

solutely require it. Where two interpretations are sought to be given to the same words, that one is to be preferred which attributes to the enacting power a faithful performance of its duty, and a strict observance of the limitations under which it acts. The Federal Constitution requires that the time shall be prescribed by the Legislature, not that the Legislature shall authorize or permit some other body to do it. The thing to be done is a legislative act, and cannot be delegated—at least not beyond the controlling power of the Legislature.

In Cooley's Constitutional Limitations, page 116, it is said, on the subject of delegating legislative power:

> One of the settled maxims in constitutional law is, that the power conferred upon the Legislature to make laws cannot be delegated by that department to any other body or authority. Where the sovereign power of the State has located the authority, there it must remain; and by the constitutional agency alone the laws must be made until the constitution itself is changed. The power to whose judgment, wisdom, and patriotism this high prerogative has been intrusted cannot relieve itself of the responsibility by choosing other agencies upon which the power shall be devolved, nor can it substitute the judgment, wisdom, and patriotism of any other body for those to which alone the people have seen fit to confide this sovereign trust.

And the same doctrine is well expressed by Chief Justice Gibson, in 5 Watts and Sergeant's (Pennsylvania) Reports, page 283, thus:

> Under a well-balanced constitution the legislature can no more delegate its proper function than can the judiciary. It is on the preservation of the lines which separate the cardinal branches of the government that the liberties of the citizens depend; for a consolidated sovereignty, in whatever form, is a despotism, in so far as it subjects the governed, not to prescribed rules of action, to which he may safely square his conduct beforehand, but to the unsettled will of the ruling power, which cannot be foreseen; and a government becomes consolidated in proportion as its legislative branch abandons its own function, or usurps those which have been vested elsewhere.

See also Brightly's Leading Cases on Elections, pages 3 to 26.

It is conceded that it is not a legitimate argument to say that because the Legislature cannot legally prescribe an "occasion" for the holding of congressional elections, therefore it has not done so. But where the inquiry is, what has the Legislature done? it is proper, in interpreting its words, to remember that of the two interpretations insisted upon, one lies within the limit of its power, and the other beyond it. In the absence of controlling words the presumption is in favor of the former and against the latter.

Whence comes this word "occasion?" It is not found in either the Federal or the State constitution, nor in the code; it exists only in the theories of these who sustain the validity of the August election. It is legally true that that is certain which can be rendered certain; but rendered certain by whom? Can it be said, in any just sense, that the Legislature has prescribed the time by prescribing an event the happening of which is subject to a power independent of the Legislature?

In such a case the event is not certain, nor can it be rendered certain by the body whose duty it is to prescribe the time. For if the Legislature discharges its duty by naming the event, and the time for the happening of the event can be legally fixed or altered by a constitutional convention, then it logically follows that the convention can refuse to prescribe the time of the event, and hence no congressional election at all could be held. The Legislature may legally prescribe the event, which event may legally never occur! Besides, this theory invests the convention with the power to do indirectly what it cannot do directly. If it cannot prescribe the time, how can it prescribe the time of the event or occasion on which the election is to be held? The practical result is the same in either case; and if there is no power to do the one, there is none to do the other.

Suppose the constitutional convention had extended the terms of the State officers, and provided that no general election should be held in West Virginia until 1874. Then, upon the theory that the election of Representatives in Congress depended upon the occurrence of the general election, the State would be absolutely without repr esenta tion in the present House; and this, too, in the teeth of the code, which provides that Representatives shall be elected in every second year.

If the Legislature can discharge its duty by prescribing an event, and leaving the time of the event to be determined by a constitutional convention, why may not the happening of the event be as well determined by a board of school directors, or by John Doe and Richard Roe?

No construction which leads to such results should be given to the act of the Legislature, if a more reasonable one can be supported by any fair use of the words employed. It was the duty of the Legislature to prescribe the time of the congressional election. In performing this duty, it prescribed a day for the general election; and then provided that Congressmen shall be elected at "the said election." If it still be insisted that their election was dependent upon an event or occasion, the answer is twofold: first, that the Legislature, in naming the event, prescribed the day on which it should occur; and, secondly, that as to the election of Representatives in Congress, no power in the State or out of it was competent to separate the event from the time except the Legislature itself. In prescribing the time for the State election, the Legislature was acting under the State constitution; but in prescribing the time for the congressional election, it acted under the power granted by the Federal Constitution. It blended in one act its exercise of these distinct powers; but this fact did not change the character of the act or blend into one the separate sources which gave it life. The presumption is that the Legislature, in adopting the language of the code, was mindful of the dual authority under which it was acting, and intended to discharge in good faith the sworn duty resting upon each one of its members.

If the code, as I have endeavored to show, prescribed a day and not an "occasion" for the congressional election, then the argument is at an end; but if it did not, then it is urged by the advocates of the August election, secondly, that the convention changed the general election in 1872 from the fourth Thursday of October to the fourth Thursday of August, and therefore carried the congressional election to that day.

Mr. CRITTENDEN. Will the gentleman yield to me for a question?

Mr. SPEER. With pleasure.

Mr. CRITTENDEN. When was this constitution of West Virginia voted on? Was it not on the 22d of August?

Mr. SPEER. Yes, sir.

Mr. CRITTENDEN. Suppose that constitution had been defeated, what would have been the result of these congressional elections held in August?

Mr. SPEER. I thank the gentleman for his suggestion. It is in the line of my argument, and I will answer it at a later stage.

I submit—

First. That the election held on the fourth Thursday of August was not a general election.

Secondly. That the time of holding it was not *prescribed*, as required by the Federal Constitution, for the election of members of Congress.

Thirdly. That the convention, in authorizing it, did not change or attempt to change the time of electing Congressmen; and even if it did change it, its act was void.

Let us see what the powers of this convention were.

In the first place, article 12, section 1, of the old constitution of West Virginia, under which the constitutional convention was called, provided that it should only be amended by a convention called as therein specified, and that—

> All acts and ordinances of said convention shall be submitted to the voters of the State for ratification or rejection, and shall have no validity whatever until they are ratified; and in no event shall they, by any shift or device, be made to have any retrospective operation or effect.

In the second place, it was called under the authority of "An act to take the sense of the people upon the call of a convention, and for organizing the same," passed 23d of February, 1871, from which I quote two sections:

> SEC. 17. The persons who shall be elected in pursuance of this act shall, on the third Tuesday in January next, meet and assemble at the seat of government, in general convention, to consider, discuss, and propose a new constitution, or alterations and amendments to the existing constitution of this State.
>
> * * * * * * *
>
> SEC. 20. The said convention shall provide by ordinance or otherwise for submitting the said constitution to the people for ratification or rejection.

It will thus be seen that the convention was called for a specific object, and after having accomplished that object, it was authorized to submit its work to the people for ratification or rejection. Under the constitution and law, which gave it all the life it had, it was expressly provided that all its acts and ordinances shall have no validity whatever until ratified; and by no shift or device shall they be made to have any retrospective operation or effect. This was the law of its being, and when it transgressed it, its act was void.

Vague notions of the powers of constitutional conventions have largely prevailed since the war; originating mainly in the dangerous and ragged precedents furnished by the reconstruction of the Southern States. These conventions are not above the law; they cannot enact law; but they are under the law, and their work must remain subject to the law, until the people by their votes stamp it with the royal seal of sovereign power.

In the most able and exhaustive work of Professor Jameson upon constitutional conventions, after an elaborate discussion of the question, he says, on page 326:

> On the contrary, as we have seen, both reason and authority concur in assigning to the convention a particular function, limited by the act under which it convenes, which is its charter or constitution.

I desire to read an extract from a recent decision of the supreme court of Pennsylvania. In that instance a constitutional convention had been authorized to submit a new constitution, and to submit it in such manner as it might think proper. It appointed a special election board for the city of Philadelphia. Ignoring the general election officers, it named a commission of five to hold the election. Bills were filed for an injunction against the commissioners, and they were enjoined, the supreme court in a unanimous opinion using this language:

> The convention is not a co-ordinate branch of the government. It exercises no governmental power, but is a power raised by law in aid of the popular desire to discuss and propose amendments, which have no governing force so long as they remain propositions. While it acts within the scope of its delegated powers it is not amenable for its acts; but when it assumes to legislate, to repeal, and displace existing institutions before they are displaced by the adoption of its propositions, it acts without authority, and the citizens injured thereby are entitled, under the declaration of rights, to an open court, and to redress at our hands.

I will read also a resolution offered in the Massachusetts constitutional convention of 1820, with the remarks thereon by Mr. Justice Story.

> *Resolved*, That the constitution ought to be so amended as to provide that the representatives of this Commonwealth in the Congress of the United States, and so many of the electors of President and Vice-President as are equal to the number

of the Representatives aforesaid, shall be chosen by the people in each convenient district as the Legislature shall direct; and that the Legislature of this Commonwealth shall be required at their session next after every apportionment of Representatives by the Congress of the United States to provide by law, by dividing the Commonwealth into districts, for the choice of not more than two Representatives or electors in any one district, and such law shall not be repealed or altered until after a new apportionment of Representatives by the Congress of the United States.

Mr. Story, in the discussion, said:

The question then was whether we have a right to insert in our constitution a provision which controls or destroys a discretion, which may be, nay, which must be, exercised by the Legislature, in virtue of powers confided to it by the Constitution of the United States. The fourth section of the first article of the Constitution of the United States declares "that the times, places, and manner of holding elections for Senators and Representatives shall be prescribed in each State by the Legislature thereof; but the Congress may, at any time, by law, make or alter such regulations, except as to the places of choosing Senators." Here an express provision was made for the manner of choosing Representatives by the State Legislatures. They have an unlimited discretion in the subject. They may provide for an election in single districts, in districts sending more than one, or by general ticket for the whole State. Here is a general discretion, a power of choice. What is the proposition on the table? It is to limit this discretion, to leave no choice to the Legislature, to compel Representatives to be chosen in districts; in other words, to compel them to be chosen in a specific manner, excluding all others. Was not this plainly a violation of the Constitution? Does it not affect to control the Legislature in the exercise of its legitimate powers? Does it not interfere with the superintending authority of Congress? * * * * * *

The members of the Legislature are under oath to support the constitution of the State. They are also under oath to support the Constitution of the United States. Will it not be a violation of their oaths to bind themselves not to choose Representatives in any manner that the Constitution of the United States allows, except that stated in the gentleman's proposition, when they are satisfied that the public interest requires another manner of choice? They may bring their consciences into jeopardy by such proceedings. It would be a direct and manifest departure from their duty. * * * * * *

It assumes a control over the Legislature which the Constitution of the United States does not justify. It is bound to exercise its authority according to its own views of public policy and principle; and yet this proposition compels it to surrender all discretion. In my humble judgment, and I speak with great deference for the convention, it is a direct and palpable infringement of the constitutional provisions to which I have referred.

Here the proposition was simply to limit the discretion of the Legislature as to the *manner* of electing Representatives in Congress; and Justice Story believed even this to be unconstitutional, and the resolution failed.

But the convention of West Virginia having been called under the authority stated, with the sphere of its powers clearly defined, what did it do? It submitted a new constitution to the people on the fourth Thursday of August, 1872, for their ratification or rejection, providng that, in the event of its ratification, it should be operative and in full force from and including the whole of that day. It was ratified.

The election was held under the authority of section 3 of the schedule, which provides:

SEC. 3. The officers authorized by existing laws to conduct general elections shall cause elections to be held at the several places of voting, established by law in each county, on the fourth Thursday of August, 1872, at which election the votes of all persons qualified to vote under the existing constitution, and offering to vote, shall be taken upon the question of ratifying or rejecting this constitution and schedule.

There was no law of the State authorizing any election on this day; and the schedule, in providing for this election, directs the officers, authorized by existing law to conduct general elections to hold it.

If the schedule had stopped here, no one could pretend that the election ordered was a general one. Up to this point it has but a single object, and that not to elect a single officer. And as the gentleman from Wisconsin [Mr. ELDREDGE] at my side suggests, if the convention itself had intended it to be a general election, it would have used the words, "The officers authorized to hold *other* general elections shall hold this one." The provision that the officers of the general election shall conduct this one clearly recognizes the distinction between the two elections.

But the schedule further provides:

SEC. 7. On the same day, and under the superintendence of the officers who shall conduct the election for determining the ratification or rejection of the constitution and schedule, elections shall be held at the several places of voting in each county, for senators and members of the house of delegates, and all officers, executive, judicial, county, or district, required by this constitution to be elected by the people.

Observe the special character of the election as recognized in this section. It is designated "the election for determining the ratification or rejection of the constitution and schedule." Such it literally was, and such only could it lawfully be. The power that called it into being had specially defined its duty and limited its action.

The gentleman from Massachusetts [Mr. BUTLER] says that if the election of members of Congress at this election was illegal, then there is no lawful State government to-day in West Virginia. Not so, however; the gentleman in his zeal has lost his usual clearness. The Constitution of the United States requires the time for the election of Representatives in Congress to be prescribed by the Legislature; but the constitution of West Virginia does not require the time for the State election to be prescribed by any authority. This is the distinction, and this the answer.

The provision for the election of State officers does not change the special *purpose* for which the election is held, and therefore cannot change its special *character*. The election of the officers named, at the time named, is contingent and dependent—hinged entirely upon the result of the election at which they may be voted for. If the constitution fails, there are no offices to be filled.

Let it be here distinctly remembered that the validity of the congressional election in August, in the tenderest view that can be taken of it, must rest absolutely upon the proposition that this election, authorized solely by the schedule, is the general election designated and prescribed in the first section of the code. If this proposition fails, the August election fails.

First. The schedule is advisory and provisional, to be worn for a little while as a garment and then cast off. Its office was to cover the transition period from the old to the new constitution.

Granting to the schedule all the power that it expressed or claimed to exercise, we find that by its direct terms the election authorized by it in section 7 is limited to the officers named "and those required by this constitution to be elected by the people." Representatives in Congress are not named, and there is not a word in the constitution requiring them to be elected. How, then, in all candor, can they be included as among the officers whose election is provided for by the schedule? They are not only not included, but they are by the terms of the section absolutely excluded.

Secondly. The constitution by the express terms of section 6 of the schedule was in force every moment of time from twelve o'clock on the night of the 21st of August, that is, seven hours before a single vote was cast for it or against it. During the whole of the 22d of August it was the supreme organic law of West Virginia, and it provided in section 7 of article 4 that—

The general election of State and county officers, and of members of the Legislature, shall be held on the second Tuesday of October, until otherwise provided by law.

Hence it follows, as surely as day follows night, that during every hour of the 22d of August it was ordained by the constitution of West Virginia that the "general elections of that State shall be held on the second Tuesday of October, until otherwise provided by law." And this being so, how could the "general election," thus fixed on the 2d Tuesday of October, be legally held under any authority, much less under the authority of the schedule, on the 22d day of August? Not only was the "general election" not authorized on that day, either by law or schedule, but the highest law of the State, the constitution, required it to be held on another day.

Thirdly. The code provides that "at the said election" "there *shall* be elected" Representatives in Congress. But at the election authorized by the schedule it was impossible for anybody to be elected unless the constitution was ratified. A candidate at this election might have received every vote cast, and yet have been practically defeated by a smaller vote polled, not against him but against the constitution. It put it in the power of the voter to say to a candidate, "I will vote for you, but at the same time I will cast another vote which will render your election impossible." And the singular spectacle was presented in West Virginia of candidates soliciting votes for themselves while earnestly opposing the constitution upon whose adoption alone they could succeed. An election is the means authorized by law of ascertaining the choice of voters; but here the choice of the voters for officers was to be regarded only upon the condition that at the same time they chose to ratify the constitution.

Fourthly. The code required the election of Representatives in Congress *by districts*, and no voter of one district could vote for the candidate of another district. But at this August election a candidate for Congress was dependent for success, not upon the number of votes cast for or against him in his district, but upon the number cast for or against a separate and independent proposition in another district. It thus enabled a voter who could not legally vote *for* a candidate, legally to vote *against* him. For instance, Mr. Davis, who claims a seat under the August election, might have received every vote in his district, and the new constitution might have had a majority there, and yet the voters of the other two districts in the State could have defeated him, not by voting against him, but by voting against the constitution. Who ever heard before, in all the wide world, of such a congressional election? It was not only without law, but in utter defiance of the law. The proposition when laid naked is simply this, that the schedule took the place of the code, and provided for the election of members of Congress by districts on the fourth Thursday of August, and yet at the same time put it in the power of any *one* of the three districts in the State to defeat an election in *all* of them. A majority of one against the constitution would override a majority of ten thousand for a candidate. The minority outvote the majority! Whatever necessity there may have been for providing for an election of State officers simultaneously with the submission of the constitution, there was clearly none in the case of members of Congress. The office was not created by the constitution, and would have to be filled whether it was ratified or rejected.

Fifthly. The August election was special in the authority that provided it; special in its purpose; special in its time, and especially special and exceptional in the fact that the success of any person voted for at it was dependent, not upon the number of votes he received, but upon the number cast for the very instrument which authorized the election. Special in authorization, purpose, time, and results, how can it be seriously said that this was "the general election" prescribed by the code, at which one Representative in every district *shall* be elected? That cannot be the election authorized by law for members of Congress which, by its terms, virtually says they shall not be elected unless the one hundred or more propositions in a proposed State constitution are also elected. It is a conditional election; Congressmen may be elected provided something else be done at the same time.

Mr. LAMAR. The election of members of Congress should never depend upon a contingency.

Mr. SPEER. It is no answer to all this to say that the voters of the whole State had a right to vote, and that all the State officers were voted for, and hence the election was general. These, undoubtedly, are two characteristics of a general election. They are good as far as they go, but they do not go far enough. All the voters had the right to vote for or against the constitution; but this fact would not make an election, held for submitting it to the people, a general election. On the other hand, an election may be general at which no State officers are voted for. At the general elections in many, if not all, the States, there are years when no State officers are elected. The general election *must be authorized by law*, and must not be dependent upon the will of the voters as to whether it shall be an election at all or not. Instead of the August election being the general election, one of the sections of the constitution which it ratified declared that the general election "*shall* be held on the second Tuesday of October." It was not the general election, but it determined *when* the general election should annually occur.

Suppose the President were to convene the two Houses of Congress in extra session. When convened, the extent of their jurisdiction would be precisely the same as if they were in regular session. There would be no difference in the scope of their powers. But would the fact of equal and general legislative jurisdiction take from the called session its special character? So the fact that the voters at the general election had the right to vote at the August election does not determine or change the essential character of that election.

Hence it seems to me as clear as a mathematical demonstration that the August election was special and not general. The election was never to be held again under the same authority; it was never to be held again for the same purpose; it was never to be held again on the same day; and it was never again to make the success of candidates depend, not upon the number of votes cast for or against them in their own county or district, but upon the number of votes cast for or against the constitution in other counties or districts. This election no more resembles "the said election" prescribed and established by the code, at which members of Congress "shall" be elected, than the corpse resembles the living, breathing, moving man.

Here the argument in behalf of the August claimants helplessly fails; but there are still other insuperable objections. Whether that election was special or general, the time of holding it was not *prescribed* as required by the Constitution of the United States for the election of Representatives in Congress.

Not insisting on any technical meaning for the word "prescribe," all admit that it means to determine, to establish. Now, was the August election established by any authority, competent or incompetent, in advance? Who could tell up to the last hour of that Thursday, whether there would be any election at all for members of Congress? The schedule under which the election was held submitted the question to the people, whether or not they would ratify the constitution. When it was known they did ratify it, *then*, and not until then, was it determined, or could it be determined, that that was the time for the election of anybody.

The civilized world execrates Caligula for writing his laws in characters so small, and hanging them on walls so high, that the people could not read them. But here we have a proposition dependent ever for having the force of law, on the undiscovered will of the voters, unwritten, and unhung upon any wall, converted by a legal fiction into a binding, prescribed law, not only before that will was known, but before a single vote had been cast. If the constitution had failed there would have been no election, and hence no time for any; whether the constitution would or would not fail, could not, in the nature of the case, be known until the polls were closed, and was not in fact known for many days afterward. Now, can it be said, or with patience be heard, that, when the *time* of the election is dependent upon the *result* of the election itself, the time is, in any legal or just sense, *prescribed*? In such a case no human being can know the time until he knows the result. And no sophist has ever yet proved that the result of an election, however certain, was prescribed by law. To state the proposition is to exhibit its rank absurdity.

The requirement of the Federal Constitution is identical as to time, place, and manner. Suppose the convention of West Virginia had provided, in submitting the constitution to the people, that the *places* of voting for candidates for Congress should be at those polls where a majority of the votes cast shall be for the constitution; or hat the manner of voting, whether *viva voce*, or by ballot, shall be determined by the result of the vote on the new constitution. Under such circumstances, could it be said that the *places* and the *manner* of electing Representatives in Congress were established or known beforehand? Would it be possible for any voter to know either the place or the manner until he knew the result? The election would make certain *for the future* the place and the manner, but that is not prescribing them. The Constitution of the United States, in requiring the times, places and manner of holding congressional elections to be prescribed, intended to have all doubt and uncertainty removed, and to secure freedom and fullness of choice to the voters. The August election had not been prescribed, but was authorized *to prescribe itself*. So far as relates to Representatives in Congress, it was a bastard—without parentage; and it should die, childless.

But it has been singularly claimed that the election both in August and in October was illegal; which is simply saying, that the convention had the power to pull down, but not to build up; to destroy, but not to create. If it could not, and did not, change the congressional election from the fourth Thursday of October to the Fourth Thursday of August, it did not attempt to change it to any other day for that year. I listened with great pleasure to the able argument of my friend from Maryland [Mr. WILSON] upon this point, but it did not satisfy me. The code expressly provides for the election of Congressmen in 1870, and in every second year. The Legislature has not changed this provision, and if by any means, direct or indirect, the convention rendered an election in 1872 impossible or illegal, it repealed, nullified the code, and its act was void. But it did not attempt to do any such thing. There is not a word in either the schedule or the constitution upon the subject; but the thirty-sixth section of article 8 of the constitution provides that—

> Such parts of the common law, and of the laws of this State, as are in force when this constitution goes into operation, and are not repugnant thereto, shall be and continue the law of the State until altered or repealed by the Legislature.

It was the law of "this State" that Representatives in Congress "shall be elected in 1870, and in every second year thereafter," at "the said elections," prescribed in the code. This law was not "repugnant" to the constitution, for in terms it does not refer to members of Congress, and does not say a word about their election. It is not to be inferred that it abolished the prescribed day of their election without naming another; and as no other is named, the day fixed by the code stands. The constitution changed the day of the general election of State officers; but it had no power (and if it had it did not exercise it) to change the time of the congressional election. And if it could not do this directly, no inference can arise that it did it indirectly.

In the case of Chase *vs.* Miller, in Pennsylvania, Justice Woodward said:

> Constitutions, above all other documents, are to be read as they are written; judicial glosses and refinements are misplaced when laid upon them. Carefully considered judicial implications may, indeed, be made upon them in support of statutes, (never to defeat statutes) when such implications are grounded in the constitution itself, and tend to accomplish its obvious purposes, as well as to promote the public welfare.

The repeal of statutes by implication is not favored. Mr. Justice Story, in Wood *vs.* The United States, (16 Peters, 353,) uses this language in delivering the opinion of the court:

> The question then arises whether the sixty-sixth of the act of 1799, chapter 128, has been repealed, or whether it remains in full force. That it has not been expressly or by direct terms repealed is admitted; and the question resolves itself into the more narrow inquiry, whether it has been repealed by necessary implication. We say by necessary implication, for it is not sufficient to establish that subsequent laws cover some or even all of the cases provided for by it; for they may be merely affirmative, or cumulative, or auxiliary. But there must be a positive repugnance between the provisions of the new laws and those of the old; and even then the old law is repealed by implication only *pro tanto*, to the extent of the repugnancy. (See also Dwarris on Statutes and Constitutions, pages 150, 154, and 10 Barr., 448.)

In 9 Barb., 308, it is held that—

> Where a late statute is absolutely repugnant to a former one only in part, it repeals the former only so far as the repugnancy extends, and leaves all the remainder in force.

In 1 Black U. S. R., 470, it is said:

> A repeal by implication is not favored; the leaning of the courts is against the doctrine, if it be possible to reconcile the two acts of the Legislature together.
>
> Hence a repeal by implication is not favored; on the contrary, courts are bound to uphold the prior law if the two acts may well subsist together. (By Nelson, Bowen on Leases; 5 Hill, 225, 226; Dr. Foster's case, 11 Coke, 63.)
>
> The repeal of a law by implication and construction of a subsequent statute should be so clear as to leave no reasonable doubt that such was the intention of the Legislature It should not be deduced by an ingenious course of argument, but should appear at once. (Crabbe's Rep., 356.)
>
> It seems to be well settled that a general statute without negative words cannot repeal a previous statute which is particular, even though the provisions of one be different from the other. (9 Harris, 43, citing 6 Report, 19.)
>
> The repugnancy between the provisions of two statutes must be clear, and so contrary to each other that they cannot be reconciled, in order to make the latter operate a repeal of the former. This rule is the result of a long course of decisions, and we know of no reason why it does not equally apply, where the repugnancy is alleged to exist, between a constitutional provision and a legislative enactment. (Ohio *ex rel.* Evans *vs.* Dudley, 1 Ohio State Reports, new series, 441; 2 Ohio State Reports, new series, 607.)
>
> The principle prevails even where the statutes are penal, and where the humanity of the law would plead for another construction. (9 Harris, 43.)
>
> Where both are merely affirmative, and the substance such that both may stand together, both shall have a concurrent efficacy. (1 Blackstone's Commentaries, 89.)

In the light of this unbroken line of judicial decision there is no room for inference. It is one of the highest rights of a State to be represented in Congress, the Legislature of the nation. West Virginia had done, by her legislative body, all that was required to secure her representation here, and it is the duty of this House to admit the persons elected under her law. Even if there was a *conflict* between the Legislature and the convention as to the time of the election, which there is not, a decent respect for consistency, if not for law, would require the House to follow its own precedents.

> In the case of Baldwin *vs.* Trowbridge, in the Thirty-ninth Congress, this House held that "where there is a conflict of authority between the constitution and the Legislature of a State, in regard to fixing the place of elections, the power of the Legislature is paramount."

If paramount as to place, it must be paramount as to time.

But if there be doubt, it is our duty to adopt that construction of the constitution and law of West Virginia which has been given to them by the State authorities.

The Committee on Elections of the last Congress, in the Tennessee cases, held this language:

If, however, the question as to whether by the act of 1870 the time for holding the election in question was changed from August to November was one of doubt we should feel bound to follow the construction given to it by all the authorities of the State of Tennessee, whose duty it has been to construe it and to execute it. It is admitted that the governor, and all other authorities in Tennessee having anything to do with the construction and enforcement of this act of 1870, have construed it as in nowise affecting the act of 1868, and by common and universal assent the election was held at the time fixed in the latter act. It is a well-established and most salutary rule that where the proper authorities of the State government have given a construction to their own constitution or statutes, that construction will be followed by the Federal authorities. This rule is absolutely necessary to the harmonious working of our complex governments, State and national; and your committee are not disposed to be the first to depart from it.

And the House unanimously adopted the report.

The contemporaneous construction so universally given to these acts would be entitled to great weight if the question were doubtful. But other reasons make the case too clear to require the aid of this authority. (9 Harris's Pennsylvania State Reports, pages 43 and 44.)

In West Virginia the State officers specially authorized by law to declare the result of the congressional election in 1872 have declared October as the legal time; and, as a matter of fact, it was publicly stated in the constitutional convention, at the time the schedule was under discussion, that it did not embrace the election of Representatives in Congress, and was not intended to embrace it; and before the August election the president of the convention, the chairman of the committee on schedule, the chairman of the committee on elections, and the chairman of the committee on the judiciary, all published letters stating that, in their judgment and from their knowledge of the purpose and work of the convention, the legal day for the election of Congressmen was the fourth Thursday of October. In the face of the law and of this common understanding of it, the House is asked to seat the claimants under the August election. Political majorities may override or disregard the law, but they cannot make the wrong the right; and, however long delayed, the time will come when these acts of usurpation will return to torment their inventors. Partisan appeals may crown with their triumph the work of this day, but with calmer moments will come the sincere regret that, in the struggle now closing, the crack of the party lash was permitted to hush the individual judgment, and to bury in silence the call to fearless duty.

Wood and Water for the Western Plains.

SPEECH OF HON. M. K. ARMSTRONG,

OF DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

January 24, 1874,

On the bill (H. R. No. 208) for the relief of settlers on western prairies.

Mr. ARMSTRONG. Mr. Speaker, the farmers and tillers of the soil upon the woodless prairies of the great West deserve and should receive from the national Congress some favorable legislation to encourage the planting of forests and utilizing the water-courses of the plains. These vast prairies are among the most fertile regions of the American continent, and need only the fostering hand of the Government to render them most populous and productive. Political economy teaches us that nations become rich and powerful in proportion as they develop their resources, reclaim their uncultured wilds, and improve and utilize their inland waters. The peculiar qualities of the soil of our western prairies naturally adapt them to become the inexhaustible grain-fields of America, provided the national Congress will but encourage the cultivation of groves of timber thereon for the uses and habitations of man. Congress, at its last session, in answer to appeals from the representatives of the Western States and Territories, passed a law entitled "An act to encourage the growth of timber on western prairies." This law was in the nature of a homestead act, and granted a hundred and sixty acres of prairie land to any person who would plant and keep in a growing condition thereon for ten years forty acres of timber. By some oversight in framing the bill, only one year from the date of entry was allowed to settlers in which to go through the whole process of breaking the prairies and planting the trees. It is well known that the stubborn turf of our western prairies cannot be sufficiently subdued within one year to admit of the prosperous growth of young transplanted trees. Hence lengthy petitions have come to this Congress from the farmers of the West, asking such a modification of the "timber-culture act" as will allow at least one year for the planting of young trees after the sod has been turned under by the plow. The amended bill now before this House provides that the plowing and planting shall take place in installments of ten acres each year until the whole is completed. Under the encouragement of such a law, our western prairies would become dotted with beautiful groves, serving as a protection against the droughts of summer and the rigors of winter.

In advocacy of national legislation upon this subject we have an abundance of favorable precedents in many of the older European states. We are informed that in France and Italy the destruction of the forests within the last few centuries has materially affected the climate, so much so that in many places the cultivation of wheat, the olive, and the grape has been partially abandoned or driven several leagues inland by the harsh winds that invade the inland from the naked coast.

By the felling of the woods on the Apennines the destructive sirocco prevails in the valley of the Po, damaging the harvests and vineyards and often ruining the crops of the season, like the ravaging tornadoes and summer hail-storms of our great American prairies. In those sections of Europe where once the straw roofs of the peasants withstood the power of the winds, tiles and slabs are now required. One of the oldest pine woods in that foreign country having been destroyed, the region was only relieved from the increasing siroccos and fitful storms by replanting the forests to resinous trees. In many parts of Italy, France, and Switzerland a perceptible lateness of spring is complained of since the destruction of the forests which formerly screened and warmed the adjacent areas.

Travelers inform us that from the cathedral of Antwerp, in Belgium, where forty years ago nothing could be seen but a vast desert plain, are now visible extensive forests planted by the hand of man, the trees being set in regular rows. These sylvan plantations have softened the climate, induced rain, and transformed the barren sands into fertile fields.

Experience in forest planting has proved that rows of trees, ten feet high and standing one hundred feet apart, will protect the intervening ground against winds and drifting snows, inasmuch as the currents of air move so nearly parallel with the earth's surface. Trees standing in rows, three hundred feet apart and thirty feet high, will also afford proportionate protection to the intervening ground on western prairies. It is also a fact too well known to be repeated here that in winter the soil in the open fields and naked prairies freezes from two to four feet deep, while the ground in the woods is barely crusted with frost, and that winter wheat and green tufts of grass survive the whole winter when surrounded by trees, while the cutting wind of the open prairie lays bare the tender roots to killing frosts and icy sleets. The heat, also, that is generated by living groves, and often by a single tree, is attested by the many instances of a solitary oak or evergreen clinging to and growing upon a cold rock in the cliffs, with barely soil enough to cover its roots, and of the many groves upon frosty mountain heights, which flourish in snow and ice through the winter months, drawing warmth with their roots from the frozen earth, and sending to the remotest branches of the trees a life-sap, like the blood in a child's fingers.

Scientific investigation has shown that trees maintain, at all seasons of the year, a constant mean temperature of fifty-four degrees above zero, even while the state of the atmosphere is far below the freezing point, and that this mean temperature of the groves sensibly ameliorates and softens the air of adjacent plains, producing rains. The American elm, for instance, has been known to produce, in one season, seven million leaves, or a foliage surface of about five acres, upon one tree, while the sugar maple of Vermont often yields eight gallons of sap per day for the season.

Philosophy informs us that as the lightning-rod abstracts the electric fluid from the skies, so the forest attracts to itself the rain from the clouds, which, in falling, refreshes not itself alone, but extends its showers to the neighboring fields. The terrible droughts which desolate the Cape Verde Islands are attributed to the destruction of its original forests, while in the island of Saint Helena the wooded area has largely extended since the exile of Napoleon, and in consequence thereof the rains there are twice as frequent and copious as in former days. Coultas says that the woods, winds, and sea form the several parts of nature's grand distillery; the sea is the boiler in which vapor is raised by the rays of the sun, the winds are the conducting tubes which carry the steam-clouds to the forests which possess a lower temperature. This naturally accumulates and condenses the misty vapor into rain-clouds, which, becoming too heavy to float in the air, descend to the earth in showers.

Sir John Herschel ascribes the extreme aridity of Spain to the proverbial hatred of the Spaniards toward trees, while in Egypt, he asserts that recent plantations of the palm tree have caused rains in desert regions where hitherto such a thing was almost unknown. In Palestine and many other parts of Asia and Northern Africa, which in ancient times were the granaries of Europe, fertile and populous, the lands have become deserts, deprived of rain, springs, and water-courses, brought about by the gradual prostration of the forests. From the same cause, many districts in Southern France have become barren wastes of stone, where once the grape and olive yielded in profusion.

The great scarcity of springs and running streams all over our American prairies can also be accounted for by the absence of groves and forests. It is well established that the protection afforded by forests against the escape of moisture from the soil insures the permanence and regularity of natural springs and running brooks. In the settlement of the American States it has always been observed that clearing the grounds of forests not only causes running springs to disappear, but dries up ponds and reduces the water-courses.

In the valley of Araqua, Europe, Humboldt relates an instance of a lake drying up by the clearing of the forests to such an extent that, from the sixteenth to the eighteenth century, the waters retreated two and a half leagues, deserting a city formerly founded

upon its shores. The lands laid bare by the retreat of the waters were converted into admirable plantations of cotton, bananas, and sugar-cane. Numerous instances are recorded, in the older agricultural regions of the globe, where streams and flowing springs have become so reduced by the felling of the forests over great areas that the mills and factories formerly erected upon these water-courses have long since been abandoned for want of sufficient water to drive their wheels.

The influence of forests on springs is strikingly illustrated by many instances in European countries. Near the town of Heilbronn the woods on the hills surrounding the town are cut in regular succession every twentieth year. As the annual cuttings approach a certain point the springs yield less water, some of them none at all; but as the young growth shoots up they flow more and more freely, and at length bubble up again in all their original abundance. Another instance is related of a great fountain, imbedded in the deep woods of France, which formerly supplied all the fountains of a large village, but since the clearing of the surrounding forests this great reservoir sends forth but a mere thread of water. William Cullen Bryant, the great American author, says that fifty years ago large barges loaded with goods went up and down the Cuyahoga River, and that a large vessel was built upon its shores and floated down its channel to the lake. Now, in an ordinary stage of water, a skiff or canoe can hardly pass down the stream. Professor Hayden, United States geologist, also confirms what every settler on our great plains has often observed, that the creeks and rivers which meander long distances through our naked and woodless wastes contain no more water a hundred miles down the stream in the open prairies than near their sources among hills and bluffs. Many of our prairie streams also, which furnish a supply of living water near their sources, are known to sink beneath the ground, and can be traced only by standing pools which rise to the surface under some protecting bank or shade, away from the sun and winds of the desert. Groves planted along these dead water-courses on our western prairies have been known to bring to the surface living ponds of water.

The day is approaching when a national system of irrigation will be required to reclaim our great American prairies of the Northwest, whereby the larger streams and water-courses may be diverted, in part, through constructed channels, to the woodless and waterless regions of the interior. The natural lakes and water-courses of the West are merely reservoirs for the plains, which must be utilized and distributed by the hand of man. And this can be done at a much less cost than was incurred by the New England pioneers in clearing the forests and stumps from those sections which now constitute the most flourishing States in the Union. In the Territories of Colorado and Utah much has already been done by irrigation companies to cause the desert to blossom as the rose. In the vicinity of Salt Lake City, as I am informed by the intelligent Delegate from that Territory, irrigation has for many years been resorted to with great success in the cultivation of field and garden. In that Territory irrigation laws have been enacted, and water companies chartered, which are limited to certain areas, and by means of drains and ditches the waters of the rivers are tapped and led over large fields and through dead furrows, which divide the plowed area into lands about one rod in width, thereby infiltrating the entire surface.

This subject has become of such national importance in reclaiming the vast timberless domain of the Northwestern Territories, that the President of the United States, in his last annual message to Congress, recommends the enactment of laws to promote irrigation over the waterless plains of the West, by conducting portions of the river waters through artificial canals to the parched interior plains. For this purpose a portion of the public lands in alternate sections should be set aside and disposed of to such corporations or local governments as will reclaim from sterility the remaining and adjacent sections belonging to the United States.

Irrigation has been carried on successfully for many years in a number of the older countries of the eastern hemisphere. In France, Lombardy, and Sardinia there are more than three thousand square miles of artificially-watered lands, to say nothing of the vast areas in Italy, Egypt, Syria, Turkey, and the Mediterranean basin, which have been reclaimed and rendered suitable for cultivation by the process of irrigation alone.

An ancient writer informs us that the first inhabitants of the sandy valley of the Nile were desert-dwellers, with the nomadic Arabs as neighbors. But the civilized people of Egypt transformed, by irrigating canals, the desert waste into the richest granary of the world, and liberated themselves from the shackles of rock and sand. The river Nile receives not a single tributary stream in its whole course through Egypt; there is not so much as a living spring in the whole land, and with the exception of a narrow strip of coast, the rain-fall in the territory of the Pharaohs is not two inches in the year. We are also informed that one-fifth of the whole volume of water which is carried by the Nile to the Mediterranean is diverted from its natural channel through artificial canals, and applied to irrigating about three and one-half million acres of land throughout Egypt.

Artesian wells have also been sunken in many countries, for the double purpose of obtaining water in the dry regions and at the same time penetrating deposits of coal or other minerals hidden beneath the surface. The French government within the last number of years has bored numerous artesian wells in the Algerian desert, every one of which became the nucleus of a settlement proportioned to the supply of water. In 1850 several nomadic tribes had established themselves around these wells and planted more than thirty thousand palm trees, besides other perennial fruit-bearing shrubs.

The same policy could be adopted with advantage upon the great prairies of America, and would doubtless result in tapping concealed coal-beds in many localities, while in other sections subterranean waters would be reached and forced to the surface of the parched desert for the uses of settlement. In Canada, Brazil, and other countries immigrants have been furnished by the government with transportation for themselves and families, besides a supply of tools, utensils, seeds, food, and lumber for one year, the amount advanced to be secured by mortgage on their new farms, at low interest on long time. Why cannot our Government do as much?

Nearly one-half the area of our American domain is yet but sparsely settled, and a large proportion of our Northwestern Territories, though fertile in soil, suffer from a scarcity of timber and running streams. It is the duty of the Government to develop its hidden resources, and encourage its people in new fields of industry and enterprise. Enact such generous laws as will induce immigration, and open new homes and harvest-fields all over the broad and uninhabited prairies of the West. Then will our own grain-fields supply Europe with bread, and bring money to our shores in return for the one million in gold which we are taxed yearly to pay as interest on our national debt.

I hope the bill, as reported by the Committee on the Public Lands, will pass this House and become a law.

Cheap Transportation of the Products of the West.

SPEECH OF HON. ERASTUS WELLS,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

January 31, 1874,

On the several propositions in regard to transportation routes between the West and the sea-board, and on river and harbor improvements.

Mr. WELLS. Mr. Speaker, the absolute necessity that exists for cheap and permanent methods of transporting the surplus products of the West to markets of collection and distribution is a sufficient reason for the urgency with which representative commercial bodies of the West press upon the attention of this House propositions for the improvement of navigable streams, and in some instances demand national legislation upon, if not aid to lines of railroads extending from or through centers of production to the sea-board.

I expect, sir, to add but little to the forcible arguments presented to this House from the Union Merchants' Exchange of my own city, (Saint Louis;) and I take this opportunity to address the House more particularly in favor of appropriations in aid of river and harbor improvements than the purpose of discussing the transportation question. In fact, sir, the demand for cheap transportation has passed beyond mere argument, and is now a question only as to the methods and manner of carrying the acknowledged requirements of a nation into practical and ready effect. The demand, if I apprehend it aright, is less for legislation to prevent extortionate charges upon artificial methods of transportation, than for a wise and generous support and encouragement of competition, by the improvement of navigable streams and the increase of facilities for water transportation.

Nor, sir, is it necessary to the prosperity of Eastern States, or even to the successful operation of existing or contemplated railroads, that the improvement of navigable streams should be refused or but haltingly carried on. The West cannot grow rich without advancing the wealth of the East; nor can a cheap carriage of the surplus products of the West to the sea-board be obtained, even at points remote from the now established centers of exportation in the East, without creating such new industries, developing such additional commercial relations, as to return and augment the freightage between that portion of the country and the East. I therefore decline to believe that the real interests of the East are opposed to the free outlet of western produce through the natural channels appertaining to the Mississippi Valley; or that its representative men indorse the desire for the construction of national railroads through States and communities abundantly able to construct such roads themselves; still less, sir, do I believe that the mere construction of one, or even any number, of trunk roads, from west of the Mississippi River to the Atlantic sea-board, at New York or Philadelphia, can permanently and absolutely chain the produce of the West to the East, or prevent the final change of the direction of grain exports to a southern outlet. This consummation may be delayed, but the evil effects of such a delay cannot be confined to the West alone.

The commerce of fourteen of the most productive States of the Union, employing upon navigable streams traversing or bordering their own lands a larger marine than is owned and employed by the sea-board States in foreign commerce, cannot be ignored, nor yet safely neglected, while aid is being extended to other and, if you

please, rival interests. The statistics presented in the report of the Merchants' Exchange, to which I have alluded, show that, of the estimated surplus of wheat grown in the Northwestern States, over seventy-four million bushels, or more than 80 per cent., are grown in localities for which the Mississippi River and its tributaries form a natural outlet, while of the surplus of one hundred million bushels of corn over ninety million bushels are produced in localities bearing similar relations to the Mississippi and its tributaries.

But the importance of free river transportation in the Mississippi Valley is not to be gauged alone by the amount or value of the cereals, the growth of Northwestern States, which is exported or might be rendered available for export to foreign countries. Cereals are not the only products demanding carriage by water in the Mississippi Valley, nor is the foreign trade and commerce the only gauge of the value of the surplus production of that region to the nation of which it forms a part.

As I have said, sir, I believe the demand of the hour is less for legislation to prevent extortionate charges upon artificial methods of transportation than for a wise encouragement of water transportation. Competition is, in my opinion, the sole safeguard against extortion of this character, and I know of no manner in which a proper competition in this respect can be so readily or practically assured as by aiding in the building up of new sources of demand at the same time that increased freight facilities are offered. In this respect I urge extreme appropriations to the navigable streams of the West.

It is certainly as wise to create a demand in our own country for the surplus produced in one section as to provide solely for the shipment of that produce to other countries. A limitation must always exist to the shipment of many articles of the West to export points on the eastern sea-board, by the necessary condition of moving those articles along lines of latitude upon which they are produced. Thus not only are the corn and wheat produced in Illinois, Iowa, Missouri, Kansas, Wisconsin, Minnesota, and Nebraska, when moved only to the East, brought into competition with the cereals produced in the corn and wheat growing States of Ohio, Indiana, Michigan, Pennsylvania, and New York, but many vegetable products, too bulky or of too little comparative value to withstand the cost of rail transportation, are rendered valueless to the producer, and only cumber the earth from which they have been drawn with toil and care. Not so with a route leading to the South, and which conveys the products of one climate to be exchanged for the products of a different region, stimulating industries and rendering profitable cultures and crops which otherwise would be unavailing and worthless.

Many articles which do not enter into the foreign trade of the Union are interchanged between the corn and wheat grower of the Northwest and the cotton and sugar planter of the South, and each added article of freight, passing up or down the river, lessens the cost of this transportation of necessary vegetable products, enhances the profit alike of the southern planter and the northern farmer, and, adding to the wealth of the nation, augments at once the prosperity of the East and the West. This would of itself be sufficient reason for completing the improvements of the Mississippi River at the rapids above the mouth of the Missouri, to defend the channel between the Missouri and the mouth of the Ohio, and to remove all obstructions from snags between the mouth of the Ohio and New Orleans; but when to the added encouragement thus given to southern productions you add the saving to the farmer of the Northwest of even but one or two cents upon each bushel of grain exported, you add millions to the national wealth.

But, Mr. Speaker, I have digressed somewhat from the line of argument to which I had proposed to confine myself. I advocate the extending of liberal aid to our western navigation as a mere matter of justice to the largest producing classes of the Union, and as a wise continuation of a policy that has become traditional in all commercial nations, and which is none the less urged upon this nation because it has an interior commerce to be served by its marine larger than that of the foreign and home commerce of many individual sovereignties. Appropriations have been made from the national Treasury annually since 1824 for the improvements of rivers and harbors of the country, and such expenditures have been acknowledged necessities from the formation of the Government. Naturally the earlier and larger appropriations have been made to the Eastern or sea-board States, and it is only within the past five years that the claims of the Mississippi Valley have been considered as equal even to those of the States bordering the lakes. That the character and amount of these appropriations may be apparent, I present the following statistical statement showing the amount appropriated to each work in each State from 1824 up to the close of the last fiscal year, the total amount expended being $42,607,416.31:

Maine:	
Machias River	$12,000 00
Saint Croix River	10,000 00
Camden Harbor	10,000 00
Belfast Harbor	5,800 00
Rockland Harbor	15,000 00
Kennebeck River	135,950 00
Richmond Island	90,000 00
Cobscook Bay	5,900 00
Saco Harbor	174,275 00
Kennebeck River	54,175 00
Portland Harbor	250,111 00
Gut Back River	16,500 00
Maine—Continued.	
Piscataquis River	$8,250 00
Union River	30,000 00
Penobscot River	125,000 00
Narragnagus River	22,000 00
Sullivan River	35,000 00
Royals River	20,000 00
Wells Harbor	5,000 00
New Hampshire:	
Piscataqua River	10,000 00
Cocheco River	30,000 00
	1,064,961 00
Vermont:	
Burlington Harbor	281,222 22
Hero Island	20,000 00
Swanton Harbor	15,000 00
Otter Creek	10,000 00
	326,222 00
Massachusetts:	
Merrimac River	160,336 72
Great Brewster Island	1,314,900 00
Sandy Bay	500 00
Wood's Hole	2,500 00
Rainsford Island	22,353 00
Marblehead	500 00
Deer and Sewall Islands	169,320 00
Duxbury	25,000 00
Plymouth Beach	57,266 00
Plymouth Harbor	110,329 44
Bass River	30,000 00
Hyannis Harbor	107,931 82
Edgarton	392,527 00
Taunton	40,000 00
New Bedford	10,000 00
Nantucket	44,265 00
Connecticut River	20,000 00
Gloucester Harbor	10,000 00
Boston Harbor	325,000 00
Wellfleet	5,000 00
Provincetown Harbor	17,000 00
Wareham Harbor	20,000 00
Salem Harbor	15,000 00
	2,899,799 00
Rhode Island:	
Church's Cove	28,000 00
Providence	55,000 00
Warren River	4,000 00
Pawtucket	52,000 00
Block Island	205,000 00
Pawcatuck River	30,000 00
Wickford Harbor	5,000 00
Newport Harbor	8,500 00
	387,500 00
Connecticut:	
Stonington Harbor	61,753 83
Thames River	65,000 00
Saybrook Harbor	20,000 00
Bridgeport Harbor	120,000 00
Fairweather Island	26,550 00
Saugatuck Harbor	1,000 00
Westport Harbor	16,516 00
Cedar Point Harbor	1,500 00
New Haven Harbor	106,000 00
Mill River	10,587 43
Southport	2,500 00
Connecticut River	180,000 00
Housatonic River	40,000 00
Norwalk Harbor	20,000 00
	455,407 26
New York:	
Dunkirk	337,274 93
Buffalo	934,043 05
Black Rock	52,098 00
Hell Gate	1,260,400 00
Oak Orchard	140,000 00
Charlotte	311,278 40
Big Sodus Bay	296,771 80
Little Sodus Bay	145,340 41
Oswego	793,162 87
Sackett's Harbor	6,000 00
Staten Island	19,500 00
Hudson River	1,109,288 00
Cattaraugus Creek	57,410 00
Portland	55,466 00
Whitehall	33,000 00
Black River	42,401 00
Salmon River	50,000 00
Plattsburgh	130,500 00
Olcott	95,000 00
Ogdensburgh	96,000 00
Pultneyville	30,000 00
Port Jefferson	30,000 00
Peconic River	25,000 00
Port Chester Harbor	12,000 00

It will be seen, sir, from the above statistics, that the annual expenditures upon these works of harbor and river improvement have averaged less than $1,000,000 per year; that the largest portion has been employed in the construction of harbors of refuge, or the protection of harbors giving facilities to the commerce of districts rather than States; and that the entire aggregate of the expenditures of a half a century, in behalf of water navigation, have not equaled the increase in actual money credits extended by the Government to the gigantic railroad enterprise which has connected the Atlantic and Pacific sea-boards. I will not, however, enter into any comparison as to the aid extended to different sections of the country. The people I have the honor to represent rejoice equally in the prosperity of each section, and are even more willing to extend aid to the sea-board and lake harbors, to encourage our lake and ocean marine, than they are ready to press their own claims upon governmental protection. We of the West do not, sir, ask to reduce in any, even the least, particular appropriations which may be necessary to afford safety to navigators of the high seas, or to extend the commerce of our lake frontiers, however small may be the district served by the construction of improvements, or however remote such works may be from the center of production. Each one of these works has aided the advancement of our nation, and each additional expenditure will assure future progress.

We ask only, sir, that the interest of the producer of the West shall not be overlooked; that the money power of the nation shall not be abused by providing artificial lines of communication, to the utter neglect of those natural channels of commerce which, after all, are the true sources of the rapid progress of civilization and production in the center of this continent.

It will be noted, from the report of expenditures that I have given, that the total amount so far appropriated to the Mississippi River and its tributaries has been less than $14,000,000, and that of this amount only about $1,500,000 have been expended in protecting and enlarging the mouth of the Mississippi. Yet this system of internal navigation covers an area extending from the Alleghanies to the Rocky Mountains, from the extreme northern limit of the temperate to the margin of the tropic zone. Within its limits are gathered the staple products of nearly every climate of the world. Parallel lines of artificial communication must seek in vain to carry these products arbitrarily to the East. The twenty thousand miles of navigable streams penetrating the most remote parts of this vast area have marked the path of this commerce, and it remains but for man to render these navigable streams accessible to his inventions for transportation. This is not the age, and certainly this is not the country, in which a halt can be called in the progress of commerce. The restless activity of our people forbids that any source of wealth should be blockaded by obstructions which the ingenuity of man can remove, or that, neglected, may deprive one region of the country of a market, and doom another to undue cost in production.

I advocate, therefore, a liberal expenditure in the improvement of the western rivers; not more in the interest of any State than in that of the nation, and, in this respect, I urge especially three works as of a distinctive character, which should be completed with the least loss of time and in the most effective manner.

First in order stand the improvements at the mouth of the Mississippi. These are not, as in the case of single improvements on the Atlantic sea-board, a work conferring advantages upon one part only, or even a limited district. It is a national work, affording an outlet to the products of fifteen of the most productive States of the Union, and of States more rapidly increasing in population and material wealth than any others in the Union. This work should not alone be retained in its present state, but should be pressed forward to a condition that shall afford free and ready access to the ocean marine of the world. Expenditures at this point, judiciously and promptly made—and to be made judiciously they must be made promptly—will augment the taxable wealth of the country far beyond the outlay, by inciting a larger commerce from the North to the South, and the use of improved and enlarged means of transportation on the river to meet the encouragement thus afforded to foreign shipments.

Second only in importance to the improvement at the mouth of the Mississippi is the completion of the works at the rapids above the mouth of the Missouri—works not only necessary to give full sway to competition in the carriage of the wheat and corn surplus of the great Northwestern States to the granaries of the world, but indispensable to the supply of the South with food and forage at values which will retain to this country its superiority in cotton production, and eventuate in its lead in manufactures of that staple.

Following naturally in the line of these two great works comes the improvement of the Mississippi, from the mouth of the Missouri to the mouth of the Ohio, as the necessary connecting link between two great works, the one an outlet for the extreme North to the South, the other an outlet from the South to the world.

Other and needed improvements are also suggested in reports made to this body, both by commercial representation and individual members of the House. All these varied measures for the improvement of the tributaries of the Mississippi I heartily support; but first and foremost, above considerations for the connection of the great lakes with the Mississippi by canals, and beyond the construction of freight railroads from the West to the East, I urge this House to aid and encourage the main artery of the commerce of the Mississippi Valley by sufficient and liberal aid to the three distinctive works I have named.

Louisiana Affairs.

SPEECH OF HON. OLIVER P. MORTON,

OF INDIANA,

IN THE SENATE OF THE UNITED STATES,

January 30 and February 2, 1874.

The Senate having under consideration the resolution relative to the admission of P. B. S. Pinchback as a Senator from the State of Louisiana—

Mr. MORTON said:

Mr. PRESIDENT: I will detain the Senate but a few minutes this evening. The Senator from Wisconsin, [Mr. CARPENTER,] in conclusion, has developed the whole intent and purpose of his new agitation. It is for a new election in Louisiana and to overturn the existing government of that State. Now, sir, I want to inquire, very briefly, who it is that is demanding a new election in the State of Louisiana.

First, I will tell the Senate who does not demand it.

The republican party of Louisiana does not demand it, is unanimously opposed to it, regards it as a movement in favor of its enemies, a movement to put it in the power of its enemies. The colored men of Louisiana regard it as a movement to put them into the power of their deadly, their mortal, enemies. Sir, the republican party of Louisiana, as an organization, as a body, composing a large majority of the people of that State, are utterly opposed to this movement on the part of the Senator from Wisconsin.

Then, Mr. President, so far as the democratic party is concerned, the best part of that party are opposed to it, and opposed to it utterly.

The business men of New Orleans, I am informed and believe, are opposed to it. I believe it can be shown satisfactorily to the Senate that the business men of New Orleans, the men of property, the men who are interested in the preservation of order and protecting honest labor, are opposed to it. They are not the political friends of Kellogg; they would not vote for him; but they desire the preservation of order; they desire the protection of property. They are opposed to anarchy; they have had enough of it; and they understand full well that the overturning of that State government and all it has done would be a new signal for disorder and the shedding of blood.

Sir, there is blood in this movement, blood and crime in it, such as have characterized Louisiana for the last eight years.

At the end of a two days' speech the Senator from Wisconsin admits away the whole case. He talks about Louisiana being controlled by military power, about Louisiana being crushed and her people held

down by military power; all of which, disguise it as he may, is a direct condemnation of the Administration; and yet in the same breath he admits, what everybody knows to be true, that a large majority of the people of Louisiana are to-day republicans; admits that which I know to be true, and we all know who are well informed, that the Kellogg government is to-day in sympathy with and is sustained by a large majority of the people of Louisiana. He admits that that majority was overwhelmed by fraud. He admitted in his report a year ago, and I have it here in his report, that the control of the machinery of that election by Governor Warmoth was equal to 20,000 votes, and that the republican party was defrauded in the elections in every possible way. He there reported that it was an organized fraud; and yet we are told in the same breath, thus the Senator blowing hot and cold, that the people of Louisiana have been crushed by a military despotism, and a government forced upon them that they did not want. If the Senator can reconcile these things he can do more than I can do—more than his audience can do. If he can justify this new movement he can do more than I think anybody else can do.

Sir, his speech is a tissue of contradictions from beginning to end. He brushes aside the decisions of the supreme court of Louisiana. He assumes to understand the law of Louisiana better than the supreme court of that State. He denies the jurisdiction of the court in one case, and he assumes that the law in another case is unconstitutional. Why, sir, that court compares favorably with the courts of other States. It is composed of four members, three of whom were chosen in 1868, and have had no connection with the present troubles at all; and the chief justice of that court is a man of legal character, and whose personal character and reputation for ability are of an order of which the Senator from Wisconsin need not be ashamed. Every question that he has discussed here has arisen under State laws, and has been decided by the supreme court of that State. But the Senator assumes that he understands the laws of Louisiana better than that court does. He treats them with contempt. He says the court is not entitled to the respect of anybody. He tramples upon all the rights of the State, and upon the tribunals of the State, and asks Congress to set aside the State government and order a new election—in whose interest? I will tell you in whose interest. ' In the first place, in the interest of Governor Warmoth, who has been on the floor of the Senate engineering this movement for a new election, who is at the head of this movement—a man of consummate ability and tact; and he is here to-day, and his trusty lieutenants are here to-day, and John McEnery, the governor whose criminal pretensions have caused bloodshed and murder in that State. He is engaged in this movement, and he is upon the floor of the Senate.

I have not time to go into the full details of this case, and do not intend to do so to-night; but I promise that it shall be ventilated to the satisfaction even of the Senator from Wisconsin. But I remarked that his speech was a bundle of contradictions and of inaccuracies. The Senator does not state anything correctly. He goes about with his pick, and he picks a little mortar out here, and a little there; finds fault with everything, and states nothing correctly. I do not say he intends to state incorrectly, but I say he does not make a correct representation of any feature. I called the attention of the Senate to one absurdity here upon the floor this afternoon. After a lengthy argument to place the President in the wrong, to show that he had issued his proclamation of May last without authority, I asked the Senator the question, "Do you mean to say it was issued in violation of law?" After some hesitation he said, "No; not in violation of law, but in the absence of law." Sir, it was either issued by authority of law or in violation of it. There can be but one of these two things. And after showing, or attempting to show, for he utterly failed, that the President had been guilty of a great offense—for it would be a great offense if he, without authority of law, had done this indefensible and this wicked thing—he then turns around and says that it is a good thing after all, and he is glad the President issued the proclamation; it had an excellent effect; as if the exercise of an unconstitutional power could be a good thing, and could have an excellent effect!

Mr. President, I have said there is blood in this thing, and so there is. Of course I except my friend from Wisconsin, but I tell him that the great body of men who are moving in this thing now in the State of Louisiana are the men who are covered with blood; they are the assassins of 1866, of 1868, and of 1873. You remember that in 1866 nearly three hundred men were killed and wounded in less than twenty minutes in and around the Mechanics' Institute in the city of New Orleans, and what for? For merely proposing to hold a convention to amend the constitution of that State, to propose amendments; and they were chiefly killed by the police, substantially by the authority of the mayor and part of the State officers. And in 1868, within sixty days before the presidential election, more than two thousand people were killed and wounded in that State for political offenses, nearly all of them colored people. Ay, sir; more than two thousand were killed and wounded in less than sixty days before the presidential election in 1868. What was the effect of it? The republicans carried the State for governor and the Legislature in May, 1868, by 26,000 majority; but after this terror had done its work and the Ku-Klux had ravaged the State, Seymour carried the State by 41,000 majority, making a change of 68,000 votes. In one parish General Grant did not get a vote at all where the republicans had had 2,600 votes in the spring before. In other parishes he got five votes, ten votes, or twenty votes. Sir, Louisiana was a vast slaughter-house; blood was shed in every parish and almost upon every plantation, and the assassins of 1868 are there yet.

But now, sir, we come up to 1873. I will not detain the Senate to-night, but I have the evidence here to show that John McEnery organized the mob in New Orleans who made the assault on the police stations on the night of the 5th of March, 1873, where a number of men were killed. Why, Mr. President, are you aware of the atrocities of the Colfax massacre? How was it? Colfax is the county seat of Grant Parish. It was proven before this committee in the very report that the Senator read from that the returns from Grant Parish, what he calls the official returns, were forgeries outright. When I talked about forgeries here this afternoon the Senator said he had never heard of them. Why, sir, there is the evidence that the returns from Grant Parish were forgeries. The Lynch board returned the sheriff and the parish officers who were on the republican ticket as being elected. They were commissioned by Pinchback in the month of January, 1872; and more than two months afterward, about the 1st of April, a man of the name of Nash, who had been the democratic candidate for sheriff of Grant Parish, commenced collecting forces, as he avowed, for the purpose of taking forcible possession of the sheriff's office and of all the parish offices in that parish. He continued this collection of forces until the 13th of April. In the mean time the sheriff, hearing about this, collected a *posse* for the purpose of protecting himself and the other parish officers, composed almost entirely of colored men. They gathered in and about the court-house, and threw up a little intrenchment, a mere trifle of a fortification. On Easter Sunday, thirteen days after, Nash commenced his operations; he and Hadnot, the other leader, surrounded the court-house and these colored men in the fortification. The colored men at once retired to the court-house, and, when driven into the court-house, they offered to surrender, provided they would be allowed to go home in safety. Nash and Hadnot refused to receive the surrender unless it was unconditional. They refused to surrender unconditionally, because they expected to be murdered. Firing was had upon the part of the assailants. They finally approached the court-house on a side where there was no window. They set fire to the roof, and when the flames had spread throughout the building the colored men in the court-house held out white handkerchiefs and other emblems as a token of surrender, and when they could stay there no longer they rushed out, some of them covered with fire, and as they went out of the court-house they were met at the door and murdered, and stabbed, and mutilated. The evidence before the grand jury, of which I have an extract here, shows that three or four men would seize a colored man and another man put his pistol in his mouth and blow his brains out; and that they were mutilated and their abdomens ripped open after they were dead. And the evidence shows further that scarcely a body was found there that had not from three to a dozen wounds upon it. Some thirty of them were captured and were marched back in front of the court-house after dark, and there they were put in lines and shot as the Virginius prisoners were shot in Cuba. A large number of them were taken to the bank of the river after dark and there they were shot, and their bodies thrown into the river. One was only wounded, and he managed to swim across the river and make his escape. The evidence further shows that when this massacre took place at night on the bank of the river, they tried experiments on them with their arms. They put them breast to back, three or four or five each, and then a man would stand at the end of the line to see how many bodies he could send a bullet from his rifle through. The testimony is that over one hundred men—they cannot tell how many, but the number is known to exceed one hundred—were murdered on that occasion. Colonel De Klyne and Colonel Wright, who afterward went there by order of Governor Kellogg, found fifty-seven bodies still upon the ground in and around the court-house, three days afterward, that they buried.

Why, Mr. President, the whole world was shocked by the murder of fifty-three filibusters captured with the Virginius—men who were going upon a hostile, an unlawful expedition. But because they were tried by a court-martial and hurried out of existence, although time was allowed them to make their confessions and to say their prayers, it was regarded by us as cause of war unless satisfaction was made to us by the government of Spain. But here were one hundred of our own people killed on the 13th day of April last, and I have heard of nobody proposing to go to war upon that account. One of the leaders, and the principal leader, of that mob was a man by the name of Hadnot, a member of the so-called McEnery legislature, a resident of the parish of Grant. He was killed, and the only man killed upon that side; over one hundred killed upon the other; and when this so-called McEnery legislature met in New Orleans about four weeks ago, in session, they passed resolutions declaring that Hadnot had perished in his attempt to enforce legal authority, and that he was murdered by a mob, thereby recognizing upon the part of McEnery and his friends that that massacre at Colfax was done by their authority and in the name of the McEnery government.

From 1866 to 1873 there have been a series of murders continually. The life of a colored man in Louisiana is considered of no more account than that of a mad dog; and for all the murders that have been committed in that State from 1866 to 1873 not one of the murderers has been punished.

As I said before, every question that has arisen in this case has

arisen under the laws of the State and been decided by the supreme court of that State, has been settled by the tribunals provided by the State; and according to the admission of the Senator in the very conclusion of his argument this government of Kellogg has not only been recognized by all the courts of that State, but it does actually represent to-day the politics, the feelings, the wishes, and the interests of a large majority of the people of that State, because a large majority are republicans and they are unanimous in the support of the Kellogg government. But, to go further, the better part of the democratic party—the men of substance, the business men, as I am informed and as I believe—are utterly opposed to this movement. They believe it would result in that which has gone before. They have had enough of it. They are democrats in politics, but their interests lie in the paths of peace.

What, then, is the proper course? It is that the Kellogg government shall go on. I have nothing to say about the faults and the follies of Kellogg or of any other man. I stand not here as the advocate of any man. If I am called upon to do it, or if my duty requires me to do it, I will prosecute Pinchback, or Kellogg, or any of them, whose faults or crimes come within the purview of my jurisdiction. I shall not present myself as a cover or protection for any of them. But there are grave constitutional considerations involved here, great political considerations that entirely transcend all the petty considerations that have been mentioned by the Senator from Wisconsin; and one of them is, that when a State government is in existence and is going on, the Government of the United States shall not interfere and set it aside upon the ground that there has been a fraud committed in a State election, cognizable by State laws, by State tribunals, which has been settled by the highest judicial tribunal of the State. When the Congress of the United States shall just one time set aside a State government upon that ground, it will place every State government at the mercy of the Federal Government, for all time to come. That precedent will be like the sword of Damocles suspended over this nation by a frail thread, liable to fall at any time and to pierce its vitals. Sir, we cannot afford to set that precedent; we will not. If we have a regard for our complex system of government, if we believe that State governments are a necessity, if we would preserve the State governments, we must recognize that they have rights in their sphere which we cannot invade and cannot overthrow.

[At this point the honorable Senator yielded for an executive session.]

MONDAY, *February* 2, 1874.

Mr. MORTON, (resuming:) Mr. President, the Senator from Wisconsin, now in the chair, [Mr. CARPENTER,] on Friday last gave notice that on this morning he would introduce a bill to provide for a new election in the State of Louisiana. That bill, I am informed, will be introduced to-morrow morning, and I learn that one of a similar character will be presented in the House of Representatives. As a large part of the remarks of my friend from Wisconsin were addressed to that bill of which he gave notice, a very considerable portion of what I shall say will also be addressed to the same subject, regarding it as the most important proposition that has been or can be made in this Congress.

I will begin by stating the principal positions and the logical attitude of the Senator from Wisconsin in the long speech with which he has favored the Senate.

His first position, which was argued at great length, was that, according to the official returns of the election in Louisiana, those made out by the officers of the election, McEnery and his colleagues upon the State ticket were elected by some 9,000 majority, and that a majority of the same party were elected to the Legislature. This position he laid down as the foundation-stone of his whole argument.

His next position was that, by the unlawful interference of Judge Durell, district judge of the United States, and by the improper use of a portion of the Army, by the unlawful intervention of the Federal authority, McEnery and his associates were prevented from being inducted into office, and what was known as the Kellogg government was installed and placed in possession of the executive and legislative power of the State. This unlawful interference by the Federal authority, by which McEnery and his colleagues were defrauded of their offices, and the establishment of the Kellogg government in power, was denounced by the Senator, in bitter terms, as a gross fraud and outrage upon the people of Louisiana—trampling the State under foot, and the substitution of Federal usurpation for State authority. He declared not only that the Kellogg government had not been elected, but that it had been installed in defiance of law and the wishes of the people of the State, and maintained ever since by the protection of Federal bayonets.

From these two positions, thus taken by the Senator, the inference was inevitable that if the Government of the United States should interfere at all, it must be to oust the Kellogg government, and to establish in power the McEnery government—to give to McEnery and to his colleagues those offices and that authority out of which they had been so unlawfully and wickedly defrauded.

But now I come to state his third and last position, which is that McEnery and his colleagues were not elected at all, and that they have no right to enter into the possession and control of the State government of Louisiana—that the election of the 4th of November, 1872, was an organized fraud by which the will of a majority of the people of Louisiana was subverted. He took the ground that a majority of the people of Louisiana were republicans, and that but for the fraudulent use of the machinery of elections Kellogg and his associates would have been elected, and that the election was so completely fraudulent, so entirely subversive of the will of the people, that McEnery and his associates have no title to the offices, and that it is the duty of Congress to order a new election. This part of the Senator's position is very clearly set forth in the report which he made to the Senate, from which I quote the following language:

A careful consideration of the testimony convinces us that had the election of November last been fairly conducted and returned, Kellogg and his associates, and a Legislature composed of the same political party, would have been elected. The colored population of that State outnumbers the white, and in the last election the colored voters were almost unanimous in their support of the republican ticket. Governor Warmoth, who was elected by the republicans of the State in 1868, had passed into opposition, and held in his hands the entire machinery of the election. He appointed the supervisors of registration, and they appointed the commissioners of election. The testimony shows a systematic purpose on the part of those conducting the election to throw every possible difficulty in the way of colored voters in the matter of registration. The polling places are not fixed by law, and at the last election they were purposely established by those conducting the election at places inconvenient of access in those parishes which were known to be largely republican; so that, in some instances, voters had to travel over twenty miles to reach the polls. The election was generally conducted in quiet, and was, perhaps, unusually free from disturbance or riot. Governor Warmoth, who was the master-spirit in the whole proceeding, seems to have relied upon craft, rather than violence, to carry the State for McEnery. In the canvass of votes, which determined the McEnery government to be elected, the votes of several republican parishes were rejected.

The testimony shows that leading and sagacious politicians of the State who were acting with Warmoth entertained the opinion before the election that Warmoth's control of the election machinery was equivalent to 20,000 votes; and we are satisfied by the testimony that this opinion was well founded. We believe that had registration been accessible to all, and polling places been properly established, the result of the election would have been entirely different. And although we cannot approve of such a canvass as that made by the Lynch board, who seem to have acted upon the principle of "fighting the devil with fire," and circumventing fraud by fraud, and cannot say that Kellogg's government was elected, nevertheless we believe that Kellogg's government was defeated, and the popular voice reversed by the fraudulent manipulation of the election.

If the Senate should be inclined not to go behind the official returns of the election, then the McEnery government and Legislature must be recognized as the lawful government of the State, and McMillen, if regularly elected by that Legislature, should be seated in the Senate in place of Kellogg. But your committee believe that this would be recognizing a government based upon fraud, in defiance of the wishes and intentions of the voters of that State.

In this passage of his report he distinctly affirms four propositions:

That a majority of the people of Louisiana were at the time of the election republicans.

That the colored people were in a majority over the white people.

That the control by Governor Warmoth of the machinery of the election, he having under the law the appointment of all the election officers, the fixing of places for registration and for the holding the elections, and the general power conferred upon him by law, was estimated by democratic politicians, in the coalition which they formed with him in 1872, as being equal to 20,000 votes in their favor; and he declares that the evidence taken before the committee shows that it was equal to 20,000 votes.

He further affirms that but for these frauds, perpetrated through the machinery of the election, Kellogg and his associates would have been elected, and a majority of republicans elected to the Legislature.

He then closes by declaring that the election was void for fraud, and that a new election should be ordered by Congress.

It thus clearly appears, from the last position taken by the Senator, that but for the interposition of Judge Durell and the Federal authority, the McEnery government, which he says was wholly fraudulent and had no title whatever, would have been inaugurated, and that by such interference the Kellogg government was inaugurated, which does represent the majority of the people of the State, and would have been elected at the polls but for the organized fraud which he so graphically describes. His distinct admission that the election of the McEnery government was a nullity because of gross frauds, and that the Kellogg government would have been elected but for such frauds, puts the whole case in an attitude with which the supporters of the Kellogg government ought to be satisfied, but leaves the Senator not an inch of ground to stand upon.

The legal proposition involved in this medley is, that whenever the governor or Legislature of a State is elected by fraud, it is the duty of Congress to intervene and order a new election. In 1868 the governor of New York was elected by an enormous fraudulent vote cast in the city of New York, and, according to the Senator, it was the duty of Congress to go forth as a great reformer, turn the fraudulent governor out, order a new election, and pay the expenses of it.

The moral proposition evolved from the medley is, that when Judge Durell kept out a governor elected by fraud and put one in who, but for that fraud, would have been elected, his conduct may have been wholly illegal, but was, in another way, giving representation to the voice of the people.

The Senator from Wisconsin said that my present position was inconsistent with my action last winter, in not at that time moving to seat Mr. Ray on a *prima facie* case. The resolution passed by the Senate, instructing the Committee on Privileges and Elections to inquire whether there was a legal State government in Louisiana, was passed some days before the credentials in the Ray case were presented to the Senate, and the investigation had already commenced. That investigation resulted in a division of the committee. I reported that

the Kellogg government was the legal government, and my position has been sustained by the President and by the House of Representatives; and for more than a year the Kellogg government has been the sole government in Louisiana; it was also sustained by the Senate by the rejection of the bill to set aside the Kellogg government and provide for a new election.

The case from Rhode Island, decided by the Senate in 1842, of Potter *vs.* Robbins, is directly in point. There were in that case two claimants, each holding under an election from a distinct Legislature, the second Legislature denying the legality of the first; and the claimant elected by the first Legislature was seated on a *prima facie* case. The fact that the two Legislatures did not sit at the same time makes no difference, so long as the legality of the existence of the one was incompatible with that of the other.

The position of the Senator, that the Legislature making the election should first be shown to be a competent body, destroys the very idea of a *prima facie* case, if that fact is to be shown by any evidence beyond the certificate of the governor and the facts of which the Senate can take judicial knowledge. A *prima facie* case arising upon the credentials implies a case established upon sufficient though not conclusive evidence. Assuming the certificate of Pinchback to be the certificate of the governor of the State, the statement in that certificate, that he was elected by the Legislature of Louisiana, must be taken to be true until overthrown by an investigation, which, according to the usage of this Senate from its first existence, could only be made after Pinchback had taken his seat. The statement made by the committee in the case of Potter *vs.* Robbins, that if there were two Legislatures, each claiming to be the lawful Legislature, the Senate might inquire which was the lawful Legislature was undoubtedly correct; but bear in mind, that statement was made in the final report of the committee after Potter had taken his seat, and had no reference to an inquiry to be made before Potter had taken his seat. And I say distinctly in this case, that after Pinchback has taken his seat it is competent for this Senate to inquire whether he was elected by the Legislature of Louisiana. But in answering that inquiry, the Senate would undoubtedly be governed by the other doctrine laid down in the case of Potter *vs.* Robbins, that in determining which was the Legislature of Louisiana they would look to the decisions of the courts, and also in the case of Luther *vs.* Borden that they would look to the action of the President of the United States, had in pursuance of a law of Congress.

In answer to the allegation of the Senator, that there was no legally organized board of canvassers in Louisiana, it is enough to say that the supreme court of Louisiana have decided that the Lynch board was the legal returning board. The alleged inconsistency between that decision and the Wittgenstein case is inferential and fine-spun. It is enough that the court have decided in this identical case that five persons, four of whom made this canvass upon which the Kellogg government was established, did constitute the legal board. The court themselves met and answered the suggestion that Bovee was the real secretary of state and Herron only *de facto* secretary; and that answer is the authoritative exposition of the law of Louisiana upon this point. Whether the supreme court of Louisiana had jurisdiction in that case and in the other cases in which they held that the Kellogg government was the government of Louisiana, and that the Legislature that elected Pinchback was the lawful Legislature, was a question which they had a right to decide, and were required to decide; and their decision is as binding upon the question of jurisdiction as upon any other point. And I assume that their decisions are intrinsically entitled to much greater weight than the opinion of any outside lawyer or politician who dips into Louisiana law for an occasion. The Senator from Wisconsin must be presumed to understand the constitution and laws of Wisconsin better than those of Louisiana; and yet he would probably admit that he has been very often mistaken in regard to the laws of Wisconsin.

As to the allegation that the returning board had before it only imperfect evidence and had not any formal returns, I answer that from the admitted character of the local election boards throughout the State, which were organized for the purpose of fraud and falsification, and from the character of the returns, as an inspection of them disclosed and the testimony showed, the evidence which the Lynch board had before them, poor as it was, according to the Senator's own admission came much nearer to representing the actual wish and voice of the people of Louisiana than the so-called official returns. It was in evidence, and will not be denied, that the Lynch board, before proceeding to make their count, twice formally demanded from Governor Warmoth what were called the official returns; that those returns were withheld from the board, were hidden away, and it was not known where they were. The equity doctrine, *omnia præsumuntur contra spoliatorem*, applies: the parties who suppress the evidence shall not be permitted to gain by the suppression; and we ought not to be asked to overturn a State government because the Lynch board had not the official returns before them at the instance of the very men who unlawfully withheld that evidence.

While the Senator admits, not only in his report but in his speech on this floor, frauds in the election against the republicans equal to 20,000 votes, and while, as was stated by the Senator from Illinois, [Mr. LOGAN,] a number of those returns were forgeries from end to end, patent to the eyes of the committee on mere inspection, yet he insists that they must be received, because they complied with the forms of law. I inquire whether the decision of the returning board is not a form of a law, and whether the decisions of the supreme court of Louisiana upon every material point are not forms of law of the highest character, and are not controlling authority. But the Senator's regard for the forms of law conveniently stops with the consideration of these fraudulent returns.

But his position involves another legal proposition, that while these fraudulent official returns must be received as the only evidence by the returning board and the courts of Louisiana, they ought to be rejected by the high court of chancery, otherwise called Congress, and a new election ordered.

To his argument that the promulgation of the board of returning officers relative to their canvass of the votes could not, by the decision of the supreme court, be revised by it, I answer that that decision applied to cases where the time required by law to elapse before the issuing of commissions had actually expired, and the commissions had issued. In those cases it was held that the statute prohibited any revision of the count of the votes by the court. Was not this a correct decision? It results from no new statute, but is provided for by an act of 1855; nor is it a new construction of that statute. It results from the manner in which the political power of the State has assigned a political function. That function could have been vested by the Legislature in the court undoubtedly, but it was not, but was vested in a separate tribunal called the returning board. The laws of the United States assign to the district courts of the United States one jurisdiction, to the circuit courts another jurisdiction, and to the Court of Claims still a third jurisdiction; and so, by the laws of Louisiana, the authority to count the votes in a State election and to declare who were elected members of the Legislature and State officers was vested in a special tribunal created for the purpose, and the decisions of that tribunal were made valid and final.

Mr. HOWE. Has the Senator got the statute?

Mr. MORTON. I have not got it here, but I can furnish it to my friend.

The misfortune of the Senator is that he is combating at every point the decisions of the courts of last resort of the State of Louisiana, and is compelled to resort to argument, to assertion, and to ridicule to overthrow them. If the statutes of Louisiana, when applied to the confused state of facts there recently existing, work out a particular result, we must accept it. It is of the very nature of government, and essential to its existence, that tribunals be provided for the decision of every class of questions that may arise, and that the decisions of such tribunals must be accepted as the final exposition and declaration of the law and the facts. If the decisions of these tribunals are liable to be questioned and set aside collaterally, or utterly disregarded, because in the opinion of parties interested they have not been rendered upon sufficient and proper grounds, that would be the end of organized government.

Mr. STEWART. If the Senator will allow me, I desire to inquire whether any court having the case before them undertook to pass upon the merits of the case? Have the merits of the question of this election been passed upon in any case?

Mr. MORTON. The question as to who constituted the legal returning board was before the supreme court and argued at great length, and the court decided it. Questions as to whether the laws passed by that Legislature were valid laws were before the court, and in several cases they decided and were required to find that the Kellogg Legislature was the lawful Legislature of the State and that Kellogg was the governor of the State. The question arose in divers ways, I suppose, perhaps in a dozen cases.

The argument of the Senator that the interference of the Federal court under which Kellogg and his officers were installed and for a time maintained through physical force, furnished by that court, goes only to the manner in which, as a physical fact, these men reached the several offices. It steers clear of the question of the title. The real question should have been, and is, not who overcame the physical obstacles or difficulties in the way, or kept off overpowering force, but, are these men actually in possession of the offices in accordance with the decisions of the tribunals specially empowered by the laws of the State to decide such questions? According to the declarations of the Senator in his speech and in his report, Kellogg and his associates, and a Legislature composed of the same political party, would have been elected if the election had been fairly conducted. Here, then, is a set of officers declared by the courts of the State to be the lawful officers, and admitted by the Senator himself to have the fullest equitable title, if that expression may be allowed with reference to such a subject, and the objection he makes is that they got possession of their offices by the irregular and unauthorized action of a court.

Suppose a man is in possession of a piece of ground to which he has a legal title, will you turn him out because he was put in possession by a court which acted irregularly or without authority? No; the question would be determined by the character of his title, and his continued possession would depend upon the decision of that question.

A title which the highest legal tribunal has declared to be good is not impaired by unlawful interference, even by violence, in its support. And admitting the illegality of Judge Durell's action as fully as the Senator claims it, it only amounts to this, that the district court of the United States has unlawfully interfered to do certain things which the highest tribunal of the State decides to be lawful

and proper in themselves. The supreme court of the State having held that the Legislature was the lawful one which was organized by the admission of such persons only as were returned by the Lynch board, is the legality of that organization affected by the fact that the circuit court of the United States interfered to prevent the organization of the Legislature by persons who were not returned as elected by the Lynch board? If an officer in the performance of his duty were aided by a mob, the performance would not be made illegal by the presence and co-operation of an unlawful assembly. The fact is, that there is no question now involved in the proper decision of this great controversy before the Senate which is at all dependent upon the former action or opinions of Judge Durell.

The Senator took the broad position that the action of the President did not constitute a recognition of the Kellogg government, because there was no case presented under the law which authorized him to act or to make such recognition, and that the proclamation of the President issued on the 23d of May, 1873, in which he recognized the validity of the Kellogg government and declared his purpose to maintain it, was made without authority of law, and was a mere nullity. The argument was that the statute of 1795 gives the President the right to intervene only in case of "insurrection against the State," while the application made by Kellogg for aid did not state that there was an insurrection existing against the State, but only declared that there was domestic violence which the State could not repress. The language of the Constitution is:

> The United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion, and on application of the Legislature, or of the executive (when the Legislature cannot be convened) against domestic violence.

The Constitution does not use the word "insurrection" at all; but declares that the United States shall protect the State, upon proper application, "against domestic violence." It was undoubtedly the intention of Congress in the act of 1795 to cover the whole ground included in the constitutional provision; and there can be no possible reason shown why there was any purpose to make the provision of the law more narrow than that of the Constitution. The word "insurrection" is defined by Webster as "a rising against civil or political authority; the open and active opposition of a number of persons to the execution of law in a city or State; rebellion; revolt; a rising up of individuals to prevent the execution of law by force of arms;" and thus in itself the word covers every species of domestic violence consisting of the open and active opposition of any number of persons to the execution of law in a city or State; so that an attempt by a combination of any number of persons to resist the government of a State in the execution of a particular law is as much an insurrection against the State as an attempt to overturn the State government itself.

The act of 1807 is in the following language:

> In all cases of insurrection or of obstruction to the laws, either of the United States or of any individual State or Territory, where it is lawful for the President of the United States to call forth the militia for the purpose of suppressing such insurrection or of causing the laws to be duly executed, it shall be lawful for him to employ for the same purpose such part of the land or naval forces of the United States as shall be judged necessary, having first observed all the prerequisites of the law in that respect.

Here it is declared that the President may interfere in case of insurrection or obstruction to the laws of any State by the use of the land and naval forces in any case where it would be lawful for the President to call forth the militia, that is, upon the proper requisition being made by the Legislature or by the governor of the State, as provided in the Constitution and the act of 1795. The narrow construction which the Senator attempts to place upon this law in effect strikes out these words, "or obstruction to the laws either of the United States or of any individual State or Territory." His construction of both statutes is exceedingly narrow, and comes little short of being absurd.

President Tyler in his letter of May 4, 1842, to Governor King, of Rhode Island, (which was understood to have been written by Mr. Webster,) having direct reference to his power under the acts of Congress referred to, declares that he "will, if need be, interfere to suppress 'lawless violence' in the State of Rhode Island." In this Louisiana case there was the application of the Legislature of the 9th of December, and the application of Governor Kellogg after the adjournment of the Legislature. The language of the resolutions of the Legislature is that "certain persons are reported to be forming combinations to disturb the public peace, defy the lawful authority, and the State is threatened with violence." The language of Governor Kellogg's letter is, "domestic violence which the State cannot repress." The language of the application in the Rhode Island case, made by Governor King, is that "the State is threatened with domestic violence;" and the only recognition which the President gave to the charter government of Rhode Island was in the letter to which I have referred, and by sending a company of troops to Newport, in that State. Subsequently the Legislature passed resolutions invoking the aid of the United States to suppress threatened insurrection; and to that the President replied that the Dorr rebellion had already been suppressed, and there was no occasion for his interference. The recognition thus given by President Tyler in his letter to Governor King was treated by the Supreme Court of the United States as a recognition of the charter government, and a decision made by him in pursuance of the power vested in him by the act of 1795. In that case the President issued no proclamation at all, but declared his purpose to Governor King, if need be, to suppress "lawless violence in the State," but used no word in regard to "insurrection."

As before stated, on the night of the 9th December, 1872, what is known as the Kellogg Legislature passed a resolution asking protection against threatened violence, and two days afterward the President sent a dispatch, through the Attorney-General, declaring that he recognized that Legislature, and Pinchback as the acting governor of the State. Subsequently came the message of the President, in which he stated that he had sustained the Kellogg government, and should continue to do so until Congress otherwise directed. Afterward, on the 23d day of May, the President issued his proclamation upon the request of the governor, in which he declared that the Kellogg government had been pronounced the legal government of Louisiana by the supreme court of the State, warned all persons to cease their opposition to it, and announced his purpose to give it protection. The argument of the Senator that the President had never recognized the Kellogg government seems to be trifling with the whole matter. He did formally recognize the Legislature; but if he had not, and had only recognized the governor, that would have been the same in effect, for the title of the governor and that of the Legislature rested upon the same facts and decisions of the courts.

While the Senator was hair-splitting on the definition of words and the phraseology in Governor Kellogg's letter, the great fact was that just before that letter was written more than a hundred men had been murdered in cold blood in the name of the McEnery government. The recognition by the President of the Kellogg government was in pursuance of laws passed by Congress, and was in every sense an act of the Government of the United States; and consistency, harmony, and public good require that it should be respected by the Senate, acting in its separate capacity, until by constitutional legislation it has been overruled or set aside.

The spirit and logic of the law is that the recognition of a State government by the President, made in pursuance of an act of Congress, must stand as the act of the whole Government and be conclusive until such time as it is reversed by law. Such reversal cannot be made by the separate action of either House. Suppose there were three claimants for the office of governor of Louisiana and the President should recognize one, the Senate another, and the House a third. Such a state of things would lead to dangerous confusion and absurdity, and might result in anarchy and bloodshed; and the only escape from such dilemmas is in the doctrine that the recognition of a State government by the President in pursuance of an act of Congress must stand for the whole Government until reversed by law.

Mr. President, the proposition to set aside the State government of Louisiana and to order a new election is one of the gravest possible character. I may remark that it could not be done without setting aside a part of the constitution of Louisiana. That constitution requires the governor to be elected on the 4th of November every four years; it provides that the Legislature shall be elected on the 2d of November every two years. If we should now set aside this government and order a new election, still the constitution of Louisiana would require a new election to be held for members of the Legislature in November next. This new Legislature, elected under our law, could not hold beyond that time unless we set aside the constitution of Louisiana. And how would the new governor be inaugurated? The constitution of Louisiana requires that the votes shall be counted by the Legislature and he declared to be elected by it, and that is all the commission he ever gets; for the governor of a State gets no other commission. We cannot, therefore, set aside this State government and order a new election without setting aside a part of the constitution of Louisiana.

Under the constitution the new Legislature would not meet until January, 1875, unless called by the new governor, and he can only be declared elected by the Legislature.

Mr. CONKLING. If the Senator from Indiana will allow me, before he takes leave of the President's proclamation, I should like to make an observation.

Mr. MORTON. Very well.

Mr. CONKLING. The argument of the Senator from Wisconsin, aimed at the act of the President in addressing a proclamation to those threatening the public peace in Louisiana, proceeded on the idea that the President must act upon the information contained in the application from the governor, and upon that alone. He argued as if the whole foundation of that proclamation must be the application of the executive of the State of Louisiana. It seems to me nothing could be more fallacious as a test of the power or of the right or duty of the President thus to act. The Constitution declares that—

> The United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion, and on application of the Legislature, or of the executive (when the Legislature cannot be convened) against domestic violence.

Nothing here implies that the United States, or the President acting for the United States, shall know nothing save only from the application, and must be blind and deaf to all else. Take the fact of the impossibility of convening the Legislature; must the President rely and act solely upon the statement of the governor for that? Or is he to judge of it from the statements of the application of the governor, and from all other facts he learns? So, as to the necessity of interference; is he confined and concluded, as to jurisdictional

power and facts, to the statement made by the governor? Not at all. If turbulence exists or impends in any State of the Union, and the President knows it, or is satisfied of it, and receives only a cry for help from the governor, saying "For God's sake send troops here to restore order," the President's power is as complete as if the application recited all the particulars and history of the case, and quoted all the words of all the statutes in any way bearing on it.

I am not left alone to insist that the President is to judge whether the case demands his action. I call attention to the case of Martin *vs.* Mott, reported in 12 Wheaton's Reports, page 19, and will read from it briefly. The court says:

> If it be a limited power, the question arises, by whom is the exigency to be judged of and decided?

That is the very exigency now in question.

> Is the President the sole and exclusive judge whether the exigency has arisen, or is it to be considered as an open question, upon which every officer to whom the orders of the President are addressed may decide for himself, and equally open to be contested by every militia-man who shall refuse to obey the orders of the President? We are all of opinion that the authority to decide whether the exigency has arisen belongs exclusively to the President, and that his decision is conclusive upon all other persons.

Suppose Governor Kellogg had in any other form, however incomplete, summoned the President to his feet, the Legislature being absent and the President being satisfied that the Legislature could not be convened, the application would have committed to the President first and last, as the sole and absolute judge, the question whether he ought to interpose. In deciding it, he had a right to take into consideration the resolution of the Legislature which the Senator from Indiana has read, the communication addressed by Mr. Pinchback, acting governor, on the 19th of December; and it was the right of the President to avail himself of all information, however conveyed or by whomsoever conveyed, which might aid his judgment. Upon the whole of his knowledge and information as to the actual predicament in Louisiana, and not upon any part of it alone, the President had the right and it was his duty to judge.

On this point, it seems to me, the argument of the Senator from Wisconsin, which at some time I may again refer to, so far from disproving the warrant of the President to do all he did, degenerates into a mere criticism upon the verbiage of the proclamation; and even in that respect I think the argument is not unanswerable. My purpose was merely to suggest that even if it could be shown that the application of the governor of the State was too narrow by itself to show the need of executive action, that is not the sole jurisdictional fact by which the President's act must stand or fall.

Mr. MORTON. Mr. President, I have no doubt of the entire soundness of the position taken by the Senator from New York, and I will say further that there is high authority for saying that the President may himself take notice of the condition of affairs in a State and interfere without any application, under the general provision that he shall see that the laws are enforced.

The late insurrectionary States at the end of the war were without governments of any kind. They were without governors, Legislatures, courts, State or subordinate officers, and the United States had the power to provide for the reconstruction of the State governments, and it was their duty to do so. The broad difference between the condition of Louisiana at present and the insurrectionary States at the end of the war must be comprehended by all. The interference of the United States at that time and undertaking the work of reconstruction was a constitutional and political necessity. * * * *

But it is not every irregularity in a State government that will destroy its existence or impair its republican or legal character. A State government consists of too many constituent parts to say that the absence of the governor or the presence of a fraudulent one will destroy its existence; and the constitution and laws have provided the machinery by which the intruder may be expelled, and the lawful governor put in his place. Should the Legislature be broken up by the secession or resignation of a majority of its members leaving it without a quorum, which has happened in many of the States, that would not destroy the existence of the State government, or if it be irregularly or fraudulently organized by the admission of persons as members who were not elected, it could not be said to have destroyed the State government. It is hardly necessary to consider how many of the constituent parts of a State government must disappear before the government ceases to exist. The presence of governors and State officers who have secured their offices by fraud has occurred many times in our political history, and has never been held to have destroyed the existence of a State government or its legal character, or to have authorized the interference of Congress. And we know there have been numerous instances where State Legislatures have been broken up by the resignation of members or by what is commonly called "bolting," and yet it was never claimed that such a result destroyed the State government or took away its legal character.

The theory of our system is, that every State government possesses the power and machinery to correct the wrongs and frauds within itself, practiced under color of, or in open violation of, its own laws, and that the decisions of its own tribunals, created by its constitution and laws for such purpose, must be received as final. When the constitution of a State provides that each house of the Legislature shall be the judge of the election and qualification of its members, full faith and credit must be given to their action; and should the Government of the United States go behind their action to inquire whether the members have been lawfully elected to the Legislature, their independence would be wholly destroyed and the validity of their action made to depend upon the will of Congress. So when the laws of a State have constitutionally created a returning board to ascertain who are elected State officers and members of the Legislature, if Congress may go behind the decisions of that board and inquire whether they had the returns before them, and whether they were acting in accordance with the laws of the State, the election of State officers and members of the Legislature would be placed absolutely under the control of Congress. The Constitution says that—

> The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six years.

The manner of constituting the Legislature is left absolutely to each State, and the question of its organization must be left to be decided by such tribunals or regulations as are provided by the constitution and laws of the State; and the only question about which the Senate may inquire in determining the admission of Senators is, whether they have been chosen by the Legislature of the State—that Legislature recognized by the State, or whose organization has been accepted by other departments of the State government. Under our complex system of government all questions of the organization of State governments under their own laws must be left to the decision of the tribunals in such States created for that purpose; and when such decisions have been made, they must be accepted by the Government of the United States in their dealings with the States. It is no answer to this to say that, in a particular case, such tribunals will or have decided wrongfully. The Government of the United States has no right to review their decisions so long as the State possesses a government republican in its form.

Murder is the highest crime; but it is not every court that has jurisdiction to punish it, and one court cannot assume such jurisdiction upon the ground that another, to which it has been granted, will not properly exercise it; and Congress has not the jurisdiction to examine and redress every great wrong that may take place in a State. Where, by the constitution and laws of a State, legal remedies are provided for the redress of all wrongs that may take place in regard to elections, it would be inconsistent with the independence and integrity of the State governments for the United States to interfere and assume jurisdiction upon the ground that the State tribunals have acted wrongfully and fraudulently, or will so act. This doctrine in no wise recognizes the blood-stained theory of State sovereignty, which has been the evil spirit in our political system, and to which the present troubles in Louisiana may be traced back, but springs from the great fact that the States have a vast body of rights distinctly guaranteed and recognized by the Constitution of the United States, and that among these is the right to constitute their own Legislatures and determine by their own tribunals the legality of their organization.

The great power to guarantee to each State a republican form of government is intended only for the highest and most solemn occasions. If it is invoked for every disorder in a State it must result in the absorption of the State governments, and subvert the whole theory and plan of our political institutions. While we are a nation in which alone the sovereignty resides, yet local self-governments which preceded the Constitution, and are recognized and continued by it as a part of the great plan of political salvation, are indispensable to our liberty, progress, and happiness, and must be preserved

While it would be imprudent to attempt to define the cases that come within its scope, it may be safely said that it does not comprehend a disorder in a State arising under its own constitution and laws, for which those laws provide remedies, a State in which there is profound peace, and in which the State government is republican in its form, and discharging its functions in every department without interruption. Even in cases that come within its scope it should not be exercised except in the last resort, and the States should be left to work out their own relief and reformation as long as there is any hope.

There is a government in Louisiana. In all outward aspects it is legal and normal. Profound peace prevails throughout the State. The government, through the courts and through its Legislature and administrative officers, is operating without interruption or hinderance. Should Congress determine to undertake the work of reconstruction it must first overturn an actually existing government which is republican in its form.

Should Congress declare that Louisiana has no legal government, and provide by law for a new election, it would establish a precedent for overturning State governments and setting up new ones, under which the government of every State would be at the mercy of Congress as controlled by the passions or exigency of parties.

Deploring this condition of things in Louisiana, and earnestly hoping that the people will take warning, and with one accord insist upon honest elections and the faithful observance of the laws, it is my deliberate judgment that it is better for them to bear the ills they have, and seek reformation and relief under their own laws and tribunals, than to invoke the national Government to the assertion of a power under which State governments would exist hereafter only by sufferance.

Those who seek a solution of the troubles in Louisiana must look

further back than the election of 1872. The results of that election, and the events that have happened since, are rather results flowing from events which occurred before. Louisiana has had a double demoralization:

First, that growing out of the rebellion, in which the foundations of civil society were to some extent broken up and slavery abolished. Full one-half of the people of the State, held before as slaves, were admitted to the enjoyment of civil and political rights, to the destruction of what was called slave property, and consequent impoverishment of many who were before considered rich as the owners of that property. Civil war makes fearful ravages upon the public and private virtue of a people. It gives license to shed the blood of those who but yesterday were brothers, to capture and destroy private property; it operates powerfully to sear the conscience, break down regard for human life and respect for private rights, to destroy habits of industry and thrift, and suggest violence as the remedy for wants and grievances. From such a revolution as this it would naturally take any people a long time to recover, and its traces and consequences must linger, not only in the public memory, but in the actual condition of the State, for many years.

But the second demoralization to which Louisiana has been subjected, not less than the first, and growing out of the first, has come from the massacres and numerous murders which have taken place since that time. A state of actual war, such as existed during the rebellion, is far less destructive to the integrity, spirit, and enterprise of a people than another condition in which murder and violence prevail, where terror takes the place of law, where every man is afraid of his neighbor, where murder, terror, and violence in every form are resorted to as the means of securing elections and seizing upon the government of the State. Living in terror not only disarms the morals but the judgment of men, and they come to act either as children, idiots, or lunatics. During the last seven years Louisiana has been drenched with blood by the murderer's hand.

These wholesale murders that made the civilized world turn pale sank deeply into the minds of the colored people of Louisiana, upon whose race they were chiefly inflicted. They came to regard the leaders of the democratic party in that State as their natural and mortal enemies; they shrank from them in horror. They believed they could receive from them nothing but injustice and oppression; and that under their rule there was no security for their lives, liberty, or property. From 1866 to 1868 the evidence shows that there were not less than two thousand colored men killed and wounded in that State from enmity to their race and to their politics, a number nearly equal to one twenty-fifth of the whole adult male colored population of the State. Under such circumstances the colored people of Louisiana were asked to perform impossibilities. They were asked to be calm, to look with confidence upon democratic leaders and politicians, to forget all their wrongs, not only for generations back, but the murder of their brothers, husbands, fathers, and sons. Crimes which in other countries would stir the blood of generations, and the memory of which could not be effaced by centuries, the negroes were asked to forget at once, and to have confidence in and even affection for their perpetrators.

It is these unpunished murderers so steeped in blood who have lately disturbed the peace of Louisiana, and under the pretext of supporting what is called the McEnery government recently renewed their bloody deeds at Colfax in that State, and, under circumstances of great treachery and cruelty, inhumanly murdered more than one hundred negroes. These unpunished murderers, made bold by their escape from justice, having come to believe that they may commit any number of crimes upon the colored people with impunity, attempted to seize into their hands the State government of Louisiana. Shall I call them savages? That would be complimentary. The Modocs who so treacherously murdered General Canby and Dr. Thomas laid no claim to civilization, were educated only in the traditions of their tribe, and were smarting under what they believed to be the wrongs of their race, almost extinct. Compared with the murderers of Louisiana the Modocs were gentle and amiable warriors.

The murder business must stop. I say to the people of Louisiana, unless they would have a fatal blight to fall upon their State, withering its every interest, blasting its reputation and prospects, they must stop this murder business. The blood of the innocent cries to Heaven, and makes barren the soil upon which it is shed. The people that instigate murder must perish. God has declared it in His Holy Word and throughout all the history of mankind. The land that has been sown in blood will spring up with the poisoned teeth of the dragon. It is not possible that this murder shall go on without bringing on its perpetrators, their aiders and abettors, ruin, desolation, death. People of Louisiana, you must not, you cannot, tolerate these crimes. Innocent blood contaminates like the plague. If the people of Louisiana tolerate these crimes, connive with the murderers, and shelter them from punishment, they must perish with them. Not to do so would be to reverse the decree of the Almighty.

I might refer to the massacre of 1866—I spoke of that the other day very briefly—when between two and three hundred men or more were killed and wounded within thirty minutes about the hour of noon in the city of New Orleans in and around the Mechanics' Institute, whose sole crime was that they were proposing to meet and hold a convention to propose amendments to the constitution of the State; and that murder was chiefly inflicted by the police of the city, by the authority of the city government, and by the connivance of a part of the State authorities. To show what the negroes of Louisiana and the republican party of Louisiana have had to pass through in the last six or seven years, I ask the Secretary to read an extract from the report of the House Committee sent down there to investigate.

The Chief Clerk read as follows:

The committee examined seventy-four persons as to the facts of violence and bloodshed upon that day. It is in evidence that men who were in the hall, terrified by the merciless attacks of the armed police, sought safety by jumping from the windows, a distance of twenty feet, to the ground, and as they jumped were shot by police or citizens. Some, disfigured by wounds, fought their way down stairs to the street, to be shot or beaten to death on the pavement. Colored persons at distant points in the city, peaceably pursuing their lawful business, were attacked by the police, shot, and cruelly beaten. Men of character and position, some of whom were members and some spectators of the convention, escaped from the hall covered with wounds and blood, and were preserved almost by miracle from death. Scores of colored citizens bear frightful scars, more numerous than many soldiers of a dozen well-fought fields can show—proofs of fearful danger and strange escape; men were shot while waving handkerchiefs in token of surrender and submission; white men and black, with arms uplifted praying for life, were answered by shot and blow from knife and club; the bodies of some "were pounded to a jelly;" a colored man was dragged from under a street crossing and killed at a blow; men concealed in out-houses and among piles of lumber were eagerly sought for and slaughtered or maimed without remorse; the dead bodies upon the street were violated by shot, kick, and stab; the face of a man "just breathing his last" was gashed by a knife or razor in the hands of a woman; "an old gray-haired man," peaceably walking the street at a distance from the institute, was shot through the head; negroes were taken out of their houses and shot; a policeman riding in a buggy deliberately fired his revolver from the carriage into a crowd of colored men; a colored man two miles away from the convention hall was taken from his shop by the police, at about four o'clock on the afternoon of the riot, and shot and wounded in side, hip, and back; one man was wounded by fourteen blows, shots, and stabs; the body of another received seven pistol balls. After the slaughter had measurably ceased carts, wagons, and drays, driven through the streets, gathered the dead, the dying, and the wounded in promiscuous loads, a policeman in some cases riding in the wagon seated upon the living men beneath him. (Reports of Committees House of Representatives, second session, Thirty-ninth Congress, page 10.)

Mr. MORTON. Mr. President, the election held in Louisiana under the reconstruction law in May, 1868, was protected by the military authority of the United States; it was a fair election; and the republicans carried the State by about 26,000 majority. Some sixty days before the presidential election that occurred in November following the Ku-Klux were organized, developed themselves, and commenced operations all over the State. What they accomplished will be shown by reference to the report of the Committee on Southern Outrages, appointed by this body, and I will ask the Secretary to read the passage I have marked, commencing on page 21.

The Chief Clerk read as follows:

The testimony shows that over 2,000 persons were killed, wounded, and otherwise injured in that State within a few weeks prior to the presidential election; that half the State was overrun by violence; midnight raids, secret murders, and open riot kept the people in constant terror until the republicans surrendered all claims, and then the election was carried by the democracy. The parish of Orleans contained 29,910 voters, 15,020 blacks. In the spring of 1868 that parish gave 13,973 republican votes. In the fall of 1868 it gave Grant 1,178, a falling off of 12,795 votes. Riots prevailed for weeks, sweeping the city of New Orleans, and filling it with scenes of blood, and Ku-Klux notices were scattered through the city warning the colored men not to vote. In Caddo there were 4,987 republicans. In the spring of 1868 they carried the parish. In the fall they gave Grant 1 vote. Here, also, there were bloody riots.

But the most remarkable case is that of Saint Landry, a planting parish on the river Teche. Here the republicans had a registered majority of 1,071 votes. In the spring of 1868 they carried the parish by 678. In the fall they gave Grant no vote, not one; while the democrats cast 4,787, the full vote of the parish, for Seymour and Blair.

Here occurred one of the bloodiest riots on record, in which the Ku-Klux killed and wounded over two hundred republicans, hunting and chasing them for two days and nights through fields and swamps. Thirteen captives were taken from the jail and shot. A pile of twenty-five dead bodies was found half buried in the woods. Having conquered the republicans, killed and driven off the white leaders, the Ku-Klux captured the masses, marked them with badges of red flannel, enrolled them in clubs, led them to the polls, made them vote the democratic ticket, and then gave them certificates of the fact.

Mr. MORTON. As an evidence of what was accomplished by this murder and terror in the November election held in 1868, I call the attention of the Senate to some of the returns. At the spring election the republicans polled 628 votes in the parish of Bienville; in the fall election but 1 vote. In the parish of Bossier they polled 727 votes in the spring; in November 1 vote. In the parish of Caddo they polled 1,242 votes in the spring; in November 1 vote. In Claiborne Parish they polled 719 votes in the spring; in November 2 votes. In De Soto Parish they polled 649 votes in the spring; in November none. In Jackson they polled 490 votes in the spring; in November none. In La Fayette they polled 743 votes in the spring; in November none. In Morehouse they polled 547 votes in the spring; in November 1. In Sabine they polled 196 votes in the spring; in November 2. In Saint Bernard they polled 524 votes in the spring; in November 1. In Saint Landry they polled 2,514 votes in the spring; in November none. In Saint Martin they polled 1,057 votes in the spring; in November 25. In Union they polled 287 votes in the spring; in November 1. In Vermillion they polled 133 votes in the spring; in November none. In Washington they polled 145 votes in the spring, and in November none.

Mr. President, the men who did that devilish and bloody work are now clamoring for a new election. They want a fair election.

After 1868 the murder business still went on. They did not shoot the negroes in droves as before, but they shot them in the woods and in the lonely fields; and the reign of terror still continued, until the colored people came to look upon these men as their mortal enemies, and the idea of these men coming into power filled them with a con-

sternation that can only be compared to that produced by the ravages of the yellow fever at Memphis or at Shreveport.

Governor Warmoth was elected by the republicans as governor in 1868—a man of ability and of personal magnetism. The democrats charged him with being the evil genius of Louisiana. They called him the Mephistopheles of politics. They charged him with the financial ruin of Louisiana. They said that he had procured the passage of bad laws; that he procured bonds to be issued, and that he had used those bonds or scattered them abroad without consideration, and for his own benefit. These were their charges. Governor Warmoth lost all caste and standing in the republican party; and it became evident to him in 1871 that the party would slough him off, would no longer carry him. He left the party with his personal adherents and went to the democratic party in 1872. They formed a coalition with him; and it is in evidence in that volume, and so stated by the Senator from Wisconsin himself, that they believed, and that was the consideration of the trade, that by means of the machinery of the election being in his hands he could carry to them 20,000 votes; that he could commit frauds equal to 20,000 votes; and they took him for that purpose. That was the consideration; and on the other hand it was said—I know not how true that is—that he was to be elected to the Senate. But be that as it may, one thing is certain, the republican party went into that contest in 1872, knowing that they were to be cheated and swindled and outraged upon every hand; and we have the testimony of the Senator from Wisconsin that it was done, for he himself states that the evidence in that volume shows that the manipulations of Governor Warmoth were equal to 20,000 votes, and that but for that fraud Kellogg and his ticket and the republican party would have carried the State by from 10,000 to 15,000 votes. There was fraud on the republican side. But fraud begets fraud; persecution begets persecution; and always did. The Senator from Wisconsin in his report made to the Senate said, in speaking of the Lynch board, that the republicans in Louisiana were "fighting the devil with fire." The Senator seems to have become somewhat reconciled to his majesty now and is only opposed to the fire; but he described the conduct of the republicans as "fighting the devil with fire." They knew what they had suffered, what they had to contend with, and he furnished that sort of justification or excuse for them.

I make no defense for what has been wrongfully done, but I do present the history of politics in Louisiana for the last seven years as furnishing a substantial vindication for the mass of the republican party in that State. I say they have been shamefully slandered and calumniated throughout the land. Newspapers and politicians have held up the wrongs and the irregularities committed before the Lynch board, and have made those things to obscure and to conceal all the rest that had been done. The election frauds that were committed by the republicans were but the drift-wood upon a pool of blood. For them I have no defense, no excuse to make; but I call upon the Senate and I call upon the country to take notice of the trials, the ordeals, the persecutions that party have passed through in Louisiana for the last seven years. And, Mr. President, how stands the matter, after all, when the Senator from Wisconsin, the great champion of a new election, the great foe of the Kellogg government, comes forward, and in conclusion admits that, but for a fraud of 20,000 votes committed at the election, under the management of Governor Warmoth, Kellogg would have been elected by 10,000 majority or more, and the republicans would have carried the Legislature and all the other offices?

Mr. President, what is the effect of this agitation in Louisiana? What was the effect last winter? It was to take away as far as possible the moral power of the Kellogg government. The enemies of that government, the men who were stained with blood, those who had been committing the deeds that I have described, took courage from what was said and done in the Senate of the United States; and I say to my friend from Wisconsin that his speech upon this occasion, which I heard with profound regret, will give hope and encouragement to those men. It takes away from the strength of that government. There was a dispatch sent from this Senate Chamber, as I am advised, on the night of the debate here in February last—a dispatch sent by the presiding genius of the McEnery government to Louisiana, to this effect: "If you have a government, do something. Action, action, action is required." McEnery issued his proclamation calling upon the militia to arm, issued a commission to Waggaman and to many other men, attempting to organize an armed mob; and I have a copy of the very bond that he gave for the purchase of arms, and with which that mob was armed that made the assault on the police stations on the night of the 5th of March.

What I want to say, Mr. President, and I say it in conclusion, is, that it is a matter of importance to the people of Louisiana that this agitation should cease. They have a government. Whatever may be its faults, and I defend no fault it has, that government is the best that Louisiana has had since the end of the war. It will not be set aside. I have no apprehension of that—none whatever; but the agitation of the question here does harm; the proposal to investigate the question does harm; the proposition in the Pinchback case to send the credentials to the committee with instructions to inquire whether he was elected by a legal Legislature does harm, and can only do harm. That Legislature is now in session. It is enacting laws. We hear no complaint of it. It passed one hundred and nineteen acts at the last session which are all being enforced in the State of Louisiana. These proposals to inquire whether it is a lawful Legislature only contribute to decrease the power of the Kellogg government and to bring about anarchy, and I say to my friend from Wisconsin we know not what day the bloody scenes of the Mechanics' Institute or of Colfax may be renewed in the city of New Orleans or elsewhere; and those who encourage those men, who give them ground to believe that that government will be overturned, however good may be their intentions, will have a fearful load of responsibility to carry if these things again happen. I know very well what was the effect in New Orleans and in Louisiana of what was said upon this floor last winter, and I know what joy, what exceeding joy, was carried to the hearts of those men by this movement on foot now for a new election. I am informed who are moving in it, who are controlling the secret springs; and I hope for the sake of the people of that State, I hope for the sake of the people of the Union, that this agitation will cease; that we shall hold that the Kellogg government is the government of Louisiana, and let it go on until in the course of time and under the constitution and laws of Louisiana it shall pass away.

Claims for Quartermaster and Commissary Stores.

SPEECH OF HON. L. LOWNDES, JR.,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

February 7, 1874,

On the bill (H. R. No. 1009) making appropriations for the support of the Army for the fiscal year ending June 30, 1875, and for other purposes.

Mr. LOWNDES. Mr. Speaker, the last three sections of the Army appropriation bill yet remain to be acted upon. It is in regard to one of these sections, and that is the last one, to which I desire to call the attention of the House for a few moments.

The gentleman from New York [Mr. WHEELER] who has charge of this bill said in his speech a few days ago, that it was not the province of any general appropriation bill to change or repeal an existing law. He stated the rule most correctly, a rule which should never be varied or waived, and which is only set aside and violated when gentlemen wish to get through this House a measure which is objectionable, and which they know is not able to stand on its own merits. It is one of our most just rules, one that gives protection not only to the members of this House but to the whole country at large, and any attempt to violate this standing rule should be looked upon with suspicion.

While this bill does not set forth the repeal of any existing law, yet on its passage the act of July 4, 1864, which provides that claims of loyal citizens in States not in rebellion, for quartermaster and commissary stores actually furnished to the Army of the United States, shall be filed with the Quartermaster and Commissary-General's Departments, which have exclusive jurisdiction over the same, will be wiped from the statute-books, and we shall have the following in lieu thereof:

SEC. 4. That all citizens who remained loyal adherents to the cause and Government of the United States during the war, for stores or supplies taken or furnished during the rebellion for the use of the Army of the United States, and for the use or loss of vessels or boats while employed in the military service of the United States, including any such claims now pending and undetermined in any Department of the Government, shall be presented before the 1st day of November, 1874, to the commissioners of claims created by act of March 3, 1871, who shall have exclusive jurisdiction to hear and determine the same. And all such claims which shall not be presented to said commissioners on or before said day shall be barred, and shall not be entertained without further authority of Congress: *Provided*, That nothing herein shall be deemed to affect or impair the limitation for the time for the presentation of petitions prescribed by section 2 of the act of March 3, 1873. Such commissioners shall, under the provisions of the act of March 3, 1871, and the acts in amendment thereof, receive, examine, and consider the justice and validity of such claims as shall be brought before them, and shall make report of their proceedings, and of each claim considered by them, at the commencement of each session of Congress, to the Speaker of the House of Representatives, who shall lay the same before Congress for consideration.

It is for this House to determine which is the better law for the people of this whole country.

This is a most important question; one which affects thousands of claimants, who represent millions of property; one in which the border States are deeply interested; and the members of this House, who have the good of their people at heart, should look well at this law before they pass upon it.

Now, Mr. Speaker, before an existing law is repealed, we should inquire as to the necessity for such a repeal, and study well the old law. The present one went into force on the 4th of July, 1864, and takes away from the jurisdiction of the Court of Claims all claims for quartermaster and commissary stores of citizens in States not in rebellion, and gives exclusive jurisdiction over the same to the Quartermaster and Commissary Generals. That law has been in operation now nearly ten years. Let us see whether it has given satisfaction to the claimants affected by it and what has been done under it.

By reference to the Quartermaster-General's report for 1871, we find that from 1864 to 1871 there were filed in his department 28,039 claims. Out of that number 4,950 were approved, and claims allowed amounting to the sum of $2,078,083.05. There were 12,923 claims rejected, which amounted to $8,308,254.07; and 6,231 were suspended, amounting to $2,663,036.35; and only 3,935 claims remained to be acted upon, representing the sum of $3,884,094.45.

A great many of the claims marked "suspended" are virtually rejected, as they have been laid aside on account of insufficiency of proof; which insufficiency or deficiency can never be given or supplied.

Since the report of 1871, there have been filed in the department 3,087 claims, representing $3,508,039.34; and during the same time 1,905 claims, representing $2,232,340.59, have been acted upon, leaving about 5,116 claims, amounting to $5,159,793.20 still pending, requiring action by the department. For, Mr. Speaker, we must not include in this account the claims that are suspended, for they have received action. From this you will perceive that the department has passed upon 27,010 claims, which is upward of 2,700 a year, and by the same rate they would get through their labors, with the work before them, within the next two years.

A great many of these cases which have not yet been acted upon have been perfected at considerable expense to the claimants, and in many cases with considerable trouble. They are now undergoing investigation by the proper officers, preparatory to final settlement.

Should any change be made in this law giving to another tribunal jurisdiction of these claims, it would not only be inflicting a grievous wrong upon a meritorious class of citizens, but would result in an unnecessary and unwarrantable expenditure of the public money. And, Mr. Speaker, what is the change that is sought to be made? It is to take these claims from the Quartermaster and Commissary Generals and bring them before the claims commission, whose report shows that they already have more work before them than they can accomplish within the time prescribed by the law.

Let us examine for a moment the law under which this commission was created, and what it has accomplished since its organization.

By the act of Congress of March 3, 1871, the President was authorized to appoint a board of three commissioners, to be designated as commissioners of claims, commissioned for two years, with power to examine and consider the justice and validity of such claims as should be brought before them, of loyal citizens, for stores or supplies, taken or furnished during the rebellion for the use of the Army of the United States, in States proclaimed as in insurrection against the United States, including the use and loss of vessels or boats while employed in the military service of the United States; each commissioner to receive a salary of $5,000 per year, with a clerk at a salary of $2,500; a short-hand reporter at a salary of $2,500, and a messenger at a salary of $1,200.

Under this act they organized, and three reports have been made to Congress. Their first report shows that the business before them was so great that complaint is made by them of the great "burden of duty" upon the clerk, and they state that assistance was granted them by detailing four clerks from the War and Treasury Departments, and the same report asks Congress to grant them additional clerical force. Congress, always ready to comply with the wishes of this commission, on the 11th day of May, 1872, passed an act granting them power to appoint three additional clerks, at a salary of $1,200 each. Power was also given them to appoint special commissioners to take testimony, their fees to be paid by the claimants. They were also authorized to appoint three special agents at a compensation of six dollars per day.

After being in operation two years, when their commissions were about expiring, they made their second report to Congress, stating that they had work before them, which "by diligence and industry" would occupy four years longer to finish, and Congress was asked to extend the time. Agreeably to their wishes, Congress, by act of March 3, 1871, extended the jurisdiction of the commission for four years from the 10th of March, 1873, and limited the time for the filing of claims to March 3, 1873.

Now, Mr. Speaker, what has this commission, with all their powers and clerical force, and, I might say, with the freedom of Congress, accomplished that fits them as the proper and only tribunal before whom the claimants from loyal States shall present their claims, which for years they have been perfecting and waiting patiently for settlement?

Their third report, made in December last, shows that there have been filed with them 22,298 claims, amounting to $60,258,150.44, and 5,254 claims, representing in the aggregate $10,224,386.32, have been acted upon by them. Of the amount passed upon—that is $10,224,386.32—but $1,794,580.55 have been allowed and $8,429,805.77 disallowed. There remain, therefore, 17,044 claims, amounting to $50,033,764.12, yet to be disposed of.

By the same report they again ask Congress to grant them additional clerks, in order that they may dispatch the business pending before them; and they make use of this most forcible language:

> It is a great hardship for a loyal and honest claimant to be delayed year after year in the examination and payment of his just claim. But it would be unjust to the Government to allow claims without thoroughly and carefully examining all reasonable sources of information in order to determine whether the claimant is loyal and the claim just.

To aid them in expediting business the chairman of the Committee on War Claims has reported a bill increasing the clerical force, and which is now upon the Speaker's table, to be taken up when reached in the Committee of the Whole.

From the foregoing you will perceive that this commission has work now before them to keep them employed with "diligence and industry" for the next four or five years.

Is it not apparent from this that great injustice would be done to those claimants who have their claims now undergoing investigation and in process of adjudication in those departments authorized by the act of July 4, 1864, by forcing them to transfer the same to a docket already stocked with work—a docket that will keep the commission, with "industry and diligence," busy during the limit of their existence; and the claims proposed to be transfered could not be reached until the present docket is cleared? It is no answer to say that the claims are not taken up in their order of presentation, but in the order of preparation.

The rules of the commission require that all claims should be proven before commissioners appointed by themselves especially for that purpose, or before the commissioners themselves, in Washington; the consequence of which would be, that claims proven before the Quartermaster-General and awaiting final action would necessarily have to be prepared and proven anew before action would be taken by the commissioners.

Experience has demonstrated the impracticability of transferring to other hands than old and experienced Army officers the multitudinous class of claims arising for property appropriated for Army use during the war. Long experience in the service; a thorough knowledge of the wants and requirements of armed forces when operating in the field; access to and familiarity with the records and archives of the Government, and, in addition, a personal knowledge of the movements and operations of the armies of the Union during the late war, render the Quartermaster-General and the Commissary-General the only proper persons to adjudicate claims for payment for supplies furnished or taken for the use of their respective departments, subject of course to the right of appeal to the proper accounting officers of the Treasury, as provided for in bill No. 556, that I had the honor to introduce and which is now before the Committee on War Claims. This does away with one of the objections made by the gentleman from New York, [Mr. WHEELER,] that of the one-man power as in the existing law.

One of the points made by the gentleman from New York in his argument is the delay experienced by the claimants in having their claims adjudicated by the departments; but the reports show that all the claims can be, and will be, closed up in the next two years.

For whose benefit, Mr. Speaker, is this bill sought to be passed? I have endeavored to show, not for the claimants. Is it for the benefit of the Government? The Secretary of War, in his testimony before the Military Committee, in most emphatic language opposes the transfer, and says:

> The departments that now have charge are the proper ones to decide and pass judgment, and these claims can be disposed of sooner and with less expense than could be done were they transferred to the claims commission.

Is this change sought to be made on account of economy? The gentleman from New York states that $45,000 can be saved in the Quartermaster-General's Office on the passage of this bill. What is the expense of maintaining the claims commission for last year? Fifty-two thousand eight hundred dollars. Pass this bill as it now stands and you will have the commission here begging for additional clerical force, and before this Congress is over a bill will be introduced increasing the number of commissioners and doubling their present force, so that the expense for the coming year will be $100,000, instead of $52,800.

The committee who have reported this bill have had before them the heads of the different Bureaus of the Government and all have been examined in regard to the business appertaining to the same. But you cannot find an officer of the Government recommending the passage of this bill, either in his testimony or in any of his reports. On the contrary, all who have spoken have opposed the proposed change in the strongest language.

A most serious objection to the bill is, that it discriminates against the loyal people of the border States. Instead of commending their patriotism for their efforts in keeping their States loyal and in the Union during that long and bloody struggle, and recognizing their sacrifices and their struggles for the Union cause, they are to be placed under the ban and be made to suffer the disabilities imposed upon those who rebelled against the Federal Government.

Under this act of March 3, 1871, the presumption of disloyalty rests against every man who appears as an applicant for its benefits. Is the Congress of the United States prepared to violate the plighted faith, law, precedent, and public policy, by stigmatizing as disloyal a people who bore the brunt of our great civil war, and whose States were not in insurrection or in any respect in hostility to the Government of the United States; is this House ready and willing to pass an act by which this class of claimants will be longer kept out of their just dues, many of whom are in great distress, and anxiously waiting payment of their claims for horses, cattle, hay, and corn, taken to support and sustain the armies of the Union in their efforts to subdue the rebellion, which supplies were as important to the Government as soldiers and guns?

Banking and Currency.

SPEECH OF HON. AMOS CLARK, JR.,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

February 7, 1874,

On the question of banking and currency.

Mr. CLARK, of New Jersey. Mr. Speaker, I would like to make a few observations upon the present banking law, and then upon the bill before the House as touching any changes proposed in that law; for if there is one subject more than another agitating the public mind at the present time, it is the subject of finance. The whole country is looking to this Congress to do something that may relieve the present uncertainty. Capital is lying idle, waiting for the action of this body. Meetings are being held all over the country, memorializing Congress to do something to help them out of their difficulties. Some are strongly in favor of inflation, others again are for contraction, whilst the solid men of large cities are sending petition after petition praying for some action that will lead to resumption. Hardly two men think alike even in this House; and probably at least one man in every ten from every part of the land has some plan to recommend, believing that his is the panacea for all our woes. But, sir, the country at large are looking to us to correct any evils that may exist in our banking system, and if we at this time pass any act altering many or all of the provisions of the existing law created by Congress, and called the national banking act, without improving it, we will receive, and deservedly, the condemnation of the entire country.

What is the attitude, Mr. Speaker, of this Congress at this present time? It is in much the same attitude as when the old United States Bank was first created, and afterward renewed, when called upon to legislate for a country depressed. Some hold it to be no part of the duty of Congress to legislate on this subject; but I for one stand by the fathers, for it seems to have been the opinion of the founders of this Government that Congress should create the institution by means of which the country should be supplied with the necessary currency to carry on the affairs of commerce and business.

The Congress of that time was greatly influenced by the report on finance made by Alexander Hamilton, and the discussions which at that time took place resulted in the charter of the Bank of the United States in the year 1791. This bank went into existence and continued for twenty years, the time limited in its charter, and ceased to exercise its functions in the year 1811. The war with Great Britain, known as the war of 1812, was declared soon after the banking capital furnished by the Bank of the United States was withdrawn and diverted into other channels. The war of 1812 tested the strength and power of the nation; and after peace was declared, in 1815, the country was left in a very depressed condition in its financial affairs.

To lighten the calamities with which the nation was afflicted in its business and commerce, the Bank of the United States was again chartered, in the year 1816, for the period of twenty years, and by the terms of its own limitations it ceased to exist in the year 1836.

In anticipation of the expiration of the charter of the bank, State banks were created and increased, and the Government deposits which had been removed from the Bank of the United States were placed in the State banks; and these local institutions were induced to enlarge their circulation, and increase what are generally called banking facilities among men of business.

This state of facts will account for the great inflation of the currency which took place in the years 1833, 1834, 1835, 1836, and the ruin and disaster which overwhelmed the men who were engaged in trade and business in the year 1837. The country, in consequence of this great inflation and the bankruptcy which ensued, sunk down into a low state of commercial depression, and the business men of the country sought relief through the aid of a bankrupt act, which was passed by Congress in the year 1842. The losses sustained by the public by the failure of many banks to redeem their bills in the year 1837 led the Legislature of the State of New York, in the year 1838, to authorize free banking based on bonds and mortgages. This banking system, based on an unconvertible security, such as a mortgage, produced a redundant circulation, but when commercial disasters came the holders of bank-notes looked in vain for a prompt security, in pledges of houses and lands, which could not be handed over the counters of banks, to redeem their promises to pay. The national experience in inflation and the disasters consequent thereon induced the Legislature of New York, in 1840, to make the State stocks of that State and the United States a basis to secure bank circulation. Though stocks were made a security for bank circulation, the banking system was defective, inasmuch as no reserves were made necessary to secure depositors and give permanent strength to banks. The people of our country were induced to follow the example of the State of New York, and free banking was authorized very generally by the States of our Government, based on stocks, and bonds, and mortgages; sometimes on stocks wholly, and in other cases on stocks, and bonds, and mortgages. Banks were created, located in remote and desolate positions, simply to issue currency which could not be redeemed, and when the necessity for redemption came the redemption frequently came through the hands of a receiver. The parties who got out the circulation having kept it out as long as they could, and having accomplished their purposes, permitted their institutions to be wound up by the judicial tribunals.

The great panic, which in 1857 was caused by the expansion of our currency, can be accounted for without difficulty. A great expansion of the currency stimulated speculation. Farms were laid out into lots; railroads were constructed far beyond the ordinary limits of our western settlements, and enterprises far in advance of the necessities of the times were projected. The country, filled with energetic men, arose after the depression of 1857 to a fair condition of prosperity, when the great calamity of our civil war, or war of the rebellion, broke out in the year 1861. A confederate government was founded in the South; depression consequent upon frequent disasters greatly affected our northern people; our commercial marine disappeared from the ocean; our credit was strained, and our promises to pay met with distrust even among a patriotic and confiding people; but finally the great measure of relief came in our national banking law of 1864. The credit of the nation was at once strengthened by placing the Government bonds as a basis for bank circulation. The circulation thus created was better than had been provided at any previous period in the history of the Government; its great merit being that in our widely extended country it was of equal value in every State and Territory; and though it was not redeemable in specie, the country having full confidence in the payment of the national debt in gold, a well-founded belief was entertained that day by day every bank-note in the land was approximating to the specie standard. It was the existence of this currency, and this system of banking with its reserves and safeguards, which next to the patriotism and valor of our brave soldiers and sailors carried us safely through the dreadful calamities of our civil war and averted bankruptcy at its close.

This banking law has now been in existence for ten years; and once more there seems to have arisen, through the rapid growth of our country and its extending business, a difficulty which is attributed to various causes, and it is generally believed that this difficulty can be removed by changes in this admirable law.

Mr. Speaker, this particular Congress has a great responsibility resting upon it. The laws enacted at this time, if for good, will not only satisfy the country, but will add new luster to the brilliant achievements of this Government; but if for evil, they will be the millstones about our necks, dragging us down into the depths of disaster. I, for one, sir, will be very careful how I vote to impair the provisions of the present national banking law—a law which in the main, I think, cannot be improved. This, sir, is the impression gained from the experience I have had in banking under the provisions of this law. And I am the more convinced that I am right in adhering to this law, with its restrictions, when I remember what efforts were put forth by Secretary Chase to establish the present system, and that it was with difficulty that the leading bankers of New York, Philadelphia, and other large cities could be persuaded to change from their old established State laws and adopt the present system. But they soon perceived the advantages of the law; and the system created has been finally established in every State and Territory in the Union. Taking up the report of the Comptroller of the Currency, I read that, since 1863, of the 2,129 banks organized under this law, only 32 have failed—only 32 out of 2,129. Where can such a record be found under any other system? During the past year only 11 have failed, and 21 gone into voluntary liquidation. Only 11 banks out of 2,000 that have not weathered the late financial storm; and even then no bill-holder has lost one dollar.

Mr. Speaker, I have no record, nor do I know that there is any of value I can make upon this subject, but I venture to say, without fear of contradiction, that prior to the war, and under the old system of banking then in vogue, there would have been more failures in each and every State during the fearful monetary panic just passed than has occurred over the entire country under the regulation of our present law. Thus my well-founded belief is conclusive to my mind that the present law with its reserve clause and other restrictions is a good law, and this Congress will do well to hesitate before changing any of these enactments.

Mr. Speaker, I consider the reserve the very life of safe banking; I mean safe to all concerned; and I wish to call the attention of this House to the proposed changes in this portion of the law. It is proposed by some parties to do away with this altogether; by others again to alter its present condition. Under no pressure let us do away with it altogether, or essentially reduce it. It is the sheet anchor which, as I have said, brought us safely through the late storms, and which kept us from drifting upon the breakers.

I confess I am not able to perceive the benefits to be derived from several at least of the sections of the bill reported by the Committee on Banking and Currency, especially as touching this reserve. I fully believe in the reserve, and I further believe it was intended to be used in just such an emergency as has passed. That the law does not contemplate such use I dispute. The framers of the law saw that it would be simply impossible to specify such times as it could be used, and believed that each institution for itself would be the best judge of that.

That section of the bill before the House amending the reserve section of the old law so as to require no reserve on the amount of circulation, but only on the deposits is, to say the least, a questionable

benefit for the banker, and certainly no direct advantage to the bill-holder.

The provisions of section 3, changing the place of redemption from the large cities to Washington, will, I am convinced, be apparent to every member of this House as simply needless. I, for one, sir, can see that no benefit would accrue to any one, not even to the Government, in this provision that a 5 per cent. reserve shall be deposited in Washington.

If it be the intention of the act to make the Treasury a redemption bureau for mutilated currency, then pray what advantage will that be to the banks? Should some remote bank have a sum, more or less, of mutilated bills of a bank distant from it, would it not be just as convenient to send the bills home to the bank of issue as to send to the Treasury of the United States, and allow the banks the use of the 5 per cent., instead of compelling it to lie idle at Washington? For it can be doing nothing; it will be so much dead capital. The Government cannot use it nor can it be of any service to the banks in time of financial distress as part of their reserve; nor yet can it be counted in the bank statements as so much money on hand. Then, sir, what is the object of this clause? Is it that our redemption agents, now regulated by law, shall not have the trouble to redeem our mutilated bills and to sort and send them back to us, or is it because the city banks will be able to send national notes to Washington and get greenbacks in lieu thereof? Of what real advantage is that? Are not national-bank notes, secured by United States bonds and distributed to the various banks at the rate of 90 per cent. of their bonds, as good as greenbacks? I think they are, and I have always found the public ready and willing to take the national-bank notes for any and every purpose. Now, Mr. Speaker, what will this dead capital amount to in the aggregate? Five per cent. on three hundred and fifty millions is just $17,500,000 locked up, thereby reducing the available circulation by just that amount; or, on the other hand, the loss of interest to the banks now loaning this sum, at 4 per cent., amounting to $700,000.

To those who are not bankers, and unacquainted with that feature of the present law called reserves for circulation, I will state what are the advantages which are now provided by the law and is not being improved upon by this bill before the House. The present law provides that every banking association in the country, as distinct from the cities, shall keep on hand 9 per cent. of its circulation in its bank of redemption in the cities. I think I can convince this House that the present method of redemption is better than that proposed. We will take for an example the banks in my city. Every bank officer throughout the country already knows which is our bank of redemption. Our mutilated currency is sent to that bank, and it redeems it and sends it to us to be sorted and canceled and transmitted to Washington to be burned. Under the proposed bill this mutilated currency will be sent to Washington and there redeemed; then by the Treasury sent to us to be sorted and canceled; then we will be obliged to transmit it to Washington to be burned, and to receive from thence again new bills. There is too much transportation in this plan, to say nothing of the extra expense to the banks.

If this plan is proposed as being a better security to the country banks, I think they will join with me in stating that they are satisfied with the present security, if the extra amount of reserve required by the law to be held by these redemption banks is not altogether done away with or reduced.

Mr. Speaker, does any member of this House imagine that the large banks in the cities will oppose this provision. They certainly will not, because the bill before the House repeals that portion of the present law obliging them to keep on hand 25 per cent. as reserve on their circulation; 25 per cent. on both deposits and circulation they contend is onerous and needlessly oppressive; because, as they say, a bank whose capital is $1,000,000, circulation $900,000, and deposits $5,000,000, is obliged to keep always on hand $1,500,000. I cannot agree with those who think this excessive, because the banks are depositories for everybody and are the clearing-houses for all country banks, and unless they are compelled to keep this reserve, (I know there are some exceptions,) they would not keep sufficient to make everybody secure. Besides this the national banks are largely the custodians of the funds of the savings-banks, insurance companies, trust companies, and kindred institutions, and for this reason alone must be secure themselves to make these large and numerous depositors secure.

But there are at the present time several projects before this House to allow the banks to hold three sixty-five bonds as a part of their reserve, which in time of financial distress no one would refuse, and I would recommend that the Committee on Banking and Currency amend this bill before the House by allowing the banks to hold these three sixty-fives as part of their reserve.

I have here a statement from a published report showing the amount of money deposited in savings-banks, and the small percentage of cash held by each. In the six New England States, at the close of 1872, the savings-banks held as deposits the enormous sum of $349,395,377, while the national banks held but little over $100,000,000. This is in the proportion of 77 to 22, or nearly 3½ to 1. We can see, then, what the difference in deposits is between these two classes of institutions; yet I will state that the savings-banks owe their continuance to-day to the help received from the national banks, and they were enabled to give just this assistance, and at the time most needed, because of the reserve they were obliged to keep on hand.

The percentage of money held by these savings-banks, as against their deposits, was 1.67 per cent.; only about 1½ per cent. of all their liabilities to depositors, or a little over $5,000,000 on a deposit of about $350,000,000.

Now, sir, what could these savings institutions do in the event of a run upon them caused by a panic in the money market? They would be obliged to fall back upon the national banks for help, as they did do during the recent panic. What is true of these eastern banks is true of all the others in this respect.

The Bank of England, sir, according to the last report of that institution, keeps a reserve on hand varying from 30 to 50 per cent., the lowest rate being greater than our banks are obliged to keep. Is there any one in this House who questions the banking intelligence of the managers of that institution? And I think, sir, that the experience of well-tried business men and bankers is that business of no kind can be conducted safely through the financial troubles that seem to be periodic in this extended country of ours without having a reserve to fall back on. Men such as Astor, Stewart, and Vanderbilt are known to always keep a reserve easily converted into the circulating medium. The elder Astor, it is stated, held some of the old United States bonds long after the Government tried to retire them, but he would not part with them, giving as his reason that they were good stock for a reserve; that they paid a low rate of interest for a business man, was true, but as an offset to that, the Treasury of the United States stood at all times not only ready, but eager to give money for them, and that some day, in the extended business he was conducting, he might need the ready money.

The West and South, and also the Middle States, are clamoring for more currency; which is hardly the road to resumption. On this account the bill for free banking is proposed as being the means of furnishing more money, and with proper restrictions will not lead to disastrous inflation.

The last section of the bill proposed by the committee makes provision looking to resumption, but the time allowed is extended almost into the next century. Redeeming $2,000,000 per month, or say $25,000,000 per annum, on a circulation of $400,000,000, will take just sixteen years to draw in the full amount; and then, under the existing state of affairs, what guarantee have we that the coin passed out will be retained? It will be seen that if this section of the bill is adopted, the anti-resumptionists have little to fear.

Mr. Speaker, I have attempted to give you some idea of what I think will be the effect of any change in this well-established law; and in the belief that Congress will pass a free-banking law, I do hope that rather than relax any of the provisions of the reserve clause, they will conclude to increase the requirements in that respect.

What does free banking permit? It permits any set of men, in any city, county, or State, to establish a bank, and that the Comptroller of the Currency will have no discretion in the matter of granting a charter. Of course, they must first purchase the bonds as a basis of circulation, and comply with the other requirements of the law. But those who are familiar with banking and have passed through the different phases of financial affairs know there are few men who understand the proper principle of banking. Yet many having the capital will establish a bank under the free law not to benefit a community, but to use the circulation only as a means of filling their own purses. This can be done easier under the proposed law because it lessens the reserve required as security to the bill-holders. I think that on the whole the people of the country are satisfied with the present law. The regulations of banking are not in fault, but the want of elasticity in the currency. This must be remedied by other means, and I think that by granting this free-banking law we will meet the demands of the time and satisfy the country.

I, for one, sir, am prepared to vote a free banking law, but I cannot avoid again expressing the hope that the regulations of the existing law shall continue in their present force in relation to free banking.

The following is the bill referred to by Mr. CLARK in his remarks:

A bill to amend the several acts providing a national currency, and to establish free banking, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section thirty-one of the act entitled "An act to provide a national currency secured by a pledge of United States bonds, and to provide for the circulation and redemption thereof," approved on the 3d day of June, in the year 1864, be so amended that the several associations therein provided for shall not hereafter be required to keep on hand any amount of money whatever by reason of the amount of their respective circulations; but the moneys required by said section to be kept at all times on hand shall be determined by the amount of deposits, in all respects as provided for in the said section.

SEC. 2. That section 21 of the said act and the several amendments thereto, so far as they restrict the amount of notes for circulation under said act, be, and the same are hereby, repealed; and that section 1 of the act entitled "An act to provide for the redemption of the 3 per cent. temporary-loan certificates, and for an increase of national-bank notes," approved July 12, 1870, be amended by repealing the second proviso in said section contained.

SEC. 3. That every association organized, or to be organized, under the provisions of the said act and of the several acts in amendment thereof, shall at all times keep and have on deposit in the Treasury of the United States, in lawful money of the United States, a sum equal to 5 per cent. of its circulation, to be held and used only for the redemption of such circulation; and when the circulating notes of any such association or associations shall be presented, assorted or unassorted, for redemption, in sums of $1,000 or any multiple thereof, to the Secretary of the Treasury or to the assistant treasurer in the city of New York, the same shall be redeemed in United States notes. All notes so redeemed shall be charged by the Secretary of the Treasury to the respective associations issuing the same, and he shall notify them severally, on the first day of each month, or oftener, at his discretion, of the amount of such redemptions; whereupon each association so notified

shall forthwith deposit with the Treasurer of the United States a sum, in United States notes, equal to the amount of its circulating notes so redeemed. And when such redemptions have been so reimbursed, the circulating notes so redeemed, or, if worn, mutilated, or defaced, new notes instead, shall be forwarded to the respective associations: *Provided*, That each of said associations shall reimburse to the Treasury the costs of redemption and of supplying new notes in place of those redeemed. And the associations hereafter organized shall also severally reimburse to the Treasury the costs of engraving and printing their circulating notes: *And provided further*, That the entire amount of United States notes outstanding and in circulation at any one time shall not exceed the sum of $400,000,000, now authorized by existing law.

SEC. 4. That any association organized under this act or any of the acts of which this is an amendment, desiring to withdraw its circulating notes, in whole or in part, may, upon deposit of lawful money within the meaning of said acts, in sums of not less than $10,000, with the Treasurer of the United States, withdraw a proportionate amount of bonds deposited in pledge for such circulation; and he shall redeem, cancel, and destroy an amount of the circulating notes of such association equal to the amount issued upon such bonds.

SEC. 5. That sections 31 and 32 of the said act be amended, by requiring that each of the said associations shall keep its lawful money reserves within its own vaults, at the place where its operations of discount and deposit are carried on. And all the provisions of the said sections requiring or permitting any of the said associations to keep any portion of its lawful money reserves elsewhere than in its own vaults, or requiring or permitting the redemption of its circulating notes elsewhere than at its own counter, except as provided for in this act, are hereby repealed.

SEC. 6. That upon all circulating notes hereafter issued, or hereafter to be issued, whenever the same shall come into the Treasury in payment or deposit for redemption or otherwise, there shall be printed, under such rules and regulations as the Secretary of the Treasury may prescribe, the charter numbers of the associations by which they are severally issued.

SEC. 7. That associations without circulation may be organized under the provisions of the said act upon the deposit, with the Treasurer of the United States, of not less than $10,000 of United States registered bonds, as provided in section 16 of said act; and associations already organized without circulation are authorized to withdraw their bonds in excess of $10,000.

SEC. 8. That the Secretary of the Treasury is hereby authorized and directed to issue, at the beginning of each and every month from and including July, 1874, two millions of United States notes not bearing interest, payable in gold two years after date, of such denominations as he shall deem expedient, not less than ten dollars each, in exchange and as a substitute for the same amount of the United States notes now in circulation, which shall be canceled and destroyed, and not reissued. And any excess of gold in, or hereafter coming into, the Treasury of the United States, after payment of interest on the public debt and supplying any deficiency in the revenues provided to meet the current expenses of the Government, shall hereafter be retained as a reserve for the redemption of such notes.

Currency—Finance.

SPEECH OF HON. J. W. KILLINGER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

February 19, 1874,

On the several propositions connected with finance and the national currency.

Mr. KILLINGER. Mr. Speaker, under the rules and practice prevailing in the House, no individual member can bring to an immediate issue any question, however urgent and necessary he may deem its solution to the welfare of the country. The uppermost thought with me, since the meeting of Congress, has been the urgency of the questions connected with the currency. But no method of taking the sense of the House has been afforded, because all propositions bearing on these questions have been remorselessly consigned to one or the other of our standing committees.

The inaction, if not indifference, of Congress has hung through the winter like a dark cloud over the whole country, threatening disaster to business enterprises, and involving many families in actual ruin. It has appeared to me that we have failed to appreciate the prostrate condition of many of our manufacturing and mechanical interests. Thousands of able-bodied men have been subjected to enforced idleness during all the time that this Congress has been in session. The managers of those beneficent establishments have been unable to procure the currency to meet their monthly payments without serious sacrifice and inconvenience. I rejoice to believe, however, that the cloud is lifting, and that the skies are brightening. With that recuperative energy which is essentially a feature in the American character our people are struggling against adverse fate, and are overcoming, in good degree, the obstacles which have been in their path.

In the mean time, our committees have been seeking counsel, not from the producers of wealth, but from money-lenders and operators in stocks. These are the trained Shylocks of our day. They are for the most part non-producers, have nothing in common with the toiling millions, and are only concerned to realize large profits from idle capital that takes no risks. They toil not, neither do they spin; but by their magic influence and experience in the ways of legislation they have crowded our statute-books with cunningly conceived contrivances that are fatal to individual enterprise, and are reducing our producing classes to the condition of the pauper population of Europe. We are, in other words, wearing the fetters of associated wealth. Our rich people are day by day growing richer. Our poor people are as surely growing poorer, by no fault of theirs.

Productive labor is the only source of our wealth. The development of our resources has so far kept the demand for labor in excess of the supply, and it has met a liberal reward. But as capital accumulates in the hands of individuals and corporations, its tendency is to oppress labor, forgetful of the fact that nothing is so utterly helpless and useless as capital without the co-operation of labor. Without that co-operation there is neither employment nor increase for capital. When labor, in self-defense, occasionally strikes in concerted action, production ceases, capital suffers the loss of its dividends, and the tax-paying capacity of the country is curtailed. The taxes come ultimately from the consumers, and they are the laborers. The Government may collect them in the first instance from the manufacturer and the importer, but at last upon the broad backs of our workingmen fall the exactions of the money power, the extortions of the money-lenders.

The scarcity of money, high rates of interest, and the crushing monopoly of associated wealth in the form of our national banking system—these are among the links in the chain which legislation has forged for the limbs of the free-born laboring and producing classes of America. The trade in money has been the most profitable business in this country for ten years past. The average net dividends of our national banks have been not less than 15 per cent. per annum during that period of time. The rates of interest which our business men have been compelled to pay, in utter defiance, too, of the provisions of the national banking law, are crushing out some of our most beneficent industries and driving capital out of employment in those channels of trade. No legitimate business can be sustained, wholly or in part, on borrowed capital, if it is required to pay the present exorbitant rates of interest.

What, Mr. Speaker, is at least one remedy for this admitted state of facts? The best evidence of the sufficiency of the supply of our circulating medium is the ruling rate of interest. When rates are reasonable, it is plain that money is abundant; when unreasonably high, its scarcity is indisputable. When we occupied less than half of our present widely extended territory; when we had half our present population, and when we had less than half the business demands for money that we now have, there were probably a thousand or more millions of currency in circulation. In the last eight years our currency has been reduced to $750,000,000, and of this amount one-fourth has been kept out of circulation, as reserve. This vast contraction of our circulation has been going on steadily, while our trade, commerce, manufactures, and agricultural pursuits were being as steadily enlarged by the increase of population and the spread of territorial empire.

Does any sane man suppose that we can satisfactorily and successfully transact the vast exchanges which this increased business involves with our present inadequate supply of money? As well might you navigate your navy in a mill-pond, or transport your country's products across the Atlantic in a canoe.

No system of revenue or finance will bring the country to a healthy condition, or render our business solvent and sound, that does not embrace as its elementary principle an excess of exports over imports. The solution of the problem that is now upon us will be facilitated by a study and adoption of the theory involved therein. A government like ours—of the people and for the people—cannot divorce its interests from those of the whole people without doing violence to the theory upon which it rests. When the country is unemployed its revenues diminish. When the people are prosperous, and industry receives fair remuneration, the public revenues are abundant. Within the last ten years we prospered as never before; all branches of trade flourished, our railroads were widely extended, and our population increased in an unprecedented ratio. These were the results of active industry, encouraged and sustained by the principle and policy of protection. Adhere to this policy, strengthen this principle by practical adaptation, and you will put new blood in the veins of your exhausted treasury, restore confidence in business circles, and credit to the Government. Then you may go on with your public works, and promote the interests of your partially completed transcontinental lines of railway. Increase the amount of your circulating medium, furnish money at reasonable rates of interest, and repeal your unwise reduction of 10 per cent. on the duties imposed by the tariff act of 1872. In addition thereto, I would have you instruct your Secretary of the Treasury to add to your present duties on foreign imports, discriminating in favor of those articles that are strictly the product of American labor and growth, 10 per cent. every ninety days, until the imports, including gold interest paid to foreigners, shall be less than the exports.

This policy may not suit money-lenders, importers, or stock-jobbers, here or abroad. But, on the other hand, it will set the whole industrial machinery of the country in active and profitable operation. Thus the fountain of our revenues will be again opened up, and the fertilizing streams will give impetus to trade and cover the land with blessings and benefits.

It should never be forgotten that to secure the most general prosperity, legislation should protect the producing classes in their right to labor, and so add to the wealth of the country. They carry forward, for the most part, the great interests that give value to free institutions. They take the hazards of new enterprises, are the pioneers of our advancing civilization, and to crown their efforts with success we require a steady as well as beneficent policy of revenue and finance.

When currency is scarce, its possession gives the lender great power and advantage over the borrower, and oppression and extortion are

too often the result. It seems indisputable that with the increase of population and the multiplication of business, larger facilities would be required. The census reports of 1850 showed the gross amount of property in the United States to be $7,135,780,000. In 1870 it was reported to be $30,000,000,000. Common sense would indicate that the circulating medium should increase with resources, population, and trade. If, instead thereof, the policy of the Government is continual contraction of the currency, common sense likewise teaches that we must retrograde in business, decay in enterprise, and lose prestige among the commercial nations of the world.

Estimating our population at forty millions, we have a circulation of about fourteen dollars *per capita*. According to the last report of the Comptroller of the Currency, England has a circulation *per capita* of nineteen dollars, and France of twenty-five dollars. That is to say, while our currency averages fourteen dollars to every man, woman, and child of our population, that of England averages nineteen dollars, and that of France twenty-five dollars. So far from needing less currency, all the circumstances surrounding us require more. With an area of country nearly equal to the whole of Europe, developed under higher prices paid for labor, and greater transporting distances, involving more time and money relatively to effect our exchanges; with railways spanning the continent from ocean to ocean as parts of a vast system compared to which those of Europe dwindle into insignificance; with an ever-increasing population, stimulated by emigration, and with an immense crop of cereals and cotton blocking our commercial capacities in their efforts to reach a market—can there be a doubt that we have outgrown our circulation? Twenty-five dollars *per capita* would give us a currency of one thousand millions; and, in my judgment, the interests of the country, the wants of legitimate business, require that amount. But no human intelligence can fix unalterably the limit of currency required, for it varies with the seasons, and is constantly changing with the lapse of time. As well try to fix the number of yard-sticks or half-bushel measures needed in the country as to make the allowance fixed and unchangeable. Let us have currency free as water, to adjust itself to the level which business supplies. This is what our people want, and sooner or later will have. If this Congress fails to respond to the public demands, the next may be more mindful of the popular will.

In this connection, I will name another issue that will sooner or later present itself to the consideration of the country. I allude to the monopoly of banking facilities. There is said to be no royal road to knowledge, and there should be no exclusive privileges granted to associated wealth, as we have them recognized in our national banking system. The business of banking, like any other business, should be open to competition.

Free banking is the necessity of the hour. The monopoly hitherto enjoyed in this respect must cease, and opportunity given for a free use and employment of capital in this direction. There are over twenty-one hundred national banks in operation, employing a paid-up capital of $500,000,000, and having an outstanding circulation of $350,000,000. Their loans and discounts amount to $100,000,000, with an aggregate of deposits of $600,000,000. As any one can see, this vast system permeates the whole country like the air we breathe. It controls the whole bank-note circulation of the country, and receives 6 per cent. in gold on the bonds deposited with the Government, as security for its ultimate payment. In addition thereto it is allowed to charge interest equal to the lawful interest in the States where the banks are located. Practically it is exempt from the current redemption of its notes, which are scattered far and wide, and are rarely presented for payment.

It is plain that such a system needs the strong hand of legislation to curb and restrain its exactions and extortions. The obstacles which this monopoly interposes to free banking must be overthrown, before the people can secure "equality before the laws" in this respect.

Like our greenback system, the Bank of England owes its existence to the necessities of war. It was organized in 1694, in the reign of William and Mary. It has scarcely ever redeemed its circulation in specie, and in 1797 was actually restrained from doing so by an order from the privy council. England cannot to day pay one-tenth of her debt in gold, without borrowing. The basis of her commercial prosperity, therefore, is not the bullion in her vaults, but her paper-money system, surrounded by checks and balances, and sustained by the confidence of her people in the stability of their bank and government.

Standing as we do, Mr. Speaker, on the eve of our centennial celebration, with a history and an experience peculiar and significant, it is not becoming in us to bend in humble adoration before the brazen god of gold! This colossal idol, like the golden calf of old, must be shattered before we reach our Canaan. A gold currency, or a resumption of specie payments, so called, is a delusion and a snare. It is no more essential to our financial prosperity than the fly on the driving-wheel is essential to the speed of the train. Our people want a Government currency, bearing the impress of solvency and security, and plenty of it, to enable them to solve the problem of their manifest destiny.

The worn out countries of Europe furnish no parallels for us. The lamp of their experience sheds no light on our path in this regard. Their population is stationary, if not actually diminishing. They do not, from year to year, increase the values of their property, and develop new resources. Their maximum has been reached. Their territory is circumscribed, and they know no such inspiring watchword as "Westward the star of empire takes its way." We, on the other hand, are a live, growing nation—a thrifty, aggressive people. We are not yet enervated by the vices and corruptions of an enfeebled old age—a decaying nationality. We are in the vigor of a ripe manhood, and we have to do with the activities of the present, the possibilities of the near future, and not with the moss-covered relics and ivy-grown ruins of the dreary long-ago.

Inequality of the Distribution of the National-Bank Circulation.

SPEECH OF HON. E. CROSSLAND,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

February 14, 1874.

The House, as in Committee of the Whole for debate only, having under consideration the several propositions in regard to the currency and the national-bank circulation—

Mr. CROSSLAND said:

Mr. SPEAKER: I beg the attention of the House to a few words on the financial condition of the South and Southwest. The people in these sections are threatened with wide-spread ruin and almost universal bankruptcy. Every mail brings petitions from them imploring Congress to take some step for their relief. We have been here almost three months, and nearly all that time has been wasted in windy speeches made solely in the interest of those who have delivered them, and generally to prove the speakers champions of economy and friends of the people. We have had a vast display of learning and science on the question of finance, and few, if any, have been in any degree enlightened by it.

I have no theory to present, no scientific learning to parade before you on this subject. I have only a plain, simple story of truth to tell, and, in the name of the sufferings of the people of the Southwest, to ask from you that which by every idea of justice and fairness they are entitled to. The Southwest needs money, and must have money, to avert the impending calamities. Our farmers tell us that the crop of last year has for months been ready for the market; that on the faith of the proceeds of that crop indebtedness was incurred. Creditors are making urgent demands to be paid. The tradesmen have no money; prices of produce are down to ruinous figures, and depression pervades every department of industry and business.

This direful situation of our people has been presented to Congress, and, as I have remarked, been answered by fine-spun theories of financial science, by which we are taught that there is money enough. Of this I have heard enough, and refuse to be deceived by it. I know from whom it comes and what it means. It comes from Pennsylvania, New York, and New England—from the States and the people who have now all the money; and as you have all and enough for you, there is therefore enough for the country. Now, I propose to exhibit the facts, and make plain the reason why you think the volume of the currency sufficient.

Of the national-bank circulation New York has $61,000,000—about $14 for each man, woman, and child in the State. Pennsylvania has $42,000,000 of bank circulation and $12 *per capita*. The six little New England States have one hundred and ten and a half million dollars—a circulation of $31.68 for each man, woman, and child in those States. And the eight States, New York, Pennsylvania, Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut, have $213,000,000 of national-bank circulation—certainly enough.

Now look at the other picture. The great agricultural South and Southwest, composed of the fourteen States, of Virginia, West Virginia, North Carolina, South Carolina, Florida, Georgia, Alabama, Mississippi, Louisiana, Texas, Arkansas, Tennessee, Kentucky, and Missouri, have divided among them the sum of $37,000,000 of bank circulation, about $2.75 *per capita*. Look at it; eight Eastern States have $213,000,000 of national-bank circulation, while fourteen Southern and Southwestern States have only $37,000,000. Rhode Island has for each man, woman, and child in the State $61.59; Tennessee has $2.66; Massachusetts has $40.84 *per capita;* Kentucky, $5.87; Connecticut has, *per capita*, $33.48; Missouri, $3.76; Massachusetts has for her share of this money over $59,500,000; Kentucky only $7,500,000; Rhode Island, not much larger than one of the counties in my district, has $13,385,671; Tennessee a fraction over $3,000,000.

The national-bank laws require the banks in the country to have on hand at all times in lawful money of the United States an amount equal to at least 15 per cent. of the aggregate amount of notes in circulation and of its deposits for the redemption of the notes and payment of deposits. And the law requires each bank in the country to select a bank in some city where it will redeem its circulating notes at par; the bank selected must be approved by the Comptroller of the Currency, and he required to give notice of the city and city bank at which each of the banks in the country is required to redeem its notes. In compliance with this law our banks select a bank in New York where they will redeem their notes. In order to redeem there they must constantly keep part of their legal-tender money there on deposit with their redemption bank for that purpose; and in this way 15 per cent. of our thirty-seven millions is kept in New York banks. The banks are required to keep on hand an amount equal to 15 per cent. of the deposits, and the reserve thus required by the banks to be

held at all times takes out of circulation between six and seven millions, leaving only an actual bank circulation of about $30,000,000.

Before the war we had an abundant, sound, convertible currency. Our State-bank notes were redeemed with gold whenever presented at the counters. You taxed and legislated the State banks out of existence, drove the gold and silver out of circulation, deprived us of our reliable, sound circulation, and in return give us only about $30,000,000 of the circulation you by force substituted for ours. You need not tell the people that this unequal distribution of the circulation results from the operation of the laws of commerce and trade. They do not know what that means; nor do you know. The laws of trade would not work such iniquities. You have the money because it was given to you by the Comptroller of the Currency, and not because the laws of trade forced it into your banks. We have $37,000,000, all he gave us; and we have kept that in spite of your theories of laws of commerce and trade.

I repeat, you have nearly all of the circulation, and have plenty for you, and, therefore, plenty for the country. You have it all, and you do not want any more given to the destitute sections, because you are enjoying the benefits of a monopoly. You have it all, and the contraction that has been going on for seven years has, day by day, made it more valuable, (I mean the interest, use, hire, profits on it.) You have all the money, and dictate profits on it. You have it without competition, and you fix prices of produce to suit your own interests. You can force the produce to seek your money and the producer to accept your price. You make the profits on your money high, the price of produce low. You refuse to give us a fair division of the national-bank circulation because you do not wish to give up any portion of the enormous profits you are making on it. You do not wish to give up the benefits of your monopoly. You will not agree to increase the circulation, and give our destitute sections the benefit of the increase, for the reason that this increase would be brought into competition with your money, fight down your profits, and bring up the price of our produce. This is the secret of your horror of inflation—it would lessen the profits on your money. You have contracted, until you buy to-day for seventy-five cents produce which costs the farmer a dollar to make. You say contraction makes our money more valuable, and next week we will get the dollar's worth for sixty cents; contract, and in a month more the farmer's needs and distresses will force him to sell us the dollar's worth for forty cents; contract, and swell our dividends in bank stocks and profits on produce we buy at half price.

If you are candid in your assertion that there is plenty of money, divide it fairly with us, and thus prove it. Give us the amount we need and must have, not the paltry sum offered in the Senate—twenty-five millions. Add to the thirty-seven millions in the fourteen destitute States about half of the two hundred and thirteen millions that have been given to the eight Eastern States, and prove your sincerity about the abundance of money you tell us the country has. Agree to this in fairness, and avoid the calamities of inflation that haunt you. This will relieve us and guarantee you against the evils of inflation.

I desire to examine and meet another argument that has been offered in defense of this unequal distribution of the money. We are told that we do not need money, that we have nothing to sell. I have not been able to procure an accurate estimate of the value of our products last year, but I have been to the Bureau of Statistics and have procured a statement showing a part of what we produced "and had to sell" and did sell during the last fiscal year. I append a table showing the value of domestic exports, gold valuation:

Coin and bullion		$73, 905, 000
Cotton		227, 340, 475
Tobacco		25, 666, 000
Grain and products of grain		100, 000, 000
Manufactured goods		208, 440, 000
Unmanufactured goods		15, 468, 000
Total domestic exports		650, 819, 475
Deduct coin and bullion		73, 905, 000
Total domestic produce exported		576, 914, 475
Value of cotton exported	$227, 340, 475	
Value of tobacco exported	25, 666, 000	
Value of cotton and tobacco exported		253, 006, 475
Value of all other exported		323, 908, 000

From this table and these figures we see that the total domestic exports, exclusive of coin and bullion, amount to $576,914,475, and of this the cotton and tobacco produced and exported from the Southern and Southwestern States amounted to $253,006,475. All the products exported from all of the balance of the States, and all other products exported from the Southwest, amount to $323,908,000. Two articles produced and exported from the South and Southwest constitute nearly half of the value of domestic exports. I have said nothing of other articles exported from this section, nor of the value of products sold in the home markets. I have not even claimed our share in the $100,000,000 worth of grain exported, a part of which went from the Southwest.

Now, I desire to put before the eyes of gentlemen the gross inequality of this distribution of money, compared by products and exports. The Comptroller of the Currency tells us in his report that the national-bank circulation amounts to $353,968,249; the fourteen Southern and Southwestern States have $37,000,000; the other States $316,968,249. Total domestic exports, $576,914,475; two articles exported from Southern and Southwestern States $253,006,475; all the exports from all the other States and all other products from the Southwestern States amount to only $323,908,000.

The Southern and Southwestern States produce nearly half the value of the entire domestic exports in two articles, and they have thirty-seven millions of the bank currency. All the other States produce but little over half of the exports, and have $316,968,245. And we are told that we have nothing to sell, and therefore are not entitled to a fair distribution of this currency. From the aggregate of national-bank circulation, as stated above, there ought to be deducted about $4,000,000, that amount having been withdrawn from circulation by bank failures.

I do not desire to be understood as an advocate of this national-bank system. I am not. I abominate it. It is oppressing and eating up the profits of the labor and enterprise of the country by its usurious exactions—the double usury that the people pay to it. The banks deposit the bonds, the credit of the Government, the credit of the people, and procure the notes or bills; the people pay 6 per cent. interest in gold on the bonds, and on the notes from 12 to 25 per cent. per annum. I do not believe a much worse system could be devised; but while the banks exist and the people of my section are taxed to sustain and support them, I demand an equitable share of the benefits derived from them.

Notwithstanding the numerous vices that appertain to the national-bank system, unless we are relieved by a division of the present bank circulation I shall vote for such an increase of it as is necessary to meet the wants and relieve the distresses of the people of the destitute sections. I would prefer not to increase this currency, and do not think it would be difficult to devise means for a better circulation; but the needs of my people are urgent, and the ponderous financial wisdom of Congress moves so slowly that I fear the sheriff's hammer will be raised over the property of the people of our section and their ruin consummated before it will develop a plan to secure a good currency, and believing that the evils that are impending, and which may be averted by an increase of this money, are greater than the evils which such increase will entail, I shall vote for it.

A certain amount of currency is necessary for a certain amount of business. The amount of business depends upon the number of people engaged and the amount they produce. If the volume or amount of the currency exceeds the amount demanded by the business, the value of the whole of it will be no more than the value of the necessary amount; if the amount of the currency is below the necessary amount demanded by the business of the country, the value of the products of the business must shrink. In other words, if the business of the country requires one thousand millions of currency and it is increased to two thousand millions, the two thousand millions would be worth no more than the necessary one thousand millions was; and if the business required one thousand millions and it was reduced to five hundred millions, the products of the business would shrink to half of its real value.

Now let us compare the amount of the currency and the amount of the business of the country at this time with the amount of each before the war, and with the amounts of the currency and business in other countries, and I think I can prove that the amount of the circulation now is certainly not redundant, and if stripped of the evils the system imposes, in my judgment, not enough to meet the demands of the industries, the labor, and commerce of the country.

The whole amount of money in circulation on the 1st of last November, as shown by the report of the Comptroller of the Currency, is as follows:

National-bank currency	$350, 332, 884
Legal-tender notes	360, 952, 206
Fractional currency	47, 876, 149
Total	759, 161, 239
Deduct the amount held by the Treasury and the banks	128, 140, 727
Leaving in circulation	631, 020, 512

according to the Comptroller's report; but the law requires the city banks to keep on hand as a reserve in legal-tender notes, 25 per cent. of their liabilities; and many of the country banks keep on hand a much larger reserve than the 15 per cent. required by law, and this will reduce the total very much below the amount stated. I have not been able to ascertain the amount actually in circulation, nor is it material, for I propose to arrive at the amount necessary for the business of the country.

In 1861 we had a sound, good currency, gold and its equivalent, and the produce of the country sold for fair remunerative prices. At that time the currency amounted to $477,000,000, and the yearly product of the country was estimated at $4,000,000,000, specie basis. In 1864 the same product was estimated at six thousand millions, and by the same ratio of increase the yearly product would amount now to over nine thousand millions. But say that it amounts to only eight thousand millions, then we test the question in proportion—if a yearly product of $4,000,000,000 requires $477,000,000 of currency, what will $8,000,000,000 call for? The answer is, $954,000,000. Since 1861 the population of the country has increased ten millions at least, and if a population of thirty-one millions requires four hundred and seventy-seven millions, how much will be required for a population of forty-one millions with the vast increase of products of business?

Great Britain has a population of thirty-two millions, and has a total circulation of coin and notes of £141,239,000, equivalent in United

States gold coin to $686,421,540—the circulation *per capita* $21.45 in gold. France has a population of thirty-six millions, and has a circulation of 6,047,727,206 francs, equivalent to $1,209,545,441 in United States gold coin—over thirty-three dollars *per capita*. North Germany has a population of thirty millions, and a circulation in coin and notes of 785,594,504 thalers, equivalent in United States gold coin to $557,772,097.84.

The population of the countries mentioned is dense, the territory of all of them not equal to a fourth of ours, nor their industries so varied or extensive as ours.

It requires a much larger volume of currency to accommodate the necessities of a people like ours, who are dispersed over such a vast extent of territory, than it does to supply the wants of a thickly populated country. In a city $100 may pay debts amounting to $1,000 and enter into a dozen business transactions in a day; in the country it would be otherwise, and ten dollars received from a sale may remain in the pocket a month, and probably not be used in three business transactions in a year. Every immigrant that reaches our shores becomes at once a productive unit in society, earning wages and expending wages. With all these lights before me, I do not see the dangers which would result from an increase of circulation that seem to haunt gentlemen. With a larger population, twenty times the territory, and double the business of France, our circulation does not amount to half as much as hers. With less of everything that creates demand for money, Great Britain has in circulation more than we have.

In six years we have contracted our circulation over $300,000,000. The increase of population, increase of industries, increase of productions, must increase the demand for currency. And when the amount of it falls below a sufficiency to supply these increasing demands, the price of the products is inevitably reduced. I am an old-fashioned State-rights, "hard-money" democrat, and believe that the suspension of specie payment was unwise and unnecessary, and that steps ought to be taken now for gradual resumption. The national banks and capitalists desire to resume at once. This cannot be done without disastrous effect upon the interests of the classes we should be most careful to protect—the laborer, the producer. You caused the suspension thirteen years ago, drove gold and silver out of circulation, and force on us the present paper-money system, and since that time the business of the country has been conducted and transacted on that basis; purchases have been made and debts incurred under it. The unsold crop of last year was raised at paper-money cost. Debtors expected to pay their debts, and creditors expected to receive their dues in this currency. And if you adopt specie payment, rise suddenly, without notice or warning, and tell every debtor that his national-bank paper-money debts must be paid in gold, his crop, raised at paper-money cost, must be sold at gold prices, tell every creditor that he may demand, exact, extort gold for all debts due him, you will have wrought the means of wide-spread ruin and distress; you will send the constable to half the habitations in the Southwest, and will cause the sacrifice of property that costs years of labor and toil to earn. Such an enactment is repugnant to every idea of justice and fairness. The present indebtedness was created, as I have argued, in this paper system; let it be paid in that currency. This is equal justice to the debtor and creditor—let our farmers sell their crops for the same money used to make it.

Where is the specie necessary to meet the present demands of the country? Where will the poor debtor get the gold to pay the execution when the sheriff has levied on his house, his corn, or tobacco? The coin is not to be had. And we insist that you shall give us time to work off the dose you have forced us to swallow, and not murder us by a sudden change of treatment in our weakness.

Let us shut our ears to the clamors of the national banks; they are dictated by selfishness and greed. Let us cease to give heed to the arguments of the stockholders, presidents, and directors; their patriotism knows nothing, cares nothing, for the suffering people; their financial wisdom is solely directed to swell dividends on bank stocks. I hope Congress will declare its independence of national banks, and legislate for the country. Let us emancipate the labor of the country from the slavery in which it is held by these corporations. Let us represent the people and not the banks. In conclusion, I urge and beseech the House to act promptly in relief of the people of the Southern and Southwestern States.

Free Exchange and Transmission of Newspapers, and Distribution of Public Documents.

SPEECH OF HON. JOHN B. PACKER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

February 18, 1874.

The House having under consideration the bill (H. R. No. 825) to provide for the distribution of the public documents printed by the authority of Congress, and of seeds furnished by the Agricultural Department, for the free exchange of newspapers between publishers, and for the free transmission of weekly newspapers by mail within the county where published—

Mr. PACKER said:

Mr. SPEAKER: In reporting this bill for the action of the House, it certainly cannot be regarded as necessary that we should enter upon a general discussion of the franking privilege as it existed prior to the 1st day of July, 1873, for that has been disposed of by congressional enactment, and, with its advantages and disadvantages, its uses and abuses, whatever they have been, is now a thing of the past.

Equally foreign and irrelevant to the question now presented for the consideration of the House is the subject to which reference is sometimes made in this connection, of the additional cost of printing, and of increased expenditures in the preparation and publication of the public documents for distribution among the people.

This bill does not provide for either, but is expressly limited in its operation, by its own terms, to providing means for the distribution, without charge, to citizens of the United States or persons residing therein, of the public documents, books or publications, and printed matter published and issued by authority of Congress, and of such packages of seeds, cuttings, roots, and scions as may be furnished by the Agricultural Department under authority of law. It makes no provision for printing a single document or book not already published, and does not contemplate or require that any more shall be ordered for publication; leaving that question for the decision of Congress when it shall properly arise.

But we have now, sir, in the folding-rooms of this House, bound, folded, and ready for distribution, about one hundred and thirty-three thousand volumes of the most valuable books printed by the direction and under the authority of Congress. In the public-document room of the Senate they have about the same number, making in all about two hundred and sixty-six thousand volumes; besides many pamphlets containing much useful information upon questions of national importance and of great interest to the public.

That these books belong to the people there can be no question. Their money has paid for them, and their right to have them cannot be doubted; while the letters, almost without number, coming to us from our constituents by every mail attest their anxious desire to have them.

Heretofore, as their representatives, members of Congress have been charged with the duty, somewhat laborious it is true, but still a pleasant duty withal, of making a judicious distribution of the quota of these documents apportioned to each congressional district among those for whose use, information, and benefit they were printed. Then, however, the law provided the means for making this distribution, and of giving the information so highly prized by many of our citizens, and which is collated, prepared, and printed at considerable cost to the public, free of expense and without charge to the people for transportation in their own mails.

Charged simply with the duty of distribution, certainly the representative could not be expected to pay the cost of sending these publications either by mail or by express, or other means of transportation, to the constituents to whom they belong. As well, and just as reasonably, might he be asked to furnish the paper upon which they are printed, and to pay the cost of printing and binding the books, or to contribute a portion of the expenses incurred in the preparation of the different works for publication.

It is true, the distribution of a limited number of documents, even at our own expense, might not be oppressively onerous, but the principle is the same whether the amount is small or large, and the people would not fail to recognize the injustice of the burden to which every member of Congress would be subjected by a repetition of similar favors to any considerable number of his constituents.

From a statement I have before me of the weight of each of the documents in the folding-room, it appears that the postage, at the rates now fixed by law, would range from about twenty-five cents on the smaller books to about $1.76 upon the largest, and reaching, for a set of the Globe of the Forty-second Congress, the respectable figure of $7.82.

These rates of postage, charged upon the whole number of documents each member of the House sent to his constituents and actually distributed among the people during the sessions of the Forty-second Congress, would have amounted to $1,953.06, or the sum of $976.53 per annum.

Each Senator's postage would have been, during the same Congress, upon his quota of documents, if charged at the present rates, $921.87 per annum.

This calculation is based, however, upon the whole number of documents actually sent; and as they include some lying over from former years, I have procured from the folding-room a statement of the number properly allotted to each congressional district during the three sessions of the late Congress, and distributed by the members of the House, from which it appears, by a careful computation of the rates of postage upon each book sent, that the aggregate of each member's postage would have been, upon these documents alone, $1,785.14. The average rate of postage being forty-six cents per document, upon the one hundred and thirty-three thousand volumes now on hand in the House folding-room, which were authorized before but not furnished until after June 30, 1873, the postage, at present rates, would be in excess of $61,000, while the charges upon the books in the Senate document-room would be about the same.

Since the expiration of the franking privilege on the 1st day of July last, but few, if any, of these documents have been sent by mail, those that have been distributed having been sent by express; and it is, therefore, very obvious that comparatively few will reach their proper owners, especially if they reside at great distances from the capital, and off the line of the express companies' routes.

In nearly all the States in which the policy of publishing and distributing official documents for the information of the people has been adopted, the State, it is believed, pays for the stamp put upon the package by the officer or person sending it by the mail, and practically that plan has been adopted and is now employed, under the act of Congress, by the Executive Departments of the Government at Washington.

The principle of the payment of postage upon official papers, documents, books, &c., by the Government, is, therefore, fully recognized and acted upon now by all the Executive Departments, in sending under official stamps provided by the Government the very large proportion of these documents authorized by Congress to be printed for their use and furnished by the Government Printer to them, although charged to the account of Congress. And this bill only proposes to carry that principle into effect, for the benefit and advantage of the people themselves, and for the purpose of securing the distribution of a portion, at least, of these publications to those whom we represent, by a method which will, it is believed, stand the test of a comparison with that now in use by the Departments to which I have referred.

Let us examine for a moment, sir, the practical operation of this departmental, or official postage-stamp system. Upon the abolition of the franking privilege of course it became necessary to make some provision to enable the several Departments to transmit their official mail matter through the mails, and therefore it was enacted by the fourth section of the act making appropriations to supply deficiencies, &c., approved March 3, 1873—

That the following amounts, or so much thereof as may be necessary, are hereby appropriated for the following-named officers and Departments for purchase of postage-stamps for use during the fiscal year ending June 30, 1874:

For Executive office, $600; for Department of State, $3,000; for Post-Office Department, $800,000; for Treasury Department, $504,000; for Navy Department, $38,000; for Interior Department, $220,000; for Agricultural Department, $52,000; for Department of Justice, $15,000; for War Department, $153,000; for offices of the Clerk of the House of Representatives, the Secretary of the Senate, and the Sergeant-at-Arms of the House of Representatives, $100 each; making, in all, $1,865,900: *Provided*, That the Postmaster-General shall cause to be prepared a special stamp or stamped envelope, to be used only for official mail matter, for each of the Executive Departments; and said stamps and stamped envelopes shall be supplied by the proper officer of said Departments to all persons under its direction requiring the same for official use.

Under this act there were furnished to the Executive Departments, from the 30th of June to the 8th of December, 1873, a period of five months and eight days, official postage-stamps and stamped envelopes of the nominal value of $1,190,478.02, in the following proportions:

Department.	Official stamps.		Official stamped envelopes.		Total.	
	Number.	Value.	Number.	Value.	Number.	Value.
Executive	5,150	$200 00	.....	.....	5,150	$200 00
State	81,595	22,619 70	.....	.....	81,595	22,619 70
Treasury	7,842,500	407,000 00	.....	.....	7,842,500	407,000 00
War	580,800	27,197 00	988,800	$14,884 82	1,569,600	42,081 82
Navy	247,230	12,239 00	.....	.....	247,230	12,239 00
Post-Office	12,136,460	436,736 00	5,647,500	170,880 00	17,783,960	607,616 00
Interior	1,228,900	73,391 50	.....	.....	1,228,900	73,391 50
Justice	65,400	3,900 00	.....	.....	65,400	3,900 00
Agriculture	315,000	21,430 00	.....	.....	315,000	21,430 00
Total	22,503,035	1,004,713 20	6,636,300	185,764 82	29,139,335	1,190,478 02

By turning to the reports of these officers, we learn how these stamps and stamped envelopes, supplied in such large numbers, are disposed of by them.

The Secretary of the Treasury, in his circular to officers and clerks of the Treasury Department and others, instructs them that—

These stamps are to be used on all official correspondence of whatever nature, and other official mail matter, whether addressed to officers lately entitled to the franking privilege, to other officers of the Government who had not the privilege, or to private persons on official business; thus entirely doing away with the use of the ordinary postage-stamp for official purposes.

And then he informs us that his Department furnishes such stamps to the following: 42 officers of the Department in Washington, 10 assistant treasurers, 5 designated depositaries, 7 mint and assay officers, 21 light-house inspectors and engineers, 46 supervising and local inspectors of steam-vessels, 42 revenue-marine and life-saving service, 11 surgeons in charge of marine hospitals, 39 superintendents construction and repairs public buildings, 22 special agents, 1 commissioner of fish and fisheries, 171 customs officers, 225 collectors of internal revenue, 26 revenue agents, 10 supervisors of internal revenue; a total of 678 officers receiving them directly from the Department; but of the number of clerks and assistants of these officers to whom they are thus intrusted we are not advised.

The State Department furnishes them to the Secretary of State, the Assistant Secretary of State, the Second Assistant Secretary, the chief clerk of the Department, the examiner of claims, the dispatch agent at New York, and the dispatch agent at Boston.

The Attorney-General reports that the Department of Justice—

Has furnished official postage-stamps to 54 United States district attorneys, 56 United States marshals, and 62 courts of the United States, making in all 172 persons who have been supplied with these stamps for the purpose of paying postage on official correspondence. Stamps are also used upon the official correspondence of this office and the office of the Solicitor of the Treasury. In a few instances where letters have been written to persons not officers or employés of the Department, asking for information, postage-stamps have been inclosed to pay the return postage. This, however, has only been done in that branch of the Department relating to the Court of Claims, where the return papers were voluminous.

He also states that—

About one-half the time of a first-class clerk is employed in keeping an account of the postage-stamps, and transmitting them to the officers entitled to them, and a considerable portion of the time of one messenger is now occupied in delivering mail matter in the city.

The Navy Department furnishes them to the eight Bureaus of the Navy Department, including the Naval Observatory, Hydrographic Office, Nautical Almanac Office, Signal Office, naval hospitals; the commandants of the several navy-yards, and the rendezvous, receiving-ships, and offices connected therewith; the Superintendent of the Naval Academy; the Admiral of the Navy; the governor of the Naval Asylum; the purchasing paymasters at Portsmouth, New Hampshire, Boston, New York, Philadelphia, Baltimore, Washington, Norfolk, and San Francisco; naval stations at League Island, New London, Mound City, and New Orleans; naval examining and retiring board; and such of the vessels of the United States Navy as may be in our ports.

In the War Department the stamps are furnished to the Adjutant-General, the chief clerk of the office, and, in his absence, another clerk, designated by the Adjutant-General, and a clerk who affixes the stamps to the letters and packages to be mailed; Inspector-General R. B. Marcy; Inspector-General E. Schriver; employés Inspector-General's office; clerk Inspector General's office; to the chief clerk of the Bureau of Military Justice.

In the Quartermaster-General's office, a clerk is designated to take charge of and account for the official stamps, &c., and eight clerks are supplied with them.

In the office of Commissary-General of Subsistence, the stamps required for the use of the office are placed in charge of one clerk of class two.

In the Surgeon-General's office, the Bureau of Medical Statistics, the Paymaster-General's office, and the office of the Chief of Engineers, the stamps are placed in the hands of clerks, while the number of officers and employés in or connected with the Signal Office, at the various stations of observation throughout the country who are furnished with official postage-stamps, for the purpose of paying postage on official correspondence, is 112.

In the Post-Office Department they are issued to the following officers and employés: 1 Postmaster-General, 3 Assistant Postmasters-General, 1 Assistant Attorney-General for Post-Office Department, 1 superintendent of foreign mails, 1 superintendent of money-order system, 1 chief clerk of Department, 1 chief of division of mail depredations, 1 postage-stamp agent at New York, 1 postal-card agent at Springfield, Massachusetts, 73 special agents, 343 railway post-office head clerks, 917 route agents, 193 mail-route messengers, and 33,780 postmasters; a total of 35,317.

In the Department of the Interior, in the Secretary's office the official postage-stamps are in the custody of the superintendent of documents, who issues them, on the requisition of the chief clerk of the Department, to the chief messenger and to the clerk in immediate charge of the document-room, who stamp all official mail-matter leaving the Department.

Official stamps are also issued by the superintendent of documents to the following Bureaus, on requisition of their respective heads: The Bureau of Indian Affairs, the Bureau of Education, the Patent Office, the General Land Office, the Pension Office, the Census Office, and the National Museum.

In the Bureau of Indian Affairs the official stamps are in the keeping of a clerk of the first class, whose duty it is to stamp all official mail. Stamps are also furnished by this Bureau to the following officers: To 5 Indian inspectors, 4 superintendents of Indian affairs, and 77 Indian agents.

In letters written to persons not connected with the Bureau, asking for information, it is customary to inclose official stamps for return postage.

In the Bureau of Education the chief clerk has charge of all matters pertaining to postage and the sending out of official mail. In this Bureau it is customary, when the correspondence renders a reply important for the information of the office, to inclose official stamps for return postage.

In the Patent Office the financial clerk has custody of the official stamps, but is not allowed to use them himself. A lady clerk has charge of stamping all the official mail, with the exception of letters written and mailed after office hours, which are stamped by either the Commissioner, Assistant Commissioner, or chief clerk.

In the General Land Office one clerk has the entire charge of the official stamps, and, for the stamping of the official mail, they are issued by him daily to the chief messenger of the Bureau, who affixes them to said mail. The clerk referred to also furnishes stamps quarterly to the following officers, upon their requisition: To 17 surveyors-general; 19 registers of the local land offices, and 90 receivers of the local land offices.

The deputy commissioner of pensions in the Pension Office is the custodian of the official stamps. They are issued by him to one clerk in the office, whose duty it is to stamp all official mail. The deputy

commissioner of pensions also issues official stamps to 1,400 examining surgeons for the payment of postage of certificates of examination of pensioners.

It is the custom of this Bureau, when official letters are addressed to persons not interested in the contents thereof, to inclose official stamps for return postage.

Mr. ALBRIGHT. Will my colleague from Pennsylvania allow me to ask him a question?

Mr. PACKER. Certainly.

Mr. ALBRIGHT. What I wish to know is, whether all the persons who are supplied with official stamps, and authorized to use them according to the gentleman's statement, were endowed with the franking privilege prior to the 30th day of June, 1873?

Mr. PACKER. No, sir. The franking privilege was limited to the President, the Vice-President, the chiefs of the several Executive Departments, Senators, Representatives, and Delegates in Congress, and the Secretary of the Senate and Clerk of the House of Representatives, to cover their correspondence, all printed matter issued by the authority of Congress, and all speeches, proceedings, and debates in Congress; such principal officers of the Executive Departments, being heads of Bureaus or chief clerks, as the Postmaster-General might by regulation prescribe, to cover official communications only; postmasters, to cover official communications to other postmasters only, and assessors and collectors and their assistants and deputies, for the interchange of official communications only.

And then it was expressly provided, by the revised act of 1872, as a protection against fraud, and as a guarantee of the official character of the paper or correspondence sent, that—

No person entitled by law to the franking privilege shall exercise said privilege otherwise than by his written autograph signature on the matter franked.

Thus, Mr. Speaker, it will be seen that under the present system it has been found necessary, in the operation of the extensive and complicated machinery of the Government, to scatter these official stamps almost broadcast, in every quarter, and I submit, sir, if all these thousands of officers, and tens of thousands of clerks and subordinates all over the country, can be and are intrusted with the custody and use of these stamps, (and I do not for a moment believe they make an improper or unauthorized use of them,) why may we not trust the Secretary of the Senate and the Clerk of the House with the care and use of the stamp or stamped envelope for public documents as provided for and authorized by this bill?

Several MEMBERS. Why not give the stamps to the members themselves?

Mr. PACKER. I will tell the gentleman why I would not have them furnished directly to the Senators and members themselves. Every member receiving them would expose himself to the charge of making an improper use of them, just as we hear it stated now, that the official postage-stamps of the Departments are applied to private or unofficial mail matter, and just as members of Congress were charged, over and over again, without the slightest evidence, with making an illegal use of their frank under the old system. The old charges of irregularities and abuses would be revived, and as it would be difficult to prove a negative it might be impossible to meet the charge. These stamps or wrappers are intended for the benefit of our constituents and not of ourselves; and our best and surest protection against all accusations and assaults will be, not to take them into our custody or possession, but leave them in the hands of the officers designated, whose duty it will be to attach them only to such public documents, or printed matter, or seeds, as may be authorized to be distributed by congressional enactment.

In view also of the objection frequently urged against the former system of franking, whether well founded or not, that other parties could counterfeit or fraudulently use the frank of a member of Congress, more especially in former years when the use of engraved *facsimile* stamps or dies was permitted, the committee have placed around the plan submitted by them such checks and guards as must, it is believed, effectually and certainly prevent every attempt to abuse it. And it may be remarked, in passing, sir, that a great, if not the major, part of the opposition to the franking privilege, grew out of its supposed or alleged abuse; for the privilege, when properly and honestly and legally exercised, was undoubtedly the privilege of the people themselves, intended for their benefit, in facilitating their communication with their agents or representatives upon the questions coming before Congress affecting their rights and their interests, or the welfare and prosperity of the country.

By the second section of this bill it is provided—

That the Secretary of the Senate and Clerk of the House of Representatives of the United States shall cause to be prepared, for their respective Houses, a special stamp, or stamped envelope or wrapper, of such form and design as shall be directed and approved by the Postmaster-General, to be used by the said Secretary and Clerk, or by such assistants as may be appointed by either of them, for their respective Houses, only upon such printed matter or documents or packages of seeds, cuttings, roots, and scions as aforesaid, as the Vice-President, the Senators, Representatives, and Delegates in Congress, the Secretary of the Senate and Clerk of the House of Representatives may, by their respective written autograph signatures, indorsed upon the wrappers or envelopes thereof, direct to be so sent by mail, as is provided in the foregoing section of this act.

Thus the matter that may be sent free of charge is, in the first place, limited to the public documents published by direction of Congress, and to the seeds, &c., furnished by the Agricultural Department, under authority of law, as before stated, and does not include the official, much less the private, correspondence of members. In the next place, it can only be sent under a special stamp, or stamped envelope, or wrapper, of such form and design as shall be directed and approved by the Postmaster-General, to be attached, or used, only by the proper officer of the House.

And then, as an additional measure of protection, and to prevent the officers designated, or any one else, from making an improper or unauthorized use of the stamp, it is required that the person authorized to send the package, the Vice-President, Senator, Representative, or Delegate in Congress, or the Secretary of the Senate, or the Clerk of the House, shall also indorse his signature upon the wrapper or envelope, in his own handwriting.

Again, as a further security against improper practices, the committee have provided in the fourth section of the bill—

That any person who shall knowingly, and with intent to defraud the Government of the United States, use, or cause to be used, any of the said stamps, stamped envelopes, or wrappers, herein authorized to be prepared and used, for any other purpose or in any other manner than as is hereinbefore authorized, or who shall counterfeit the name or signature of any person herein authorized to indorse his autograph signature upon the wrappers or envelopes aforesaid, or who shall willfully utter or use any such counterfeit indorsement, with the intent to avoid the payment of postage, shall, on conviction thereof, be deemed guilty of a misdemeanor, and be punished by a fine of not less than $100 nor more than $1,000, or by imprisonment not less than three months nor more than twelve months, or by both fine and imprisonment, in the discretion of the court.

To meet also the apprehension of the very able, energetic, and vigilant head of the Post-Office Department, who has inaugurated so many acknowledged improvements, and, with the aid of his faithful and intelligent assistants, has succeeded in establishing and maintaining the most complete, efficient, and admirable postal system in the world, and recognizing the force of his objection that there might, at times, be difficulty in providing immediate means for the expeditious transmission of these official documents, along with the other mail matter, upon a few of the trunk lines, and particularly those leading from the city of Washington, the committee have inserted in the bill a provision authorizing the Postmaster-General, if the welfare or exigencies of the service shall require, to make rules and regulations delaying in whole or in part the transmission of these documents and packages for any period not exceeding thirty days from the time of delivery for mailing.

Mr. HURLBUT. If the gentleman will allow me, I desire to ask him whether the contracts of the Post-Office Department for carrying the mails have been in any respect reduced by the abolition of the franking privilege?

Mr. PACKER. I am not aware that any of the rates of compensation have been reduced up to this time. Whether a reduction shall be made in the future, on this account, cannot be absolutely determined, but I shall presently submit some statistics from which gentlemen can have no difficulty in drawing their own conclusions.

Mr. KASSON. With the leave of the gentleman from Pennsylvania I will answer the gentleman. No new contracts have been made since the franking privilege was abolished. But the Postmaster-General informs me that there has been a reduction in the cost on account of the mails being carried by weight.

Mr. PACKER. That, I fear, is rather the expression of a hope than a realization upon the part of the Department. Upon at least three-fourths of the 256,000 miles of mail service, and upon a very large proportion of the 63,457 miles of transportation by railroad, the difference in the amount of mail matter would be small, and scarcely appreciable, and it is only upon the leading lines of railway that it is claimed there will be lower rates upon account of the absence of public documents from the mails. On these there has not yet been any reduction from the maximum rates heretofore claimed and allowed, and I venture the opinion that any saving there may be in the future will come from competition between rival lines, and will not be in consequence of the exclusion of these documents from the mail. In looking through the official estimates of the probable future expenditures I do not find any place in which this claimed reduction asserts itself.

Without troubling the House with a reference, at this moment, to the gross amount of the receipts and expenditures of the Department, I prefer to call attention to what seems to me a more legitimate subject of inquiry in this connection—the cost of the inland transportation of the mails. It amounted in the fiscal year ending—

June 30, 1868, to	$12,647,949 61
June 30, 1869, to	13,485,406 15
June 30, 1870, to	13,356,251 85
June 30, 1871, to	11,529,395 00
June 30, 1872, to	12,566,892 00
June 30, 1873, to	13,635,341 00
For the current fiscal year, ending June 30, 1874, there were appropriated, on official estimates	$14,840,020 00
And for readjustment of pay on railroad routes, under act of 3d March, 1873	500,000 00
Making total amount appropriated for current year	15,340,020 00
In the estimates for 1875 the Department sets down the estimated cost of this service at	$15,878,821 00
And the increase of compensation on railroad routes, under act of March 3, 1873, at	535,000 00
Making the estimated cost for the the next fiscal year	16,413,821 00

The whole cost, then, it will be seen, of inland transportation of the mails for the year ended June 30, 1873—the last year of the franking privilege, and including the unusual amount of free matter thrown upon the mails during the last three months of its existence—was $13,635,341, while the sum appropriated for the current fiscal year ending on the 30th day of June next, upon the estimates of the Department, and including the $500,000 appropriated for readjustment of pay on railroad routes under the act of 3d March, 1873, amounted to $15,340,020. And the amount Congress is now asked to appropriate for the next fiscal year for the same purpose is $16,413,821.

Of course a very large proportion of this increase is chargeable to the establishment of new post-offices, the extension of mail-routes, and of the improved mail facilities afforded, and no one who will take the trouble to examine the subject with any degree of care can doubt it is entirely legitimate and proper. But it is just as evident that the abolition of the franking privilege has not produced the benefits predicted by the friends of the measure, and that the increased revenue which was expected to result from its repeal has not been sufficient to dispense with or diminish the usual appropriations for the deficiencies in the revenues of the Department.

And I am entirely free to admit, sir, that I cannot comprehend the line of argument which, taking the whole number of documents formerly sent to the people of the country under the frank of members of Congress, and computing the total amount of the postage that would be chargeable upon them if sent by mail at the present rates, assumes that such sum represents the amount the Post-Office Department would gain by the abolition of the privilege. If the same number of books and documents should be sent by the mail, at the same rates, of course the conclusion would be correct, and the revenues would be increased by the amount paid thereon; but if they are not put in the mail, and are forwarded by express, it is difficult to understand how the receipts of the Department will be augmented, or how any person will be benefited except the stockholders of the express companies.

It was not, sir, because I believed the Government would derive any very substantial pecuniary advantage from the abolition of the franking privilege that I uniformly voted as I did in the last Congress in favor of its repeal, but because many persons had come to regard it as a personal privilege of members of Congress, and believed, whether properly or not, that it was not only liable to abuse, but that is was abused by those entitled to its exercise as well as by others. For the same reason I should now vote against its re-enactment, in its original objectionable form, and would oppose its restoration with any features that could be regarded as conferring a privilege personal to the member himself, in any sense or degree, or as granting privileges which could in any manner be abused or perverted to improper or unauthorized purposes.

Mr. SMALL. Will the gentleman yield to me for a question?

Mr. PACKER. Certainly.

Mr. SMALL. I desire to ask the gentleman from Pennsylvania whether the estimate which has been submitted for the expense of carrying the mail for the next year includes the expense of carrying so much of it by express as the Department chooses to carry by express, and whether that was done last year?

Mr. PACKER. I feel very confident the Post-Office Department does not send the mails or mailable matter by express. It is said some of the other Departments do send matter by express which they formerly sent in the mails under the frank, but to what extent I am not advised.

Mr. SMALL. You have no account, then, of the expenses that have been incurred in carrying by express during last year?

Mr. PACKER. No, sir; I have no reliable data from the other Departments. It may be proper for me to explain, in this connection, however, that although the Post-Office Department does not send by express, it does send free in the mails, without the use of the official postal stamp, such articles as are regarded in the nature of "supplies" for the Department itself; such as wrapping-paper, twine, mail-bags, locks and keys, marking-stamps, blanks, stamped envelopes, &c., the daily average of which is, I understand, in the neighborhood of half a ton in weight. If postal stamps were put upon these, the apparent revenues of the Department would be increased by that amount, but whether the country would be any richer by the operation is a problem I leave to others more skilled in such mysteries to explain.

Now, sir, having referred to the "deficiency" in the Post-Office Department, permit me to say that I do not think it will be difficult to show whence it comes, nor to demonstrate to the House and the country why the expenditures in this Department are in excess of the receipts.

In the forty-eight States and Territories, including Alaska and the District of Columbia, the expenditures for the fiscal year ended June 30, 1873, exclusive of the amount paid for foreign mails, mail-bags, postage-stamps, and items of a general nature, and including a small amount of miscellaneous items, were $26,609,963.93. And the receipts, exclusive of money-order business, fines, dead letters, &c., were $22,905,658.48—leaving a total deficit on this account of $3,704,305.45.

In only seven of the States did the receipts exceed the expenditures, namely:

New Hampshire	$29,983 83
Massachusetts	641,860 27
Rhode Island	104,593 04
Connecticut	122,642 97
New York	1,392,526 59
New Jersey	2,058 06
Pennsylvania	398,448 54
Total excess of receipts	2,692,113 30

While, in all the other States and in the Territories, the expenditures were in excess of the receipts, and some of them very largely, as follows:

Maine	$18,274 81
Vermont	30,954 10
Delaware	2,300 37
Maryland	102,858 06
Virginia	218,718 81
West Virginia	60,076 91
North Carolina	117,648 53
South Carolina	79,998 74
Georgia	84,242 90
Florida	166,059 60
Ohio	224,749 11
Michigan	112,003 65
Indiana	145,504 83
Illinois	200,882 59
Wisconsin	77,758 76
Iowa	230,024 59
Missouri	264,758 56
Kentucky	129,052 52
Tennessee	136,430 81
Alabama	173,738 60
Mississippi	155,587 98
Arkansas	272,350 01
Louisiana	145,483 21
Texas	478,825 10
California	587,513 28
Oregon	66,400 36
Minnesota	126,002 68
Kansas	249,467 69
Nebraska	309,325 79
Nevada	145,047 44
Colorado	141,590 59
Utah	346,588 65
New Mexico	312,941 22
Washington	162,742 36
Dakota	20,461 41
Arizona	70,438 07
Idaho	100,552 60
Wyoming	4,753 27
Montana	116,748 31
Alaska	206 38
District of Columbia	62,313 61
Total excess of expenditures	6,452,277 72

In the eleven States of Virginia, North Carolina, South Carolina, Georgia, Florida, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, and Texas, there was an excess of expenditures over receipts of $2,029,084.29, and in Utah and New Mexico the excess was $659,529.87.

It is manifest, therefore, even from the hurried reference I have made to the official records, that these deficiencies are occasioned principally by the extended lines and additional service upon our mail-routes, and not by an increased volume or bulk of mail matter transported. In the older and more thickly settled States, with their larger population, greater commercial activity, and more fully developed resources, and where the mails are heavier, the receipts, it will be observed, are much in excess of the expenses, while in the more sparsely populated districts, where the mails are lighter, and the distances greater, the expenses not only exceed the receipts in their own sections of the country, but absorb the balances in favor of the service in the other States, and swell the deficiencies to the proportions I have already stated.

It is possible, I believe, sir, that some of these expenditures, especially in the Territories, may be reduced without detriment to the service or serious inconvenience to the inhabitants, by limiting the amount of service upon some of the routes; and at the proper time I shall, in the interest of economy and retrenchment, call the attention of the House to that subject. But while I hold it to be the duty of Congress to economize and reduce expenditures in every form and in every direction in which the burdens of the people may be lightened, and while I shall continue to give in the future, as I have in the past, my earnest support to every just measure of economy, yet I do not wish to be understood as advocating the policy of abridging the proper mail facilities of the public, or of crippling the postal service and depriving the people of the incalculable benefits and advantages enjoyed by them, merely because the Post-Office Department is not, in this age of improvement and development to which it contributes so largely, a paying or self-sustaining institution. The War and Navy Departments do not exhibit a cash balance in their favor upon the ledger of the Government, and yet, useful and necessary as they are justly admitted to be, it is doubtful whether both of them combined can be regarded as so potent an agent of civilization as this.

Let but half a dozen of our enterprising citizens plunge into the wilderness and commence to-day a settlement far beyond the boundaries of civilized life, and before the smoke shall have curled a fortnight above their humble dwellings, they will be asking for the establishment of a post-office and a post-route to reach it. And it is right and proper that it should be so. The millions of acres of our public lands

awaiting development will remain unoccupied and unimproved, and will pay no taxes and furnish no revenues to aid in the support of Government, unless the hardy pioneer, braving the perils and enduring the privations of frontier life, is advised that the Government will treat him like all the rest of his fellow-citizens, and will not regard him as an exile from the old home and friends he has left behind.

I have referred to these statements, Mr. Speaker, to show why it is we are having these "deficiencies," and why we have had them, from year to year, every year, I believe, with the exception of one, since 1851; but I do not believe, sir, that the most searching examination of the details of these expenditures will furnish any, even the slightest, ground for adverse criticism of the Department whose officers have honestly, economically, and faithfully performed their whole duty to the Government, and have so successfully met the highest expectations of the people.

The attention of the House was called, a few days since, by the distinguished gentleman from Massachusetts [Mr. DAWES] to the increase in the gross expenditures of the post-office from 1837 to the present time, but he omitted to give us, along with his general statement of the expenses, any information in relation to the increased receipts of the Department during the same period, and, what was far more important, in my opinion, he failed to make any reference to the wonderful development of the country which has so largely and imperatively demanded a corresponding increase in our postal accommodations and facilities.

At the commencement of the period he has seen proper to select we had a population of less than 15,000,000, who were accommodated with about 11,000 post-offices, supplied by 125,000 miles of post-roads, not one mile of which was recognized as railroad service. At the end of the second period (1855) our population did not exceed 27,000,000, and we had but 24,410 post-offices, employing about 228,000 miles of post-roads; while, at the termination of the next period indicated by him, (1866,) with a population of about 34,000,000, we had 23,828 post-offices, using 180,921 miles of post-roads; and at the close of the last fiscal year, (1873,) with a population of at least 40,000,000, we had 33,244 post-offices, with 256,210 miles of post-routes, 3,457 miles of which were upon the railroads of the country.

With post-offices more than treble in number, with a population much more than double, with postal service twice and thrice a day in place of weekly mails, and with post-routes more than twice as long as they were thirty-seven years ago, it is not surprising that there should be the increase spoken of in the amount of the expenditures of the Department.

A comparison with the expenses of the "post" established by the United Colonies on the 26th of July, 1775, when Benjamin Franklin was chosen the first Postmaster-General, to hold his office at Philadelphia, with a salary of $1,000 per annum for himself, with power to appoint a secretary, if necessary, at an annual salary of $340, and directing "the establishment of a line of posts from Falmouth, in New England, to Savannah, in Georgia, with as many cross-posts as the Postmaster-General should think fit," would show more astonishing increase, and yet it would but serve to prove the still more astonishing progress and advancement of the country.

That the question of the postal revenues and expenditures may be more fully understood, I also ask attention to a statement made from the records of the Department, showing the number of post-offices and length of post-roads in the United States, the annual amount paid for mail transportation, and the amounts of postal revenues and expenditures, at periods of five years from 1790 to 1840, inclusive, and in each year from 1840 to 1873, inclusive, with the length of the railroad portion of the post-roads, the length of railway post-office lines, and the cost of the railroad portion of the transportation, from the date of the commencement thereof. (See tabular statement foot of next column.)

The third section of the bill will, if passed, be substantially but a re-enactment of the law authorizing the free exchange of newspapers, periodicals, and magazines between publishers, and the free circulation of newspapers to actual subscribers residing or receiving the same within the county of publication, as it stood prior to the 1st day of July last.

In tracing the origin of this provision it is remarkable at how early a date the fathers of the Republic recognized the value and importance of this means for the dissemination of intelligence and information among the people.

The men who believed that governments derived their just powers from the consent of the governed, and who were seeking to establish justice, to insure domestic tranquillity, provide for the common defense, promote the general welfare, and to secure the blessings of liberty to themselves and their posterity, could not long remain indifferent to this most powerful agency for the education and enlightenment of those in whose keeping the new government was to be intrusted, and therefore we find that the Second Congress under the Constitution, at its first session, made full provision for the free exchange of newspapers through the mails.

In the first general ordinance for regulating the post-office of the United States of America, after the declaration of independence, and passed on the 13th day of October, 1782, it was ordained by the United States in Congress assembled—

That letters, packets, and dispatches, to and from the members and secretary of Congress, while actually attending Congress; to and from the Commander-in-chief of the armies of these United States, or commander of a separate army; to and from the heads of the Departments of Finance, of War, and of Foreign Affairs of these United States, on public service, shall pass and be carried free of postage.

At the first session under the Constitution, Congress, by an act approved September 22, 1789, enacted that the regulations of the post-office should be the same as they were under the resolutions and ordinances of the late Congress, and this provision was continued and re-enacted from time to time, until February 20, 1792, when, in the first law passed by the Congress of the United States "to establish the post-office and post-roads" within the United States, containing general rules and regulations for the government thereof, it was enacted—

That the following letters and packets, and no other, shall be received and conveyed by post, free of postage, under such restrictions as are hereinafter provided, that is to say: all letters and packets to or from the President or Vice-President of the United States, and all letters and packets, not exceeding two ounces in weight, to or from any member of the Senate or House of Representatives, the Secretary of the Senate or Clerk of the House of Representatives, during their actual attendance in any session of Congress, and twenty days after such session; all letters to and from the Secretary of the Treasury, and his assistant, Comptroller, Register, and Auditor of the Treasury, the Treasurer, the Secretary of State, the Secretary of War, the commissioners for settling the accounts between the United States and individual States, the Postmaster-General and his assistant.

And by the twenty-first section of the same act it was provided—

That every printer of newspapers may send one paper to each and every other printer of newspapers within the United States free of postage, under such regulations as the Postmaster-General shall provide.

And that privilege was continued, in some form, from that date until the passage of the act of March 3, 1873, when, by a sweeping provision, inadvertently inserted as a proviso to the third section of the act making appropriations for the service of the Post-Office Department, and passed without sufficient, or perhaps any consideration, in the confusion attendant upon the last hours of the session, all laws permitting the transmission by mail of any free matter after June 30, 1873, were repealed, and this privilege, which had been enjoyed for a period of eighty-one years, nearly as long as the franking privilege of members of Congress, heads of Departments, and other officers of the Government, was taken away.

Statement showing the number of post-offices and length of post-roads in the United States, &c.

Years.	Number of post-offices.	Length of post-roads in miles.	Length of the railroad portion of such post-roads.	Length of railway post-office lines.	Paid for transportation.	Paid for railroad portion of such transportation.	Postal revenues.	Expenditures.

* Including suspended offices in rebellious States.
† Exclusive of routes in rebellious States.
‡ Six thousand eight hundred and eighty six miles in length, and $978,910 in cost, discontinued in rebellious States.
§ Railroad and steamboat service combined.

This action of Congress having been made the subject of much adverse criticism, it may be interesting, at least, to state briefly its history, as shown by the official records.

By the act approved January 31, 1873, entitled "An an act to abolish the franking privilege," which originated in the House of Representatives, it was enacted—

That the franking privilege be, and the same hereby is, abolished from and after the 1st day of July, anno Domini 1873, and that thenceforth all official correspondence, of whatever nature, and other mailable matter sent from or addressed to any officer of the Government or person now authorized to frank such matter, shall be chargeable with the same rates of postage as may be lawfully imposed upon like matter sent by or addressed to other persons: *Provided*, That no compensation or allowance shall now or hereafter be made to Senators Members, and Delegates of the House of Representatives on account of postage.

This, it will be observed, did not reach or affect the free transmission of newspapers or exchanges, but only took the franking privilege from members of Congress and the officers of the Government. At a later period in the session, however, and after the annual post-office appropriation bill had passed the House and had gone to the Senate, without any provision in relation to that subject, the Senate Committee on Appropriations reported an amendment to the bill as follows:

Provided, That all laws and parts of laws permitting the transmission by mail of any free matter whatever be, and the same are hereby, repealed, from and after June 30, 1873.

And the Senate, on February 21, 1873, agreed to the provision—ayes 24, noes not counted.

The bill having been returned to the House on February 24, 1873, Hon. Frank Palmer asked and obtained unanimous consent from the House to have the bill taken from the Speaker's table and referred to the Committee on Appropriations.

On March 2, 1873, Mr. Palmer reported the bill back, and asked and obtained a non-concurrence in the Senate amendments, and a committee of conference was ordered.

So that it will be seen the House refused to adopt this amendment of the Senate.

Upon the 3d of March, 1873, the last day of the session, the committee of conference, appointed as before stated, made report as follows, (see Congressional Globe, page 2094:)

The committee of conference on the disagreeing votes of the two Houses on a bill (H. R. No. 3498) entitled "An act making appropriations for the service of the Post-Office Department for the year ending June 30, 1874," respectfully report that having met, after full and free conference thereon, have agreed to recommend, and do recommend, that the House recede from their disagreement to the amendments of the Senate, numbered 1, 2, 4, 6, 7, and 10, and agree to the same.

That the Senate recede from its amendments numbered 3 and 9.

That the House recede from its disagreement to the amendment of the Senate numbered 5, with an amendment, as follows:

Line 4, page 5, strike out all after the words "to wit," down to the word "that," in line 6, and agree to the same.

The previous question was seconded and the main question ordered; and under the operation thereof the report was adopted.

Thus, under the operation of the previous question, without a word of explanation of the nature of the amendments, in the closing hours of the session, this important amendment was adopted, adding another to the long list of unwise laws that have been passed through legislative bodies upon the eve of an adjournment when sufficient time could not be taken for their consideration.

That this Congress will correct the error by the passage of this bill, I have no doubt. There never was any good reason for the enactment of the law it proposes to repeal, which could only be regarded as imposing an unjust tax upon intelligence; and I am glad to find that the Postmaster-General, in a recent communication, takes occasion to express his approval of this proposition of the committee, and gives the powerful aid of his official position and influence in its support.

At the dawn of the Revolution there were but thirty-six newspapers published in all the land. In New Hampshire, one; Massachusetts, six; Rhode Island, two; Connecticut, four; New York, four; Pennsylvania, nine; Maryland, two; Virginia, two; North Carolina, two; South Carolina, three; and in Georgia, one.

In 1870 we had 4,295 weekly newspapers, having a circulation of 10,594,643. We had, at the same time, 574 daily papers, with a circulation of 2,601,547; 107 tri-weekly, and 115 semi-weekly newspapers, and with the monthly and quarterly publications making a grand total of 5,871, with a circulation of 20,842,475, and the enormous aggregate of 1,508,548,250 copies issued annually.

The history of the newspaper press in this country, and of its steady advancement and magnificent success, would be but the history of the country itself. Defending, educating, or leading public opinion, it has, as a rule, been found in the advance in all measures of progress and reform, and who so bold as to venture to conjecture how much this country is to-day indebted to this agency, fostered, encouraged, and protected by the people and the Government as it has been in the past, for our national greatness, prosperity, and renown.

These weekly newspapers, let me add, reaching as they do every fireside, every workshop, every abode of civilized life, and shedding their rays of intelligence even in the remote and waste places not penetrated by other means or agencies of education and information, exert an influence at once too powerful to be neglected, and of far too much national importance not to command and receive the respectful consideration of the representatives of the American people.

Finance—Currency.

SPEECH OF HON. LEWIS V. BOGY,

OF MISSOURI,

IN THE UNITED STATES SENATE,

February 19, 1874.

The Senate having under consideration the bill (S. No. 432) to amend the act entitled "An act to provide for the redemption of the 3 per cent. temporary-loan certificates, and for an increase of national-bank notes," approved July 12, 1870—

Mr. BOGY said:

Mr. PRESIDENT: The subject of finance in its various bearings, including expansion and contraction, resumption of specie payments and its opposite, the relative difference as well the relative advantages or disadvantages between national currency and legal-tenders, and finally, the issue of bonds of low interest, convertible at the option of holders into legal-tenders, has been discussed by different Senators. The discussion has been, Mr. President, very instructing, exhibiting great research and reflection. It is therefore with no little diffidence that I undertake at this late hour to venture to say a few words.

I am, strictly speaking, a hard-money man. I profess to belong to the school at whose head stood, many years ago, the most illustrious of my predecessors on this floor. Well do I remember the time when Colonel Benton made this question the corner-stone of his party in my State. I hope it will not be considered out of place for me, while engaged in the discussion of a subject in which he exhibited such wonderful abilities, to say that I am truly proud to be the successor, however humble, of one so distinguished as he was. It may be considered, therefore, very strange, after such an avowal, for me to advocate a policy apparently the very opposite of what he advanced and successfully carried out. Hence the necessity for me to give the reasons of this apparent inconsistency. This I will now undertake to do as briefly as possible.

The present system of making paper and calling it money I do not approve. But the fact that this system does exist cannot be denied; and it is not in my power to change it. My object is simply to secure, from a system not approved by me, all the advantages which I think the trade and commerce of my section stand in need of. It is not necessary to go into a formidable array of figures to establish the fact that the currency of the national banks is not fairly distributed between the East and the West. This is admitted by every Senator on this floor. This being the case, I claim we have the right to a fair distribution, based on wealth and population, extent of trade and productions. Who can honestly deny our right to a fair distribution? I presume no one will rise to his feet on this floor and deny our rights in this respect. The right being conceded, the next question is, have we the wealth and population, the trade and productions, which justly entitle us to more currency?

I will not detain the Senate by going into the details to establish our just right to an increase of currency. It will be sufficient to say that the Comptroller of the Currency, whose report is able, founded on official facts that nobody denies, says that the East obtained at the outset an excess of ninety millions. Since then fifty-four millions have been issued, leaving yet a large deficiency. Senators from the East admit in argument the fact as stated, but say, first, that we have not the bonds in the West to get this currency; secondly, if we had, the creation of banks would not add to our circulation; and, thirdly, the balance of trade being against us, if the money was issued in the West, would immediately find its way to the great money centers of the East, as water will find its level.

I answer, if we have not got the bonds, parties in the East who have them would gladly avail themselves of the opportunity to engage in the banking business in the West, for the simple reason that capital will always seek for places where it can be profitably engaged. Nor is it strictly correct that we have not the means to organize banks. There is money in the West; it may be scattered in small sums among many persons, but if a good opportunity was offered to invest it in safe bank stocks much that is now hid away would come out from its hiding places. If the business of the West will justify banking, no one can doubt but that the banks would be organized. I will not take the time of the Senate to argue this point.

In answer to the second point, I will say that it is true the creation of banks under this banking law does not add to the wealth of the country. Bonds being worth a premium of 15 per cent., the sum of one hundred and fifteen dollars will only yield ninety in currency. But we need banking facilities, banking machinery, and in other words the aggregation of money at one center, which is called a bank. Without banks, or this concentration of money at common centers, commerce at this age cannot be carried on. This is a fact so well known to persons who have made this a study that it need not be argued. Banks are a necessity of this commercial age. No nation, no city, no man, can carry on commerce and have nothing to do with banks; and with the extension of commerce are banks multiplied.

In answer to the third objection—namely, that even if currency was issued in the West and South it would soon find itself in the great money centers of the East—I will say that this argument is

founded on one of the most singular mistakes that ever entered into the mind of anybody. It is not true that the balance of trade is in favor of the East and against the West and South. Cast up the value in dollars of the products of the West and South and the reverse of this will be found to be the fact. Time will not allow me to go into these details. I merely state the fact. I have still a better and stronger argument.

If we can succeed in getting for the West the amount of currency that we are so justly entitled to, it will enable us to turn our attention and energies to new fields of labor. Thus far we have mainly been engaged in agriculture; but if we could get the means, there is no country in the world that would be able to compete with us in manufactures. My own State is burdened with minerals, rich in quality, various in kind, and inexhaustible in quantity, with water, timber, soil, climate, and rivers. Yet, because we do not manufacture, but buy everything from abroad, we are poor and have no money.

I could mention from twenty-five to fifty towns in my State—not now prosperous—which would flourish and prosper by establishing in each one an extensive manufacture. Locate a bank of $250,000 in any of these towns, and it would at once enable some men of enterprise to engage in some new branch of business. And without this banking facility, the means do not exist, because it is not concentrated in one common center; it may exist, but it is scattered in very many hands and hid away in old stockings.

We now produce more meat and breadstuffs than we can find a market for, and even the market we have is too distant, and our profits are all eaten up by cost of transportation, and by the middle-men, who have necessarily to be employed as long as the market is so far away.

Formerly, within my recollection, we had a market at home, for two reasons: our products were limited, because our population was small, and the immense immigration flowing into the Western States of Indiana, Illinois, and Missouri consumed everything at home. This is no longer the case; hence the time has come when we must create a home market, and for this we need money.

Therefore I am in favor of an increase of currency; I do not admit that I am in favor of expansion, still less of an irredeemable currency. I hold that when we take into consideration the population, wealth, production, and the energy and intelligence of our people, we are certainly entitled to as much money *per capita* as the people of England, France, or Germany; and I see no reason why the West should not have as much per head as New England.

The legalizing of the forty-four millions legal-tender reserve, and the additional issue of forty-six millions of national-bank notes—making four hundred millions of legal-tenders, and four hundred millions of national notes, say eight hundred millions—would give twenty dollars a head for the entire nation, which is less than they have in the commercial nations of Europe.

That this augmented issue would to some extent impair the profits of a certain class I have no doubt; but this class is not the producing one; it consists of money-lenders and capitalists in favor of high interest. That this amount of money would enable the West to engage in new enterprises is to my mind as clear as any rule in arithmetic. To allow to this people a sufficient amount of currency—although it may be an augmentation of the present volume—is not inflation. I understand inflation to be an amount beyond the business wants of the country; but within the limits required by the needs of trade and commerce it is not inflation. I admit it is not competent for the national Government to do this wisely, and hence I offered a resolution, now pending before the Finance Committee, to to leave this question to the different States. But as long as I am forced to live under the system as it is now, I desire that we should get what our rights and business necessities require.

The whole West is poor, and far from being prosperous. The seasons have been favorable, and our crops large, and prices not bad; yet we have no money, and our people can hardly pay their taxes. Give us this increase, and in less than two years the valley of the Mississippi in its whole extent will be the most prosperous country of the world. Having all the elements of wealth in abundance, all we need is the vital spark to be infused into us.

But, sir, we have heard much about the ruinous effects of expansion and the terrible and more than ruinous effects of an irredeemable paper issue. Senators have given wings to their imaginations, and have gathered arguments from other nations and other ages. The facts stated by them are no doubt historic facts, but their application to our age and country requires, indeed, more imagination than sound logic. No one will deny that too much medicine will kill. But, on the other hand, is not death as certain to happen if no medicine be given in cases where it is admitted to be necessary?

An excess of currency, or an irredeemable paper currency, is certainly as destructive to public prosperity as anything can well be. An issue of money like the continental money, or the French *assignats*, or the money of John Law, is the financial ruin of any nation that will tolerate it. But is this the fact with our currency, whether legal-tenders or national notes? Who can say that it is not good; who can say that it will not always be good It may be true that it is not equal to gold; but is it valueless, like the continental money or the French *assignats*? I would certainly prefer gold; but if we cannot get gold, are we to do without the next best thing? I agree with those Senators who have spoken so well and eloquently as to the advantages of gold, and that it is the only true money of the commercial world. The theories laid down in the books are correct, and are sustained by the experience of mankind in all ages.

The first transaction in real estate was the purchase by Abraham from the sons of Heth. The Good Book tells us that Abraham paid "four hundred shekels of silver, current money with the merchants," to the sons of Heth for the purchase of Machpelah, where Sarah was buried. This was in "the field of Ephron, which was in Machpelah, which was before Mamre." This, I repeat, was the first transaction in real estate, and paid for with coin, being current money. From that day to this, coin, whether silver or gold, has been the recognized medium of exchange by all nations of the world. I am not here to argue against this fact, for indeed I profess to be a disciple of that school myself. Statesmanship is practical; and however correct theories may be, there are times and places when true wisdom dictates a departure from them.

I doubt very much whether our foreign commerce will be as great and as profitable with paper as our medium as it would be with gold. I know that at the counter of the great clearing-house of the commercial world, where every nation has once a year to make a settlement, nothing is received but gold. Hence, I repeat, until we do resume I doubt if our foreign commerce will be what it would if we had gold as our medium. But I do say that resumption under the present condition of our commerce, and the fact that thirteen hundred millions of our bonds are held in Europe, is impossible.

I will read a few words from the report of the Secretary of the Treasury on this subject:

> During the fiscal year ending June 30, 1873, the value of merchandise imported into the United States was $642,029,539, as against $626,595,077 for the previous year.
> The export of gold and silver in excess of the imports was $63,127,637, as against $66,133,845 for the previous year.
> The balance of trade in merchandise has been largely against the United States for many years, and the country has exported during the twenty years, ending with the last fiscal year, gold and silver to the extent of more than $1,000,000,000 over and above the amount imported.

In twenty years this nation has exported over $1,000,000,000 of gold, while not one of the other commercial nations of the world has exported one dollar more than it imported. Other nations have exported gold, of course, but the imports have exceeded the exports. England, France, Germany, Italy, Austria, each and all, during that same period of time, increased continually their gold supply; while we have been exporting until in the last twenty years we have exported $1,000,000,000. I say as long as this fact continues and gold only receivable in payment of duties, it will be difficult, if not impossible, to resume specie payments successfully.

I will not here undertake to refute the arguments on this branch of the subject, for they are doubtless true, but they are not applicable to our situation. With the balance against us and in favor of foreign nations of sixty-three millions a year, and one hundred millions to be paid for interest on our bonds, namely, on eight hundred millions of United States bonds, and five hundred millions of State, city, and railroad bonds, and the fact that all duties, amounting to two hundred millions, are required to be paid in gold, resumption is as impossible as it would be to fly to the sun with the wings of the fellow of old who made the trial, but fell and lost his life.

Hearing this learned discussion reminds me of that dismal place spoken of by Milton—

> That Serbonian bog
> Betwixt Damatia and Mount Casius old,
> Where armies whole have sunk.

The subject has been mystified by too much learning about other nations. Our position is different from any other nation on the globe. We are growing and getting greater and richer by mere natural growth, while other nations have obtained their zenith and many of them are on the down-hill course.

To resume specie payment is to contract, and every proposition which has been made leading to resumption was based either on contraction of the currency or on accumulation of gold in the Treasury of the nation. To contract is to bring every business man as well as every branch of business in the West under the greatest pressure, and many of our most enterprising and careful men to utter ruin. This I look upon as the most cruel thing which this Government could do: to force men to be ruined in spite of their industry, sobriety, prudence, and judgment; to be ruined by the Government that should give you all the help and protection possible.

Contraction is utter folly. To accumulate gold is not better. There are in this country, according to the best-informed statisticians, about one hundred and fifty millions of gold. Of this amount the Government has all the time on hand from fifty to one hundred millions, or about seventy-five millions on an average. Very little more, therefore, could be obtained from our own country. How can we get it from abroad? It must be remembered that the balance of trade is against us to an amount of about sixty millions annually. Therefore we could not get gold in the way of our foreign commerce. How, then, are we to get it? There is only one other way—to sell bonds in Europe for gold, and thereby increase our foreign bonded debt. But could this be done; and, if it can, ought it to be done? No one, I think, will get up in this body and sustain the proposition. How, then, are you to get the gold? Another way suggests itself to my mind, which is for the Government to buy all the cotton of the Southern States with greenbacks and sell it for gold; this would realize some two hundred to three hundred million dollars; but then how would

you pay for the importations of foreign goods now settled for by our cotton crop, amounting to about three hundred millions? You see in what a vicious circle of absurdities you would find yourself.

Desiring resumption myself at a proper time, I see but two ways to reach it: first, by giving more money to the West so as to enable it to manufacture, and thus stop foreign importations, and in this way turn the balance of trade in our favor; and, secondly, by providing that at least one-half of the duties on imports shall hereafter be paid in paper money.

The amount of duties collected annually is about two hundred millions. About one hundred millions are required to pay the interest on our bonds held abroad. By collecting one-half in paper money, we still would have enough to pay this annual interest. The demand for gold would cease, and the premium would, as a consequence, soon be but nominal. The advocates of resumption are all, however, opposed to this. They themselves depreciate the paper of the Government, and it does seem to me that as long as this continues no resumption can take place. For, rest assured, the mere saying that we will on a given day resume will amount to nothing, and resumption would be of very short duration. This must come, when it does, as the natural outgrowth of a wise system, and not by any arbitrary enactments.

Yet, Mr. President, I hope to see the day when this whole system will be wiped out; when such a thing as the Federal Government making paper and calling it money will be a thing of the past. The whole subject should be as speedily as possible removed from the Halls of Congress and remitted to the States. The resolution I introduced some time ago, and now before the Committee on Finance, fully explains my views on the subject. Let each State be the judge of the amount of banking capital its business wants require, as also the number of banks. Let each one provide what security it may deem proper for its depositors. Yet, as the notes issued perform a function which is national, because they circulate in every part of the country, the security for their redemption should also be national. This would be effected by the deposit of Government bonds as now required by the national banking law—*State independence with national security.*

I regret, Mr. President, that I have spoken so long; it was not my wish. But in attempting to consume as little time as possible, I have stated merely the heads of my position. I feel, sir, that I know the interest of my section. I think I know the wants of our business men and manufacturers; and although I am not willing to be considered a sectional man in the discharge of the duties devolving upon me as a Senator of the United States, nevertheless, as different sections have different interests, it becomes a duty to plead for those who sent me here—to speak for them. In this spirit I present you their case, believing that the prosperity of the West and the South would increase the prosperity of the East and the North, and in this way the common good of all would be promoted.

Franking Privilege.

SPEECH OF HON. BENJ. F. BUTLER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

February 25, 1874.

The House having under consideration the bill (H. R. No. 825) to provide for the distribution of public documents printed by authority of Congress, and of seeds furnished by the Agricultural Department, and for the free transmission of weekly newspapers by mail within the county where published—

Mr. BUTLER, of Massachusetts, said:

Mr. SPEAKER: I had but lately thought of taking part in this debate, and if I consulted my own convenience or health I would not do it now. But as my views upon this subject differ widely from many I have heard expressed, I wish to state them to the House and the country, that we may see exactly what is the matter about which we are legislating. Let us therefore go back to the beginning.

In our Constitution was given to the Government the right of establishing post-offices and post-routes. For what purpose? For the sole purpose that the Government might do its own business. There was no other way by which its orders could be sent out; by no other channel could the Government communicate with the people and its officers. Therefore post-riders, with saddle-bags upon the backs of horses, started from the capital with the messages of the Government, and they were franked; that is to say, they were free, because they were part of the machinery of government. Then the people desired to send their own messages by the Government's agents, and the Government put on the price according to the distance. So the system went on until, from the four-quire book in which Franklin kept the whole accounts of the Post-Office Department, it grew up to the immense establishment we have now.

In the mean time there has come a revolution so complete that we are discussing the proposition whether the Government shall pay its own expenses on its own messages and documents, and the documents of the people shall go free by the Government mails. So great is the revolution of thought as to the uses of the post-office. It is upon that point, Mr. Speaker, I desire the attention of the House.

Our fathers, our economical fathers, our pure and upright fathers, those to whom we are so fond of going back and saying how pure they were in the old days, used the franking privilege for all purposes of the agents of the Government, when every document had to be carried on horseback at an expense ten times greater than now, and nobody thought of abolishing it. This change of opinion is because of something which has grown up in our day.

In the process of time the newspaper press has taken possession of the mails, and printed matter has become by far the greatest bulk of our mail transportation. Let me state—for I have taken pains not to generalize but to get the very facts themselves, though I will not stop to read them even in the tabulated form—for the information of the House what I find to be a fact. Fifty-eight and a half tons of mail matter leave New York on an average daily, sometimes as high as one hundred tons, and of that amount eight and a half tons only are sealed packages of letters and correspondence. The rest is what? Forty-seven and a half tons of regularly issued newspapers and two tons of transient printed matter.

Now, I stop right here to notice in the very remarkable speech of my colleague what he claims to be the grand post-office abuse, calling for reform in administration. And that I may not deal with him unfairly, I send an extract to the desk to be read.

Mr. GARFIELD. Who speaks?

Mr. BUTLER, of Massachusetts. Mr. DAWES, the only one of my colleagues who makes remarkable speeches. [Laughter.] The speeches of my other colleagues are good; his are remarkable.

The Clerk read as follows:

Turn to the Post-Office itself. Has any gentleman looked at the gross expenses of the Post-Office for the last twenty years? From 1837 to 1850 the gross expenditures of the post-office were less than $4,500,000; from 1850 to 1855 they were only $8,000,000; from 1855 to 1866, after the war, they were only $15,000,000; but in 1873 they were $29,000,000; the estimates for the next year are $33,929,912. Now the whole expenses of the Government in 1846 were, as I have said, but a little more than $26,000,000. I know that the people of the United States demand every possible mail facility, and that the extension of mail facilities contributes to postal receipts, which, however, have not kept pace with the expenditures. The deficiencies are now twice what they were at the period to which I have referred, and were a million more last year than they ever were before.

But there are reforms in the Post-Office which I submit the people of this country will exact of us. Look at the fact that we are running the Post-Office in opposition to the express companies; that we load our mails with dead weight at half the rates at which we would carry printed matter. You can send dead weight under a certain limit for just half the rate at which you can send a book. Almost the entire bullion of the Pacific coast goes through the mails in this manner instead of being sent by express, because postage is cheaper than expressage.

A friend of mine went into a postal car the other day when the clerk was opening the mail-bag. There rolled out of the bag a great iron bolt of a peculiar construction, which, as appeared from the label upon it, was sent from Springfield, Massachusetts, to some large machine establishment in Ohio, and ten cents postage had been paid on it. It was one of the interchangeable parts of a machine manufactured at Springfield. This particular bolt had been broken, and the owner of the machine in Ohio had written to Springfield for the corresponding part, which was made and sent by mail at ten cents postage, instead of being sent by express at a cost of probably five or six times that amount. I only suggest this as one of the many things in which there is room for improvement.

Mr. BUTLER, of Massachusetts. Now, Mr. Speaker, we had a man in Massachusetts (unfortunately for the scientific world now deceased) who, if you could give him a single shell, could truly designate the age of the world in which the animal that bore it had existed. But he is dead, and his mantle has not fallen on my colleague. Now from that single "bolt," which could not have weighed more than ten ounces, because the postage on it was limited to ten cents, and which my colleague designates a "great bolt" because of the use he made of it, my colleague has attempted to fasten on the republican party the responsibility of a great abuse. Let us see in how far has he succeeded.

I have told the House that fifty-eight and a half tons of mail matter go out daily from New York on an average, and that forty-seven tons, leaving out the odd hundreds, are newspapers; the rest are books and transient printed matter, except eight and a half tons of letters. Now New York must send out more matter other than printed matter, known as "miscellaneous mail matter," than probably any city of the United States, because of samples of merchandise, &c., which would be likely to be sent from this center of commerce. How much do you suppose is the amount of all the miscellaneous matter, outside of printed matter, of the fifty-eight and a half tons, which is sent in the mails in daily average on which my colleague has framed an indictment of the extravagance of the republican party? Why, sir, four hundred and ten pounds. I speak by the card. I speak by exact statistics which I propose to print in the RECORD and which tell the exact story. The quantity of matter sent in "opposition to the express companies" amounts to four hundred and ten pounds daily only, while the newspapers weigh forty-seven and a half tons. We shall hardly break down the express companies by such an opposition as that, especially as the postage is greater, by nearly double in price by weight on the miscellaneous mail matter, than the price for the same matter by express.

Now, then, let us go a little further and see where the real profit and loss of the postal service is. How much postage do the letters pay? Over $20,000,000. How much postage do the newspapers pay? A little over $1,000,000. The weight of the letters is eight and a half tons, and if you add to that all the matter outside of newspapers, all the printed matter, transient papers and books, the weight is only about eleven tons, while the weight of the regular newspaper mail is forty-seven tons.

The following are the statistics in detail:

POST-OFFICE, NEW YORK, *February* 3, 1874.

SIR: In reply to your letter of the 24th ultimo, requiring an estimate of the number of pieces, weight and bulk of matter, of the third class, covering merchandise and samples of merchandise, and all other matter included under that head, *except printed matter*, I have to respectfully inform you that the following is an exhibit, made from actual count and weighing, for the week ending January 31, 1874, and is a fair average for the heaviest month in the year.

Date.	Pieces.	Weight.
	Number.	*Lbs.* *oz.*
January 26	1,931	554 4
January 27	1,788	497 8
January 28	1,445	350 2
January 29	1,973	382 4
January 30	1,320	330 1
January 31	1,540	349 5
Total	9,997	2,463 8

At 75 pounds to the sack, 2,463 pounds 8 ounces will equal about thirty-three sacks, or about ½ of 1 per cent. of the entire average quantity of matter, other than letters, dispatched from this office during a week.

Yours, very respectfully,

T. L. JAMES, *Postmaster.*

Hon. GEORGE S. BANGS,
General Superintendent of Railway Mail Service.

Average quantities of mail matter disposed of in one day at the New York post-office.

	Letters.	Bags.	Pounds.	Tons.
LETTER MAIL.				
Drop letters, for other offices, at ½ oz	259,976	.....	8,124	.....
Received in mails for other offices, at ½ oz (Average weight of pouch without contents, 7 lbs.)	19,273	.....	602	.....

	624,275	1,416	131,286	58.60

These tables were accompanied by the following memorandum:

As you will see by inclosed tables there is a daily average of fifty-eight and a half tons of mail dispatched from the New York post-office. There are days of every week in the year when one hundred tons are received and dispatched. There is a daily average of six hundred and twenty-four thousand two hundred and seventy-five letters received and dispatched, weighing eight and a half tons.

Of mail matter of the "third class," (see chapter 12, section 133, Post-Office Regulations,) except printed matter belonging to that class, only four hundred and ten pounds daily are received at the New York office. More samples of merchandise are received in the New York office than any half dozen other offices in the Union.

Of the daily average of fifty-eight and a half tons of matter sent from New York, over forty-nine tons are newspapers, magazines, pamphlets, books, and *transient* printed matter.

The assertion frequently made that the Post-Office Department is carrying what is called "express matter" *is not* true to any great extent. The mails, as a rule, are not used for merchandise and samples, &c., except in cases when *time* is an object, or where there are no express accommodations at either the place of dispatch or delivery; and there is the best reason in the world why the people do not use the mails instead of the express—*it costs more* in almost every instance.

All mail matter should be prepaid at the office of dispatch.

The letters pay $20,000,000; the newspapers pay $1,000,000. And yet they call upon us to relieve them even of this burden upon their business, and have the Government pay for all its own business from taxation of the people, and require everybody else to pay postage, while their business, paying now less than one-twentieth of the cost, causes quite six times the expense.

Sir, I propose to consider the franking privilege, or, I will say, the greatest abuse alleged against it; the one that has been most harped upon, the one that has been most attacked by the newspapers, and see whether even that is not perfectly defensible and to be justified. I think I can convince the House and the country that it is not an abuse.

It is said that at every presidential election the several parties—and there is no complaint that it is not done equally by all parties—that the several political parties in the country frank many millions of speeches and documents. That is true. To whom are they sent? To the people. What are those speeches and other documents? They are the best presentation of political ideas on the one side or the other that the managers of the several parties can find; the ablest presentation, the best method of putting their case, or they would not buy and fold and circulate them. What are they circulated for? For the education of the people. What are they? They are solid, compact, well-written documents, containing valuable information, with not a waste sheet of paper about them.

If the same speech is printed in a newspaper, then it is said it ought to go free. Why so? Is it any better? Are not those speeches and documents so prepared, chosen, and sent out quite equal to the ordinary daily effusions of the newspaper? Are they not carefully prepared, carefully delivered in the face of the country; prepared and delivered for the very purpose of enhancing the writers' or orators' reputations as debaters and statesmen before the country? Are they not then as likely to be quite as good as what some man, whom you might hire for twenty-five dollars a week, will get off in his attic daily in the newspaper? If no better, I trust nobody will say worse. Then why should it be an abuse to frank the speech if the newspaper article ought to go free?

Perhaps I might not object to the newspaper articles if they went through the mails by themselves and carried no dead weight with them. But, in order to send those articles in the newspapers through the mails free, you have four or five pages of business advertisements to carry free also. In order to get one column of the editor's ideas you have to take four or eight pages of everybody else's business cards in the shape of advertisements.

Which is the abuse? Sending this matter, much of which, giving it its highest character, is largely useless, or sending to the people without their paying anything for them, except so much by the ton on the railroad, the speeches which are made and the documents which are issued by both Houses of Congress?

Assume the argument is sound that the Post-Office should be used to educate the people by sending the newspapers free, are not these, our documents, quite as likely to be good vehicles of thought and instruction to the people as the newspapers, and far less bulky and costly of transportation than they are with these columns of local advertisements of no use to anybody?

What is the other abuse of the franking privilege that is complained of most loudly? It is that our committees and the Departments prepare reports by the most learned men upon all branches of human knowledge, and all matters of governmental concern, which are printed and compressed into the smallest space, and sent to the people; that is the "head and front of our offending" in this regard. They are sent to the people for what? For the use of the people and for no other purpose; for the instruction of the people, for the education of the people. Are they not quite as valuable as this broadside of advertisements telling who can sell baby-chairs, dolls, or whisky in some city? Here, now, is a paper, and not a bad paper as papers go, [holding up a paper in his hand.] Now, in order to get two columns of editorials to the people, you must send them this great paper, three-fourths of it covered with advertisements. They may be very valuable in the city where the paper is printed, but out on the prairies how useless, after they have been transported thousands of miles at public cost, but free to the newspaper makers. I am comparing the alleged abuse of the franking of documents and books by Congress with the fact. We send six times more in bulk every day of these papers than we do of letters. And we send only ¼ of 1 per cent. in weight of seeds, cuttings, mineral specimens, "great bolts," and everything else, known as "miscellaneous matter" not printed. Yet this "miscellaneous matter" is the only abuse of which, in terms, in this part of his speech, my colleague [Mr. DAWES] complains—four hundred and

ten pounds daily of this, and forty-seven tons of newspapers. "One penny worth of bread to all this sack."

I agree the newspapers are great educators. No man has an idea of the extent to which they educate the people, but also no man has any idea of *how* they educate.

We hear daily of murders, robberies, larcenies, rapes, burglaries, counterfeiting, defalcations, and frauds happening all over the country. When and whence comes this appalling increase of crime? The newspapers give every detail of how a murder has been, and often the way it may be, committed; how counterfeiting has been and can be practiced; how banks are broken open; how safes are robbed; every minutia is given. If there is a man with an insane delusion about murder, he is thus taught the way in which murder can be committed safely. And the last words of the dying murderer, as he expiates his crime on the gallows, are given with minuteness of detail; the prayers that are made over him; the heroic manner with which he bore himself on the scaffold, and that he died in the hope of a glorious immortality. Others with murder in their hearts are thus taught that they can be made famous at least by murder, and most probably enhance their hopes of final salvation by a repentance of their great sins on the scaffold. Do not these descriptions, illustrated by pictures, tend to enhance and stimulate murderous tendencies? The most thoughtful students of the psychology of crime have advised that executions should be private, because of their demoralizing tendencies; and in many of the States executions are allowed to be witnessed but by a few; yet by the newspaper descriptions all the details, dressed in the most glowing and sensational language, are brought to the eye of many, many thousands. A few hundreds only could see these executions, or hear the words of the condemned, if they were ever so public; but by printing and pictures they are visibly present to hundreds of thousands.

And if there is a case in court where prurient details must come out for purposes of justice, which ought to be heard by the triers only, in cases where in the old English courts, when any such details were to be heard for purposes of justice, the crier was ordered to proclaim, "Let the women and children withdraw"—all these are spread out in the newspapers in all their sickening and disgusting details, and we are asked to send them free to the people, to educate the youth of the country and familiarize their minds with obscenity and crime.

Sir, if any congressional committee ever franked any documents containing matter like this I would take away not only the franking privilege from the committee, but I would take away the committee itself. If we have ever ordered any such stuff to be printed, I will vote to expel the man who suggested the thought.

The question recurs, which is the abuse?

Yet we are told we must circulate such educational matter as this free. Nay, more, we are told that we ought to curtail our own privilege as public servants to correspond with our constituents, in order that the mails may be thus loaded down with this degrading, vicious, and poisonous matter. Think of it a moment, gentlemen; think of it fathers, brothers, good citizens. Ask your wives, mothers, sisters, daughters, what they think of it. They will tell you with one voice, sweet with angel purity, "Shut out, O, shut out, for virtue's sake, such demoniac stuff from family circles, our homes and our firesides."

Think not how much the people are educated by the newspapers, but how they are educated by the newspapers. Will you not only give a premium to have such pictures and details of crime sent to your families to be read by your children, but, in order that it may go free, will you abandon the right to send them the antidote to all this poison, thus poured into their young minds when you are away from them, in good advice, warning, and virtuous instruction, with equal facilities?

I call the attention of the country to this. It is said I am an enemy of the newspapers. By no means; I am an enemy only to their abuses. I desire that the children of this country shall not be taught where bad books can be bought, where lewd instruments can be found, and how to use them. I propose that the burglar shall not know the experience of every other burglar. I do not desire that the man who has an insane mind, ready to commit murder, shall be told exactly how it can be done, and done safely. I do not desire that the speech of the man on the gallows, wherein he claims that he is going straight from the foot of the scaffold to heaven, by the shortest road, may be sent abroad to induce every other person, who desires, to commit murder in order that he may reach heaven by the same road. If all this destructive and deleterious matter must go to our youth, I would rather it should not do so at the expense of the Government, if you please. Therefore I have no desire to pass this bill.

If I were content that all this matter shall be circulated free, I do not propose that the servants of the Government shall be themselves restricted in order to do it.

Who are we here? We are the servants of the Government, the servants of the people, responsible to the people for our action. We desire to communicate with our constituents; we cannot do it now except we pay for it. If a slander is charged upon one of us, we cannot reach our constituents with the refutation, while the slander is spread broadcast free by this bill. You, Mr. Speaker, may be attacked by a newspaper in your district. You get up here in Congress and repel the attack. How can you get that to your constituents? The newspaper that attacks you will not publish your answer?

I can give you an illustration. As gentlemen will remember, I rose the other day and stated that, in regard to a certain bill about Judge Durell, it had been charged in the papers that I had advocated it. I said that I had never heard or known anything about it; that the whole thing was a falsehood; that I did not know whether the bill legislated Judge Durell out of office or not. It was called "MOREY's bill" in the newspapers. Mr. MOREY, of Louisiana, in aid of my explanation, rose and said that not only was what I had said true, but that the bill itself would not disturb Judge Durell. Now how do you suppose the newspapers, to which I called the attention of the House, treated that explanation? Why, sir, the next morning I saw substantially this in the newspapers: "General BUTLER rose to a personal explanation, and got into a controversy on a question of veracity with Mr. MOREY, of Louisiana." [Laughter.] That is all the retraction there was; that is all of the explanation that was given. The only way I could send it to a single man was to buy a CONGRESSIONAL RECORD and pay the postage upon it, while forty-seven tons of those lies were going through the mails at twenty-six cents a year; and even that, it is suggested, ought not to be paid.

Let us see exactly how this so-called franking privilege affects the members of Congress.

I do not mean to speak boastingly, but I wish to state the exact fact as to one member. I receive on an average over ten thousand letters a year. I have had a little examination made, and I find that in not one in twenty of those letters have I any personal concernment. They come from the widow of the soldier, from the maimed soldier, from my old army associates asking for pensions, and from persons all over the county asking for documents or for information from the Departments, or concerning matters before Congress, and the like. Up to this time I have paid out of my more than abundant salary the postage upon the letters I write in return. The poor soldier sending me a letter must prepay three cents postage. The letter asks me, for example, to send and get documents from a given Department and send them to him in order that he may make out a claim for pension. I have to pay postage when I send to the Department asking for those documents. The Department pays postage in sending them to me; or sends a special messenger with them. When they come to me they weigh perhaps two or three ounces, so that to send them to the soldier or other correspondent costs me ten, twelve, or fifteen cents. What am I to do? Am I to refuse to send them, or am I to pay the postage? If I send to my constituent to inform him that the documents are in my hands and that the postage must be paid upon them, I must pay three cents in writing to him, and he must pay three cents to send me the money or the stamps with which to pay the postage. As a matter of fact I send the documents and pay the postage. I cannot say, as did my colleague, "I do it cheerfully;" but I do it from a sense of duty and because I can afford to do it. But a still greater burden comes upon me from this correspondence, as it would be impossible for me to do even the formal work. To answer all these letters I have to keep two assistants to attend to this sort of business, or I should not have an hour even to look up a mistake of my colleague about the Post-Office [laughter] or any other matter of public business. Those assistants of mine, I am very certain, work more hours than any clerk in the Departments. These expenditures amount to a very considerable tax. At the end of the year I may tell the country how much, when I make up the expenses incident to congressional life.

Now, I presume that my experience corresponds precisely with that of other gentlemen. Not one in ten of your letters—not one in twenty perhaps—relates to any business that concerns you. You have all this correspondence to attend to; you have to get information or documents from the Departments and send it to your constituents; and more than that, you have to run the risk, where the amount of postage is doubtful, of having the document detained in the post-office because not fully prepaid. Not very long ago I had a very important document which was to go abroad. I did not know how much the postage was. My clerk put on as many stamps as he supposed to be right, and the document was mailed. Twenty days afterward it was returned to me through the dead-letter office. By this delay the document had become useless. The time had gone by in which it could serve the purpose for which it was designed. That document concerned the public service, and nothing else.

Yet we here are to bear all these expenses as an extra tax on ourselves. Why? Because our fathers did? By no means; but because somebody has abused the franking privilege at some time. I agree that there have been abuses of the franking privilege. There are bad men everywhere—fewer in Congress than elsewhere, because we are the chosen men of the people. I speak with reverence, I hope, in saying that when Omniscience undertook to select the twelve disciples one of the twelve had a devil, [laughter;] therefore I insist that there must be bad men everywhere, and that the franking privilege, like everything else, may be abused. But all general laws work loss in some special cases. One would suppose that the general laws of nature could have been so framed by Omniscience and Omnipotence as to work no injury to men. But the divine wisdom has not so arranged the universe. The lightning, which clears the air and renders it salubrious, may at the same time strike and kill the poor man's cow. Gravitation holds all things, and yet the poor workman falling from the scaffold, under the operation of that law, strikes the ground a crushed and shapeless mass.

[Here the hammer fell.]

Several MEMBERS. Go on.

The SPEAKER *pro tempore*. If there be no objection the gentleman will proceed.

There was no objection.

Mr. BUTLER, of Massachusetts. But, sir, the abuse in connection with the franking privilege is a very small matter, because it is now demonstrated that since the abolition of the franking privilege the mails go no cheaper than they did before. I think gentlemen misunderstand what swells the cost of carrying the mails. Mail freight is the cheapest of all possible freight that can be carried on a railroad. Why? Because there is no demurrage and no handling. Just as the mail train is about to start, somebody brings the mail matter; and as soon as the train stops, somebody comes and takes it away. Thus this is the cheapest of all freight that can be carried. Why then this trouble with the railroads? It is because we insist that they shall drag post-offices on wheels—moving public buildings. To what extent this is done may be inferred from what I am told by the postmaster at New York, that if the postal cars and their means of assorting the mails and getting them ready for delivery should be stopped, he could not, with all the force at his command, distribute in ten days the mail matter coming to New York in a single day. Therefore the Post-Office Department requires the railroad companies to haul these public buildings; for that is what the postal cars are. Mail matter itself could be hauled for little, but the railroads are now obliged to have this strong, well-made passenger car, in addition to being a freight car, and haul it with great speed. So that I say again the mere increase of weight by mail is nothing at all because of the franking privilege.

Now, then, shall we be allowed, as our fathers were, the privilege of communicating with our constituents without paying postage? It is not our privilege, but the privilege of our constituents. Why, sir, one-half of my labor—yea, two-thirds—would stop, if I did not answer any letter which should come to me without stamp to prepay an answer to it. So it is with every member of this House; and I appeal to your honors and consciences whether I am not right.

I heard my friend from New York, [Mr. MELLISH,] to whom I yielded the floor, say he would vote against the franking privilege because it was an unequal taxation. Sir, it is unequal taxation. When you abolish the frank you put the taxation on members of Congress to a greater amount than to any other class in the country, and you put the tax on your constituents who have public business and public rights to be attended to. The question is here whether we consider ourselves capable to do that business.

Mr. MELLISH. In regard to the application of soldiers for pensions, &c., would not the better plan be for the Department to be conducted in such a liberal spirit and with a sufficient number of clerks, so that the humblest citizen of the land—including the limping soldier—could write directly to the Department and get the information he wants without applying through a member of Congress?

Mr. BUTLER, of Massachusetts. It would be well, Mr. Speaker, if this world all went just right, but it does not. That is my answer to my friend.

Mr. MELLISH. I want to make it as nearly right as possible, by establishing equality on the part of all applicants to the Departments.

Mr. BUTLER, of Massachusetts. You cannot make it right, because, in the first place, the clerk in the Department can only do that which is assigned to him. He cannot know, and he cannot have any interest in, the poor lame soldier I saw limping by my door when I was home, and who asked me when I came to Congress if I would not look into his case to see what it was that delayed his pension. The abolition of the frank has done this; it has sent the soldier into the hands of the claim agents, until he has been robbed of a large portion of the bounty the Government gave him for his services and his wounds.

Mr. MELLISH. Will the gentleman allow me to ask him one other question?

Mr. BUTLER, of Massachusetts. Certainly.

Mr. MELLISH. I wish to ask why the Department cannot treat the soldier limping by your door with as much consideration as a Congressman? If it does not do it, it does not, in my judgment, do its duty.

Mr. BUTLER, of Massachusetts. I will tell you why, (and they do their duty besides;) because the soldier sends to me, and I take his bundle and go down to the Department where his case is. I go about once a week to these Departments. I sit with some clerk, and I say, "I wish this thing looked up." Well, he goes and finds this was passed upon so and so. "I know it," I say; "but this man now says he can get new evidence to show where he was the day when he was wounded. If he gets that evidence, will that pass his pension?" "Yes." Then I write to the soldier to send an affidavit and more evidence, so and so; to go to the lieutenant of his company, so and so, and get him to make an affidavit, or to certify on honor, when and how you were wounded. That is the reason why I have the power to do what the soldier has not. He cannot come here. I hold it is my duty, as a member of Congress, to do that business. And I appeal now, in the presence of the country—for the soldiers of the country have been in a large degree my constituents—how well I have attended to that duty, acting for hundreds and thousands whom I never heard of otherwise; and, I declare here, never receiving a penny therefor.

Now, sir, I desire to see whether that soldier shall not communicate with the Department free. He limps by my door with nothing to eat, with a starving child. How is he to spare ten, fifteen, or twenty cents to send his document to the Department?

Mr. MELLISH. I would ask the gentleman if it costs anything more to send it to the Department than to a Congressman?

Mr. BUTLER, of Massachusetts. No, sir; but I will explain to the gentleman what he will find out when he has been here a little longer, if he does his duty, as no doubt he will. I have no doubt that it is the Congressman's duty to attend to this business. But the question is, ought you to pay a little something for the privilege of going to the Department to do this business, besides your coach hire carrying you there? That is the question I am trying to argue. Does the gentleman understand that? [Laughter.] That is the question at issue, whether we are called upon to pay something besides doing the business.

Mr. MELLISH. I think—without intending to reflect in the least upon the Department, which has always attended promptly to any applications I have made—that the Department ought to do the business.

Mr. BUTLER, of Massachusetts. I agree that this world ought to be all right, as I said before. But it is not right, and we must take it just as it is.

Mr. MELLISH. The Department is paid for doing this work, is it not?

Mr. BUTLER, of Massachusetts. That may be all very true; but there are a great many men who ought to do business who do not do it. But why should we pay for the privilege of doing it ourselves if they do not do it? Why tax us for their misfortune or their negligence?

I have been led away from the line of my argument in the course of these remarks. In regard to the use of the Post-Office by members of both Houses of Congress for sending public documents, I do not think that it would be well to grant a subsidy—I mean to set aside a sum of money out of which postage has to be paid. Some would put that into their pockets; they would not do the business and would keep the money. But lazy men in the House cannot use the franking privilege unless they take the trouble first to get the document, or, second, to buy the speech, and then to put their names upon the document or the speech and the address of their constituents.

Now, the effect of that is to put every member of the House in the hands of the newspapers of the metropolitan cities, because the country newspapers are being crushed out. There is not a man here who does not know it, and the newspapers too know that every Congressman is dependent on them, because he has no other means of reaching the people. The newspaper man sends out a hundred thousand of his sheets containing charges which it would ruin any man to attempt to reply to, if he undertook to give the same circulation to his reply, outside of the newspapers. Let me give you an illustration. I wrote a letter on the salary question which I wanted to get to my constituents, and it cost me $400 for postage and express charges alone to get it distributed, while the distribution to the same extent of the misrepresentations that went into the newspapers would not have cost four hundred cents for postage. I am told that anybody who undertakes to go for the restoration of the franking privilege is to be disemboweled—that, I believe, is the word—by the newspapers, or they may commit hari-kari. [Laughter.] Well, sir, I have done that so often that I have become used to it. [Laughter.] I am not to be frightened out of my propriety by that. I am ready to meet whatever may come. I have never, thank God, been afraid of expressing my honest convictions without fear or favor, and my head is too bald to begin now. I am willing that they shall have that. But I am not willing to crush out every country newspaper. Let the city newspapers circulate within a hundred miles, if you please, free; let all the newspapers circulate within a certain distance free. Let every communication to a member of Congress come free. And let every communication from him go free which he, on his official responsibility, will mark upon the outside "public business." Let that go free, and make it felony, if you please, without benefit of clergy, for any man to put that upon any matter of mere private business. I am willing to exercise the franking privilege, under that limitation. Open the way between our constituents and their representatives. Let a petition come to Congress for the redress of grievances without taking toll on it. Let the Government do its own business, through its own post-offices, at its own expense.

What has made this great deficiency of which my colleague [Mr. DAWES] complains? It is not the carrying the mails on the railroads, but it is the establishment of non-paying post-offices in so many small towns, villages, hamlets, and country places. God forbid that they should be taken from them. I would pay twice as much more, if necessary, to have them there; but how is it done? New England pays two dollars for every dollar that her post privileges cost. New York pays two dollars for each one her post-offices and mail matter cost. Pennsylvania more than pays the expense of her post-offices; so do Illinois, Ohio, and many other States; but the majority of the States do not pay, and thence comes the deficit; the Southern States do not pay, and thence comes the deficit. But would I recommend the cutting off a single mail-route to the most remote settler, because we have to pay a little more in New England on that account? Not if I know myself. I would send that agency of civilization just as far as the farthest pioneer raises his cabin in the wilderness to be the nucleus of a future city.

"When it will pay," some one says. Pardon me; talk about the Post-Office paying! Why, sir, our light-houses do not pay any money into the Treasury that I know of. Our life-saving stations are not a source of revenue. The sun that warms us and the air we breathe do not pay anything into the Treasury. Everybody thinks—no, pardon me, some few think—that everything that the people have must in some way pay something back to the Government. By no means. If it pays in civilizing, in enlightening the people, in aiding the efforts of the adventurous men who carry forward the civilization of the country; if it pays in aiding commerce, in breaking down the rates of transportation between the West and the East; if it pays in opening a way between the producer and the consumer; all such expenditures, in my judgment, are economical, and shall receive my vote. And the forerunner of them all in this country is the post-office. Next I want to see transportation carried as cheaply as possible just as far as the Post-Office and the mail go now. And I would pay the money for it cheerfully and willingly, although I know much the larger share of it must come out of my constituents. I would vote it cheerfully and readily, and with their ready concurrence, in behalf of those who are engaged in making this country what it ought to be—the home of the oppressed, the asylum of freemen, the place where every man may find land on which to live and die a good citizen.

The Currency Questions, in connection with Capital and Labor,

SPEECH OF HON. SIMEON K. WOLFE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

February 28, 1874,

In the Committee of the Whole on the state of the Union, on the several propositions in regard to the currency and its relation to the capital and labor of the country.

Mr. WOLFE. Mr. Chairman, there is no subject before this Congress or before the American people of greater importance, or about which the people are more concerned, than the subject of finances, and especially when considered in connection with capital and labor, and the relations which each bear to the other. The subject of the currency, as one branch of our financial system, is, in my judgment, so important that it should have been taken up as the very first to be considered, to the exclusion of all others, and never laid aside until it was finally and correctly disposed of.

But this has not been done; and the reason why it has thus far been ignored in this body the overwhelming majority of the friends of the Administration here ought to be able to explain to the country, for they will most undoubtedly be called upon for such an explanation. They certainly cannot fail to know that there has been for the past five months a more feverish excitement, a deeper-seated anxiety, expressed and felt by the people throughout the country on this subject than upon any other that has been agitated since the close of the war. Yet three months are now gone, fully one-half of the session, and nothing has been accomplished. So far the people have been treated with the utmost contempt. Not only has the relief asked for not been granted, but it has not even received serious consideration in this House. We have not had the question up for regular debate or action, and the only opportunity that has yet been afforded to say a word upon it has been, as now, when the House is in Committee of the Whole on the state of the Union, when all things are in order.

Now, sir, I have a great anxiety to hear what excuse the majority are going to offer for this delay; and the suffering people are anxious on the subject. They want to know why you could find time to spend, not only days and weeks, but months, in discussing "civil rights," so called, but really social privileges for the negro, and other matters, in relation to which nine out of ten of the white people have no interest or concern, and yet this vital question, which deeply concerns everybody, upon which millions upon millions of their property depend, has been permitted to lie buried in your Committee on Currency and Banking until a few days ago, when a bill was reported, but as yet no action has been taken upon it.

At the beginning of the session when there was such a rush apparently to repeal the salary law, by listening to the remarks of members I had begun to hope that Congress for once had found out that there was a "dear people" behind them with "hay-seed" in their hair and the whip of public opinion in their hands, intent upon lashing their delinquent public servants into an honest and faithful discharge of their duties; and having made that important discovery, I did suppose that this granger-scared Congress would ere this have brought forth fruit meet for repentance.

But no, my hope was based upon a delusion; and we find the majority here, like hell-scared sinners, have gone back into their old evil ways. The salary repeal it seems was only intended as a "tub thrown to the whale," or a bone thrown to a dog, to quiet him, to stop his growling. But if I am not greatly mistaken in the signs of the times and in the temper of the people it will require more than such a bone as that to satisfy them. That will do for a beginning, but it will not do for an ending.

Is it possible that the majority here are ignorant of the fact that a great political revolution is going on in this country; that there is an upheaval, a ground-swell, a real, genuine "tidal wave" that is destined to shake down and wash out the strongholds of vice and corruption? Is it possible that this majority are laboring under the delusion that the old order of things which produced this revolution will be permitted to remain unchanged, and that political vices that stink in the nostrils of honest men everywhere, without distinction of partisan slavery or previous condition of party servitude, will be permitted longer to run riot over this fair land; and that the cormorants and public plunderers, in the form of rings or a bloated moneyed aristocracy, or pampered wealth in any of its forms, shall be longer permitted to rob honest labor of its just reward, either by open violation of law, or under the guise of laws cunningly devised to enable them to accomplish their purpose? If such a delusion is entertained, then, indeed, is the old adage true, "Whom the gods would destroy they first make mad;" for this would be both madness and blindness.

The financial situation has produced one of the great questions now so deeply agitating the country. In every part of this broad land the life-blood of the nation is coursing slowly in its arteries and veins. Trade, commerce, the manufacturing and especially the agricultural interests, are prostrate or languishing. The story of the financial revolution which overwhelmed the country last September, and which still sits like a horrid nightmare upon labor and productive business, need not be repeated by me to show the wide-spread ruin that followed in the wake and as the legitimate result of the vicious financial system with which the country is now cursed.

Nor ought there to be any argument necessary to establish the proposition that any system which produces such results, or permits such results to be produced, is essentially a vicious system, and ought to be reformed. Nothing in this world or in any other world, so far as I know, is produced without a cause. All nature tells us, and revelation confirms it, that we do not gather figs from thistles or grapes from brambles; but that every tree and shrub and living thing brings forth fruit after its own kind. So even is it in moral and political matters. "By their fruits ye shall know them," is no less a golden standard by which to measure the conduct of man than it is to measure the useful or vicious character and tendency of a human law or a system of human government. When we behold a nation whose laboring masses are in poverty, vice, and ignorance, we know that such a nation is ruled by despotic and unjust laws, by which the people are crushed into their degraded condition. We know this just as well as we know, when we see in autumn the withered grass and flowers and leaves, that such desolation was produced by the biting frosts of that season which Bryant, with more beauty than truth, describes as "the melancholy days," "the saddest of the year." But, ah, sir, when we behold on the one side the withered prospects and the prostrate and hopeless condition of the laboring masses, and on the other the "money oligarchy," whose iron heel is more blighting and crushing to the interests of the laborer than are the biting frosts of autumn to the flowers that bloom around that laborer's cottage, how truthfully, and beautifully, too, might we appropriate the language of the poet, and say indeed—

> The melancholy days are come,
> The saddest of the year.

Melancholy and saddest, because of the dark night that always closes around a nation whose yeomanry have lost their power and their independence.

Mr. Chairman, what is the voice of history? What lessons do we learn from its pages? Ah, sir, it is a sad and gloomy story. It is the old, old story. I need not repeat it. A very few words comprise it. A contest of the strong few against the weak many; and in all such contests the weak have gone to the wall. Money has more power than numbers; capital has more power than labor, because the sons of toil have not the time, the means, or the opportunity to defend and protect themselves against the schemes and machinations of the lords of capital. Our fathers supposed they had struck the key-note when they proclaimed against the rule of the kingly scepter and placed the ballot in the hands of a nation of freemen. But while they chained the monster of political tyranny, and gave us the best government on earth, they failed to put a curb upon the power of aggregated wealth and to restrain the evils of class legislation. For these evils a new key-note will have to be struck. It may be that it is striking now. It may be that the rumbling that we hear on the broad prairies of the great Northwest is but the gathering of the clans for the onset; and, if so, I might say to the lords of capital, as the wizard did to the Highland chieftain:

> Lochiel, Lochiel, beware of the day
> When the Lowlands shall meet thee in battle array.

Or, as it might be travestied,

> Capital, Capital, beware of the day
> When the Grangers shall meet thee in battle array.

That there are differences of opinion and a variety of theories as to what is the best remedy to cure the national malady and to prevent its recurrence, is not at all to be wondered at. The minds of men are so different, and their temperament, interests, education, and local surroundings are so various, that even honest men do not all see alike in regard to the plainest and simplest propositions.

But, sir, I cannot understand how it is possible that there shouldbe two honest, disinterested opinions in regard to the main proposition, that some remedy is necessary, that something ought to be done by this Congress, and that speedily, to arrest the evil, to remove the incubus, that is now weighing down and crushing out the productive industries of the country.

Yet we have a class of financiers—I do not know how large their bank accounts are—who tell us in most dazzling eloquence and sparkling brevity that all we have to do is to do nothing; simply to let the whole subject alone and the evils will remove themselves. When it is remembered that that proposition comes with eloquent gusto from that class who are "clothed in purple and fine linen," and are now in the full enjoyment of the "good things" which their favored position enables them to occupy, the coolness of the proposition is about equal to a sojourn in midwinter at the north pole. It is in fact about as modest as was the demand of the whilom president of the southern confederacy, who, when in the zenith of his power, asked to be let alone.

I, sir, am in favor of letting things alone when they are right; but error and evil need to be assaulted in their strongholds. Nick Biddle, that pigmy of a financial king, when compared with some of our modern controllers of aggregated wealth, only wanted to be let alone. Certainly it is not at all unnatural for one who has a "good thing" to want to keep it. The world, or at least nine-tenths of it, is filled with exactly that kind of benevolence. But Jackson did not heed the demand. He took the responsibility. He saw the enemy and moved upon his works. O, that we had a Jackson, or some one imbued with the honesty and courage of that old hero, to lead the coming contest! Then would there be hope for the toiling millions that they should have at least an equal chance in the battle of life.

These gentlemen who want to be let alone are controlled by the fact that the present system "brings water to their mill," and many golden grists besides; or else they base their false theory upon the assumption that there has been, in fact, no actual monetary revulsion at all; that the trouble was only a panic, a scare, brought about by the failure of Jay Cooke & Co. This is their great error. It is undoubtedly true that the failure of that great banking house, followed as it was by other like gambling institutions, hastened the crisis; and it is equally true that, as in all such cases, a panic was also produced. But it is both ridiculous and absurd to suppose that such a general and wide-spread crash could have resulted alone from such a cause. But even if that were true, it would do the "let-alone" policy no good. It would, in fact, be a strong argument in support of the proposition that our financial system is terribly defective. If we had a sound system of finance, one that would promote stability, security, and prosperity to the general business of the country in all its various departments, I tell you, sir, if all Wall street should collapse in a single day, it would not materially affect the general business of the country at large.

One of the great evils of our present system lies in the fact that it is largely within the control of Wall street and other great money centers of the country. In other words, the finances of the country are at the mercy of the capitalists, the stock-gamblers, and moneylenders of the country generally. It is a system devised in the interest of capital, and enables them by Black-Friday transactions and other like shrewd manipulations to disorganize the legitimate business of the country. These evils have been existing so long and the people have submitted to them so quietly that we are disposed at first blush to look upon them as unavoidable evils that must be submitted to as a matter of course, as we do to the visitation of an epidemic.

Now, sir, I do not know that these evils can be entirely eradicated. I know the power of capital is great and will make itself felt, not only here in controlling and shaping legislation, but in the administration of any system that may be devised. But I do believe that a financial system could be established over which the power of the capitalists to control it in their interest would be very materially diminished. To do that, if possible, is the duty which this Congress owes to the laboring masses of all sections of the country; a duty which, if not faithfully discharged, will seriously retard the future development of the country.

A financial system, to be independent and free from the control of aggregated capital at the money centers of the country, must be based upon the cardinal doctrine that it is the duty and exclusive prerogative of the Government to determine both the quality and the quantity of the currency which may be in circulation.

The money of this country at the present time is of three kinds: coin, Treasury notes, and bank-bills. Money being a representative of values and a medium of trade and exchange of commodities, its quantity should not be left to the control of any private interest. Being a medium of exchange of commodities, its quantity should be regulated by the quantity of commodities to be handled. Everybody understands that it requires more money or more credit to raise or to handle ten thousand bushels of wheat, at a given price, than it does to raise or handle one thousand bushels. As the productive industry of a country increases, the amount of the circulating medium must be increased in like proportion, or else the prices of labor and the products of labor will be reduced in like proportion.

Coin has an intrinsic value on account of the metals of which it is made. Gold and silver, whether coined or uncoined, have a commercial value the same as other commodities, and their values are regulated exactly like the values of all other commodities, by the supply and the demand. But aside from the usefulness of these metals, as metals, a gold or silver dollar has no more value than any other kind of dollar as a circulating medium.

The value of money is measured by its purchasing power, and assuming that the supply and demand for labor and the productions of labor remain the same, then the value of a given sum of money as a medium of exchange is regulated by its proportion to the whole amount in circulation. This rule is demonstrated by a simple illustration. Suppose the whole amount of money in circulation of all kinds is $800,000,000—and that is not far from the amount with which this country is now carrying on business, though a part of that is not actually employed. Then suppose that any one individual is the owner of $1,000,000 in cash. In such case he would be the owner of one eight-hundredth of all the money in the country. But then, again, suppose the amount of the circulating medium should be reduced to four hundred millions. Now the individual with his million would own one four-hundredth part of the whole, which would be practically doubling the value of each one of his dollars. So, if the amount of the circulating medium should be increased to $1,600,000,000, the man with his million would own only one sixteen-hundredth part of the whole, and by the same rule his wealth would be depreciated one-half in value.

The result follows clearly, that as you diminish the amount of money in circulation, you in the same ratio increase the relative value of the money owned by the capitalists; and, on the other hand, as you increase the amount of money in circulation, you practically diminish the value of that which is owned by them.

If these deductions are true—and I think they cannot be successfully overthrown—we ought to be at no loss in understanding why the capitalists are opposed to what they are pleased to term "inflation." But it must be remembered that a proper increase is not inflation, any more than to eat a sufficient quantity to satisfy the demands of the body is gluttony, or any more than *zwei lager*, to a German, is drunkenness.

And from the same deductions it will appear equally clear why the capital classes—those who have their coffers filled, or have stiff bank accounts standing to their credit—are in favor of a reduction in the amount in circulation, or at least to be let alone under the present decreased condition of the currency. In each case it is simply a question of self-interest.

And, on the other hand, it need not be denied, for it is a truth, that the non-capital classes are in favor of an increase in the amount of money in circulation, for the sole reason that such increase would be for their interest. I have no desire to conceal the fact—for it is a fact—that the whole controversy is between the two classes. On the one side is capital seeking the best investments, where it can earn the largest dividends and draw the largest per cent. in interest. And on the other side is labor, seeking for the poor boon of working for a fair reward. On the one side is the creditor, with his bonds and his mortgages and other obligations for the payment of money; and on the other side is the debtor, looking to his resources to pay his debts. He knows that with an increase of currency would come an increase in business and the demand for labor, which would make the dollars come easy and save him from the bankrupt court or the sheriff's execution, which is now staring him in the face. Certainly these classes are each contending for exactly the kind of legislation that would promote their respective interests. There need be no concealment on that point.

Need I stop to argue the indictment against human nature which charges that it is selfish? With most men *pro bono publico* means, practically, for the good of self. I know, sir, we have in theory those exalted virtues called patriotism and benevolence; and we have read about them in romance and in story. They teach that private interests should be subordinated to the public good; but unluckily for the reputation of our common nature, it generally turns out in practice that it is the private interests of somebody else, and not of self, that is meant. The world is wonderfully inclined to fashion their conduct in such matters after the pattern furnished by A. Ward, who was willing to sacrifice all his wife's relations to save the Union.

It was said by the wisest teacher that ever spake to man that it is as hard for a rich man to get to heaven as it is for a camel to go through the eye of a needle. This doubtless was only intended as an illustration of the deplorable selfishness of that class of mankind who make money-getting their sole avocation in life, and who worship not God but Mammon. For my part I shall build no hopes, I shall construct no financial scheme upon the delusive and uncertain theory that capital is a safe guardian of the rights and the interests of labor. I do not believe the capital classes are here demanding non-legislation, to be let alone, all in the interest of labor. It will be time enough to believe in such a marvelous exhibition of self-denial when we can find a single instance like it in all the history of mankind.

No, sir; the congressional lobby, once known as the "third house," and now known as the "ring," is not organized to promote the interests of any but its own members. It is a close corporation. Its members are numerous and powerful. The atmosphere here is malarious with their breath; and their influence is seen at all points. In their mouth is the song of the siren, and upon their lips is the poison of the asp. To touch the hem of their garments is to risk the taint of leprosy. Before their dazzling splendor strong men stand bewildered.

The temptation is sometimes too great. Some have yielded, have entered the gilded saloons of corruption, have drunk of the poisoned wine, embraced the political harlot, joined in the giddy dance, and to-day the effects of these fearful debaucheries are felt in every artery of business throughout the country.

But there is another peculiarity surrounding the question. We are told that the subject of finance is too complicated and abstruse to be understood by any one except a close student of political economy; and for that reason it is claimed that we ought to give weight to the testimony, theories, and arguments of those who have made it their study. And hence we ought to heed what the great financiers tell us.

Now this argument looks plausible, and has misled many. But it is a dangerous fallacy. These financial experts are all interested parties. Their theories are constructed to support their interest. A good financial system, in the eyes of a great financier like Jay Cooke, is one that will assist him in filling his coffers. That celebrated great financier looked upon Secretary Boutwell's syndicate scheme as quite an advantageous invention, because it enabled him and his associates to fleece the Government. And I remember reading a few years ago from the pen of the same great financier a pamphlet elaborating the proposition, that "a national debt is a national blessing." And I have no doubt that much of our national blessing, of that peculiar kind, was brought upon the country by the advice and upon the theories promulgated by that great financier and others like him.

But, sir, let us look back a little and see what other great financiers have done for us in the way of showering national blessings, in the form of national indebtedness, upon us. During the first years of the war, when it became necessary that the Government should have more money than its ordinary sources of revenue would produce, the question was presented, what would be the best means of raising the money? The ordinary sources of revenue—the tariff, and other systems of taxation, the sales of the public lands, and other incidental sources of revenue—were manifestly insufficient. Only two other plans were available. Nations, like individuals, when compelled to purchase, if short of funds, must either borrow or purchase on credit. The great financial experts, bankers and other capitalists, were consulted, and they decided that borrowing was not the true policy. Yet we all know that if that policy had been resorted to the price of all articles purchased by the Government would have been kept at the old gold values; and in that case the expenses of conducting the war, and the consequent indebtedness of the nation growing out of it, would not have been much, if any, over one-half what it was.

But such a result was not in the interest of the great financiers whose teachings were then followed. It would not have resulted in such a large crop of national blessings, in the form of Government bonds, as followed the system that was adopted. Now it is admitted that an increase in the volume of the currency would tend generally to increase the price of labor and the productions of labor. Indeed, the fact that such an increase would be the result is one of the principal reasons urged against that policy. The plan adopted was for the Government to buy on credit. Greenbacks were issued, as the notes or promises of the Government, without interest, and they were made legal tenders in all private transactions. These notes thus became a part of the money of the country. They were issued as follows:

In 1862	$147,700,000
In 1863	263,500,000
In 1864	237,900,000
In 1865	49,800,000
Total	698,900,000

Besides these there were other large sums, in various, forms of Government promises (not bonds) that went into circulation and were used as money. The amount of these last-named substitutes for money was over $1,200,000,000, thus swelling the actual amount of Government promises that were used as money to over $2,000,000,000. My object in referring to these figures is to show that the currency became greatly inflated; largely more than double in quantity what it is now.

It was under that inflated condition of the currency, and equally inflated condition of prices and values, that the entire Government indebtedness was created. But in addition to that indebtedness, many hundred million dollars of State, county, and municipal debts were created. And that does not end the catalogue. We must still add to these many hundred million dollars of private debts. That this was extremely bad financiering for the interest of the people, who are burdened with the payment of all these debts, I presume no one will now deny. But the unwise policy did not stop there. Not only were these debts created while the currency and prices were inflated, but, to make matters still worse, as soon as there was no longer any necessity for the Government to go in debt, and before any of the debts were paid, the policy of contraction or reduction in the amount of the circulating medium was begun. This policy of reduction began in 1866, and has been going on ever since. In a word, the policy pursued was to make money plenty until the debts were created, and then make it scarce when the debts and interest are to be paid. And this is the policy that our wise financiers have given us. And we are told that we must still look to them for wisdom to shape the policy for the future! Well, verily, I do not want any more of their wisdom. We have already had too much of it.

Those who oppose an increase are at no loss to find financial witnesses, and any quantity of arguments, to sustain their theory. Why, sir, these disinterested friends of the dear people literally load—I might say litter and load—our desks with their voluntary contributions to the financial literature of the country. They pile up fearful columns, I might almost say pyramids, of figures, to prove that specie payment is the great panacea for all the ills with which the country is now afflicted.

Now, while we cannot remedy the evils of the past, nor undo the blunders which produced the present indebtedness of the country, the fearful result at least furnishes us with an illustration of the danger of following the advice of men who are so largely interested in the result. As well might you call upon a manufacturer of iron, or any other commodity, for his advice and theory in regard to the amount of "protection" you ought to allow him, as to call upon bankers or other capitalists for the best basis upon which to settle the currency question. As a matter of course, these gentlemen do not want the volume of the currency increased, because such increase would not be to their interest. Every dollar you add to the volume of the currency diminishes, in the same proportion, the relative quantity in their coffers, and in the same proportion diminishes the burdens upon the debtor class by increasing the debtor's ability to raise money to pay his debt. A farmer who is in debt $1,000, and has on hand five hundred bushels of wheat for sale, is not in a distressing condition, provided he can sell his wheat for two dollars per bushel. In that case the wheat would pay the debt. But if he could sell it for only one dollar per bushel, he would be left in debt $500. It is, then, perfectly plain that anything that increases the price of that farmer's wheat produces the same effect as if the amount of the debt itself was diminished, and anything that diminishes the price of the wheat practically increases the amount of the debt—that is, the amount of labor that it requires to pay it, which is practically the same thing to the debtor.

The existing indebtedness of the country—I mean of the Government and the people—and the inflation of the currency when they were created, are important facts to be considered in fixing a proper and fair basis for the settlement of the currency problem.

And upon that point I hold to this cardinal proposition, that it is but just and fair to the debtors that the quantity of the currency in circulation at the time the debts were created should not be reduced before the time for their payment.

Any such reduction would be practically equivalent to an increase of their debts; for it would require an increased amount of labor to earn the money to pay them. If you buy a horse to-day and agree to pay $200 for him, and the price of a day's work is two dollars a day, you, in effect, agree to work one hundred days to pay for the horse; or if wheat be worth two dollars per bushel, you, in effect, agree to give the proceeds of the sale of one hundred bushels of wheat to pay for him. Now suppose, before the money is to be paid, by some turn in the financial wheel the quantity of money in circulation is reduced, and with it down goes the price of a day's labor, or a bushel of wheat, to one dollar. The effect of that turn in the wheel to you would be, that it would require you to work two hundred days or give the proceeds of the sale of two hundred bushels of wheat to pay the debt.

The amount of the entire indebtedness of the country, Government, State, county, municipal, and individual, is not certainly known and can only be approximated; but from the best data that can be arrived at it is certainly as much as $5,000,000,000. Any policy, therefore, that will have the effect of diminishing permanently the price of labor and the productions of labor, even to so small an extent as 10 per cent., is equivalent, exactly, to adding 10 per cent., or $500,000,000, to the value of the bonds, mortages and other securities held by the creditor class. By value, I mean the purchasing power; that is, the power to purchase labor.

Mr. Chairman, so far as I am concerned I do not desire to make, or to see made, any unjust war upon any class. The prosperity of the country, and especially of the laboring classes, cannot be restored or maintained by any wicked spirit of communism which seeks to level down the rich instead of leveling up the poor. I will not say there is no antagonism between capital and labor; but I do say there ought to be none; and that it is the duty of Congress so to legislate that no such antagonism can be successfully maintained. But to do that, all class legislation, privileges, immunities, bonuses, and other abominable devices to foster capital at the cost and sacrifice of labor, must be withdrawn. It is true that labor and capital ought to go hand in hand, each the helper of the other. But, sir, that desirable condition of things cannot exist while one has such an advantage as shall injuriously and unjustly oppress the other.

In support of the position that the volume of the currency ought not to be increased, we hear it sometimes said that we already have more money *per capita* than either England, Germany, or France. This statement is not true. It is just the other way exactly. Of the four countries, the United States has the least, as is shown by the following statement:

United States:	
Total volume of currency	$869,000,000
Less gold and paper reserves	200,000,000
Total actual circulation	669,000,000
Circulation *per capita*, $16.72.	

England:	
Total volume of currency	$884,943,000
Less reserves	112,259,000
Total actual circulation	772,684,000
Circulation *per capita*, $24.28.	
Germany:	
Total volume of currency	$1,296,000,000
Less reserves	205,000,000
Total actual circulation	1,091,000,000
Circulation *per capita*, $26.80.	
France:	
Total volume of currency	$1,650,000,000
Less reserves	540,000,000
Total actual circulation	1,250,000,000
Circulation *per capita*, $34.72.	

Of these three European nations it will be observed that England has the smallest amount of currency *per capita;* yet when we compare the United States with England, we find it would take $331,000,000 to be added to our currency to give us the amount *per capita* enjoyed by the people of that country. Yet we hear a hundred millions spoken of as inflation; and even the little bill to restore the $44,000,000 reserve to the circulating medium is opposed on the score of inflation. But suppose it were true that we have more currency *per capita* than either of those European countries, it would prove nothing in our case. Our institutions, politically, morally, and socially; our habits, manners, and customs; and our interests, agricultural, manufacturing, and commercial—indeed everything that goes to make up the characteristics of a people—are so peculiarly American, and essentially different from any other country, that any such comparison fails almost wholly to illustrate any single political truth.

Nor is it true that the amount of currency required by a nation is measured by the number of its population. The amount of money *per capita*—that is, that would fall to each man, woman, and child, if the whole was equally divided—has but little to do in determining the amount of money needed. The necessities for money are largely controlled by a variety of other facts, a few of which I will mention. A country that is new and in the active process of development, where vast public improvements and private enterprises are demanded, requires more money than an old, finished country, whose institutions are moss-covered, and whose resources are fully developed. Extent of territory also should be considered. A country like ours, whose territory includes almost every productive latitude, extending from ocean to ocean, whose soil yields every variety of productions, and whose mountains are ribbed and vertebrated with the richest mineral deposits, needs much more money for its development than any of the "pent-up Uticas" of Europe. The amount of money should be measured, not by the number of the people, but by their necessities. The number of business men, the amount and kind of business done, the price of labor, the cost of material, the expense of transportation, and many other like matters, must be considered in determining the amount of currency required. If we expect to see our country march onward and upward in the line of progress, we must afford the people, whose labor alone it is that moves the world, all the necessary supplies and equipments for the grand campaign. With the great achievements to be wrought in the development of this magnificent empire, in all the departments of the arts, sciences, and labor, Wall street and the Shylocks must not interfere. If they cannot be enlisted in the grand work they must not be permitted to retard it.

But, sir, let us look over the field to see how goes the fight, or how the battle has gone. What is the result of the ten years' campaign from 1860 to 1870? What are the facts?

> Theories often fail, for errors often breed them;
> But facts are stubborn things, and honest men will heed them.

The census of 1870 contains some stubborn facts that should be heeded by every honest man in the land, facts that show how the battle between capital and labor has resulted during the last decade. We need not go to the census to learn that labor is prostrated. The thousands and tens of thousands of unemployed laborers all over the country tell us that in language too plain to be misunderstood. But the census, by its incontrovertible figures, shows the cause and the extent of that prostration. It shows that long before the recent revulsion in monetary affairs the causes were at work which would certainly produce a crash. The census figures, when carefully studied, reveal the fact that, during the last decade—from 1860 to 1870—the relative wealth of the laboring classes and that of the capital classes has undergone a wonderful change. Without going into the details I may say that the census discloses the fact that, while there has been a general increase in the wealth of the country since 1860, the proportion owned by these two respective classes is changed, greatly to the disadvantage of the labor classes. It shows the extraordinary and fearful fact that the capital classes have increased their relative proportion of the wealth of the country $6,000,000,000; while the wealth of the laboring classes has decreased relatively in the same proportion. With these facts staring us in the face, is any further argument needed to establish the fact that our whole financial system is radically wrong, and that it must be reformed before there can be any real prosperity among the laboring classes? These facts explain why the capitalists are remonstrating against any increase in the volume of the currency, and why they are asking us to let the finances alone. Occupying the vantage ground as they do, by which they are gradually absorbing the wealth of the country, they can very well afford to be let alone. But, sir, I do not believe they will be let alone much longer. This Congress may obey their mandates, and fail to do anything that will materially change the situation; but if it does so fail it will raise such a storm of indignation throughout the country, outside of New England and the great money centers, as has not been witnessed for many years.

What now is the condition of the country? Is it simply laboring under the scare of a panic without any legitimate cause? I wish to speak more particularly in regard to the West because I am more familiar with the condition of that section. The prime, admitted fact, throughout the entire Mississippi Valley is that there is a scarcity of money; and the same is true, I understand, in regard to the South, and, to a considerable extent, in the Middle States. As an evidence of this fact, I need but refer to the experience of every active business man in that part of the country, and the almost universal cry for relief that we hear throughout that great valley. Business of all kinds, if not actually suspended, is being prosecuted under great disadvantages and embarrassments, and generally without any adequate returns in the way of profits. Debtors cannot pay their debts, and people are forced to reduce their expenditures to the point of actual necessity. Almost all kinds of improvements, both public and private, are stopped, throwing out of employment thousands upon thousands of laboring men, and reducing the wages of those who are retained to almost the starving point. But the gloomiest feature of the situation is its utter hopelessness under our present system. If that system is not changed there is no particle of ground of hope that the situation will materially improve. The changes in the season, and good crops, would, as usual, have temporarily a beneficial effect; but no permanent relief need be looked for in that direction. The inexorable laws of trade, as now adjusted under the Wall street and "the New England policy," are constantly draining the agricultural regions of their material resources.

Let me say to gentlemen from New England in all candor, we of the West and Northwest do not want any contest with you. We do not desire to diminish your prosperity, or in any way interfere with your rights. We are proud of the great archievements in literature, in science, and in the arts and industries, which have found their birth among your rugged hills, and given our entire country an enviable character throughout the civilized world. I know "your men are brave, your women fair and lovely." I know there is any energy and moral courage in you that ought to be imitated by others. In fact, I confess I love the New England character, saving always its faults; yet I must say to you that as well as we love and honor you, we cannot longer afford to let you rule the country, and control its legislation in your interest, and to the manifest injury of our own section. You may, by your united vote, defeat any reform in the finances of the country. But if the evils that now afflict the agricultural regions of the country are continued because your solid vote prevents them being removed, such action would very much tend to unite other sections against you; and it may be that, in the contest which you are driving us to make in order to get our rights, you may lose some of yours; or, at least, some of your high prerogatives.

But in addition to the scarcity of money as a cause of the trouble, the whole financial system seems as if it had been organized in the interest of the capitalists. The tax laws have been so adjusted that labor is unequally burdened. A protective tariff compels the consumer to pay not only the tariff tax upon imported goods, but they are also compelled to pay the manufacturer at home at least as much as goes into the Treasury, which in 1873 was $188,089,522.70 as a bonus or protection. The total amount of receipts into the national Treasury last year from all sources was $333,738,204.67. By adding the protection or bonus paid to manufacturers, we have in round numbers $522,000,000 as the sum paid the last year, in the form of taxes, to support the General Government. And, in addition, they paid their State, county, city, town, and township taxes, which in 1870 amounted to the sum of $280,591,521, making in all the enormous sum of $802,591,521 per annum. Under the order of things brought about by contraction in the amount of money in circulation, and the corresponding contraction in the business of the country, this large sum of money annually drawn from the pockets of the people has become a terrible and oppressive burden. For it must be remembered that while the money has become scarcer by its unwise withdrawal from circulation, the expenditures of the Government have not been diminished in like proportion. The reason why we hear so much complaint of high taxes and large expenditures is not because either has been increased within the last few years, but because the people's income has been materially decreased; I mean the income of the laboring classes, for the income of the capital classes has been constantly increasing. As money becomes scarce, borrowers become plenty, and as borrowers become plenty, interest and other profits of the lenders are increased.

Mr. Chairman, the only remaining topics that I desire to discuss—or rather allude to briefly, for I have not time to discuss them at length—is in regard to the manner in which the volume of the currency should be increased, and the amount of the increase. The question in regard to the manner is this: Shall it be done by issuing more greenbacks, or by increasing the circulation of the national banks?

I have no doubt that it should be done by increasing the amount of greenbacks; first, by restoring the $44,000,000 reserve to the circula-

tion; secondly, by authorizing the issue of at least $50,000,000 more. That would make the amount of the greenback circulation $450,000,000. To that there should be added, in the third place, new bonds for $100,000,000 more, drawing a low rate of interest, say 3.65 per cent., to be convertible into greenbacks at the option of the holder. Such a plan would give new life and vigor to the business of the country. It would, it is true, still leave the greenback circulation much below what it was a few years ago. As a portion of the reserve is already in circulation, it would not add over about seventy millions to the permanent circulation; and the convertible bonds would prevent the accumulation of bank deposits in the great money centers at those seasons of the year when a less quantity of currency is needed. Western produce dealers, after the season for using their money is over, have been in the habit of sending it to New York, on deposit in the banks there, in order to save it from lying idle. That policy has caused large sums to accumulate in the New York banks, and has led to many evils. If these dealers had the opportunity of investing their funds in these bonds, upon which they could get greenbacks again whenever they needed them in their business, they would not send their money to New York or other money center, to inflate it and excite those schemes of speculation so destructive to the prosperity of the country.

As to the other plan, of increasing the currency by extending the circulation of the national-bank bills, I must say that I am entirely opposed to it. If I had the power to do so, I would abolish the whole banking system. I allude to banks of circulation. Such banks are not only wholly useless in facilitating commercial transactions, but, in fact, are the fruitful sources of many of the evils which afflict our financial system. With that system abolished, and the $353,968,249 of bank-bills withdrawn from circulation, and their place supplied with greenbacks, the Government would save twice as much in one year as would be required to construct that great and much-needed work, the Fort Saint Philip Canal. As it is, the Government is giving the bankers a bonus of about $20,000,000 a year, in the form of interest on bonds deposited by the banks, while all those great public improvements for opening up the avenues of commerce and cheapening transportation are to be postponed for want of money. Why is it, that in order to give to the people the bank circulation just named, the Government should be required to pay that large bonus every year? Why not provide that the Government take up the bonds and cancel them, and thereby save the interest on them, and give the people greenbacks for them drawing no interest?

Would any sensible individual refuse to arrange with his creditors in that way? Suppose you owed me a debt of $10,000, or any other sum, secured by mortgage on your land, and drawing 6 per cent. interest, which is to be paid in gold. Now, if you could adjust that debt on the basis that you shall take up your mortgage and give me your notes drawing no interest, to be paid whenever it should suit you, would you not, I ask, accept such an offer? If you would refuse to do so, your neighbors would be justified in regarding you as a fit subject to be placed under guardianship. And yet that is exactly what the Government has been doing for the last ten years; and the bank advocates say it was such a wise financial transaction that its operations ought to be extended to an unlimited extent under the name of free banking.

The bonds deposited in the Treasury by the national banks and held to secure their circulation, according to the report of the Comptroller of the Currency, on the 1st day of November, 1873, amounted to $392,852,100. Of that sum $235,022,150 draw 5 per cent. interest, and $160,829,950 draw 6 per cent. interest. Upon these bonds there was then an authorized outstanding bank circulation of $353,968,249. The whole number of banks then in operation was 1,975, which were distributed as follows:

Locality.	Banks.	Circulation.
6 New England States	506	$110,489,966
5 Middle States	584	124,608,139
14 Southern and Southwestern States	201	38,160,308
9 Western States	668	78,785,148
11 Pacific States and Territories	22	1,924,688
Total	1,975	353,968,249

These figures show a great disparity, both in the number of banks and especially in the amount of the circulation allotted to the different sections—a disparity greatly against the West. It is claimed that with free banking that evil would be remedied. I am not disposed to deny that such would be the effect. But the difficulty is that while removing or lessening one evil the remedy would create many others of much greater magnitude; a few of which only I have time to mention. In the first place, it would largely increase the extent and power of this already mammoth combination of corporations; because, although not a single corporation, there is a common interest among them all that would always induce them to make common cause in any scheme that their common interest would dictate. In the second place, it would largely and dangerously increase the power and influence of capital by giving its owners special privileges which are contrary to the spirit of our free institutions. In the third place, it would violate what I have already stated to be an essential prerogative of the Government, by allowing capitalists, and not the Government itself, to fix or limit the amount of the paper circulating medium. In the fourth place, by leaving the capitalists to regulate and control the amount of paper money, they would have the power to inflate the currency at times to any amount which their interests might dictate, and then, again, to contract the same when their interest would require contraction, thus keeping the business and values of the country constantly in a ruinous state of instability and uncertainty. That it is always to the interest of the money-gamblers and money-lenders to keep up that condition of uncertainty is proved by the constant operations of Wall street within the last ten years. In the fifth place, banks have no disposition, even if they have the power, to prevent a monetary revulsion, as is proved by their action in the struggle last September, in which the banks, instead of being able, or willing if able, to give any relief, were interested in withholding it, and they did so; and just the time when accommodations were the most needed was just the time when they could not be obtained. In view of these evils, and in the face of such experience, I would look upon the adoption of the free-banking scheme as one of the greatest financial evils that could afflict the country.

We hear much said about specie payments, and the pledge that Congress made in 1869, that the greenback should soon be redeemed. As to specie payment, all must know that it is simply impossible. There is not specie enough in the country, if every dollar of it was in the Treasury, to pay or redeem so much as one-half of the Treasury notes in circulation. True, if it could be done gradually, the Government might begin with the few millions in coin in the Treasury. But that cannot be done. It would be unfair to the holders of the part that cannot be paid for want of the coin. But the great objection to specie payment is, that it means a contraction of the volume of the currency. The greenbacks, if redeemed or paid, would be canceled, and would no longer constitute any part of the circulating medium. This would be ruin to everybody except the capitalists, as I have already shown. The cry of specie payments is therefore a delusion, intended to subserve no beneficial purpose. If desirable at all, the only way that specie payments could be reached is by the adoption of such a policy by the advancement of all our productive industries as shall enable us to export more of our commodities to foreign countries, and thereby turn the balance of trade in our favor. But while the vast agricultural interests of the West are crippled and burdened by a scarcity of money, and the impositions and extortions of railroad monopolies, and by the obstructions in the water lines to the sea-board; and while the South, that land of former abundance, is so crippled, robbed, and devastated by maladministration as to render her incapable of furnishing her quota in cotton to swell those exportations to their former dimensions, it is in vain that we look for a change in that regard. Until these obstructions to the agricultural productiveness of the country are removed, the hope for specie payments must remain an unrealized and visionary dream. And the best we can do in the mean time is for us to authorize the Government to supply the people with the next best thing to coin, as a circulating medium, which is the greenback Treasury note, in such reasonable quantities as shall once more give life and vigor to trade and business.

Educational Fund.

SPEECH OF HON. C. W. MILLIKEN,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

February 28, 1874.

The House, as in Committee of the Whole for debate only, having under consideration the bill (H. R. No. 477) to establish an educational fund, and to apply the proceeds of the public lands to the education of the people—

Mr. MILLIKEN said:

Mr. SPEAKER: I regret it has not been within my power to prepare the remarks that I propose to offer upon this occasion, so as to present them in better shape than I fear I shall be capable of doing.

I wish, as briefly as the nature of the case will admit, to offer to this House and to the country the reasons which induce my opposition to the bill offered by the distinguished gentleman from Massachusetts, [Mr. G. F. HOAR,] entitled "A bill to establish an educational fund, and to apply the public lands to the education of the people."

I approach the discussion of this bill with much more diffidence than I otherwise would because of the eminent source from which it comes.

It is my purpose to endeavor to show that its provisions are unjust, unequal, and in violation of the plain letter and spirit of the Constitution of the United States, and tending to class legislation in the interest of the colored, to the prejudice of the white race in the several States.

In doing this, and that I may not do injustice to its true import and meaning, I will read the several sections to which I wish to call the attention of the House as I reach them in the course of my remarks.

To begin, I read:

SEC. 2. That the Secretary of the Interior shall cause an account to be taken upon the close of each fiscal year, and ascertain the total receipts from the sale or other disposition of the public lands of the United States, including all fees received at the General and district land offices during such year, and the amount of expenditures during said year incurred or occasioned by the survey, sale, location, entry, or other disposition of such lands, including appropriations for the expenses of the said offices for said year, and shall certify to the Secretary of the Treasury the amount of the net cash proceeds from the sale, entry, location, or other disposition of such lands as aforesaid, after deducting such expenses and expenditures.

Then by the third section it is provided—

That upon the receipt of such certificate the Secretary of the Treasury shall cause one-half the amount so certified to be invested in bonds of the United States, bearing interest at the rate of 5 per cent. per annum, which said amount so invested shall constitute a perpetual fund in the Treasury of the United States, to be known as the national educational fund.

It is provided by the fourth section—

That upon the receipt of the certificate of the Secretary of the Treasury, as provided by section 3 of this act, the Commissioner of Education, under the direction of the Secretary of the Interior, shall proceed to apportion to the several States and Territories, and to the District of Columbia, upon the basis of population of the said States and Territories between the ages of four and twenty-one years, one-half of the net proceeds of the public lands for the previous year, together with the whole amount of the income of the said educational fund so certified, such apportionment to be according to the last preceding general census of the United States.

Now, Mr. Speaker, from the history of the States and their status, each toward the other, before, up to, and at the time of the organization of the Government of the United States under the Constitution, without a citation of that history, I conclude that the public lands of the country were then, and now are, a property held in common by all the States, each holding and owning an equal undivided interest therein with all the others; that the rights of no one of them are either greater or less than those of any other one; that they are held in the nature of a trust by the Congress of the United States as the agent alike for each and all the States, with instructions, certain, but stipulated and restricted.

This conclusion, however, is in effect denied, first, by the proviso in section 4, which at this point I merely wish to give a passing notice. It is as follows:

Provided, however, That for the first five years the distribution of the said fund to and among the several States and Territories, including the District of Columbia, shall be made according to the numbers of their respective population of ten years old and upward who cannot write, as shown from time to time by the last preceding published census of the United States.

It will not be, I hope, denied that they were equal while in a colonial state, and so recognized by each other, and by all the nations of the earth, at the time of their acknowledged independence. Then, if they were and are not equal now, when and where did the inequality take place, and where is the authority for it? No authority can be found where they or either of them have surrendered any portion of their rights to the public lands since the adoption of the Constitution of the United States. If in this statement I am wrong I will thank any gentleman to correct me. Assuming that I am right, let us see what will be the distributable share under this proviso between the State of Massachusetts, the State of the gentleman, [Mr. G. F. HOAR,] and that of Kentucky, my own State.

By the last general census the population of Massachusetts was 1,457,351. Out of this number there were 97,725 persons ten years old and over who could not write. By the same census the population of Kentucky was 1,321,011, and out of this number there were 132,128 persons ten years old and over who could not write; thus proving to a mathematical demonstration that by this bill the State of Kentucky will receive one-third more of the public lands than will the State of Massachusetts, though the latter has 136,340 more inhabitants than has the former.

But, to illustrate further, I will take the States of New York and Mississippi, which, by the same census, are as follows: that of New York was 4,382,757, out of which 239,152 ten years old and over could not write; that of Mississippi 827,922, and out of these there were 312,128 ten years old and over who could not write. Thus it will be seen that this bill gives to the State of Mississippi over one-third more of the public lands than it does to the State of New York, notwithstanding the State of New York is five times greater in population than Mississippi, and the State of Mississippi will receive over three times as much as will the State of Massachusetts, though the latter has a population of 629,429 more than the former. But it will be remembered that of the number in Mississippi who are to be the recipients under this bill 264,902 are negroes and 37,226 are whites, which establishes the further fact that the negroes there receive of this distribution nearly eight times as much as do the whites, and nearly as much as both the States of New York and Massachusetts, whose populations are almost entirely white.

While I may be charged with indiscretion in my opposition to this bill, I hope not to be charged with a want of candor and honesty of purpose in refusing to accept a proposition which seems to give to my State an advantage in this distribution over many of the Northern and Eastern States, for I can accept no proposition, however advantageous to me or the people whom in part I have the honor to represent, when its acceptance involves a sacrifice of principle, as would be the case, in my judgment, were I to support this measure. I want justice to be done to each and every State, and to each individual in every State of this Union. I want no State or individual to have any advantage by this or any other law over my State or myself, nor do I want my State or myself to have any advantage, by this or any other law, over any other State or person of this Union. This I believe to be the true theory of our Government, and the feeling that should prompt every gentleman on this floor in casting his vote upon this and all other measures, it being equal rights to all and exclusive privileges to none. And believing this, I am led to inquire what prompts such excessive overflow of philanthropy as is contained in this bill, whether there is not some selfish or political end to be sooner or later accomplished by it; for the principle in human nature to gather together as much of this world's goods as possible, by all honorable means, is as boundless as civilization itself. Then why this bountiful gratuity if self is not to be benefited some way or somewhere, sooner or later?

While I opposed with all the earnestness of my nature the passage of the thirteenth, fourteenth, and fifteenth amendments to the Constitution, by which the negro was set free and citizenship and franchise conferred upon him, I have no unkind feeling toward him. He is not to blame for either. They were thrust upon him without his solicitation, and he has simply put on and is wearing the garment without complaint that was cut out and put on him. I thought at the time of the passage of the thirteenth amendment, and yet believe, it was a great outrage upon the rights of those who owned slaves, and an outrage upon other existing parts of the same Constitution then in full force and effect. That outrage, among other things, consisted in the disfranchisement of those who owned property in those slaves, in order to pass this amendment, and thereby, without compensation to the owner, deprive him of a property fully recognized and protected by the law. By the passage of this amendment, millions upon top of millions of dollars have been swept from the States that owned them; and immediately following this amendment oppressive military governments were placed over them and men appointed and installed into their several offices, in a majority of instances, who had no local identity of interest either with the States or the people over whom they ruled and tyrannized, outside of pelf and plunder, which has left them poor indeed.

On top of all this came, and yet comes, unequal and unjust taxation both by State and Federal law, by excessive tariffs, internal revenue, and levies to maintain a State militia to hold in subjugation those who pay the taxes; thus daily grinding and pressing them to deeper humiliations. In addition to all this, there is a public debt hanging over us, as shown by the reports of the last fiscal year, of $2,234,482,993, with an interest of $104,750,688, but which has been reduced to some extent; and to this may be added the fact that our imports exceeded our exports more than $15,000,000, a falling off of customs and internal revenues, and a cost of about $300,000,000 annually expended in the administration of the Government.

Sir, with these startling facts and figures before us we are asked to take from the public Treasury annually the sum of $2,882,312, which was the amount of receipts from the public lands at the close of the last fiscal year. Such an act would necessarily carry with it heavier and more burdensome taxation in one or another shape. Especially will it be required with a bankrupt Treasury, as we had at the convening of the present session of Congress, and thereby add depression to the oppression that is crushing the energies and industries of the whole South.

While I charge that this legislation looks almost, if not entirely, to the education of the colored race of the Southern States, and not to that of the whites in any part of the country, I do not wish it understood that I oppose the education of the negro or any other race on the earth; for I tender my readiness to assist in the education of all persons, of whatever race or nationality, when and wherever the same can be done in justice to all parties concerned. But I cannot and will not give my consent to take from the public Treasury the public moneys by congressional legislation to educate anybody. I have been the negro's friend on more than one occasion when he was in need of a friend, and this, too, since his freedom, and will continue to be whenever and wherever it is right, in my judgment, to do so.

I do not charge the gentleman with an attempt to commit a fraud or a wrong on the States or the people by this bill, for such is certainly not his deliberate purpose; but, at the same time, the effect of its passage will be both a fraud and a wrong, because of the unjust and unequal distribution of the public lands among the States and the whole people therein, as provided and contemplated by the details of the bill.

But, Mr. Speaker, the inauspicious times in which we live are pregnant with frauds, wrongs, and usurpations.

Falling within the purview of this description of legislation is a bill now pending before this House, known as the civil-rights bill, but which may more properly be called the social-rights bill, for such is its only effect upon those sought to be affected by it.

Which of these two measures is the greater usurpation and fraud upon the reserved rights of both the States and the people I am unable to determine, for both alike disregard either, and are looking to the advancement of the colored, regardless of the white race. That they are closely related one to the other is clear, as they both came from Massachusetts together, registering themselves at the same hotel and destined for the South; in fact, they spring from the same parent stem. Like Chang and Eng, they travel together, they are at home together, they lie down together and get up together, they sleep together and wake together, and I hope will soon die together.

But, sir, if it be true that all men are equal before the law in our country, then the civil-rights bill is surplusage and this school bill a libel on that truth. Be that as it may, the purpose of these bills is too palpable to be misunderstood. They are so clearly class legislation in the interest of the colored race, that he who runs can read and understand it, for it is known by the friends of the civil-rights bill that if it shall become a law, it will disorganize and break up the public-school system throughout the South, because it of necessity mixes the races in those schools. In that event this school bill stands ready to reorganize those schools, and thereby apply every dollar of the public lands assigned to those States to the education of the colored race.

Then the question presents itself, is this character of legislation designed for the good of the whole country, or is it to accomplish some political end? Can a general law affecting the whole people, and affecting them unequally, be a just law, and consistent with the Constitution? If so, the Constitution itself is defective, and should be amended. But this is not true; the Constitution knows no favorites, few or many, to the prejudice of others, but recognizes the exalted and the humble alike. As it now stands, the rights of all persons are equal and the same, regardless of color or previous condition of servitude. This is a phrase you have inserted into the Constitution yourself, or at least your party did. Now stand by it. It does seem that further legislation in this direction can be prompted by no higher motive than a gratification of some further or other selfish political end; for every conceivable device and strategy have been sought for, and put on foot, since the war, to estrange the feelings of the colored man from his former master, who is to-day his truest and best friend; while, on the other hand, all things possible have been done to gain his confidence, by telling him falsehoods, and thereby securing his support at the polls. I confess there are honorable exceptions to this unpardonable sin, and I am proud to know it.

But, sir, the more I think and reason on this subject, the more monstrous its provisions grow, and the more thoroughly I am convinced that there is not a paragraph or sentence in the whole bill that is not inconsistent with public and private rights, and subversive of constitutional guarantees.

I will dwell no longer on this part of the subject, but call your attention to the consideration of the fifth sectio n, which reads as follows:

> That each of the States and Territories, and said District, shall be entitled to receive its share of the first distribution under such apportionment, which shall, before the first day of January, 1875, or within two months of the first meeting of its Legislature thereafter, have, by its Legislature, engaged that it will provide by law for the free education of all its children between the ages of six and sixteen years, and will apply all moneys which it shall receive under this act in accordance with its conditions.

How startling is this proposition! No party before has ever held to a theory or advocated a policy that was inconsistent with the principle I laid down in the beginning, that is, that the public lands are a common property to all the States, and that the title of no State in and to the same is paramount to that of any one or more of the others. This idea has been uniform with both lawyers and politicians at all times, so far as I am advised. Sir, does not this section disregard, deny, and overturn the idea that a State has any rights whatever, either absolute or qualified, in these lands or their proceeds?

The proposition, when reduced to its simple meaning, is that if the State will by solemn act of its Legislature enter into a contract binding itself unconditionally, and without qualification, to educate all its children between the ages of six and sixteen years, free of charge to them, then and in that event only it may obtain the little pittance by this law allotted to it. In other words, the several States may have and use that which is their own, provided they will use it as their agent (Congress) orders them; and provided, further, that they will obligate themselves to exhaust their State free-school fund, their sinking fund, their treasuries, and all other money resources, if it shall take this sum, to educate all who are within the ages of six and sixteen.

Nothing short of this is the demand made of the States, for this section does not restrict them to the use of the land proceeds to educate these children, but the demand is unconditional and unqualified that they shall educate them, which fairly and logically bears the construction that they shall be educated, let the sacrifice be what it may; and if they fail or refuse to comply with any of these mandatory conditions, they (those refusing) shall not receive and enjoy that which by law is their own, by vested and absolute right, in a joint and common property to them all. Was ever a more arbitrary and high-handed measure taken by despotic governments, much less by a legislative body claiming to bear the name and attributes of a republic?

The word "educate" occupies an important position in this entire bill. Further along you will find there is a Commissioner of Education, who is invested with immense power and authority; and the word "educate," being indefinite in its extent, will give this Commissioner, if he be a bad man, (which is very likely, for there are a great many of them nowadays,) a pretext under this fifth section to withhold the distributable shares from one or more States as he may see fit, upon the ground that this word means more or less education than that promised to be given by the State in its acceptance of the terms contained in this section.

Nor have we yet reached the end of these qualifying and restricting conditions upon which this money may be had.

I now read section 7, which is as follows:

> That each State and Territory, and said District, shall be entitled to receive its share of every apportionment after the first.

And three additional conditions, the first of which is that the State will again reiterate the promise made in the fifth section. The second is—

> That it shall have applied all moneys by it previously received under this act in accordance therewith.

That is, in accordance with each and every condition in the whole bill. The third is:

> Thirdly. That it shall, through the proper officer thereof, for the year ending the 30th day of June last preceding such apportionment, make full report of the number of public free schools, the number of teachers employed, the number of school-houses owned and the number of school-houses hired, the total number of children taught during the year, the actual daily attendance, and the actual number of months of the year schools shall have been maintained in each of the several school districts or divisions of said State, Territory, or District, and the amounts appropriated by the Legislature for the purpose of maintaining a system of free public schools.

Here contemplating again the exhaustion of the school fund of the State, the exhaustion of the State treasury, and all other private resources of the State, over which Congress has no more rightful control than a single private individual of England. Yet you are bound to surrender these private and reserved rights of the States before they can receive a dollar.

We have now reached the eighth section, in which is contained the almost unlimited power of the Commissioner of Education under this bill, and which reads as follows:

> That on or before the 1st day of September, in each year, the Commissioner of Education shall certify to the Secretary of the Treasury, as to each State, Territory, and District, whether it is entitled to receive its share of the apportionment under this act, and the amount of such share, which shall thereupon be entitled to receive the same. If the Commissioner shall withhold a certificate from either, its share of such apportionment shall be kept separate in the Treasury until the close of the next session of Congress, in order that it may, if it see fit, appeal to Congress from the determination of the Commissioner. If Congress shall not at its next session direct such share to be paid, it shall be added to the general educational fund.

Here you discover him monarch of the field and sole arbiter as to whether the State or States have complied in detail with all the conditions and restrictions of this most unjust law, including the word *educate;* that is, whether or not the State has educated its several children between the ages of six and sixteen up to the standard fixed by him; if not, of course he refuses to give the required certificate. Then what is the remedy? An appeal to Congress is the only remedy from the determination of this monster in authority. Then suppose Congress shall have a quantity of general public business to transact, and consequently not have the time to devote to the little trivial matters pertaining to the rights of one little and insignificant State, or shall refuse or neglect to act in the premises, the appeal is unavailing, and the money thus lost to the State is added to the general educational fund, thereby increasing the educational interests of each of the other States, whose representatives may negligently or carelessly have deprived the former of its just rights, if indeed any right under this bill may be termed just.

Nor is this all the difficulty attending this appeal. The costs attending it, with counsel and witnesses, in many characters of cases that might be cited, would be immense, because of the extravagantly high prices of living in this national capital city, and the uncertain times at which a trial might be had, all of which must come out of the State treasury, for it can come from nowhere else. She cannot touch one dollar of the money in controversy for any other than for school purposes under any circumstances, or for any purpose or purposes, and hence the value of the entire amount in controversy may be lost in the effort to get it.

Why, sir, what would be the sense of the State of California in taking an appeal and bringing her witnesses and records to Washington City in the effort to get the pittance that might be assigned her, or the States of Oregon, Florida, Texas and others that could be mentioned, whose distance from the capital renders a successful effort by appeal almost hopeless, especially where witnesses might be required before a committee to inquire after and report the facts?

And now, dismissing these objections, I pass on to another feature in this bill that is seriously objectionable to me, whatever may have been the practice in the Federal courts, or whatever may have been the phraseology of the Federal statutes heretofore.

To reach this objection I read section 11:

> SEC. 11. That in case any State or Territory shall misapply, or allow to be misapplied, or in any manner appropriated or used other than for the purposes herein required, the funds, or any part thereof, received under the provisions of this act, or shall fail to comply with the conditions herein prescribed, or to report, as herein provided, through its proper officers, the disposition thereof, such State or Territory shall forfeit its right to any subsequent apportionment by virtue hereof, until the full amount so misapplied, lost, or misappropriated shall have been replaced by such State or Territory, and applied as herein required, and until such report shall have been made; and all apportionments so forfeited and withheld shall be added to and become part of the principal of the educational fund hereby created; and the officer or officers, person or persons, willfully so misapplying, misappropriating, squandering, or embezzling such funds, or knowingly consenting thereto, shall be deemed guilty of a felony, and, upon conviction thereof, shall be punished by a fine in double the amount so misapplied, misappropriated, squandered, or embezzled, or by imprisonment not less than one nor more than three years, or by both such fine and imprisonment, in the discretion of the court.

The objection that I here refer to is the discretion given the court by the latter part of this section. But before I urge my objections to this feature of the section I wish to notice more fully its other restrictions and demands.

By other provisions of the bill, it will be remembered, the several school officers of the State are made the officers of the Federal Government to receive and disburse the moneys herein distributed by virtue alone of their State official position. Therefore each of the States must surrender to the Federal Government an interest in the time and labor of her officers in order that she may receive and enjoy this benign bounty from the hand of her master, Congress. She must further engage to indorse, and be responsible for, all his acts under this law, under penalty of a forfeiture of her distributable share of this fund. And if any one of these several officers shall fail in any of the requirements of the bill, or if he shall misuse, misapply, or embezzle any portion of this money, the State thereby forfeits all interest therein to a future distribution, unless she will take from her treasury an equal amount and supply the deficit occasioned by the bad faith of that officer. If the engagements of the State are such that the amount is not in her treasury, then she must make a levy on her citizens and require them to replace the amount, otherwise she is disinherited forever; hence you see she is made the surety of each one of these officers, not willingly, but forcibly, as the only condition upon which she is permitted to receive and enjoy this money. And while the officer who is to receive and disburse the money is liable to both fine and imprisonment, upon his bad faith, inattention, or other misfeasance, malfeasance, or nonfeasance in office, he is not paid a cent for his services. It would, doubtless, be amusing to see how many of the thousands around this city, who are in the employment of the Government, could be found at their posts of duty a week from to-day if assured by act of Congress they would receive no compensation for their labor, but be fined and imprisoned in the penitentiary if what they did do was not well and faithfully done.

But I now come to the consideration of the latter part of this section, that part of it which gives to the judge of the Federal court the discretion of fixing the punishment as between the two extremes, and the period covered by them. It seems to me that this part of the bill is an abridgment of the right of trial by jury, and in violation of that part of our Constitution which has given such universal pride and confidence to our citizens in all parts of the country in our system of government. At any rate, it grates harshly on my ear, as a violation of the true spirit, meaning, and intent of our system and theory of government.

Mr. G. F. HOAR. Would it disturb the gentleman if I were to tell him why that provision is inserted in the bill?

Mr. MILLIKEN. It would not.

Mr. G. F. HOAR. I do not understand that it is the purpose of that bill, or that the effect of it would be, to deprive anybody of trial by jury. It proposes that certain courts should have jurisdiction of the offenses specified. Of course the trial would be by jury, and this I understand to be the ordinary provision in the case of all offenses against the Government.

Mr. MILLIKEN. The gentleman is right, I concede, in the ordinary provisions with respect to all offenses against the Government; and to these ordinary provisions I object, as well as to the gentleman's bill. I wish to construe it fairly; but to do so I must be allowed to speak of it as it is, and not with any explanation of the gentleman outside the bill.

Mr. G. F. HOAR. I will ask the gentleman if this bill, in this respect, varies at all from the language ordinarily used in provisions of the United States statutes in all cases relating to crimes?

Mr. MILLIKEN. I have stated that in this the gentleman is doubtless right so far as the United States statutes are concerned, and it is to this I object. The State statutes, so far as I am aware, are, however, different, and I think are correct, and the Federal legislation wrong, on this subject; because, as in this law, there is a discretion given the court in fixing the period of confinement within and including the two extremes. The period of confinement, not being fixed positive and certain by the statute, is not matter of law, but a question of aggravation and mitigation to be determined from the facts and circumstances of each case, just as the guilt or innocence is to be determined from the same facts and circumstances. The only province of a court, in trying a person for his life or liberty, is to judge and expound the law to the jury as it is, they alone being the judges of the facts and circumstances, limited in their verdict by the law as given them by the court.

The Constitution guarantees to each citizen the right of trial by a jury composed of his peers. Then what is the province of that jury? It is to act upon the facts, and determine from them the guilt or innocence of the party accused. Therefore if they, and they alone, determine from the facts that the party accused is guilty, should they not also say how guilty, or to what extent guilty? If it is safer for a jury to say whether or not a law has been violated than the judge of the court, are they not for the same reason safer than he to determine to what extent it has been violated, and to what extent the party violating it shall be punished, they having and acting upon all the facts and circumstances, while the judge of the court acts or fixes the period of punishment alone by reason of the finding of the jury under the law as it now is?

Mr. G. F. HOAR. I understand that there are no cases in the statutes of the United States which provide, nor are there any United States courts where the jury fixes, the amount of penalty; in all cases that is done by the court. Does the gentleman know of any case where the jury in a United States court fixes the amount of penalty?

Mr. MILLIKEN. It is to this I object, and I know of no better time to correct either a wrong or an error than when the same is discovered, and this and other similar statutes are to my mind errors that should receive immediate attention and correction.

The twelfth section gives jurisdiction alone, and is as follows:

> The circuit courts of the United States shall have exclusive jurisdiction of all offenses committed against the provisions of this act, and shall have power and authority, by proper writ, to compel the performance of the duties herein required by any officer herein mentioned.

It will be remembered that by a previous section the State officers are made the recipients of the money to be distributed, not by the consent of the State, or of the individual officers, but by the unbounded and limitless will of the Federal Government. She steps into the State and takes possession of its civil officer, and applies him to the use of the congressional will. This, gentlemen, is a bold, daring, and high-handed assault upon the reserved rights of the States, as well as those of each and every private citizen of every State of the Union, and one which every member on this floor should feel himself specially called upon to resist with all his ability; for by the provisions of this section, should that private officer, either willfully, by negligence, or otherwise, fail to comply with the full requisitions of this bill, the judge of the Federal court has exclusive jurisdiction of his offense, whatever it may be, with authority to arrest and take him from the use and employment of the State, whose officer he is, and against whose laws he has committed no offense.

If Congress has the power to take charge of the school commissioners of a State, and does take charge of them, has it not equal power to take charge of the probate judge of a county, the circuit judge of a district court, the supreme judge of the State, or its governor; and will it not do it whenever it thinks proper to do so? Most assuredly. For the same power can be found in the Constitution for making the governor of a State this receiving and disbursing officer that is found for making a school commissioner of a school district. And should that governor in the discharge of this national official position fail to discharge all its duties, a Federal judge issues his Federal warrant and puts it in the hands of a Federal marshal who executes its high command by arresting the highest officer known in State authority. Would this not subvert every principle of local self-government, wipe out State lines, and at one blow centralize in the various departments of the Federal Government every vestige of State and individual rights worth living for? Certainly this conclusion cannot be denied; for when the power is once admitted, the will to exercise it is ever ready. And thus will end the proudest and happiest government the world has ever known.

I now call your attention and ask you to consider it with me in its constitutional bearing for a few moments. For this purpose I read all of that part of section 3, article 4, of the Constitution of the United States touching upon the power of Congress to legislate upon the subject of the territories, and the only clause in the Constitution where any power to legislate as to the territories is given to Congress. It is as follows:

> The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States.

The power is clearly given to *dispose* of the territories and to make all *needful* rules and regulations respecting them. But does this language carry with it the correlative power to dispose of and make all needful rules respecting the proceeds arising from the disposal of them? If so, how? In what way? The language of the law does not say how nor in what way, nor does it by implication give such power; for the only power that is given is direct, clear, and positive; and if the framers of that instrument had intended to give the power to dispose of the proceeds arising from a sale of the territories, is it not reasonable to suppose they would have said so in as clear and concise language as they did in conferring the power to dispose of the territory itself? If not, why not? for they certainly knew as well what the effect of the language here used was, as that used anywhere else in the same instrument. It certainly would have been as easy, and certainly clear enough for any one to have understood it, if they had said that Congress shall have power to dispose of and make all needful rules and regulations respecting the public lands and the proceeds arising therefrom, as to have said what they did say; but they have not said this, nor have they used language from which a reasonable inference can be drawn that they meant or intended to give such power, or any other than that plainly and clearly expressed in the language quoted.

The gentleman may fall back, though, on the latter part of the last paragraph of article 1, section 8, and claim that we have the power by inference or implication, as by this section all power is given to Congress which shall be necessary and proper for carrying into execution the vested powers. But if he will carefully examine the language used in this section, and that used in the section which gives to Congress the power to dispose of the public lands, he will find as little authority in one as the other; for Congress can only exercise the implied power when the expressly given powers are insufficient

cise any authority not clearly given it by the Constitution. Nor can it assume to itself the right then in reference to the public lands, unless it appear to be both necessary and proper to do so. Hence it will be seen that the discretion which is given in section 8 of article 1 is qualified by section 3 of article 4. Therefore, as there was no power given to Congress to dispose of the proceeds arising from a sale of the territories, and none that can be legitimately inferred, what is the most natural and safe course to be pursued by Congress? Clearly, I think, to place the money in the public Treasury and let it go in liquidation of this enormous public debt that is sucking the very life-blood from the South and West, irrespective of party association.

Why, sir, if Congress, with this flimsy and far-fetched inference, may exercise the right of using this money in this way, may it not (and is not the power equally clear that it may) invest these lands in railroads on speculation, in railroad bonds, in town lots, in magnificent mansions for rental purposes, and in anything else, without stint or hinderance?

This is not all; and that my argument may be more clearly understood, I read the whole of the last paragraph of article 4, section 5:

> The Congress shall have power to dispose of and make all needful rules and regulations respecting the territories or other property belonging to the United States; and nothing in this Constitution shall be so construed as to prejudice any claims of the United States, or of any particular State.

Certainly, sir, this puts the idea of the rejection of this bill beyond question, for two facts are clearly, and beyond doubt, established by this paragraph: first, that the territories are the common property of all the States, otherwise they could not have enacted this section, they, at the time, being in convention of the whole States, and certainly as such would not have acted upon any matter which did not affect all alike; secondly, because in this same article, section, and paragraph, in which is given to Congress the power to dispose of the territories, and make all needful rules, regulations, &c., respecting them, are also found restrictions to the effect that nothing in the Constitution shall be so construed as to prejudice any claim of the United States, or of any particular State. In construing this law the whole paragraph must be considered together in order to reach the full power, and no more, that is intended to be given Congress, for the reason that the power to dispose of the territories, and the restrictions that nothing in the Constitution shall be construed so as to prejudice the rights of either the United States or those of the States, are bound together by the copulative conjunction, and making the whole paragraph one sentence, and hence precluding every other hypothesis than that to exercise the power given to dispose of the territories, it must be done with a due regard to the equal rights of each State as well as the United States, otherwise the power given cannot be exercised without the usurpation of power clearly withheld from it.

I hold, sir, that Congress is but the creature and agent of the States; that it has no existence outside of the Constitution of the United States. Nor has it any power outside that instrument. To destroy the Constitution would be the destruction of Congress and the abrogation of all the powers now legitimately exercised by it. And hence the Constitution is the life-giving power to Congress and the power of attorney by virtue of which alone it acts or can authoritatively act.

The Congress, therefore, acting under specified and restricted instructions, should not, as a prudent and discreet body, watchful of the best interests of its principal, exercise any authority or privilege not plainly given, unless the exercise of it should become an absolute necessity, to accomplish the end sought to be accomplished by the principal, and it the only means by which the desired object could be attained. This view was most certainly the one in which the framers of the Constitution looked on the powers conferred upon Congress. And in confirmation of this conclusion I read the tenth article of the amendments, which is as follows:

> The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

This article is the palladium, the great safeguard and bulwark, of our boasted liberties; and when we, as the representatives of the people, have violated these sacred restrictions, we have that moment sinned against light and knowledge, and deserve the execrations of an outraged people and frowns of a just God.

When the restrictions thrown around us by the constitution are once broken over, a field as boundless as imaginary space lies before us. The tyrant, whose ambition for place and power never ceases to burn within him, would be surfeited in viewing the feast spread out before him. Then, sir, the rights of the people are gone forever. Liberty will desert us, and discord and confusion, pain and war, will take the place of order, quietude, peace, and happiness; this, too, in every section of the land.

Think not that one member of this political union of States, or any other number, can be wrongfully and foully dealt with, and the rights of the others remain intact; such is not the truth. Like any other body, when you have wounded or severed any portion of it, the whole body, by the natural course of things, will sympathize, and sooner or later decay will follow.

Hence I pray you, who have lived in peace and affluence since and during our late war, be not content to fold your arms and look quietly at the ravages of the rights of the Southern States, in the confidence that your States and your liberty are secure from the same red right of themselves to accomplish and carry into effect the object sought to be accomplished by those powers thus expressly given. Hence, when they fail, and not till then, can Congress rightfully assume to exerhand, for I warn you now to fly the wrath to come. Oppression knows no friends, and its wrath is as certainly destined to reach you as it has reached them, unless reform is invited to the rescue. For by the passage of this bill your rights and those of your States are invaded as well as those of the South, and it is but the entering-wedge of another and another, of like and even more serious usurpations of power, if possible, until, finally, there will be but one legislative body in all the length and breadth of this Union of States, and but one great centralized governmental power.

By way of awakening your jealousies as well as your judicious scrutinies to a full and thorough examination of this bill, let me here refer to some authority for our cautious guidance, as showing the great care with which we should approach the exercise of doubtful legislative power as members of Congress.

I read from page 331, of volume 4, of Thomas Jefferson's Works. He says:

> The true theory of our Constitution is surely the wisest and best: that the States are independent as to everything within themselves, and united as to everything respecting foreign nations.

Is not the idea contained in this bill put to blush when confronted by this language, coming as it does from a source so eminent?

On the same subject I now read from page 758, volume 7, of the same Works. Among other things he says:

> With respect to our State and Federal governments I do not think the relations are correctly understood by foreigners. They generally suppose the former subordinate to the latter. But this is not the case. They are co-ordinate departments of one simple and integral whole. To the State governments are reserved all legislation and administration in affairs which concern their own citizens only; and to the Federal Government is given whatever concerns foreigners or the citizens of other States—these functions alone being made Federal.

Can you for one moment reasonably conjecture that Thomas Jefferson ever dreamed that Congress, at any time in the history of this Government, would assume to itself the right to enter the limits of a State of this Union for the purpose of taking hold and control of the education of its children? If so, these sentiments were willful deceptions, for which posterity should never forget to despise him. But, sir, such an idea was never entertained by him. He thoroughly understood the design sought to be reached, and the relative rights reserved by the States, as well as those surrendered to the United States Government; and no better definition of their powers respecting each other can be given in fewer and simpler words than is in these two quotations. It is at any rate clear to my mind that if the States have the right to regulate and control their own internal social relations the Federal Government has not, and if the Federal Government has it the States have not; but for the Federal Government to have it, it must have been given to it by the States, somewhere or somehow. I will wait for the gentleman from Massachusetts [Mr. G. F. HOAR] to tell us where and how, if he can. If he does not, the inquiry recurs, is this not a matter which concerns her own citizens only? unless the gentleman may argue that the education of the people of the several States is not a matter which concerns the State only, but one which concerns the Federal Union or Government in a national point of view. If he takes this view, then there is no way to meet him; for if that position be tenable, Congress may, by its legislation, regulate the relation between husband and wife, guardian and ward, landlord and tenant, and all other social, financial, and industrial relations of life between the citizens of a State; for it is as much interested in each of these as in the education of the people of a State. The well-being of the citizen in a social and financial point of view tends to give character and wealth to the General Government as well as does the education of the citizen of a State. And by parity of reasoning the States have no rights that may not be invaded and wrested from them by Congress. Thomas Jefferson was insane when he wrote this book, or never knew what principles the Government was based upon if this bill is in harmony with the Constitution.

I have now said all I have to say on this subject at present, and may never be heard on it again. I therefore appeal to each member on this floor, irrespective of party affiliation, to vote against this measure, to unite as one man in an effort to return within the limitations prescribed by the Constitution in the exercise of legislative power, and to reform in the expenditure of the people's money, that they may feel and know their servants are faithful and obedient to the trust that has been confided to them. Let not the laboring multitudes of our whole country, who are staggering like a drunken man under the burdensome taxes that are now weighing them to the ground, cry out against us because of additional taxes made necessary by the passage of this bill. Should this appeal be unheeded by you, I then appeal to the people in every nook and corner of the land to look well to their own interest, to demand of Congress reform and retrenchment in the expenditure of their money. And from every consideration that is near and dear to an American citizen I appeal to them to require of their public servants, in every official position, to confine their official acts strictly within the limits prescribed by the Constitution of the country, else return them to private life, where they can sin no more.

Free Trade—Interstate Commerce.

SPEECH OF HON. WM. E. ARTHUR,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

March 3 and 4, 1874.

The House having under consideration the bill (H. R. No. 1385) to regulate commerce between the several States—

Mr. ARTHUR said:

The proposition, by act of Congress, to make a Federal incursion into the reserved province of executed contracts between man and man in the several States, and seize and vest in nine persons, to be appointed and removed at the pleasure of the Executive, the whole subject of personal intercourse, with rates and charges for carrying men for hire, and property for hire, over all chartered railways in the Union, connecting or intersecting across State lines, is manifestly a proposition sufficiently startling.

The novelty and magnitude of the subject, the popular sentiment converging upon it, the public men supporting it, together with its relations to the fundamental law, by which it must be judged, demand for it the gravest consideration which can be awarded it by the House and the country. If I may be permitted so to speak, the proposition is in the nature of an experimental exploration of the elasticity of constitutional government, penetrating not only the known and real, but the unknown and conjectural; searching not merely the most vital center of Federal power, but equally the faintest shadows of its most imaginary extremities.

To the continued constitutional regulation of commerce among the several States, in the future as in the past, as illustrated by congressional legislation through a period of more than eighty years of unexampled commercial prosperity, there is, I believe, universal assent. The proposition so to construe a grant of limited power as to make its scope in effect unlimited and universal, and under color of such construction to push the legislation of Congress to an extreme heretofore unheard of, forms an occasion for the temperate consideration and candid judgment of the American public, aided by all the light which can be obtained from the exhaustive deliberations of those early and succeeding American statesmen and jurists whose investigations and opinions continue to shed luster upon all the principles and powers of institutional government. On a very interesting occasion Mr. Madison said:

It will be remembered that a frequent recurrence to fundamental principles is solemnly enjoined by most of the State constitutions, and particularly by our own, as a necessary safeguard against the danger of degeneracy to which republics are liable as well as other governments, though in a less degree than others. And a fair comparison of the political doctrines, not unfrequent at the present day, with those which characterized the epoch of our Revolution, and which form the basis of our republican constitutions, will best determine whether the declaratory recurrence here made to those principles ought to be viewed as unreasonable and improper, or as a vigilant discharge of an important duty. The authority of constitutions over governments, and of the sovereignty of the people over constitutions, are truths which are at all times necessary to be kept in mind; and at no time, perhaps, more necessary than at present.

At the termination of the revolutionary war the States found that they were not in a condition to realize its fruits. The Articles of Confederation proved wholly inadequate, whether as a basis of union or as a constitution of government. The Confederation was neither suited to the domestic nor the foreign relations of the States. The government in virtue of it was plainly incompetent. But it manifested the extraordinary greatness of promptly consenting to forego its own existence and aid in transferring its functions, enlarged, multiplied, and strengthened, to its successor under the present Constitution. No necessity contributed more powerfully to the formation of the present Government than that of the regulation of commerce.

Two of the major evils which it was especially designed to remedy were, first, commercial restrictions at home; and, secondly, commercial restrictions abroad. Free and untrammeled commerce among the States and with foreign nations formed the paramount object to be promoted. Freedom, fairness, competition, and equality, combine the influences under which it was known to achieve its greatest triumphs.

The States had pursued systems of retaliatory restrictions upon each other, which uniformly resulted in adversity to their own commerce, and in prosperity to that of rival powers.

Before the Constitution existed the States taxed the commerce and intercourse of each other. This was the leading cause of abandoning the Confederation and forming the Constitution; more than all other causes it led to the result. (Mr. Justice Catron in the Passenger cases in 1849.)

Said Mr. Hamilton, illustrating by quotation:

The commerce of the German Empire is in continued trammels from the multiplicity of the duties which the several princes and states exact upon the merchandise passing through their territories, by means of which the fine streams and navigable rivers with which Germany is so happily watered are rendered almost useless.

Though the genius of the people of this country, he said, might never permit this description to be strictly applicable to us, yet we might reasonably expect from the gradual conflict of State regulations, that the citizens of each would, at length, come to be considered and treated by the others in no better light than that of foreigners and aliens.

And Mr. Madison represented that if one State imposed high duties on the goods or vessels of a foreign power, to countervail the regulations of such power, the next adjoining States imposed lower duties, to invite those articles into their ports, that they might be transferred thence into other ports, securing the duties to themselves.

This contracted policy in some of the States was soon counteracted by others. Restraints were immediately laid on such commerce by the suffering States, and thus had grown up a state of affairs, disorderly and unnatural, the tendency of which was to destroy the Union itself, and with it all hope of realizing those blessings which had been anticipated from the glorious revolution which had been so recently achieved.

The sole power to regulate commerce among the States was in the States severally. Its exercise was inevitably conflicting, irritating, and disastrous. The evil was restriction, the remedy freedom. Hence the several powers in each of the States to regulate commerce were, to a limited extent, merged in the Federal power to regulate commerce among the States, in order that the General Government should have authority to remove and preclude restrictions and secure uniform freedom of commerce among the States. Instances of the evils of such restrictions upon interstate commerce were plentiful at that early day when American trade was yet in its infancy. The States which imported and exported through the Atlantic States required relief from the burdensome duties and imports of the latter.

Were these at liberty to regulate the trade between State and State, it must be foreseen that ways would be found out to load the articles of import and export, during the passage through their jurisdiction, with duties which would fall on the makers of the latter and the consumers of the former. We may be assured by past experience that such a practice would be introduced by future contrivances; and both by that and a common knowledge of human affairs, that it would nourish increasing animosities, and not improbably terminate in serious interruption of the public tranquillity. To those who do not view the question through the medium of passion or of interest, the desire of the commercial States to collect, in any form, an indirect revenue from their uncommercial neighbors must appear not less impolitic than it is unfair; since it would stimulate the injured party, by resentment as well as interest, to resort to less convenient channels for their foreign trade.—*Madison.*

There were incidents and details legitimately within the compass of the American sense of the power to regulate commerce with foreign nations, and among the several States, and with the Indian tribes, not relevant to that branch of the subject now under consideration. What we are now especially concerned with are the origin, identity, and objects of the grant of the power to *regulate* commerce. It is important to keep in view those ultimate limits of this division of the question. The oppressed and degraded state of American commerce was chief among the most insufferable grievances. Even among the States alone it lay prostrate before the cupidity of foreign nations, and every American effort at counteraction by suitable restrictions was made abortive by divided councils and conflicting instrumentalities.

The New England States were then, as subsequently, eminently commercial in their popular pursuits. Under the British Crown they had enjoyed a profitable foreign trade with the English West India islands, and also with the French islands. In the whale and cod fisheries on the American coast they had scarcely any formidable competition. The British posts scattered along the line to a considerable extent of our northern frontier had covered a lucrative fur trade. From this trade New York and Pennsylvania had realized large profits. By the terms of the treaty of peace those posts were to be broken up and evacuated. But upon sundry pretexts the British government still retained them, and, with the view of diverting this valuable trade to Canada, cut off or broke up the communication and intercourse of the States with the Indian country. American commerce was excluded from the ports of the English West Indies. The numerous ports on the Mediterranean Sea had afforded ample marts for the produce of our fields and fisheries, but all these operations speedily fell a prey to the rapacity of the pirates and corsairs by whom that sea was with impunity infested; and wherever had sailed the foreign commerce of the States it was ceasing to appear.

The envy and jealousy of the maritime powers of Europe had been kindled by the manifold displays of the adventurous spirit of American commerce. All too apparent had become its capacity to command navigation, the carrying trade, and naval supremacy. Hence were fostered by foreign nations divisions and conflicts in the commercial policy of the States to answer "the threefold purpose of preventing our interference in their navigation, of monopolizing the profits of our trade, and of clipping the wings on which we might soar to a dangerous greatness."

The foregoing reflections and citations will suggest inquiries which may serve to lead the mind of the House to the paramount facts in this connection, that in the then lamentable condition of things commerce among the States was crushed under State restrictions, and commerce with foreign nations was crushed under foreign regulations.

Early in 1786 commissioners were appointed by the State of Virginia to meet such commissioners as might be appointed by the other States, for the purpose of—

Considering how far a uniform system in the commercial regulations may be necessary to their common interests, and their permanent harmony; and to report to the several States such an act relative to that object as, when unanimously ratified by them, would enable Congress effectually to provide for the same.

A meeting ensued at Annapolis; but subsequently assembled in Phil-

adelphia, in May, 1787, that convention which framed the Federal Constitution.

Animated pre-eminently by the facts and considerations which I have sought, suggestively, to revive in the recollection of the House, that convention founded and constructed the power to regulate commerce as we find it amid the grants enumerated in the Constitution.

It would be quite tedious, if not impracticable, to dwell with any degree of minuteness upon the debates and proceedings of the convention in this regard, although upon the commercial power great unanimity prevailed, and the debates, &c., were comparatively brief.

Said the Supreme Court in 1852, by Mr. Justice Daniel, in Veazie *vs.* Young and Moore:

> The design and object of that power (to regulate commerce) as evinced in the history of the Constitution, was to establish a perfect equality among the several States as to commercial rights, and to prevent unjust and invidious distinctions which local jealousies, or local and partial interests, might be disposed to introduce and maintain.
>
> Those were the views pressed upon the public attention by the advocates for the adoption of the Constitution, and in accordance therewith have been the expositions of this instrument propounded by this court, in decisions quoted by counsel on either side of this cause, though differently applied by them.

With this brief review I now take leave of the preliminary branch of the discussion by again adverting to the principal fact that the paramount object of the grant to Congress of the power to regulate commerce among the States was to remove from it, and to preclude the restrictions and burdens inseparable from rival systems of State legislation, and so secure to it the only boon it asked, the charity of being let alone, subject only to such general regulations or rules by act of Congress as would inure to its safety and freedom.

> An unrestricted intercourse between the States themselves will advance the trade of each. * * The veins of commerce in every part will be replenished, and will acquire additional motion and vigor from a *free circulation.—Hamilton, in the Federalist.*

IS IT EXCLUSIVE?

Keeping that consideration in view, the further inquiry properly arises as to whether the grant so made was designed to and did vest in Congress the sole, absolute, and exclusive power to regulate commerce among the States? This inquiry is specific; it is not as to the nature and extent of the power, or the subjects and means embraced in it, but whether that specific power was so absolutely and wholly surrendered by the respective States and the people thereof that the exercise of such power by a State would thenceforth be and remain unconstitutional and void? Upon the proper solution of this question, it is well known there has been a conflict of the opinions of eminent men ever since the origin of the Government, and recurring legislation upon the one theory and upon the other, both on the part of the State and the Federal governments. But the supremacy of the Federal law, within the limits and objects of the grant, over laws of the States, all concede.

Mr. Justice Story, in his Commentaries on the Federal Constitution, insists that the Federal power to regulate commerce among the States is exclusive of all or any part of the same power in the States. He says:

> It is general and unlimited in its terms. The full power to regulate a particular subject implies the whole subject, and leaves no residuum. A grant of the whole is incompatible with the existence of a right in another to any part of it. A grant of a power to regulate necessarily excludes the action of all others, who would perform the same operation on the same thing.

And the same views are maintained by Mr. Justice Story in his dissenting opinion in The City of New York *vs.* Miln, in the Supreme Court, in 1837.

In the convention, however, which framed the Constitution, on the 20th day of August, 1787, it was moved and seconded to insert the words "sole and exclusive" before the word "power," so as in express terms to give to Congress the sole and exclusive power to regulate commerce; and on the vote being taken, *the amendment was rejected by a vote of* 6 *to* 5:

> Yeas—New Hampshire, Massachusetts, Pennsylvania, Delaware, and South Carolina—5.
>
> Nays—Connecticut, New Jersey, Maryland, Virginia, North Carolina, and Georgia—6.

Unquestionably there is great significance in that proceeding. It would be quite unreasonable in this connection to dispute the weight of such authority. It is in fact an *express refusal* to delegate the *sole and exclusive* power. And it operates as a restriction upon the grant, running with the grant and qualifying it.

In the memorable case of Gibbons *vs.* Ogden, in the Supreme Court in 1824, Mr. Webster contended for the exclusiveness of the power. He said, "The people intended, in establishing the Constitution, to transfer from the several States to a general government, those high and important powers over commerce, which, in their exercise, were to maintain a *uniform and general* system." From the very nature of the case, these powers he thought must be *exclusive;* that is, *the highest branches of commercial regulation* must be exclusively committed to a single head. He was of the opinion, speaking in general terms, that roads, bridges, and ferries, though, of course, affecting commerce and intercourse, are not of such importance and elevation as to be deemed the subjects of *commercial regulation.* In his opinion a reasonable construction should be given to the Constitution; and such construction is as necessary to the just power of the States as to the authority of Congress.

But Mr. Oakley, of counsel on the other side, maintained the opposite ground with equal plausibility and force, and contended that it was perfectly settled that an affirmative grant of power to the United States does not, of itself, divest the States of a like power, and that the question was no longer open for discussion in the Supreme Court. But the case of Gibbons *vs.* Ogden did not decide this question.

In delivering the opinion of the court, Chief Justice Marshall said, in this connection, that many of the powers formerly exercised by the States are transferred to the Government of the Union; yet the State governments remain and constitute a most important part of our system.

> When each government exercises the power of taxation, neither exercises the power of the other. But when a State proceeds to regulate commerce with foreign nations, or among the several States, it is exercising the power that is granted to Congress, and is doing the very thing which Congress is authorized to do. There is no analogy, then, between the power of taxation and the power of regulating commerce. * * * In discussing the question whether this power is still in the States, in the case under consideration, *we may dismiss it from the inquiry* whether it is surrendered by the mere grant to Congress, or is retained until Congress shall exercise the power. We may dismiss that inquiry, because it has been exercised, and the regulations which Congress deemed it proper to make are now in full operation. The sole question is, can a State regulate commerce with foreign nations and among the States while Congress is regulating it?

And in the Passenger cases in the Supreme Court in 1849, Mr. Justice McLean, in delivering the opinion of the court, observed, in referring to the commercial power, that the States retained every attribute of sovereignty which is not *plainly* vested in the Federal Government and *inhibited* to the States, and whether he considered the nature and object of the commercial power, the class of powers with which it was placed, the decision of the Supreme Court in Gibbons *vs.* Ogden, and in Brown *vs.* Maryland, he was brought to the conclusion that the power to regulate commerce with foreign nations and among the States was by the Constitution exclusively vested in Congress. But he maintained, with equal stringency, that *all commercial action within the limits* of a State, which does not extend to any other State or foreign country, is exclusively under State regulation. That commerce, he contended, Congress had no more power to regulate than a State had to regulate commerce with foreign nations.

And Mr. Justice Wayne, in the same cases, in considering the subject-matter of the grant in the Constitution, was satisfied that the meaning of the terms used was to exclude the States from regulating commerce in any way except as to their own internal trade. The power in Congress could not be said to be unlimited, because it was expressly prohibited from levying any tax or duty on articles exported from any State. This was an insuperable restriction. Inspection laws, quarantine laws, health laws, and all laws regulating the internal commerce of a State, and laws relating to turnpikes, roads, ferries, &c., he said, were "component parts of that immense mass of legislation which embraces everything within the territory of a State, not surrendered to the General Government."

In the case of Cooley *vs.* The Board of Wardens of Philadelphia, in the Supreme Court in 1851, Mr. Justice McLean insisted upon the exclusiveness of this power, and in his dissenting opinion observed—

> That a State may regulate foreign commerce, or commerce among the States, is a doctrine which has been advanced by individual judges of this court; *but never before, I believe, has such a power been sanctioned by the decision of this court.* In this case, the power to regulate pilots is admitted to belong to the commercial power of Congress; and yet it is held that a State, by virtue of its inherent power, may regulate the subject until such regulation shall be annulled by Congress. This is the principle established by this decision. * * * *The power is recognized in the State,* because the subject is more appropriate for State than Federal action; and, consequently, it must be presumed the Constitution cannot have intended to inhibit State action. This is not a rule by which the Constitution is to be construed. It can receive but little support from the discussions which took place on the adoption of the Constitution, and none at all from the earlier decisions of this court.

But the doctrine of the foregoing opinion of that eminent jurist was again overruled by the Supreme Court in 1865 in the case of Gilman *vs.* Philadelphia, where the same subject was under consideration. The opinion of the court was delivered by Mr. Justice Swayne. The court, after reciting that the Federal Government possesses no powers but such as had been delegated to it; that the States retain all but such as they have surrendered; that the power to authorize the building of bridges is not to be found in the Federal Constitution; that that power has not been taken from the States; that it must reside somewhere; that the States had it before the Constitution was adopted, and that they have it still, affirmed the doctrine of the case last above cited. The court said:

> The power to regulate commerce covers a wide field, and embraces a great variety of subjects. Some of those subjects call for uniform rules and national legislation; others can be best regulated by rules and provisions suggested by the varying circumstances of different localities, and limited in their operation to such localities respectively. To this extent the power to regulate commerce may be exercised by the States. Whether the power in any given case is vested exclusively in the General Government *depends upon the nature of the subject* to be regulated. *Pilot laws are regulations of commerce,* but if a State enact them in good faith, and not covertly for another purpose, they are not in conflict with the power to regulate commerce, committed to Congress by the Constitution.

As late as 1872 this subject came up for consideration in the Supreme Court in the case of the Reading Railroad Company *vs.* The State of Pennsylvania. The opinion of the court was delivered by Mr. Justice Strong. In that opinion it was deemed unnecessary to review the much-debated question whether the Federal power to regulate commerce among the States was exclusive. The earlier decisions of the court had held to the affirmative. It had been often argued, and sometimes intimated, that in the absence of congressional regula-

tions State regulations might be made. This was denied. Cases that had been decided in support of State laws related to bridges, dams, police, health, or subjects of a kindred nature, not involving strictly commercial relations. Transportation of passengers or merchandise through a State, or from one State to another, is within the power of Congress to regulate commerce among the States, and cannot be subjected to State taxation.

Merchandise is the subject of commerce. Transportation is essential to commerce, and every burden laid upon it is *pro tanto* a restriction. Whatever, therefore, may be the true doctrine respecting the *exclusiveness* of the power vested in Congress to regulate commerce among the States, we regard it as established that no State can impose a tax upon freight transported from State to State, or upon the transporter because of such transportation.

The House cannot be insensible to the gravity of a question which perplexes and divides such intellects as those of Marshall, Taney, Story, McLean, and others scarcely less commanding. With all their transcendent powers of analysis, generalization, and reflection, they have left this question where they found it, and the divided sovereignty between the local and the general governments still remains in the two lineal institutions, instinct with harmonious vitality, in shares practically undefined and undefinable. However superficial or profound may be the researches into our twofold system, its phenomena will probably continue to divide and perplex in the future as in the past, so long as it shall rest upon its original foundation. Efforts of construction to reduce great constitutional barriers to the low level of exact lines, minute intersections, and fixed quantities, in the administration of its details, amid the shifting gales of expediency or passion, run into metaphysical subtilty, and end in consolidation.

In our systems of civil polity, the mutual dependence, the ceaseless action, of the State and Federal governments is vital, organic, and omnipresent. The power to regulate commerce among the States may, metaphysically, be said to be a unit, to be incapable of division, to be exclusively in Congress. In the same sense sovereignty is said to be a unit, incapable of division, exclusively in the people; but many of its powers are classified and delegated, or reserved, to be exercised by designated agencies upon subjects upon which they are designed to act.

And the subjects upon which the commercial power must act, as act it everywhere must, on and over the merely theoretical boundaries of both local and Federal jurisdictions, are multifarious and inseparable, and wholly beyond the single compass of either the one or the other. Those kindred co-operating jurisdictions are poised and adjusted within their appropriate limits by the checks and balances subject to whose restraining influences they act and react the one upon the other. But the subjects, instruments, and agencies which are comprehended by and which compose commerce are, and have ever been, and must continue to be, dealt with and regulated by both the State and Federal governments in their blended proportions. And in the light which our political and judicial history sheds upon this interesting fragment of delegated power, it is most obvious that, if we speak with the exactness and precision of inexorable fact, though it may be said the Federal power to regulate commerce among the States is supreme within the limited range of its objects, it cannot properly be affirmed of it that it is, has ever been, or can ever be, in the past and present condition of the Federal Constitution, incompatible with the co-existence of a right in the States to any part, and in that sense exclusive.

IS IT CONCURRENT?

The greatest masters of thought and expression have conceded the difficulty in definitions and distinctions to speak always with absolute precision and exactness. Certainly in the hurry and turmoil of congressional discussion such difficulty disputes every step of our progress with questions of the character of the one now under consideration. To find the true solution of the problem of constitutional power to legislate in the manner proposed by this bill, due circumspection demands of us to walk reverently through the aisles and corridors, and beneath the enduring monuments of the august structure, and to thoughtfully feel our way to its sanctuaries, guided by the sages and jurists who have contributed to originate, illustrate, and expound it.

Under the best auspices difficulties will be found still to confront us. If any gentleman friendly to this bill should lay down the proposition that State legislation and Federal legislation relating to commerce had not, from time to time, and continually from the organization of the latter, co-operated, contributed to the same event or effect—that along the mathematical boundaries of the one jurisdiction and the other, through the great seas, lakes, rivers, and over the great mountains and plains which bound or intersect our dominion, the one had not accompanied and was not found collaterally connected with the other—I venture to say he would find it quite impossible to maintain it in the face of the weightiest mass of testimony to the contrary, of the most commanding authority, running through the whole period of our Federal history. And it is as to the adequacy of that testimony to produce conviction that the exercise of the power to regulate commerce among the States has been, and continues to be, concurrent in the two governments, that I propose now briefly to marshal parts of it before the House.

In the debate in the convention of 1787 pending the discussion, Mr. Sherman said that no danger was to be apprehended from a concurrent jurisdiction in the States in the regulation of commerce, because the grant of power to Congress would be supreme within the range of its objects, and would preclude interfering or conflicting legislation.

Of a like opinion was President Monroe, in his special message to the House on May 4, 1822:

The national Government begins where the State governments terminate, except in some instances where there is a concurrent jurisdiction between them. This Government is also, according to the extent of its powers, a complete sovereignty. I speak here as repeatedly mentioned before altogether of representative sovereignty, for the real sovereignty is in the people alone.

In delivering the opinion of the Supreme Court, in 1819, in Sturgis *vs.* Crowninshield, Chief Justice Marshall, adverting to the question now under consideration, observed that when the American people created the national Legislature, with certain enumerated powers, it was neither necessary nor proper to define the powers retained by the States. Those powers remained, after the adoption of the Federal Constitution, what they were before, except so far as they were abridged by the grants in that instrument. In some instances, as in making treaties, the Constitution contains express prohibition against the States, and these show the sense of the convention to have been, that the mere grant of power to Congress *does not imply a prohibition* on the States to exercise the same powers. It does not follow, however, that this concurrent power of legislation extends to every possible case in which its exercise by the States has not been expressly prohibited.

Whenever the terms in which a power is granted to Congress, or the nature of the power, requires that it should be exercised exclusively by Congress, the subject is as completely taken from the State Legislatures as if they had been expressly forbidden to act on it.

But even in that class of cases the difficulties in the way of drawing the line where one begins and the other ends, remain. And they are adverted to by the Chief Justice, in construing the power to "establish uniform laws on the subject of bankruptcies throughout the United States." Bankruptcy and insolvency, in the common and legal acceptation of those terms, import the state or condition of a person who is unable to pay his debts. In common parlance they are equivalents. The supposed necessity for them arises out of the exigencies of commerce. It was at one time contended that Congress possessed the exclusive power to regulate both bankruptcy and insolvency. But that shell of contention was long ago exploded. The Chief Justice said:

The establishment of uniformity is, perhaps, incompatible with State legislation, on that part of the subject to which the acts of Congress may extend. But the subject is divisible in its nature into bankrupt and insolvent laws; though the line of partition between *them is not so distinctly marked as to enable any person to say, with positive precision*, what belongs exclusively to the one, and not to the other class of laws. The difficulty can arise only in our complex system, where the Legislature of the Union possesses the power of enacting bankrupt laws; and those of the States, the power of enacting insolvent laws.

He said the line of distinction must be, in a great degree, arbitrary. The two systems have existed apart from each other, and the connection between them is such as to render it difficult to say how far they may be blended together. Much inconvenience would result from that construction of the Constitution which should deny to the State Legislatures the power of acting on this subject, in consequence of the grant to Congress. It may be thought more convenient that much of it should be regulated by State legislation, and Congress may purposely omit to provide for many cases to which their power extends.

It is not the mere existence of the power, but its exercise, which is incompatible with the exercise of the same power by the States. * * The Constitution does not grant to the States the power of passing bankrupt laws, or any other power; but finds them in possession of it, and may either prohibit its future exercise entirely, or restrain it so far as national policy may require.

Mr. Justice Story delivered an elaborate dissenting opinion in the Supreme Court in Houston *vs.* Moore in 1820. In that opinion the same general doctrine was adhered to by him. There are many similar powers in the two governments, of vital importance to each. It is not true that a mere affirmative grant of powers to Congress vests therein an exclusive sovereignty over all the subjects to which it relates. The powers granted *are never exclusive by construction merely.* They are exclusive only where they are expressly so; where their exercise by the States is prohibited, or is repugnant, or incompatible. In all other cases the power of the States is concurrent. This is so upon two grounds: first, upon the soundest principles of general reasoning; and, secondly, upon the tenth amendment to the Constitution:

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people.

Any friction which might ensue in the practical operation of this concurrent jurisdiction is precluded by force of the sixth article, which declares:

This Constitution, and the laws of the United States which shall be made in pursuance thereof, * * shall be the supreme law of the land.

And Mr. Justice Johnson, who also dissented from some of the views in the opinion of the court, but concurred in the judgment rendered, used this remarkable language:

This is a branch of the exploded doctrine, that within the scope in which Congress may legislate the States shall not legislate. That they cannot, when legislating within that ceded region of power, run counter to the laws of Congress, is denied by no one; but, as I before observed, to reason against the exercise of this power from the possible abuse of it, is not for a court of justice.

And Mr. Justice Washington, who delivered the judgment of the court, held that Congress has power to provide for organizing, arming, and disciplining the militia; that it is presumable that the framers of the Constitution contemplated a full exercise of the power. But, if Congress had declined to exercise it, it was competent to the State governments to provide for organizing, arming, and disciplining their respective militia, in such manner as they might think proper.

That this and other merely affirmative grants in the Constitution are concurrent is sustained by an inference quite conclusive from the terms of that portion of the sixth article of the Constitution just quoted. That important fortification in the Federal structure relating to the supremacy of the law once omitted, the power of the States might have followed their commerce by land and by sea. To that self-imposed restraint they have ever yielded as to a volition of their own undisputed sovereignty, but the fact still remains that the concurrent exercise of the power to regulate commerce among the States is so "intermixed with the materials which compose it, so interwoven with the web, so blended with its texture, as to be incapable of being separated from it without rending into shreds" the harmony and completeness of the Federal system.

In the course of the argument of the celebrated case of Gibbons *vs.* Ogden, in 1824, Mr. Emmet observed that it had been said by very high authority that the power of Congress to regulate commerce "sweeps away the whole subject-matter." If so, it makes a wreck of State legislation, leaving only a few standing ruins to mark the extent of the desolation.

Sundry acts of Congress, in 1796 and 1799, directed certain officers of the General Government to assist in the execution of State legislation affecting commerce among the States and with foreign nations by means of quarantine and health laws. Those acts of Congress were political recognitions of the constitutionality of the State laws. It is true the acts of Congress designated the State laws as quarantine and health laws; but it is equally true that, call them by whatever name, their nature and effect were the same, and by their nature and effect they were regulations of commerce among the States and with foreign nations. And in adverting to those and other State laws regulating pilots upon the coast, equally within the commercial power, Chief Justice Marshall, in delivering the opinion of the court, said that the recognition of the State laws was in the spirit of harmony and conciliation incumbent upon the two governments, in pursuance of which Congress had adapted its legislation to the laws of the States operating upon and affecting the identical subject-matter; that when the Government of the United States was brought into existence, it found a system for the regulation of sea pilots in force in every State; that the acts of Congress alluded to adopted the State laws and gave to them the same validity as if their provisions had been specially made by Congress; that although Congress could not confer upon a State power to legislate, and could not give validity to a State law in conflict with the Constitution, it could adopt the provisions of a valid State law; and that the congressional acts referred to unquestionably manifested a disposition to leave the subject of these State laws entirely to the States until Congress should see proper to otherwise interpose.

In 1829 the Supreme Court decided a case of very great interest in this connection, Wilson and others *vs.* The Blackbird Creek Marsh Company, (2 Peters.) It involved the question of repugnancy to the commercial power of the Constitution by the Delaware act authorizing the building of a dam across Blackbird Creek, a navigable stream and public highway, through which the tide ebbed and flowed. Chief Justice Marshall delivered the opinion of the court.

The act of Assembly stopped a navigable creek, and so interfered with the right of the public in the habit of navigating it. But the interference, unless in conflict with the Federal Constitution, or a Federal law, was an affair of the State of Delaware and the citizens thereof, of which the Supreme Court could not take cognizance:

> If Congress had passed any act which bore upon the case, any act in execution of the power to regulate commerce, the object of which was to control State legislation over those small navigable creeks into which the tide flows, and which abound throughout the lower country of the Middle and Southern States, we should feel not much difficulty in saying that a State law coming in conflict with such act would be void. But Congress has passed no such act. The repugnancy of the law of Delaware to the Constitution is placed entirely on its repugnancy to the power to regulate commerce with foreign nations and among the several States, a power which has not been so exercised as to affect the question. We do not think that the act empowering the Blackbird Creek Marsh Company to place a dam across the creek can, under all the circumstances of the case, be considered as repugnant to the power to regulate commerce in its *dormant* state, or as being in conflict with any law passed on the subject.

In the License cases in the Supreme Court, in 1847, the question to be decided was whether a State was prohibited by the Federal Constitution from making any regulations of foreign commerce, or of commerce with another State, confined to its own territory, for its own interest, and not in conflict with a law of Congress. Chief Justice Taney delivered the judgment of the court, and in his opinion explained the law to be that the mere grant of power cannot be construed to be an absolute prohibition to the exercise of any power over the same subject by the States. For the convenience of its trade, for the health of its citizens, for its own ports and harbors, and for its own territory, the State may make regulations which will be valid if not in conflict with a law of Congress. This construction was unquestioned at the time of the adoption of the Constitution, and the decisions of the Supreme Court maintained the power of the States.

> If it was intended to forbid the States from making any regulations of commerce, it is difficult to account for the omission to prohibit it, when that prohibition has been so carefully and distinctly inserted in relation to other powers, where the action of the State over the same subject was intended to be entirely excluded. But if, as I think, the framers of the Constitution (knowing that a multitude of minor regulations must be necessary, which Congress amid its great concerns could never find time to consider and provide) intended merely to make the power of the Federal Government supreme upon this subject over that of the States, then the omission of any prohibition is accounted for, and is consistent with the whole instrument.

The laws in relation to pilots and pilotage, health and quarantine, are regulations of foreign commerce; they deal with the ship, cargo, and crew, detaining and inspecting them, and destroy the cargo if deemed dangerous to health. And the expense in executing the State law is imposed upon the ship. This power has always been exercised by the States, recognized by Congress, and affirmed and enforced by the Supreme Court. The doctrine of the exclusive power of Congress is comparatively modern. It was never seriously put forward until after the decision in Gibbons *vs.* Ogden. But it is not the doctrine of the opinion in that case. That opinion establishes the doctrine that a State may in the execution of its powers of internal police make regulations of foreign commerce; and that such regulations are valid, unless they conflict with a law of Congress.

The States exercise their own powers in laying taxes for State purposes, although the same thing is taxed by Congress; and they exercise powers granted to Congress when they make regulations of commerce.

> In the first case, the State power is concurrent with that of the General Government, is equal to it, and is not bound to yield. In the second it is subordinate and subject to the superior and controlling power conferred upon Congress. And it is solely with reference to this distinction, and in the midst of this argument upon it, that the court in Gibbons *vs.* Ogden uses the expressions which are supposed to maintain an absolute prohibition to the States.

The case was not decided upon that ground, but upon the ground of a conflict between the law of New York and the law of Congress. In Wilson *vs.* The Blackbird Creek Marsh Company, five years after the opinion in Gibbons *vs.* Ogden, the court held that the law of Delaware was not invalid merely because it made regulations of commerce. Chief Justice Marshall delivered both opinions, and the later opinion is considered as an exposition of what he meant to decide in the former. And this interpretation of the opinions of Chief Justice Marshall in those two cases is given to them alike by Chief Justice Taney and Justices Thompson and Catron.

In the Passenger cases, in the Supreme Court, in 1849, in concluding a very learned opinion against the doctrine of exclusive power in Congress to regulate commerce among the States, Mr. Justice Woodbury said:

> This construction of the Constitution, upholding concurrent laws by a State where doubts exist, and it is fairly open for adoption, has much to commend it in this instance, as the States which singly become feebler and weaker daily as their number and the whole Union increases—being now thirty to one instead of thirteen to one—will not thus be rendered still feebler, and the central government, daily becoming more powerful and strong, will not thus be rendered still stronger. So the authority of the latter will not thus, by mere construction, be made to absorb and overwhelm the natural and appropriate rights of sovereign States, nor mislead them by silence.

Two years afterward was decided in the Supreme Court the interesting case of Cooley *vs.* Board of Wardens of Philadelphia, in which the question in discussion was squarely met and adjudged in favor of the State power. Mr. Justice Curtis delivered the opinion of the court, and it was held that the power to regulate commerce included navigation. The regulation of pilots, the modes and times of their services, their responsibilities, their powers, and the subject of penalties, constitute regulations of navigation and commerce within the meaning of the commercial clause of the Constitution. The act of Congress of 1789, providing that pilots shall continue to be regulated by such laws as the States may enact for that purpose, instead of being inoperative as an attempt to confer on the States a power to legislate of which the Constitution had deprived them, manifests the understanding of Congress at the outset of the Government that the subject is not such as to require its exclusive legislation. Such has been the practice of the States and the Federal Government since the origin of the latter. The act of 1789 gives its sanction only to laws enacted by the States. This implies a constitutional power in them so to legislate. For the courts say only a rule enacted by the sovereign power of a State, acting in its legislative capacity, can be deemed a law enacted by a State.

> We are of opinion that this State law was enacted by virtue of a power residing in the State to legislate; * * * that it does not interfere with any system which Congress has established by making regulations, or by intentionally leaving individuals to their own unrestricted action; that the law is therefore valid; and the judgment of the supreme court of Pennsylvania in each case must be affirmed.

Fifteen years had elapsed when the Supreme Court reiterated the same doctrine in 1865 in the case of Gilman *vs.* Philadelphia. The opinion was delivered by Mr. Justice Swayne. The power to regulate commerce may be exercised by the States. Whether in any case the power is vested exclusively in Congress depends upon the subject to be regulated. Pilot laws are regulations of commerce. A State may enact them. Bridges are connecting parts of streets, turnpikes, and railroads, and are instruments of commerce. The municipal power may regulate them:

> The States have always exercised this power, and from the nature and objects of the two systems of government they must always continue to exercise it, subject, however, in all cases, to the paramount authority of Congress, whenever the power of the States shall be exerted *within the sphere* of the commercial power which be-

longs to the nation. * * * If it be objected that the conclusion we have reached will arm the States with authority potent for evil, and liable to be abused, there are several answers worthy of consideration. The possible abuse of any power is no proof that it does not exist. Many abuses may arise in the legislation of the States which are wholly beyond the reach of the Government of the nation.

In 1872 arose in the Supreme Court the case of the Reading Railroad Company *vs.* Pennsylvania. The opinion was delivered by Mr. Justice Strong. The case decided a State tax upon the *carriage* of merchandise from State to State to be in conflict with the Federal Constitution.

The emancipation of commerce among the States, by the creation and delegation of a central power to remove and preclude State restrictions and obstructions, mainly contributed to the adoption of the Federal Constitution. This fact was established in the consideration of the first branch of this discussion. The decision in the Reading case, just mentioned, removed just such a restriction or obstruction, by giving effect to the power delegated.

The court said transportation is essential to commerce, and every burden laid upon it is *pro tanto* a restriction. But they neither discuss nor decide the question of exclusiveness:

Whatever may be the true doctrine respecting the exclusiveness of the power vested in Congress to regulate commerce among the States, we regard it as established that no State can impose a tax upon *freight transported from State to State* or upon the transportation, because of such transportation. But while holding this, we recognize fully the power of each State to tax, at its discretion, its own internal commerce, and the franchises, property, or business of its own corporations, so that interstate intercourse, trade, or commerce, be not embarrassed or restricted. *That must remain free.*

Subsequently to the former one, the State of Pennsylvania passed another revenue act to meet the exigency, by which a tax was imposed on the gross receipts of the Reading Railroad Company. It, too, was resisted by the company, and litigated on the same ground of repugnancy to the congressional power to regulate commerce among the States. It was contended that this act imposed, under a different form, the same burden or restriction upon interstate commerce. But the Supreme Court, by the same justice, held the State law to be constitutional and valid:

That its ultimate effect may be to increase the cost of transportation must be admitted. So it must be admitted that a tax upon any article of personal property that may become a subject of commerce, or upon any instrument of commerce, *affects commerce itself.* If the tax be upon the instrument, such as a stage-coach, a railroad-car, or a canal, or steamboat, its tendency is to increase the cost of transportation. Still it is not a tax upon transportation or upon commerce, and it has never been seriously doubted that such a tax may be laid.

In a later case in the Supreme Court, in 1872, Chief Justice Chase said, in delivering the opinion of the court in Osborne *vs.* Mobile, there are several cases in which the court has asserted the right of the State to legislate, in the absence of legislation by Congress, upon subjects over which the Constitution has clothed that body with legislative authority.

The review of authorities upon this branch of the subject may terminate here. I regret the time consumed. I think I do not mistake the weight of the evidence adduced when I assume that the affirmative is clearly established, and that the doctrine has been settled that the States do now, and have always, exercised a concurrent power in regulating the subject of commerce.

EXAMPLES OF STATE LEGISLATION.

A cursory survey of the statute laws of the States will demonstrate innumerable instances of very important regulations materially affecting commerce. The details would expand into a mass. Those laws stand and have stood through every vicissitude. Instances of a familiar class are apparent. On and over navigable waters they have created and regulated steamboat and other commercial companies, and exclusive ferry franchises, which more or less interrupt or appropriate the freedom of navigation. Over land they have authorized and regulated roads of every description, canals, and stage and transportation lines for passengers and freight, which commonly intersect continuous routes at the boundaries of adjoining States. Over all these and all other species of highways their sovereignty has operated unchallenged by any questions of repugnancy to Federal power. Foundries, factories, machine-shops, mills, manufactories, steamboat and ship yards, and many varieties of incorporated companies, whose whole material, business, and production enter into the vital substance of commercial imports and exports with foreign nations and among the States, stand precisely in the same category. To declare these laws void would be a measureless mischief. Federal control of the commerce which they regulate would be State annihilation and monopoly and centralization of the direst form.

From the foundation of the Federal Government, or their accession to the Union, Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, Georgia, Louisiana, Alabama, New York, and other States, have habitually passed and enforced quarantine, passenger, wreck, seaman, harbor, health, pilot, and other laws affecting commerce.

Quarantine laws direct possession to be taken of vessels arriving, their crews, passengers, and cargoes, and they are detained, and all intercourse with the shore forbidden. So also health laws, with the power to purify, and, if necessary, to destroy the cargo. These laws interfere directly with foreign commerce, and control cargo, crew, vessel, intercourse, and transit, pending the voyage. It is admitted they are laws materially regulating commerce; that the subjects they regulate belong to commerce, and are amenable to the regulations of Congress. And whether entitled "an exercise of the reserved police power of the States" or "a concurrent power to regulate commerce," the fact remains the same. Commerce *is* so regulated by the State law, and the constitutionality of those laws has been conceded, sanctioned, and deferred to by every department of the Federal Government, from the day of its organization. More than one hundred and thirty of such laws in the States were cited in the argument in 1837 in New York *vs.* Miln.

THE PRACTICE OF THE FEDERAL GOVERNMENT.

Fresh from the contemporaneous debates upon the formation, construction, and adoption of the Federal Constitution, and composed in part of persons eminent in framing it, the First Congress assembled under it, in 1789, enacted a law, providing—

That all pilots in the bays, inlets, rivers, harbors, and ports of the United States shall *continue to be regulated* in conformity with the *existing laws of the States*, respectively, wherein such pilots may be, or *with such laws as the States may, respectively, hereafter enact for that purpose.*

A clear, conclusive, contemporaneous exposition of the meaning of the provisions involved, of the Constitution, by the First Congress, composed in part of the framers of the instrument.

Another instance of congressional recognition of the validity of these State laws may be cited in the law of March 2, 1837, providing that masters of vessels coming in or going out upon waters *forming the boundaries* of States might lawfully—

Employ any pilot, duly licensed or authorized by the *laws* of either of the States *bounded* on the said waters to pilot said vessel to or from said port.

And, recognizing the great weight of these legislative expositions of the Constitution, the Supreme Court, in Cooley *vs.* The Board of Wardens, &c., said, if the States had been divested of the power to legislate on this subject by the grant of the commercial power, it is plain Congress could not confer upon them power thus to legislate. If the Constitution excluded the States from making any law regulating commerce, certainly Congress could not grant, or in any manner reconvey, the power to the States. The acts of Congress sanctioned *only laws* enacted by the States, not usurpations of power or void acts of States; and hence was recognized the plenary constitutional power in the States to enact those laws.

In the License cases Mr. Justice Catron adverted to this class of legislation. All necessary and many general regulations of commerce existed in the States when the Constitution was adopted. Those in harmony with that instrument were continued. They have since greatly accumulated, both as to commerce among the States and foreign commerce. So minute and complex are the necessities of commerce, that not even States legislation is adequate to all its wants between ship and shore. To that end the States have descended to another division of institutional government, and vested the power in city corporations. Suitable regulations must be variant, with the varying circumstances of the different ports and places where commerce enters and clears, and would be difficult, if not impracticable, to congressional legislation nor could the latter depute the power to corporations, as the States do.

With the increase of commerce those difficulties would increase, especially on large rivers and along inland borders by land and water. Congress could not do what the States have done, are doing, and must continue to do, from a controlling necessity. All this was too manifest to have escaped the attention of the convention, and the Constitution was framed accordingly.

On many of those subjects and instruments of commerce, as regulated by the States, coming within the scope of a proper exercise of the power of Congress to regulate commerce among the States and with foreign nations, Congress has also legislated, and the two jurisdictions so interlaced have concurred down to our time without any serious jar. And throughout all the general and particular, the concurrent and the exclusive, legislation of Congress, from 1789 to 1874, no instance is to be found of the power to regulate commerce with foreign nations and among the States being exercised, to fix the rates of fare and freight for persons and things entering into what composes commerce in one form or another. Upon every subject fit for, or susceptible of, constitutional regulation, Congress has acted or acquiesced in the concurrent action of the States. Certainly with a freedom and boldness fully up to the measure of its constitutional functions, it has searched the heights and depths, the shoals and boundaries of Federal jurisdiction and sovereignty in a period of more than three-quarters of a century of constitutional history, distinguished by a material prosperity and expansion which in their magnitude and splendor rival the creations of fiction.

Though at times—some perhaps not remote from the present—the influence of the Government upon commerce might be shown to be ill judged and disastrous, this has not proceeded from the proper exercise of the congressional power to regulate it, consistently with its objects. And evidences of the proper exercise of that power, with careful regard to its just limits, may be found interspersed all through the seventeen large volumes of Federal statute law. These form an immense mass of theoretical and practical construction and exposition of the objects and limitations of the power to regulate commerce by the Federal Legislature, composed of forty-three Congresses, which deserve the respect and ought to secure the acquiescence of the House and country.

The enumeration of some examples may be suggestive, that if the

power has been minutely and circumstantially exerted upon all its proper objects, it is equally true that it has reached its confines, beyond which is the deluge. The power is construed, applied, and exhausted in existing regulations, such as those which relate to beacons, buoys, imposts, non-importation, non-intercourse, embargo, enrollment, registry, &c., of boats, ships, and vessels, highways, navigation, pilots on the coasts, lakes, and rivers, quarantine, regulation and protection of seamen, rivers and harbors, tonnage, trade, for the security of the wages of seamen, regulations for passenger-ships and other vessels, railroads and canals, bridges, ports of entry and delivery, and for the better security of life, &c., upon the Ohio and other rivers, licenses, supervisors, inspectors, construction, equipment, officers, crews, and so on.

In looking with some care through that great mass of statute law I have been unable to find one letter or syllable which countenances the proposition of the pending bill, for the Federal Government to enter the counting-room, or upon the road of, at this time, one only of the many forms of transportation chartered by the State laws, and shackle and obstruct commerce by fixing an arbitrary schedule of rates and hire for the labor, skill, enterprise, and property of the citizen owner or operator, and compel him to take it under penalty of being prosecuted for crime.

Said Mr. Madison, in a letter to Mr. Cabell, in March, 1827:

If every new Congress were to disregard a meaning of the instrument uniformly sustained by their predecessors for such a period, there would be less stability in the fundamental law than is required for the public good in the ordinary expositions of law. And the case of the chancellor's foot, as a substitute for an established measure, would illustrate the question as well as the lesser evil of uncertainty and mutability.

The Constitution may be as grossly violated by acting against its meaning as against its letter.

THE OBJECTS OR NATURE AND EXTENT OF THE POWER.

The violence done to the spirit and meaning of the Constitution by perverting and forcing a general power over commerce among the United States into the details of the private affairs of citizens of the States will not fail to be conspicuous upon candid investigation and reflection concerning the object or nature and extent of the power in the circumstances of its origin, theory, and practical history.

The Congress shall have power to regulate commerce with foreign nations, and among the several States.

The terms used to express the grant are general. Undoubtedly, in a state of isolation, the words are sufficiently sweeping. Must construction be confined exclusively to the words employed, or must it not explore the whole genius and context of the instrument, together with the history of its formation and its contemporaneous explanation and application, in order to arrive at the objects or nature and extent of its powers? The words used comprehend every species of commercial intercourse. They are without inherent limitation. But does any person contend there are consequently no constitutional limitations upon the grant of power to regulate commerce? The Constitution is said, by high authority, to be one of enumeration, and not of definition. It is permeated with limitations by expression, implication, reservation, by the subjects to be affected, and by the nature and extent of the powers to be exercised. In the very next section an express limit was put upon the power, by denying to Congress the right to prohibit the immigration or importation of such persons as the States might see proper to admit. And another by denying to Congress the right to lay a tax or duty on articles exported from any State. And another by providing that—

No preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another; nor shall vessels bound to or from one State be obliged to enter, clear, or pay duties in another.

And another by providing that—

No person shall be * * * deprived of life, liberty or property, without due process of law; *nor shall private property be taken for public use without just compensation.*

These are familiar examples of express limitations upon the commercial power.

Of some of the implied limitations upon that power, or limitations arising from its subjects, its nature and extent, embracing operations and values known to the House to be of such vast scope and vital importance, Chief Justice Marshall gave an example in Gibbons *vs.* Ogden, when he said:

It is not intended to say these words comprehend that commerce which is completely internal, which is carried on between man and man in a State, or between different parts of the same State, and which does not extend to or affect other States. Such a power would be inconvenient, and is certainly unnecessary.

And these limitations he finds, not in the words of the grant, but in the nature or objects and extent of the power as founded and circumscribed "by the genius and character of the whole Government."

And examples of limitations by reservation are equally familiar in articles 9 and 10 of the amendments.

The enumeration in the Constitution, of certain rights, shall not be construed to deny or disparage others retained by the people.

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.

To give the exercise of the power an operation coextensive with the words of the grant would carry it wherever commerce can be found, and commerce is everywhere. This would be to practically abolish the barriers erected in the Constitution against arbitrary government and to establish a central despotism. We have a wholesome dread of implied or constructive power; we need fear nothing, but hope much, from implied and constructive restrictions supplementing the more definite ones of reservation and prohibition.

Said Mr. Madison, in a letter to Mr. Cabell, in 1827:

The meaning of the power to regulate commerce is to be sought in the general use of the phrase; in other words, in the objects generally understood to be embraced by the power when it was inserted in the Constitution.

And again, in 1828:

In all doubtful cases, it becomes every government to lean rather to a confidence in the judgment of individuals, than to interpositions controlling the free exercise of it.

And in the forty-fifth number of the Federalist he designated external objects, such as those of war, peace, negotiation, and foreign commerce as the class upon which the few and defined powers of the Federal Government were designed mainly to operate; and those of the States upon all the objects which in the ordinary course of affairs, concern the lives, liberty, and property of the people, and the internal order, improvement, and prosperity of the State.

Power to regulate commerce among the States is a power to control State legislation imposing restrictions upon commerce among the States, by prescribing uniform regulations of a general nature when necessary to secure facility and safety in its vehicles; not a power to enter into the intrinsical operations and minute details, *per se*, of commerce, and fix the prices, rates, and hire of personal intercourse, transportation, labor, and property. Such petty, inquisitorial meddling and tyranny in the abuse of delegated power would be fatal to that freedom which is essential alike to the States and to the enterprise of the citizens whose operations they regulate. It would be tantamount to a sort of federal communism, if the expression may be allowed. In striving to exorcise all the evil spirits in arbitrary power, the framers of the Constitution calculated this one had gone into the sea with the herd.

The power to regulate commerce among the States is in the same words with the power to regulate commerce with foreign nations. If Congress can impose duties to protect American industry against foreign competition, does it not follow that Congress may impose duties to protect the industry and productions of the States against the competition of each other? It was in response to a query like this that the following interesting doctrine was enunciated in a letter in 1832, designed for Professor Davis, of the University of Virginia, by Mr. Madison:

Waiving the constitutional obstacles presented by the communion of rights and privileges among citizens of different States, the difficulties, the inutility, and *the odium of such a project* would be a sufficient security against it; a better security than can be found against abuses incident to most of the powers vested in every government. The power to regulate commerce among the States *was well known* and *so explained* by the advocates of the Constitution, when before the people for their consideration, *to be as a necessary control on the conduct of some of the importing States toward their non-importing neighbors.* A recurrence to the angry legislation produced by it among the parties, some of whom had passed commercial laws more rigid against others than against foreign nations, will well account for the constitutional remedy.

This important paper is corroborative of the position heretofore urged in this discussion, and is a commanding exposition and proof of the fact that the power delegated to Congress to regulate commerce among the States had for its especial object the removal and preclusion of State restrictions upon it, and the security to it of freedom and competition unshackled by the invidious control of rival governments. Duties, burdens, restrictions, and even embargoes, &c., might become proper, and even indispensable, in the exercise of the power to regulate commerce with foreign nations, but Federal interference with, and restrictions upon, commerce among the States, under color of the power to regulate it, were wholly different, incompatible, and inadmissible, and had no foot-hold or advocate anywhere, as we have before seen in the progress of this discussion.

In the lecture-room of the University of Virginia, in 1832, Professor Davis laid down this canon of construction:

The purpose for which a power is granted constitutes an inherent and essential limitation of it, which those invested with it can no more disregard than the most express terms of limitation. * * * It may be that Congress may so mask this, and many other usurpations under the forms of the Constitution, as seemingly to exercise only their legitimate powers; but they do not, therefore, the less violate the charter which they profess to respect. To defend such encroachments on the ground of the facility with which they may be committed, and the difficulty with which detected, is to advance the principle that impunity is the test of right—a principle as inadmissible and monstrous in politics as in morals, and which would equally, in both, justify any other act of treachery or crime.

The British Parliament, prior to the Revolution, exercised arbitrary control in the regulation of commerce between the different ports of the empire. The Virginia Legislature declared it to be *mere practice without right*, and contrary to the true theory of the British constitution. So long as its exercise was convenient and equitable the abuse was acquiesced in or overlooked. But so soon as it became the instrument of party and oppression, feeling and reflection were aroused.

And the moment the claim to a *direct and indefinite* power was ingrafted on the precedent of the regulating power, the *whole charm was dissolved*, and every eye opened to the usurpation.

It was in view of the fatal tendencies of construing away the definite objects and the specified and enumerated powers of the Constitution that Mr. Madison in 1817, in his message vetoing the bank bonus bill, so solemnly averred that—

Seeing that such a power is not expressly given to the Constitution, and believing that it cannot be deduced from any part of it, without *an inadmissible latitude* of

construction; * * and believing also, that the permanent success of the Constitution depends on a *definitive partition* of powers between the General and State governments, and that no adequate landmarks would be left by the constructive extension of the powers of Congress, as proposed in the bill, I have no option but to withhold my signature from it.

To the like effect said Mr. Jefferson, in 1791:

To take a single step beyond the boundaries thus specially drawn around the powers of Congress, is to take possession of a boundless field of power, *no longer susceptible of any definition.* * * It would reduce the whole instrument to a single phrase, that of instituting a Congress with power to do whatever would be for the good of the United States; and as they would be the sole judges of the good or evil, *it would be also a power to do whatever evil they pleased.*

Mr. Justice Story was not a strict constructionist. He was friendly to the largest and most vigorous constitutional power. In his commentaries he has elaborately examined and expounded the objects which come within the extent of the commercial power, both among the States and with foreign nations; but he has nowhere said or intimated, either in terms or inferentially, that fixing the price of services or of things entering into commerce, by land or water, was embraced among those objects. He has said, what we have already shown, that an essential object of this power was the freedom of commerce among the States to enterprise and competition by the relief of the States which import and export through other States from improper contributions levied upon commerce by the latter. He has elaborately explained the meaning of the words used to express the grant. He has minutely shown to what they have been applied and to what they may be applied, as heretofore noticed in this discussion. He shows that the power extends to the regulation of navigation and the coasting trade and fisheries, within as well as without any State, wherever it is connected with the commerce or intercourse within any other State, or with foreign nations. But it never occurred to him that it could fix the wages of the navigator, the value of the merchandise, or the price of the fish. It extends to the regulation and government of seamen on board of American ships, but he did not perceive that it could fix the pay or hire of the seaman, and say what he should receive for his labor or skill, and what the master or owner should pay. True, it has made regulations by which to secure fair play to the seaman in the payment of his wages according to his contract, at home and abroad, but it has not yet, that I am aware of, put a price on him. It extends to the regulation of passenger and freight vessels, but it has not fixed the fare of the passenger *per capita*, nor the price of the freight *per pound*. But these reflections cannot be extended.

That eminent jurist adds, further along in his Commentaries, what it may be well to ponder at this epoch:

If the Constitution is to be only what the administration of the day may wish it to be, and is to assume any and all shapes which may suit the opinions and theories of public men, as they successively direct the public councils, it will be difficult, indeed, to ascertain what its real value is. It cannot possess either certainty, or uniformity, or safety. It will be one thing to-day, and another thing to-morrow, and again another thing on each succeeding day. The past will furnish no guide, and the future no security. It will be the reverse of a law, and entail upon the country the curse of that miserable servitude, so much abhorred and denounced, where all is vague and uncertain in the fundamentals of government.

In Mr. Hamilton's celebrated opinion as to the constitutionality of the Bank of the United States in 1791, he, too, elaborately reviewed the objects of this power, with the same result as that subsequently experienced by Mr. Justice Story. He went into minute details such as the prohibition of commodities from our ports; to impose duties on them; to subject them to custom-house regulations; to grant them exemptions or privileges; to prohibit the exportation of commodities; to prescribe rules concerning the characteristics and privileges of an American bottom; how she shall be navigated, whether by citizens or foreigners, or both; of regulating the manner of contracting with seamen; the police of ships in their voyages; for the regulation of seamen in the merchant service; the granting of bounties to certain kinds of vessels, and on dried and pickled fish and salted provisions; for inspection; regulation of policies of insurance; of salvage; of pilots; regulation of bills of exchange between merchants of different States.

Such are examples of Mr. Hamilton's searching analysis of the objects and extent of the power to regulate commerce, but the discovery of the supposed constitutional authority to fix the price of services and of things entering into commerce baffled all his learning and sagacity.

It is true this is negative proof. But negative proof is in many instances the only proof of which the subject-matter is susceptible, and then it is unanswerable. It is said the non-user does not prove the non-existence of a power. But it is equally true that that which does not exist cannot be used. Existence and non-user are *sometimes* found together; but non-existence and non-user *are always* found together. They are inseparable. Long and uniform non-user repeals statutes. And it is impossible to overlook or underrate the influence and utility of that spontaneous concert of action, that invisible power, by which without shock or commotion a people does justice upon bad laws, protects society against hasty or inconsiderate legislation, and in fact guards the legislator against himself.

The Federal Constitution gives nothing to the States or to the people. Their rights and powers existed before it was formed, and are founded in the nature of sovereignty and the principles of freedom. They gave to the Constitution all it gives to Congress, and the exercise of the grants should be limited to their nature and to the objects to be subserved for the sole good of the States and people. The indefinite enlargement of the extent and range of those grants would absorb the one and enslave the other.

To make regulations of commerce by which it shall be carried on, to prescribe rules for transportation by land and water among the States, *is not to fix the prices at which the articles and subjects of commerce shall be bought and sold; is not to fix prices for transportation of persons or things;* nor is it anything of the same nature. The transportation, *per se*, of the pound of freight, or the bale of goods, is private property in the carrier, in as plenary a sense of that term as the pound of freight or the bale of goods *per se* is private property in the owner. If Congress has power to fix the price of the one species or article of private property, it has power to fix the price of the other species or article and of every species or article. They are all equally the subjects of commerce. The analysis of the proposition so to confiscate private property is a demonstration of some of the consequences of such indefinite enlargement of the extent and range of the grant under consideration. And if Congress under the power to regulate commerce among the States shall fix the price of the transportation *per se*, what but its own discretion is to restrain it from fixing the price of the pound of freight or of the bale of goods, and to enforce these regulations wherever commerce can be pursued and harassed, whether among the States or with foreign nations?

It would involve a palpable and sweeping usurpation of the functions of contract, of the imprescriptible right which every man has to demand his own price for whatever he has to sell, and to have his price from the buyer. It would be difficult to state a more unconstitutional and pernicious invasion of private right, domestic government, and commercial freedom. It would forge a chain of restrictions upon the limbs and arteries of commerce among the States by the agent specially constituted to remove and preclude restrictions, of a description far, far more irritating, unjust, and destructive of the interests involved, than all the previous restrictions of the States under the Articles of Confederation. In the deluge of its encroachment upon rights, both public and private, hitherto sacred, it would presently ingulf all forms of industry and enterprise in the nature of inland carriers, by land and water, and carriers by sea, including owners of stage wagons and coaches and railroad trains, who carry goods as well as passengers for hire; wagoners, teamsters, cartmen, draymen, porters, masters and owners of ships, vessels, and all water craft, including steam-vessels and steam tow-boats, belonging to internal as well as coasting and foreign navigation, lightermen, barge-owners, canal-boatmen, ferries, and so on to the end of the alphabet; and in due time all other agents and operations directly or indirectly connected with trade among the States or with foreign nations, until every man's business would be managed by a Federal bureau, and every man's income be measured by a Federal office-holder.

What would have been thought of such *miscalled* regulation by the framers of the Constitution? Can any man doubt that the assertion of such an undefined and undefinable power by Madison, Hamilton, and Jay, in the commentaries composing the Federalist, would have resulted in the instant and inexorable rejection of the Constitution?

In Gibbons *vs.* Ogden, Chief Justice Marshall declares that the grant of Federal power was not made so as to inure solely to the benefit of the grantee, and its nature and extent must be collected and measured, not merely from the language of the instrument, but from the known purposes for which the powers were conferred. And then he proceeds to make one of those definitions, so luminous and so axiomatic, in which he indicates the characteristic objects of the power:

Commerce undoubtedly is traffic, but it is something more; it is intercourse. It describes the commercial intercourse between nations and parts of nations, in all its branches, and is regulated by prescribing rules for carrying on that intercourse

And then he speaks of legitimate objects, by instancing laws concerning navigation; laws for the admission of vessels into ports; rules for the conduct of individuals in buying and selling, or of barter; laws prescribing what shall constitute American vessels; laws requiring vessels to be navigated by American seamen. But it never occurred to him that Congress might fix the price of the articles of traffic, or the fare for the intercourse, or the value in dollars and cents of the services of the navigator, or the charges for passage or freight upon the vessel entering or leaving the port, or the price or equivalent that individuals might lawfully demand and have for their private property bought, or sold, or bartered, or the wages or hire of the seamen, any more than what they should eat, drink, or wear, or how much or how little they should buy, or sell, or barter. His ideas of Federal power, liberal as they were, left some few of the minute details of human affairs to the sovereignty of the States and the volition of the citizen.

To regulate commerce, says he, among the States, or intermingled with the States; commerce cannot stop at the external boundary line, but may be introduced into the interior. But these words do not apply to commerce between man and man, or between parts of the same State. We have seen examples of its limitations as to objects; here are examples of its limitations as to intercourse and boundary.

Commerce, as the word is used in the Constitution, is a unit, every part of which is indicated by the term. This is the language of the Chief Justice. And he proceeds to show that this unit is *e pluribus unum*, that its objects, its intercourse, its divisions, its operations, partake of the nature of the infinitesimal; that some of its objects, intercourse, and operations are not only beyond, but are actually in-

accessible to the utmost reach of Federal power, and have been so from the birth of Adam to the date of this bill, and he demonstrates that the extent and range of the grant must be ascertained by the words used *taken in connection with the purposes and objects for which the grant was made.*

Neither from its words, its purposes and objects, nor any of its surroundings, can a colorable pretext be found for assuming that its scope embraced the right to fix the price of the intercourse, of the services, or the property of the citizen employed in commerce anywhere, whether among the States or with foreign nations. The States and people delegated no such power, the Constitution contains no such power, the Government was created for no such purpose, and the genius of the people, the freedom of commerce, and the purity of future congressional legislation, alike forbid the usurpation.

In support of the assumed existence of the constitutional right so to legislate can be found no color, in any expression from the tongue or pen of any of our jurists or statesmen before or since the era of 1787–'89.

The ample power to regulate, to prescribe rules for carrying on commerce, (not to fix the price of the commodity,) does not stop at jurisdictional lines of the States. And the Chief Justice proceeds to show that if the commerce which is designated be the subject of a voyage commencing or terminating at a port within a State, then the regulating power of Congress may be exercised on it there, and that this is no interference with the internal commerce excluded from the regulating power of the latter.

Precisely what he understood to be the meaning of the word "regulate," as used in the Constitution, he proceeded to explain by reference to the act of September 1, 1789, for registering and clearing vessels, regulating the coasting trade, regulating the transportation of goods from and to Philadelphia and Baltimore across the State of Delaware, and for other purposes, and by reference to other acts of a like character. And this power, so limited by its objects, &c., as we have seen, he says, may be exercised to its utmost extent; that it is plenary; that is, full, complete, *as to its objects*, and as to them is vested in Congress as absolutely as it would be in a single government, *having in its constitution the same restrictions on the exercise of the power as are found in the Constitution of the United States.*

And then the power of the States to pass inspection laws, which are regulations of commerce among the States and with foreign nations, is adverted to. It is a power founded in the sovereignty of the States, which, subject only to the Federal Constitution, is unlimited and undefined, whilst the powers of the United States are few and defined. Those inspection laws of the States—

> Form a portion of that immense mass of legislation, which embraces everything within the territory of a State not surrendered to the General Government—all which can be most advantageously exercised by the States themselves. Inspection laws, quarantine laws, health laws of every description, as well as laws for regulating the internal commerce of a State, and those which respect turnpike roads, ferries, &c., are component parts of this mass. No general power over these objects is granted to Congress; and, consequently, they remain subject to State legislation.

And when Mr. Webster eloquently argued that the phrase "to regulate" implied in its nature full power over the thing to be regulated, that it excluded necessarily the action of all others that would perform the same operation on the same thing, the Chief Justice refused to so decide it; and again adverted to the importance, in construing the grant, of interpreting the words used by the nature and objects of the power, as understood at the time of the adoption of the instrument, and *make them the test* of the arguments to be examined.

And in the subsequent case, in 1827, of Brown *vs.* State of Maryland, he again emphasized the paramount importance of that rule of construction for the examination of the general objects to be accomplished. The object of the powers conferred and the nature of those reserved must always be taken into view in expounding the words of any clause.

If those enlightened rules of construction are to be disregarded, and the words only to be looked to, what part of commerce is left to the State or the citizen?

If it be adhered to, the just distinction will be maintained between the two classes of powers—delegated and reserved—which in some respects, like "the intervening colors between white and black, approach so nearly as to perplex the understanding, as colors perplex the vision in marking the distinction between them."

And the Chief Justice, in the opinion of the court, again gave great prominence to the object of delegating to Congress the power to regulate commerce among the States. The grant, says he, was meant to be *as extensive as the mischief*. What was the mischief? He specifically points it out:

> The oppressed and degraded state of commerce previous to the adoption of the Constitution can scarcely be forgotten. It was regulated by foreign nations with a single view to their own interests; *and our disunited efforts to counteract their restrictions were rendered impotent by want of combination.*

But down to that era, even the most despotic of foreign nations had in no instance undertaken to fix the price of the subjects of commerce. The citizen or subject was left free to fix his own price for his services or his effects. Such a mischief had not existed then; its introduction was left for our improved era, under the benign auspices of our grant of power to Congress to remove and preclude restrictions upon commerce among the States. It is inconceivable that the power should now be used to introduce a system of restrictions upon the freedom of that identical commerce, far more odious and impolitic than those which it was especially designed to exclude.

In Brown *vs.* State of Maryland the court decided that the State could not tax the importer's sale of the goods in bulk. Such a tax would be inconsistent with the Federal power to regulate commerce. It was in the nature of a State restriction upon commerce. Congress has a right not only to authorize importation, but to authorize the importer to sell. The astonishment of the court would doubtless have been great, if it had been intimated, in argument, that Congress had power to fix the price of the bale of goods in bulk, the charges of the ship which brought it into port, the wages of the seamen who worked the vessel, the hire of the stevedore who hoisted the cargo, of the lighterman who brought it to the shore, of the drayman who drayed it to the warehouse of the importer. Yet commerce covers all that and these. But the nature and objects of the power to regulate commerce with foreign nations and among the States not only do not embrace them, but exclude them as wholly incompatible with the generality, spirit, and intent of that power.

As well might it be claimed the power may be used to fix the price of cotton, tobacco, whisky, hemp, wheat, corn, potatoes, cattle, mules, locomotives, steamboats, ships, railway iron, dry goods, and groceries, manufactures, &c., employed in commerce among the States or with foreign nations; for all these are of its legitimate objects; and, indeed, the inevitable logic of the exercise of the power, as sought to be construed, must carry it, in the discretion of Congress, to all these objects, and others, "which, in the ordinary course of affairs, concern the lives, liberties, and properties of the people, and the internal order, improvement, and prosperity of the State," as to which the authority of the State government is complete, unqualified, and exclusive.

Undoubtedly the power to regulate commerce with foreign nations has a breadth and operation different from that to regulate it among the States. The relations which the Government of the Union bear to foreign nations are wholly unlike those which bind it to the States. The former involve international and undefined considerations and exigencies; the latter definite objects and partitioned jurisdictions. The vitality of the Government, defined in the Constitution, is the organization composing the respective States, which embraces everything but certain designated Federal objects. In the argument of the Passenger cases, in the Supreme Court, in 1849, it was forcibly urged that the limitation of the Government to those defined objects secures to it its proper strength and usefulness, and that no course could be more unwise and fatal than to arrogate to it the power of the States, by taking from them what they have been accustomed to enjoy, including nine-tenths of the whole subject of commercial regulations, through every vicissitude of our Federal career. Subjects intermingle. Commerce, manufactures, agriculture, are concerned in ship-building. Scarcely an act can be named which is not affiliated. Commerce, in its enlarged sense, covers nearly all the business relations of society. The means employed to regulate it are as diverse as nature, and are more free to the States than to the Federal Government, because the means of the former are minute in their nature, unlimited and undefined, while those of the latter are general in their nature, few and defined. If the words of the grant were to be decisive of the extent, &c., of the power, the enigma would be of easy solution, and the friends of the pending bill might rejoice in the absoluteness and universality of the words used. But the purposes and objects of the grant lie across their path. These Chief Justice Marshall declares to be limitations upon the power. It derives no increased latitude from the difficulty to precisely draw the line *in all cases.* Mr. Justice McLean, in 1849, declared in the Passenger cases that—

> No one has yet drawn the line clearly, because, perhaps, no one can draw it between the commercial power of the Union and the municipal power of a State.

But at that time it had never been pretended that, under the commercial power, Congress might fix the vendible price of private property, consisting of services or things employed in trade or transportation. It is, perhaps, not too presumptuous to say that, if it had been otherwise, Mr. Justice McLean would not have hesitated one moment to draw the line long and deep, and to have placed those things on the other side of the line, far, far beyond the utmost extent or range of the Federal power. And Mr. Justice Wayne, in the same cases, declared that, in construing the words "regulate" and "commerce," the etymology of the words would be wholly unsatisfactory; and that, to arrive at their meaning, as used by the framers of the Constitution, it is indispensable to have recourse to the subject-matter.

And in the same cases Mr. Justice McKinley, rejecting the theory that the power granted was coextensive with the meaning of the words used as absurd, said, "Where does the power of the United States over this subject end, and where does the State power begin?" And then declared, "This is, perhaps, one of the most perplexing questions ever submitted to the consideration of this court." And he adverted to the case of Brown *vs.* Maryland, before mentioned, in which the court carried out the power of Congress to regulate commerce with foreign nations upon the subject then under consideration to the line which separates it from the reserved powers of the States, and plainly established the power of the States over the same subject-matter beyond that line.

And the doctrine that the power is unlimited, because of the words

used, was met and repelled as wholly inadmissible by Mr. Hamilton in the Federalist. Said he:

Notwithstanding the affirmaive grants of general authorities, there has been the most pointed care in those cases, where it was deemed improper that the like authorities should reside in the States to insert negative clauses prohibiting the exercise of them by the State.

Chief Justice Taney gives prominence to another of the numerous limitations upon the power. He says, in his opinion in the Passenger cases:

It has always been held that the power to regulate commerce does not give to Congress the power to tax it, nor prohibit the States from taxing it in their own ports and within their own jurisdiction. The authority of Congress to lay taxes upon it is derived from the express grant of power, in the eighth section of the first article, to lay and collect taxes, duties, imposts, and excises; and the inability of the States to tax it arises from the express prohibition contained in the tenth section of the same article.

The phrase "to regulate," then, is a phrase of a restricted meaning; it means to prescribe rules for the carrying on of commerce, and does not mean the power to tax the service or commodity, and far less does it mean to fix the price of the service or commodity employed in commerce.

In the same cases Mr. Justice Daniel, in deploring the evils of indefinitely enlarging the objects and extent of specific grants, said the practice would result in the creation of a power transcending that which called it into existence—a power single, universal, engrossing, absolute. Everything in the nature of civil or political right is thus ingulfed in Federal legislation. What, then, must be thought in our day, and in future times, of a doctrine which, under a Government professedly one of charter exclusively, claims, beyond the terms of that charter, not merely the absolute control of civil and political rights, but the power to descend to, and regulate *ad libitum*, the private and personal concerns of life? By permitting such an abuse every limit may be removed from the power of the Federal Government. Once let the barriers of the Constitution be removed, and the march of abuse will be onward and without bounds.

The most careful definitions must equally be understood with reference to their subject-matter. This may be illustrated by a quotation from Chief Justice Marshall, much, but erroneously, relied on by the friends of this bill. He says, in Gibbons *vs.* Ogden:

Commerce is undoubtedly traffic; but it is something more. It is intercourse. It describes the commercial intercourse between nations and parts of nations in all its branches, and is regulated by prescribed rules for carrying on that intercourse.

But to superadd to the word "commerce," as used in the Constitution, the word "traffic," or the word "intercourse," cannot operate to multiply the objects or enlarge the extent of the power. Such an assumption would be wholly foreign to his meaning. It would be trifling with the judgment to proceed to argue that which is self-evident, to wit, that all traffic is not within the power to regulate commerce, nor is all personal intercourse within that power; for the greatest mass of traffic is confessedly of State cognizance, and the greatest amount of personal intercourse is partly of State cognizance, and the residuum not commercial at all.

I submit that nothing can prove more unreasonable than to insist that the definition of the great jurist can be used to sanction the fixing of the charges for transporting the articles or subjects of traffic in the nature of commerce, or of persons traveling in the employment of commerce, or otherwise.

The absurdity and the vice of this bill were most forcibly drawn by Mr. Justice Daniel in Gibbons *vs.* Ogden:

This word *intercourse*, nowhere found in the Constitution, implies infinitely more than the word *commerce*—intercourse "with foreign nations, among the States, and with the Indian tribes." Under this language not only might national, commercial, or political intercourse be comprehended, but every conceivable intercourse between the individuals of our own country and foreigners, and among the citizens of the different States, might be transferred to the Federal Government. * * * It would embrace the right of transit for persons and property between the different States of the Union, and the power of regulating highways and vehicles of transportation. We have here a few examples of the mischiefs incident to the doctrine which first interpolates into the Constitution the term *intercourse* in lieu of the word *commerce* contained in that instrument, and which then, by an arbitrary acceptation given to this term, claims for Congress whatsoever it may be thought desirable to comprise within its meaning. * * * And no engine of usurpation could be more conveniently devised than the introduction of a favorite word which the interpolation would surely have as much right to interpret as to introduce. This would be fulfilling almost to the letter the account, in the Tale of the Tub, of Jack, Peter, and Martin engaged in the interpretation of their father's will.

The case of Veazie & Young *vs.* Moor, in the Supreme Court, in 1852, settled the validity of a law of the State of Maine, investing the defendant with the exclusive right to navigate the Penobscot River above Old Town for a term of years. It was claimed the law was repugnant to the Federal power to regulate commerce. Such was not the opinion of the court, by Mr. Justice Daniel:

Because the products of domestic enterprise, agriculture, manufactures, or the arts may ultimately enter into commerce among the States or with foreign nations, it does not follow that they are within the regulating power of Congress. Otherwise that power would extend to contracts between citizen and citizen of the same State, to the pursuits of the planter, the grazier, the manufacturer, the mechanic, the immense operations of the collieries, mines, and furnaces. The results of every one of these industries are the subjects of commerce among the States and with foreign nations. And they are borne by turnpikes, canals, railways, boats, or vessels from mart to mart within and beyond State lines. The exercise of such a power would paralyze every effort of internal improvement and individual enterprise; because upon the pretext that such works were objects or instruments in the nature of commerce among the States and with foreign nations, their charges, income, and economic interests would be brought under the control of Congress. The *design and object* of the grant in the Constitution were the removal of commercial restrictions and the establishment of commercial freedom among the States. Those were the views of the founders, and they have been sustained by the rulings of the court.

The case of Gilman *vs.* Philadelphia was decided in the Supreme Court in 1865. A bridge had been built across the Schuylkill, an ancient river and common highway of the State, pursuant to an act of the Pennsylvania Legislature. Commerce had been floated on it in all kinds of vessels for many years. The bridge seriously obstructed it. The act was resisted for its alleged repugnancy to the commercial power of Congress. Mr. Justice Swayne delivered the opinion of the court, sustaining the act. The power to authorize the building of bridges is not to be found in the Federal Constitution. It has not been taken from the States. It must reside somewhere. They had it before the Constitution was adopted, and they have it still.

And the court says, of the limitations and objects of the grant:

The power to regulate commerce covers a wide field, and embraces a great variety of subjects. Some of these subjects call for uniform rules and national legislation; others can be best regulated by rules and provisions suggested by the varying circumstances of different localities, and limited in their operation to such localities respectively. To this extent the power to regulate commerce may be exercised by the State.

The case of Gray *vs.* The Clinton Bridge, was heard in the United States circuit court in 1861, before Mr. Justice Miller. It was on a bill in chancery filed by Gray, complaining of a railway bridge erected in pursuance of State charters across the Mississippi River between the towns of Clinton, Iowa, and Albany, Illinois, on the ground that it presented a serious obstacle to the navigation of the river, and praying for its abatement as a nuisance. The bridge was sustained.

The court said the power to regulate commerce was one of the most useful confided to the Federal Government; that the exercise of it had essentially contributed to create and foster that strongest bond of our nationality, a community of interest among the States. The power of Congress to regulate commerce is the same by land and water. The railway now shares with the steamboat the carrying trade. Congress has made salutary regulations for commerce by steamboat, and it may do so for commerce by railway. To regulate them is to regulate commerce. And the court adverts to the invidious State restrictions upon commerce among the States under the Confederation, and says that the removal of these fetters led mainly to the adoption of the Constitution.

For myself, I must say that I have no doubt of the right of Congress to prescribe all needful *and proper regulations* for the conduct of this immense traffic over interstate railways.

Now, what does the court evidently mean by *proper regulations*? Why it could mean only such regulations as lie within the extent and objects of the grant. As to the objects, they were of the class comprehended in the safety, equality, and freedom of commerce, imperiled and fettered under the Confederation. As to the extent, it is found in the examples in the statutes for the regulation of commerce on steamboats. These were definite and tangible illustrations of the meaning of the court. The objects furnish no authority to this bill. The examples limiting the extent furnish none, because the statutes regulating steamboat commerce leave the carriers free to fix their own price, fare, and freight. And not the remotest intimation is given by the court that the power to regulate embraces in its objects or extent the subject of tolls, fare, or freight; and the court excludes any such conclusion by instancing the regulations of steamboat commerce as of the nature and extent of what is meant by the phrase "proper regulations."

The interesting case of The Reading Railroad *vs.* Pennsylvania, in the Supreme Court in 1872, involved the validity of the State tax on freight taken up within the State and carried out of it, or *vice versa*. This was held to be a State restriction upon commerce among the States, and void for repugnance to the Federal Constitution. It was a modern restriction of the ancient class, which, under the Confederation, led to the grant of the power to remove and preclude them and secure equality and freedom of commerce among the States. The opinion of the court was delivered by Mr. Justice Strong. The transportation of freight, or of the subjects of commerce, for the purpose of exchange or sale, is a constituent of commerce. The transportation of articles of trade from one State to another was the prominent idea in the minds of the framers of the Constitution when to Congress was delegated the power to regulate commerce. "A power to prevent embarrassing restrictions by any State was the thing desired."

Whether by land or water, the rule is the same. When the Constitution was adopted transportation among the States was principally by land. The State might, with the same propriety, establish custom-houses on her border and demand a duty for allowing commerce to pass. And the court say:

We concede the right and power of the State to tax the franchises of its corporations, and the right of the owners of artificial highways, whether such owners be the State, or grantees of franchises from the State, *to exact what they please for the use of their ways. That right is an attribute of ownership.*

This would seem to be decisive of the adverse fate of the pending bill, if it still survives. The bill and the opinion cannot stand together.

And the court continues:

The tax is not compensation for services rendered by her or by her agents. * * * Tolls and freights are a compensation for services rendered, or facilities furnished to a passenger or transporter. * * * A tax is a demand of sovereignty; a toll is a demand of proprietorship.

This was an interstate railway within the meaning of the bill. Does the reasoning or language of the court give color to the assumption that Congress has power to fix the tolls or freights? On the contrary, the court declare in the most positive terms *the right and power* of the owners of the railway *to exact what they please for the use of their ways*, and expressly decide that that right is an attribute of ownership.

And in another case entitled of the same parties, in the same court, in the same year, involving the validity of the State tax upon the gross receipts of the road, the State law was held to be constitutional, the same justice delivering the opinion of the court:

> The Federal Constitution ought not to be so construed as to impair, much less destroy, anything that is necessary to their [the States'] efficient existence.

In the very recent case of Osborne *vs.* Mobile in the Supreme Court, in 1872, involving the question whether an ordinance of the city of Mobile requiring the Southern Express Company to pay a license to transact there a business extending beyond the limits of Alabama was repugnant to the power to regulate commerce among the States, the court held it was not repugnant. The opinion was delivered by Chief Justice Chase. He adverted to The Reading Railroad *vs.* Pennsylvania:

> The tax was held to be unconstitutional because it was in effect a *restriction* upon interstate commerce, *which by the Constitution was designed to be entirely free.*

And as late as December, 1872, in Railroad Company *vs.* County of Otoe, in the Supreme Court, Mr. Justice Strong again gave prominence to the indispensable canon of construction that—

> In construing the Federal Constitution, Congress must be held to have only those powers which are *granted expressly or by necessary implication*, but the opposite rule is the one to be applied to the construction of a State constitution. The Legislature of a State may exercise all powers which are properly legislative, *unless they are forbidden* by the State or national Constitution. This is a principle that has never been called in question.

The late case of Olcott *vs.* The Supervisors, in the Supreme Court, in the winter term of 1872–73, decided the validity of an act of the Legislature of Wisconsin in aid of the construction of a railroad by taxation, &c. Mr. Justice Strong delivered the opinion of the court. Expressions found in that opinion have been quoted and relied on in support of the bill. But it is a vain reliance. The opinion was delivered by the same justice and by the same court that delivered the opinion in Reading Railroad *vs.* Pennsylvania, and in the same term, month, and year.

Ever since passage and transportation by railways have had an existence they have been held to be public highways. Though the ownership is private the use is public. So turnpikes, bridges, ferries, canals, &c., although made by individuals or companies under grants, are regarded *publici juris*. The right to exact tolls or charge freights is granted for a service to the public. And it is the *right and the power* of the owners to *exact what they please for the use of their ways*. Chief Justice Marshall said, in Dartmouth College *vs.* Woodward, that a corporation was an artificial being, the creature of law; it possessed only those powers which the charter of its creation conferred upon it. These are such as are supposed to be best calculated to effect the object for which it is created; among the most important are immortality, individuality, perpetual succession. These enable a corporation to acquire and hold property, and *to manage its own affairs*.

THE POLICY OF EXERCISING IT.

But if, peradventure, all the foregoing views be founded in error; if I have misstated the origin of the power to regulate commerce, confounded the exclusive with the concurrent, or the municipal with the Federal; mistaken the practice of the State governments, and the practice of the central Government, and misunderstood and misinterpreted the nature, objects, and extent of the grant; and if it be true in theory and in fact that a source of power so undefined and undefinable lurks concealed among the *few and defined* powers which alone were delegated, then, I submit, the exercise of it, by the Congress of the United States, would be unnecessary and dangerous, if not pernicious in the extreme.

The Union is a first power among the first powers of the habitable globe All that it is has been the work of a single century. A few trickling springs of trade have expanded into a boundless sea of commerce. For a century in its progress from penury to power, that commerce has floated upon the oceans, lakes, and rivers which bound or intersect our territory, and been transported overland among the States. For more than forty years of that time the railway has borne a constantly increasing part in adding to its power, beneficence, and glory. Throughout that one hundred years, throughout that unparalleled progress of commercial prosperity, the power under discussion was never exercised. No jurist, no statesman, no politician, no Congress, no President, no Administration or party, ever so much as named, divined, or imagined its exercise. The need of it was never felt. For one hundred years by land and water, by vessel or rail, that growing commerce has been carried, yet no statesman or party proposed to fetter it by thrusting a politician into its free domain to fix the charges or freight of the carrier, or the price or equivalent of the bale or commodity.

The triumphs and the logic of the past are then against its exercise. Are these deserving of no consideration?

A statesman, than whom a purer and a greater never lived to shed luster upon his country, has said:

> Ours is not a Government of precedents, nor can they be admitted, except to a limited extent, and with great caution, in the interpretation of the Constitution, without changing in time the entire character of the instrument. The only safe rule is the Constitution itself, or, if that be doubtful, the history of the times.

If, then, we leave the face of the Constitution, and search, as we have done, for its spirit and intent in unbroken precedent and contemporaneous history, we cannot fail to be impressed with the coinciding and concentrated authority of both, against the exercise of the power proposed by the pending bill.

Is the entire past history of the States and the Union to be put behind us? Is the system that has conducted their twofold march to greatness, to opulence, and to glory to be held for naught? Is a new and untried system to be interpolated, unknown to our past, alien to our present, and malign to our future? Will you fix the fare for a passenger and the charge for a pound of freight on the railways used in commerce among the States, and leave untouched the fare for the same passenger and the charge for the same pound of freight on our rivers, lakes, and coasts among the States, and on the oceans, in our commerce with foreign nations? Or will you overturn and annul as to these last-named ancient highways the system of regulations founded by the fathers, continued by our predecessors and practiced by ourselves, during near a century past and gone, and fix the fare and charges for every passenger or thing carried by land or water in our commerce among the States and with foreign nations, because intercourse and property are sometimes the subjects and instruments of commerce? And if yea, how long will it be before the deluge of congressional legislation will fix the merchantable price or equivalent for the goods, wares, and merchandise carried, which are equally the instruments and subjects of the commerce designated, equally subject to the exercise of the power, and even in a greater degree, and in more respects, the objects of high prices, excessive exactions, and vexatious monopoly? The diversity in the innumerable descriptions of vehicles by land or vessels by water, their cost, construction, equipment, running expenses, accommodations, &c., render the regulation of fare and freight practically impossible under any other auspices than those of the carrier, his agents or employés, and the passenger or owner, subject to the laws of competition and of supply and demand. I say impracticable under our system of private right and public law. Elsewhere it might be practicable, but only under a despotism. And if it shall be established here, the railways will either absorb Congress or Congress the railways, and in either event the farmer, consumer, producer, and merchant will be the sufferers.

> Self-government, general as well as local, is indispensable to our liberty, but interference and dictation are the essence of absolutism. Absolutisms presume to do everything and provide for everything. Robespierre, in his "great speech" for the restoration of the Supreme Being said, "The function of government is to direct the moral and physical forces of the nation."

The policy of the bill once incorporated, its jurisdiction, equipments, and staff will speedily sweep from center to circumference of agriculture, manufactures, and all the arts and industries of peace employed in commerce. One by one the reservations of power by the States will be insidiously absorbed, until in a little while their control of even their own local commerce will be drained off into the Federal vortex. Encroachments, disguised by arguments of expediency, establish precedents which ultimately devote a generous and unsuspicious people to all the consequences of usurped power. The staff of office-holders, their supernumeraries, dependents, and minions, will incubate and swarm over and eat out the industries of the citizen. It now requires sixty-odd pages of the Blue Book to hold the names alone of the office-holders in the custom-house and revenue service And who can foretell what numberless pages will have to be added to enable the rank and file of this new army of political emissaries commissioned to wage a war of espionage and dictation upon individuals and property employed in the pursuits of commerce? And what new ways and means will be devised and instituted still further to burden the industry and production of the country to raise revenue wherewith to meet the demands of the new pay-roll?

> Gloomy or ardent and bold times may try men's souls, but periods of material prosperity and public depression try a country's institutions. They are the most difficult times, and liberty is lost at least as often by stranding on pleasant shores as by wrecking on boiling breakers.—*Lieber.*

A new cabinet officer must be appointed and salaried, and new bureaus and desks established, and new tables of statistics explored and classified, to digest a system of fares, freights, and charges, for all the countless forms of transportation of a commerce in its external values exceeding $1,300,000,000, and an unestimated internal commerce of perhaps $5,000,000,000 per annum.

This new and alarming order of things must prove only a question of time; it will follow the enactment of this bill as the day the night, the night the day. For years the States have been steadily increasing in number and diminishing in strength, and this last volition of encroachment and centralization is a mighty stride toward not only their utter degradation but the enslavement of enterprise and the reduction of commerce, like finance, to a partisan institution and an administration patronage.

The great Emperor Napoleon once exclaimed, "Poor nation! in spite of all your enlightened men, of all your wisdom, you remain subject to the caprices of fashion, like individuals."

Has the patronage of the Executive not become strong enough? Does any friend of the present incumbent, and yet a friend of his country, wish that patronage extended? Let speak the experience of the recent past. The advocates of extension, if advocates there

be, should place their hands upon their mouths, and their mouths in the dust.

In the adjustment of this new internal and external revenue system of fixing the rates of fare and freight, of hire or wages, for the labor and property of citizens employed as carriers of passengers and merchandise, ashore and afloat, what will be the basis of uniformity, permanency, and equality? The diversities of ships and vessels are countless, as to cost, equipment, and expenses, and these fluctuate with the fluctuations of the labor, finance, and commerce upon which they depend. The same may be said of railways, canals, bridges, turnpikes, &c., which, by their intersection, traverse State boundaries.

The construction cost of railways per mile varies most materially. In Florida the cost is estimated at $15,000; in California, $98,000; in Pennsylvania, $88,000; in New York, $76,000; in Massachusetts, $73,000; in Kentucky, $45,000; and in Illinois, $48,000. And the variations in cost in the thirty-seven States range from the minimum to the maximum in the States cited.

Costs of equipment are quite as various; and so of running expenses, and employés, and business done, and terms and conditions of their franchises, and State taxes, and so on to the end of the alphabet.

Will detachments of this vast army of official invaders of private rights make daily incursions upon every link of road in every State, county, township, and precinct, and into the counting-rooms and books and vouchers of citizens and companies, in order to adapt their tariff of rates to the table of costs, and fluctuate their rates with the fluctuations of business or income, as these are controlled by the vicissitudes in labor, currency, and trade upon which they subsist? Or will all those fundamental discrepancies be disregarded, and the greatest and the least, and all intermediate grades, be cut off, or stretched out, to fit one common and indiscriminate scale?

The House can form some adequate idea of the capital, ability, and energy employed in the carrying of commerce by land and water. The cost of 71,564 miles of railway and equipments alone is estimated at $3,728,416,958, their gross receipts per annum at $478,885,597, and their net receipts at $174,350,913. Every one of these roads, in any one of the thirty-seven States of this Union, derives its essential legal existence, from the voluntary act of the representatives of the people, in the State Legislature assembled. Would it be desir able to recruit the lobby of this Capitol, and to beleaguer the patronage of the Administration with the numberless aids and appliances of such a combination in legislating to fix a tariff of rates, or in the appointment of commissioners to fix it; or is it not far better that all that capital, ability, and energy, and all their forms and combinations, be left where they have always gathered and diffused enterprise and wealth, unestimated and inappreciable, subject only to the supreme law of the Union, as heretofore expounded and applied; subject to the laws of the States where situate, and the terms and conditions of their charters, if chartered, and to those unwritten laws of competition, supply, and demand, which form the vital spirit and the potential genius of a flourishing commerce?

The regulations of the Federal Government should continue or be extended within the limits and for the purposes as practiced and approved through more than eighty years of constitutional supremacy. And the States should be wary and circumspect in erecting corporations and granting franchises, particularly where they are, like railways, public in their uses but private in their ownership. The State undoubtedly has not always been wary and circumspect. But let the Congress of the United States study its own statutes for the erection of corporations, and learn a lesson of charity in its animadversions upon the States.

If the State has already conferred exclusive privileges upon citizens or incorporated companies, in faith of which they have expended their funds, incurred liabilities, and constructed great works, their privileges are their property, which they have bought and paid for with a price; the contract is executed, and the Supreme Court declares all such to be sacred and inviolable. And though the consequences of such exclusive privileges are oftentimes oppressive in practice, as well as odious in name, fortunate for us, and perhaps for our public and private fidelity to the obligations of contract, such is the character of the American people and the resources of their country, that just so soon as those exclusive privileges are so used as to oppress and plunder, they are corrected or rendered valueless by powerful agencies of competition, constructed with all the limitations and guards enjoined by the experience of the past. Here lies the appropriate remedy for the evils of hasty and injudicious legislation. It does not lie in usurpation of power, nor in repudiation of the obligations of contract. To rob them of their franchises, or to so burden them as to seriously impair their utility would be to dry up the arteries of our commerce, and to remit the States to corduroy bridges, wooden sleds, and bark canoes.

At common law, enforced in perhaps every State in this Union, every company is obliged to carry whatever is brought to it, and is restricted to reasonable charges for passage and freight, unless it is otherwise provided in its charter. It is further burdened with liabilities, in the nature of those of an insurer, for the safety of passengers, baggage, freight, &c., and for losses by theft, &c., unless occasioned by inevitable accident or the public enemy. All these, and others of a like and of a dissimilar nature, have proved in the past restrictions upon those lines of transportation, adequate to the best interests of the people, the States, and the Union, and the creation and carrying of a commerce rivaling the most magnificent in the world.

This bill, we have seen, proposes to take from the carrier his proprietary right to fix his own charges, as to which the Supreme Court, in Reading Railway *vs.* Pennsylvania, declares that he may exact what he pleases. If this Government has power over one part of the carrier's charges, it has power over every part; and if it can forbid or abolish one part, it can forbid or abolish every other part, and take from him all. But the Supreme Court say:

> Tolls and freights are a compensation for services rendered, or facilities furnished to a passenger or transporter. A toll is a demand of proprietorship. The right to make terms for the use of the roadway *is in the grantee* of the franchises, *not in the grantor*.

And Congress has the same right to fix the price of his locomotive as of his freight or tolls. For those tolls, which are the carrier's private property, he has at common law a lien upon the thing carried; he may keep it until his charges are paid, and if not paid he may go into equity and sell it for his charges. Yet, in the face of all these decisions and considerations and more, the provisions of this bill propose to give to a coterie of persons, to be appointed by the President, absolute control over those tolls or freights by the absolute abolishment of such part of them as they see proper, to which the carrier must submit, under the penalty of being arraigned and prosecuted for crime in a United States court. This is not law; it is arbitrary power. Says Edmund Burke:

> Law and arbitrary power are in eternal enmity. * * It is a contradiction in terms; it is a blasphemy in religion; it is wickedness in politics, to say that any man can have arbitrary power. * * And he that will substitute *will* in the place of *law* is an enemy to God.

It is centralism. It embodies a policy which in its tendency would bring everything under the political control of Congress, and effect everything through the political patronage of the Administration. I submit it to the House and country, for the past few years the fearful strides of the central Government in that direction have increased, are increasing, and ought to be diminished.

Professor Lieber observes:

> It is necessary to have seen nations who have been forced for centuries to submit to constant and minute police interference, in order to have any conception of the degree to which manly action, self-dependence, resoluteness, and inventiveness of proper means can be eradicated from a whole community. On this account systematic interference weakens governments instead of strengthening them; for in times of danger, when popular energy is necessary, when every man must do his duty or the state is lost, men, having forgotten how to act, look listlessly to the government, not to themselves.

Within the last few years Congress has given away to railroads over two hundred and fourteen million acres of the public lands, and with more than regal munificence has invested the companies in whose favor it has legislated with almost every conceivable form of exclusive privilege and perpetuity which the owners and managers could wish, including the prerogative of unlimited railway tolls and unlimited railway consolidation. And in no instance in which it had the power in the acts and grants it made within its exclusive jurisdiction in the District of Columbia and in the Territories, and public lands, where and when it lawfully might, did it ever undertake to fix tolls and freights, from the act granting the right of way to the Baltimore and Washington Railway in May, 1828, to the act for the creation of railway and other corporations in this District in May, 1870, although those acts are pregnant with minute stipulations and regulations in most all other respects; and this with but a single exception. This exception refers alone to the act of July, 1862, to aid in the construction of the Union Pacific and the Central Pacific Railways, wherein it was provided that Congress reserved the right to establish the rates of fare by law, if then unreasonable, whenever the net income should exceed 10 per cent. of their cost, and 5 per cent. to be paid the United States. I have observed no other exception from the otherwise uniform practice of Congress.

The tribunal created by this bill and invested with arbitrary power over the tolls and freights, being the private earnings and property of citizens and companies, is of no republican lineage, but is despotic in its origin, as well as in its nature. It is imported from England, and is the *scion of a royal stock*. It is an American imitation of Her Majesty's lords of the privy council acting as a board of trade. The introduction at this time, of an equivalent institution, in a republican country, inhabited by the descendants of that band of patriots who fought seven long years to break from the bondage of that very privy council and board of trade, and transmitted to posterity these States and this Union, and their deathless hatred of arbitrary power, at once as a legacy, a trophy, and an admonition of that struggle, and its motive is a circumstance most ominous indeed of a day when the legatee may have occasion to turn away from the *husks* and the *swine*, and exclaim:

> I will arise and go to my father, and I will say unto him, Father, I have sinned against Heaven and before thee, and am no longer worthy to be called thy son.

The power to create a corporation is an ancient, hereditary prerogative of the King of England, who, in the English theory, is the fountain of honor, of office, and privilege. The King's consent, previously given, is absolutely indispensable to the erection of any corporation; and it is usually evidenced by act of Parliament in the form of a charter. Instance the ancient charter of the East India Company of 1600, given by Queen Elizabeth; the ancient charter of Virginia in 1584, given by that Queen to Sir Walter Raleigh; the ancient charter of Massachusetts in 1606, given by James I; the ancient charter of Maryland in 1632, given by Charles the First to Lord

Baltimore. But the creative act is that of the King in virtue of his royal prerogative:

It is held that if the King grants to a set of men to have *gildam mercatoriam*—a mercantile meeting or assembly—*this alone is sufficient to incorporate and establish them forever.*

In the respective States of this Union, railway corporations exist only by act of the State Legislature, in virtue of the original, inherent, unlimited sovereignty of the people there assembled by their representatives; unlimited, save by the self-imposed limitations composing the *few and defined* powers delegated to the Union. Of those the power to erect a corporation *per se* is not one; though it has been held that Congress may create a corporation if it be a necessary and proper mean to carry out an express power.

Now the power of the State government over its corporations is unlimited in all respects, save only two. The first in reference to any privilege conferred, which it has contracted not to interfere with; the second, the power delegated to the Union, which within its prescribed limits is the supreme law as to its objects; and notwithstanding the unlimited and undefined power of the State, it lies not within the sphere of even State sovereignty to go back upon a franchise granted, and fix the tolls and charges, or price of the services and property of its owners, *unless* in the exercise of a power to do that thing, reserved from the act of its creation. The power is not only not in the Federal Government, and never was, because it is not among the powers delegated, express or implied; but as to vested rights, it is not even in the State government, though it was inherent and original in the State, because the State has parted with it to the citizen or company for a consideration, and the right so acquired is inviolable and irrevocable. It is manifest that as to existing corporate privileges, which are executed legislative contracts by the sovereign with the citizen, the power to fix or abolish them, in whole or in part, contrary to the will of the grantee, exists nowhere within the range of American institutions except for public use and upon just compensation.

In the absence of reservations to that effect in the general law, or, what is equivalent, in the special law of the corporation, the State possesses no more power to fix or limit its charges within the territory of the State than the Federal Government, which has none at all, and never had any, and can never have any while the Constitution stands as it is.

Hence I presume the committee have no reference to existing and unrestricted charters by the States, when they say in their report:

It will hardly be claimed, however, at this day, that a State has no power to fix or limit the charges of railroads within its territory.

I cannot say that I correctly apprehend the meaning of the report of the committee in the following extract:

The power of the State over the railroad commerce within its limits is not derived from the fact that railroads are chartered by the State—

I am not aware that it has ever been contended by any theorist or utilitarian in this country that the power *of the State* is derived from charters *by the State.* I think the opinion prevails that, however a State may *limit* its power *by its charters,* at all events it can never *derive its power from its charters*—

but it is derived from the fact that railroads are public highways, and therefore necessarily subject to legislative control.

Now, my understanding is, that the power of the State is derived, not from highways, but from the sovereignty of the people. A railway is a highway, public in its use, private in its ownership. It is the creature of legislative authority; and the Legislature, in the formation and structure of the charter or franchise, which is its vital existence, can endow it with any privileges, or fetter it with any restrictions or conditions, within its legislative discretion. But having done that, this offspring of plenary legislative sovereignty can not only not be harmed by its creator, but it retroacts and becomes a law of limitation to its creator of the highest obligation, and as such is universally held to be inviolable and irrevocable. I am, therefore, at a loss to conceive how the sovereign power of the State can properly be said to be derived from highways.

Involuntarily leaning upon the analogies of the monarchical institutions of England for the power proposed by the bill, the report asks:

Is the authority of Congress, when exercising the powers conferred upon it by the Constitution, more limited than that of Parliament? We think not.

I aver, then, upon the enduring authority of the founders, the plain terms of the instrument, and the decisions of the Supreme Court, that the Government created and defined in the Federal Constitution is essentially a government of limitations, as to its objects, as to its powers, and as to its means. And I aver, upon the proof of the English constitution, Sir Edward Coke, and Chief Justice Marshall, that the authority of Parliament is an unknown quantity, without limitation, as to its objects, as to its powers, and as to its means. Can anything be better settled?

Said Mr. Madison, in the Federalist:

The powers of the Federal Government are few and defined.

Said the Supreme Court, in McCulloch *vs.* Maryland:

We admit, as all must admit, that the powers of the Federal Government are limited, and that its limits are not to be transcended. Should Congress, in the execution of its powers, adopt measures which are prohibited by the Constitution; or should Congress, under the pretext of executing its powers, pass laws for the accomplishment of objects not intrusted to the Government, it would become the painful duty of this tribunal to say that such an act was not the law of the land.

Said Chief Justice Marshall, in Dartmouth College *vs.* Woodward:

According to the theory of the British constitution, their Parliament is omnipotent. To annul corporate rights might give a shock to public opinion, which that government has chosen to avoid; but its power is not questioned.

Said Sir Edward Coke:

The power and jurisdiction of Parliament is so transcendent and absolute, that it cannot be confined, either for causes or persons, within any bounds. It hath sovereign and uncontrollable authority in the making, confirming, enlarging, restraining, abrogating, repealing, reviving, and expounding of laws, concerning matters of all possible denominations, ecclesiastical or temporal, civil, military, maritime, or criminal: this being the place where that absolute despotic power, which must in all governments reside somewhere, is intrusted by the constitution of these kingdoms.

I submit to the House and the country the power to regulate commerce among the States is limited by its objects. Its objects are safety, equality, and freedom, to be secured, it may be, by prescribing rules for carrying it on, as in the past and the present; but not by imposing arbitrary laws for the valuation and sale of services and things employed in its pursuit, as proposed by the pending bill.

Without confusing and confounding all limitations, the power to regulate, that is, to prescribe the rule by which commerce is to be conducted, cannot be construed to comprehend the *far greater power* to arbitrarily fix the commercial value and vendible price of the private property, skill, and labor of the citizen.

The bill is advocated because it is claimed to be in the interest of the people and against monopoly.

I oppose the bill because in the combinations to which it may lead, it is in the interest of monopoly and against the interest of the people. If it should become the law, thenceforth there will be but *one* check upon it, to wit, Congress; whereas now there are *thirty-seven* checks in so many Legislatures, composed in the aggregate of more than *four thousand* representatives fresh from the people, and, presumed at least to be, vigilant in the protection of the interests of the people.

I do not know for my part, nor do I care, whether the wealthy corporations of this country desire this fusion with the Government or not. If they do, I would oppose it; because it would form an unconstitutional and adulterous intercouse of political monopoly with chartered monopoly. If they do not, I would oppose it, because it would form an unconstitutional and pernicious interference with commercial freedom and vested right. But especially would I oppose it, because it is centralization, and centralization is the sepulcher of liberty.

The effect of it all would be in the end a consolidated monopoly—monstrous, inordinate, and universal, by land and sea, ashore and afloat.

Against monopoly, if by that word are to be understood exclusive privileges, unjust, and oppressive of the many by the few, or of the few by the many, are arrayed all the convictions and instincts of my natural being; all the lessons and experience of my youth and manhood; all the circumstances of my temporal existence. But the monopoly which my observation has taught me most to deplore is that monopoly of power in the central government of our federative system, which, in the name of the people, beginning with the dreadful prerogative of war and circling the entire globe of human affairs, in its course annihilating or absorbing the functions of the States and the enterprise of the citizen, ends only in the despotic control of the minutest circumstances of capital, intercourse, and trade.

Mr. Speaker, I desire, again, to renew my cordial acknowledgments to the House for repeated evidences of courtesy throughout this very protracted discussion.

State of Louisiana.

SPEECH OF HON. M. H. CARPENTER,

OF WISCONSIN,

IN THE SENATE OF THE UNITED STATES,

March 4, 1874.

The Senate having under consideration the bill (S. No. 446) to restore the rights of the State of Louisiana—

Mr. CARPENTER said:

Mr. PRESIDENT: The true office of debate, like that of pleadings in an action at the common law, is to separate from the subject all immaterial things, eliminate all as to which both sides agree, and present the propositions affirmed on one side and denied on the other, upon which the matter under discussion depends. I shall endeavor to conform to this method; and my object to-day will be to set before the Senate the admitted facts, and state the contested points between the Senator from Indiana [Mr. MORTON] and myself touching the existing state of things in Louisiana; and I shall endeavor to show that the admitted facts warrant the passage of the bill now under consideration.

Those facts are summed up in the preamble to this bill, which I will ask the Clerk to read.

The Chief Clerk read as follows:

Whereas there is no governor, lieutenant-governor, secretary of state, attorney-general, auditor of public accounts, or superintendent of education in the State of

Louisiana, holding said offices, respectively, under an election by the legal voters of the State of Louisiana, in pursuance of the constitution and laws of said State; and whereas there is not in said State any Legislature elected by the legal voters of said State, according to the constitution and laws thereof; and whereas there is no provision in the constitution or laws of said State for the election of a governor, lieutenant-governor, secretary of state, attorney-general, auditor of public accounts, or superintendent of education, until the next regular election, to be held in November, A. D. 1876; and whereas the offices of governor, lieutenant-governor, secretary of state, attorney-general, auditor of public accounts, and superintendent of education are now filled *de facto* by persons claiming the right to hold said offices, in virtue of a pretended canvass of the votes given at the last general election in said State, on the 4th day of November, A. D. 1872, by John Lynch and others, but which canvass has been shown to be fraudulent and void; and whereas a body of men in said State now claim to be the members of, and to constitute, the Legislature of said State, and were organized as a Legislature in pursuance of illegal orders issued by a judge of the circuit court of the United States for the district of Louisiana; and whereas the President of the United States, in May, A. D. 1873, issued his proclamation recognizing the person now holding *de facto* the office of governor of said State as legal governor of said State, and the persons now holding *de facto* the offices of lieutenant-governor, secretary of state, attorney-general, auditor of public accounts, and superintendent of education in said State as legal officers of said State government, which proclamation was issued upon representations made by said persons holding said offices, or on their behalf, but it now appears that said persons holding said offices are not legal officers of said State; and whereas said pretended Legislature is now in session, pretending to enact laws for said State, which said pretended governor is pretending to approve, under which pretended laws it will be claimed rights have vested, so that the people of said State may be oppressed and involved in vexatious and expensive litigation before the next general election under the constitution and laws of said State, in A. D. 1876; and whereas the public peace in said State is at present preserved, and can only be preserved during the existing state of things in said State, at the expense of the United States, and by retaining a part of the Army in said State: Therefore, to quiet the discontent, and restore the State to its full rights, and give it officers of its government which shall be chosen by the legal voters of said State, * * *

Mr. CARPENTER. This preamble sets forth the general propositions which I claim result from the facts of this case either conceded or clearly established by the evidence. My first purpose is to establish this, and if I succeed in doing so, I think it will not be very difficult to satisfy the Senate that Congress ought to apply some remedy. I shall then contend that a new election is the only adequate remedy for such a case; that when the people of a State have been defrauded of the result of an election, and all the State officers and the Legislature are usurpers, the proper remedy is to give the people another opportunity to elect their officers.

In the first place, let it be borne in mind that the general election in that State, for the election of presidential electors, governor and other State officers, half of the senate and all the members of the lower house of the Legislature, was held on the 4th day of November, 1872.

I ask the attention of the Senate to the fact that at this election electors of President and Vice-President ought to have been elected, because I claim that the decision of both Houses of Congress rejecting the vote of the electors of that State, and denying Louisiana any voice whatever in the election of President and Vice-President, is an adjudication by Congress that no result was accomplished by the pretended election of November 4, 1872. If anything was accomplished at that election, then presidential electors, a governor and other State officers, and a Legislature were elected. But if no presidential electors were elected, then no election of governor and other State officers and members of the Legislature was effected. Congress having decided that the election was void as to presidential electors, it follows that the election of State officers and members of the Legislature held at the same time, and subject to the same objections, must be void also.

Let us consider this election, the canvass of votes, and the subsequent determination of Congress in the premises.

The election passed off quietly; no riots or violence interfered with its progress; and the returns were generally made to the governor of the State in conformity with the statute law of the State. But these returns were never canvassed, except by the De Feriet board, appointed by Governor Warmoth under the act of November 20, 1872, and the Foreman board, appointed by the pretended McEnery legislature. The result of both these canvasses was to declare that McEnery and his associates on the State ticket were elected by about 9,906 majority.

The Lynch board never made a canvass of the returns, because they never had the returns before them; but in a manner wholly unwarranted by any law, and in open defiance and flagrant violation of the law under which they pretended to act, entered into an investigation at large, to estimate the result of the election. This board certified that a certain number of persons, who may be designated the Grant electors, were duly elected; that Kellogg and his associates on the State ticket were elected; and that members now constituting the Kellogg legislature were also duly elected at that election.

The validity of the election as respects presidential electors was necessarily involved in the question whether their votes for President and Vice-President should be counted. The subject was referred to the Committee on Privileges and Elections; and I shall refer the Senate to the unanimous report of that committee, made by its chairman, the Senator from Indiana, [Mr. MORTON,] as bearing upon that subject. Before doing so, however, permit me to refer to the objections which I have made against the validity of the canvass by the Lynch board, the only canvass relied upon to establish the right of Kellogg and his associates to hold the offices of that State.

First. I showed that the Lynch board, so called, never had a legal existence; that Longstreet and Hawkins, who pretended to be members of that board, never were elected; and that Bovee was disqualified, because he was a candidate at that election.

Secondly. That the persons claiming to be members of this board were enjoined from canvassing anything but the official returns.

Thirdly. That the board was abolished by the act of November 20, 1872.

Fourthly. That this board never had the returns before them.

Fifthly. That they had no warrant of law, even conceding that they were a legal board, for doing what they pretended to do—that is, inquire at large into the result of the election; that all that even the legal board could do was to canvass the legal returns.

Sixthly. That if the board had been duly elected, had not been enjoined, and if it had not been abolished, and had the official returns and had been authorized by law to depart from the returns and inquire at large to ascertain the result of the election, still their proceedings were corrupt and fraudulent, as admitted and sworn to by the members of the board, to such extent as to invalidate their proceedings; to such an extent as would nullify the effect of the judgment of a judicial court clothed with jurisdiction to make such inquiry.

Now, let me refer to the report of the committee, drawn and presented by the Senator from Indiana, [Mr. MORTON,] to see how far it sustains the objections I have made to the canvass by the Lynch board. The subject being considered was the result of the election as to presidential electors. After setting out the election law of 1870, and the circumstances under which it is claimed the Lynch board and the Warmoth board were elected and organized, the report proceeds as follows:

> The election for presidential electors, members of Congress, State officers, and members of the Legislature, was held in Louisiana on the 4th of November, and the returns of the election in the various parishes were sent to the governor by the supervisors of registration, as required by law. The governor refused to act with the board known as the Lynch board, or to open and lay before that board the returns of the election from the various parishes; but opened them and prepared to make the count before what is known as the Wharton board, which was then enjoined from further proceedings by Judge Durell. The official returns which had been sent to the governor were by him withheld from the Lynch returning board, and never at any time came into the possession or under the examination of that board. The Legislature of Louisiana, at its session in the winter of 1872, passed an act abolishing the returning or canvassing board, as created by the act of 1870, and authorizing the State senate to elect a returning board, to have the same powers as the former, and making other changes in the mode of conducting the elections; and on the 20th of November, 1872, the governor, who had not signed this act, but kept it in his possession during the pendency of these proceedings in the circuit court of the United States, and also proceedings of a like character commenced in the eighth district court of the State, signed the bill and published it as a law.

This is the act which abolished the Lynch board.

Again the report says:

> Some two or three days preceding the 4th of December, the Lynch board officially declared that M. F. Bonzano, J. Lanabere, C. H. Halstead, L. C. Croudanez, A. R. Johnson, Milton Morris, J. Taylor, and John Ray, whom we shall designate as the Grant electors, had received a majority of all the votes in the State for electors of President and Vice-President; and the secretary of state *de jure*, Mr. Bovee, not then in possession of the office of secretary of state or the State seal, but who had been decided by the supreme court of the State a few days before to be the lawful secretary, made a certificate of election to the persons so declared chosen as electors, and on the fourth of December they met and cast their votes for President and Vice-President, according to the requirements of the act of Congress. They did not, on that day, however, seal up their vote, but kept it open for several days until Mr. Bovee, the secretary of state, got possession of the State seal, so as to attach it to their certificates of election. The secretary of state had no right, under the law, to make any certificate upon the subject, unless for the information of the governor, and his certificate constitutes no legal evidence of the election of the persons therein named—the Lynch board.

And I call attention to the language of the Senator from Indiana in this his first report from the committee, which was unanimous:

> The Lynch board, in making the count and declaration as to the election of electors, did so without having before them any of the official returns of the election as made out by the officers of the election under the laws of the State, and had no legal evidence before them at all upon which they could count the votes, but their count was made upon documents, affidavits, and statements, *ex parte* in their character, having no legal validity, and which could not, in the nature of things, form the basis of an accurate and reliable declaration of the result of the election.

There, Senators, is the judgment passed by the Senator from Indiana upon the validity of the canvass by the Lynch board.

Upon pages 5 and 6 of this report he proceeds as follows:

> The third section of the act of Congress of 1792 declares what shall be the official evidence of the election of electors, and provides that "the executive authority of each State shall cause three lists of the names of the electors of such State to be made and certified, to be delivered to the electors on or before the first Wednesday in December, and the said electors shall annex one of the said lists to each of the lists of their votes." The certificate of the secretary of state is not required, and the certificate of the governor, as provided for in this section, seems to be the only evidence contemplated by the law of the election of electors and their right to cast the electoral vote of the State. If Congress chooses to go behind the governor's certificate, and inquire who had been chosen as electors, it is not violating any principle of the right of the States to prescribe what shall be the evidence of the election of electors, but it is simply going behind the evidence as prescribed by an act of Congress; and, thus going behind the certificate of the governor, we find that the official returns of the election of electors, from the various parishes of Louisiana, had never been counted by anybody having authority to count them.
>
> * * * * * *
>
> It is claimed on behalf of this board, that, by the demand upon Governor Warmoth that he should produce before them the official returns of the elections, and his refusal to do so, a foundation was laid for the introduction of secondary evidence to prove the contents and character of said official returns, upon which secondary evidence the count might be made. Without entering into the discussion of the legal question whether a sufficient foundation had thus been laid for the introduction of secondary evidence as to the character of the returns, it is sufficient to say that if such foundation had been laid it could only justify the introduction of secondary evidence to prove the actual character and contents of the returns, and

the testimony before the committee shows that the evidence which the Lynch returning board had before them went to contradict the face of the returns, to show fraud, and what the vote should have been, and that in making their count, the board did not rely so much upon evidence as to what the official returns showed, but upon evidence which, in many cases, contradicted and denied their correctness. Among other evidences, the Lynch board counted some five thousand affidavits as votes for presidential electors, State officers, and members of the Legislature. These affidavits purported to have been made by persons, mostly persons of color, who had been denied the right of registration, and whose votes had been refused at the polls. In many of them it was stated that these rights had been denied them because of race, color, or previous condition of servitude, and many of them contained no such statements. It is urged that these affidavits might be counted as votes under the provisions of the act of Congress of 1870, to enforce the fifteenth amendment to the Constitution. A brief examination of that act will show that this claim is unfounded. By the third section of that act it is provided that where a person has offered to register or to perform any act required by law preliminary to voting, from the performance of which he has been wrongfully hindered by any officer or person in authority, the offer to register or to perform the preliminary act shall be taken as a performance, and, upon proof thereof, such person shall have a right to vote just as if such preliminary act had been performed. But there is no provision in the law that if any person has been refused the right to vote and has performed such preliminary act, or offered to perform the same, as provided in the third section, his offer to vote shall be taken and counted as a vote. In the twenty-third section of the act it is provided that if any person has been defeated in obtaining an office by reason of such denial to any person or persons of the right to vote on account of race, color, or previous condition of servitude, such person may bring a suit in the courts of the United States to recover the office; but the section expressly provides that its benefits shall not extend to candidates for the State Legislature, for Congress, or for electors for President and Vice-President. The section clearly contemplates a suit in court, to which the person who, it is claimed, has been fraudulently elected, shall be made a party, and that upon legal proof that the plaintiff has been deprived of his election by the exclusion of persons from voting on account of race, color, or previous condition of servitude, he shall be entitled to recover the office.

The statute of Louisiana authorizes the supervisors of registration in the parishes, or the commissioners of election, to make affidavit in regard to any violence, tumult, fraud, or bribery by which a fair election has been prevented, which shall be forwarded to the returning board, along with the returns, and upon which the returning board may reject the vote of a poll in making the count; and if the evidence of the officers of the election is not sufficient to satisfy the minds of the returning board in regard to the matters charged, they are authorized to send for persons and papers and take further testimony upon the matter; but they have no authority to make such investigation unless the foundation is first laid by the sworn statements of the officers of the election, as before mentioned. The Lynch board, in making their count without having the sworn statements of the officers of the election to give them jurisdiction to investigate, received affidavits, the statements of supervisors of election appointed under the act of Congress, letters and verbal statements upon which they assumed the authority, in some cases, to reject the entire vote of parishes, and in many instances to throw out the vote of particular polls and wards, and in others to estimate and fix the vote at about what they supposed it ought to be from their knowledge of the political status of the parish or locality. The evidence submitted to the board, and which has been described to the committee, undoubtedly produced the conviction in their minds that the election had been an organized fraud. Governor Warmoth, under the act of 1870, had the whole machinery of the election in his own hands. He had the appointment of the supervisors of registration in the different parishes, and they the appointment of commissioners of election, and those officers, with but few exceptions, were appointed from the ranks of those who were opposed to the republican party, and we think, from the informal evidence before the returning board and from what this committee has learned in the course of this investigation, there is little doubt that those advantages were used to the utmost, and every means resorted to in order to secure the triumph of the party with which Governor Warmoth was acting. Great difficulties were thrown in the way of registration; republicans in many parishes were put to great inconvenience to find the registrar, and in many instances were unable to do so; places of registering and of voting in many parishes were fixed at points remote from the centers of population, often without notice of the place being given; false registration papers, double voting, stuffing ballot-boxes, and other frauds and irregularities, were charged in a majority of the parishes, and there is not much room to doubt that the Lynch returning board were of the opinion that, upon a fair election, the republican party would have carried the State, and had been cheated and hindered in every way possible by the power that controlled the machinery of the election. But, notwithstanding all this, the Lynch returning board, with the sort of evidence which was before them, had no power under the law of the State to investigate these charges of fraud and injury, or to act upon their convictions of wrongs that had been suffered.

Mr. President, bearing in mind that the Senator, in this report, was speaking of the election of November 4, 1872, for the election of presidential electors, State officers, and Legislature, and that the same objections exist to the validity of the election of State officers and Legislature as in regard to presidential electors; that the election for all was held at the same time, under the same election laws, and that the returns for all these officers were made in the same way; that the canvass by the Lynch board was made in the same manner as to all these officers, and that if one is invalid so, also, is the other, am I not justified in saying that the Senator from Indiana, by this report, in effect determined that the election failed as to State officers and Legislature, as well as in regard to presidential electors? What we call an election consists of several parts. There is, first of all, a registration of voters; secondly, the casting of ballots; and hirdly, the counting and canvassing of votes. Each step in this process must be performed according to law to secure the legal result which we call an election.

It will be seen, by carefully examining this report, that the fact that the votes were not legally canvassed and certified was regarded as conclusive that the election as to presidential electors was void.

The two Houses of Congress adopted, or at least acted upon, the doctrine of this report, and decided that the so-called Grant electors had not been duly elected, and therefore the votes cast by them for President and Vice-President could not be counted.

Now, Mr. President, it is clearly established that the election of the Kellogg government was subject to all the objections and afflicted with all the infirmities which both Houses of Congress held conclusive against the election of presidential electors. It will bear repetition that the election of the Kellogg government was, at the same time, in the same manner, surrounded by the same circumstances, canvassed by the same board, and in the same manner, and in every particular affecting its validity, identical with the election of the Grant electors, which both Houses of Congress have declared to be absolutely void.

Therefore, am I not warranted in declaring that Congress has already, in effect, declared that the Kellogg government never was elected?

In connection with this report, I should add that the decision of the supreme court of Louisiana was made before that report, as appears by the following addendum thereto:

A majority of the committee were of opinion that no reference should be made in the report to the decision of the supreme court of Louisiana as to which was the legal returning board, upon the ground that the decision was made subsequent to the 4th of December, when the electors were to cast their votes for President and Vice-President; but it seems to me that the history of the whole matter would not be complete, and the Senate would not be placed in possession of all the material facts, without a statement of the character of that decision, and that the fact that it was made after the casting of the vote by the electors would furnish no sufficient reason why it should not be referred to in the report. Decisions of courts of last resort are made at the end of causes, and not at the beginning, and are held to relate back, and establish the rights of the parties throughout the whole controversy.

On the 14th day of November, 1872, a proceeding was commenced in the eighth district court of Louisiana, by the attorney-general, on the information of the returning officers of elections, to enjoin what was called the Wharton board from canvassing the official returns and making any finding thereon, and requiring the returns to be placed in the hands of the Lynch board. And to this suit Governor Warmoth, Hatch, Da Ponte, and Wharton were made parties. This case was appealed to the supreme court of the State, and by that court decided on the —— day of January, 1873. The court held that the board consisting of Lynch, Longstreet, and Hawkins, together with Governor Warmoth and Mr. Bovee, who was the secretary of state who had been suspended by Governor Warmoth when he first appointed Herron, and who had been restored by a decision of the supreme court, constituted the legal returning board, and that Da Ponte, Wharton, and Hatch had no authority whatever.

This shows that notwithstanding the decision of that court, now relied upon by the Senator from Indiana to establish the validity of the election of the Kellogg government, because it held that the Lynch board was the legal returning board, the Senator from Indiana regarded the pretended canvass by that board as absolutely void, in consequence of the irregularity of their proceedings, and the fact that the returns never were before them; which objections exist in full force, and must be equally fatal, in regard to the election of the Kellogg government.

Let me say that, although this report was made as a preliminary report by the committee, yet all the testimony subsequently taken by the committee tends to increase rather than lessen the objections to the validity of that election.

Congress will stand in an unenviable attitude before the country if in regard to an election for several officers, held at the same time and conducted in the same manner as to all, it shall decide that as to one it is void and as to the other valid; if it shall hold that as to presidential electors it was void, and yet as to State government it was valid.

In recent discussions the Senator from Indiana has carefully abstained from laying stress upon the canvass by the Lynch board. Apparently aware that its invalidity and the irregularity and lawlessness of its proceedings could not be defended, he has contended that the Senate is precluded from inquiring into the validity of the Kellogg government upon two grounds: first, the supreme court of that State has decided that the Lynch board was the legal returning board, from which the Senator argues that the legal returning board can do no wrong, and that its canvass is conclusive upon all the world; and secondly, that the recognition of the Kellogg government by the President in his proclamation of May 23, 1873, is conclusive upon Congress, and therefore we are precluded from inquiring into this question for ourselves.

Having shown, from the mouth of the Senator himself, that the proceedings of the Lynch board are absolutely void upon their merits, I come now to examine the two grounds upon which the Senator from Indiana denies to the Senate the power to investigate these merits.

And, in the first place, let me consider the proposition of the Senator, that this investigation has been precluded by the supreme court of the State. I considered this subject to some extent in the remarks which I made the other day. But in his reply the Senator from Indiana again interposes the decision of the State court as a shield for the Kellogg government, and I propose here and now to put that decision out of this case in the estimation of every lawyer of this body.

I protest against this decision as an authority binding upon us, for the following reasons:

1. I say it is a question no judicial court can settle. The question is in its nature political, not judicial; and no judicial court, State or national, can settle it so as to preclude Congress from inquiring into it and settling the question for itself. Speaking upon this subject, in the Rhode Island case, the Supreme Court, by Taney, Chief Justice, say:

Indeed, we do not see how the question could be tried and judicially decided in a State court. Judicial power presupposes an established government, capable of enacting laws and enforcing their execution and of appointing judges to expound and administer them. The acceptance of the judicial office is a recognition of the authority of the government from which it is derived. And if the authority of that government is annulled and overthrown, the power of its courts and other officers is annulled with it. And if a State court should enter upon the inquiry proposed in this case, and should come to the conclusion that the government under which it acted had been put aside and displaced by an opposing government, it would cease to be a court, and be incapable of pronouncing a judicial decision upon the question it undertook to try. If it decides at all as a court, it necessarily affirms the existence and authority of the government under which it is exercising judicial power.

The Constitution makes it our duty to guarantee to every State of this Union a republican government. Everybody concedes that this power includes the right in Congress to determine whether the government existing at any time in a State is republican in form. Suppose it were to-day suggested that the government existing in Massachusetts is not of the republican form or kind; and that Congress, examining the subject, should decide that it was not, and should pass a law to overthrow it, and establish in its place a republican form or kind of government. Then suppose the Legislature of that State, as by law it may do, should call upon its supreme court for an opinion upon that subject; and suppose that court unanimously to decide the existing government to be republican; and thereupon the Legislature should pass a joint resolution, which should be approved by the governor, declaring the government to be republican, and should transmit the resolution and the opinion of the supreme court to Congress, and rely upon them as a bar to any further proceedings by the United States in the premises. Will any lawyer maintain that Congress would be thereby estopped? Certainly not; because, if it were so, it would rest with each State, and not with the United States, to determine whether the State had a republican government; and although the government of the State might be monarchical in form, it would be in the power of the State to preclude the United States from doing what the Constitution of the United States says the United States shall do, that is, guarantee—or see to it and take care—that the State of Massachusetts shall at all times have a republican government. For the benefit of my State-rights friends, who, if anybody, will be offended by this assertion, let me prove it by the words of John C. Calhoun, of whom many harsh things, and possibly some unjust things, have been said, but who was never accused of favoring centralization in Federal hands, or of injustice toward the States. In his Discourse on the Constitution of the United States, (1 Calhoun's Works, page 332,) he says:

> Take, for illustration, what is called the "guarantee section" of the Constitution, which, among other things, provides that "the United States shall guarantee to each State in this Union a republican form of government, and protect each of them, on application of the Legislature, or of the executive, (when the Legislature cannot be convened,) against domestic violence." Congress, of course, as the representative of the United States, in their legislative capacity, has the right to make laws to carry these guarantees into execution. *This involves the right, in reference to the first, to determine what form of government is republican.*

The supreme court of a State is a part of the State government. Its decisions are doubtless entitled to great respect. But the appellate power, that is, the ultimate power of decision upon this question, is in Congress, and not in the State government or any department thereof. And, in the case supposed, it would be the duty of Congress to exercise its own judgment and conscience; and if it believed the decision of the supreme court of Massachusetts, and the opinion of its Legislature and governor, to be erroneous, it would be the clear duty of Congress to disregard them.

2. The decisions of the State court of Louisiana upon this subject are conflicting, and for that reason Congress is at liberty, when within the principle decided by the Supreme Court of the United States, to follow the one which is most consonant with sound principle. (See Ohio Life and Trust Company *vs.* Debolt, 16 How., 432; Gelpecke *vs.* Dubuque, 1 Wallace, 175; Havemeyer *vs.* Iowa County, 3 Wallace, 294.) In the Wittgenstein case, decided in May, 1872, six months before this election, the court decided that Herron never was secretary of state; and they said that, even conceding, which they did not, that Warmoth, after having removed Bovee, could appoint Herron to discharge the duties of the office *ad interim*, his powers could only extend to a discharge of the routine duties of the office, and that Herron *could not appoint an assistant secretary of state, because he was not himself secretary of state.* But after the election, and when the court had determined to sustain the Kellogg government, in the case of State *ex rel.*, &c., *vs.* Wharton *et al.*, they decided that Herron *was* secretary of state, and as such was entitled to act as a member of the returning board; which was certainly not routine duty.

Speaking of these two decisions, the conflict of which is direct and expressed in words, the Senator from Indiana said, "The alleged inconsistency is inferential and fine-spun." That is to say, when, speaking of the same animal, one man says, "That horse is black," and another, "No, that horse is white," the Senator from Indiana says "the alleged inconsistency" between the two propositions is "inferential and fine-spun."

Again, the Senator from Indiana says:

> In answer to the allegation of the Senator that there was no legally organized board of canvassers in Louisiana, it is enough to say that the supreme court of Louisiana have decided that the Lynch board was the legal returning board.

The Senator then proceeds to deliver me a lecture upon my audacity in assuming to question the decision of the State court of Louisiana upon what he is pleased to style a State question. But when we find that court, in a line of decisions made previous to the election of 1872, deciding one thing, and in the decisions subsequent to that election, for the purpose of sustaining the Kellogg government, deciding exactly the reverse, this cannot fail to arouse suspicion.

3. But, again, in the case of the State *ex rel.*, &c., *vs.* Wharton *et al.*, as I showed in my former remarks, the court had no jurisdiction under the constitution of that State. The case was this: Persons claiming to be members of the Lynch board sued the persons claiming to be members of the Wharton or Warmoth board for intrusion into the offices of the returning board; and the court below decided in favor of the Wharton board. By the constitution of the State the supreme court has no jurisdiction except in cases where the amount involved exceeds $500. It is well settled, by a long line of decisions in that State prior to this difficulty, that where an office is in question the salary fixed for the office is the amount in controversy. The law gave no salary to the officers of the board. Consequently the members of the Lynch board, defeated in the court below, could not appeal; but Mr. Field, who had been canvassed into the office of attorney-general by the Lynch board, claimed the right to intervene, upon the ground that his salary was $1,500 per annum, and appealed to the supreme court. The supreme court, composed of five judges, two dissenting, held this intervention proper, and sustained the appeal taken by Field on behalf of the defeated parties who had no right of appeal. But, in thus sustaining its jurisdiction in this case, the court disregarded their former adjudication upon this subject made prior to the election. In State *vs.* Markey, 21 Annual, 743, the controversy was between certain parties claiming to be aldermen and assistant aldermen of the city of New Orleans. The city intervened and appealed. Motion was made to dismiss the appeal, on the ground that the city had no pecuniary interest in the suit. The court say:

> The law grants the right of appeal to any one, though not a party to the suit, if he have an interest in the subject-matter of the suit. (C. P., 571.)
>
> But he must allege and show that interest, and it must be a direct pecuniary interest. (1 N. S., 308; 4 N. S., 342; 4 N. S., 622; 2 R., 391.)
>
> The matter at issue is the right to office—whether the relators or the defendants are, under the law, entitled to hold the offices of aldermen and assistant aldermen.
>
> We have examined the record in vain to ascertain what the interest of this city in this suit is. What is decided against the city? What can be decided in her favor on appeal?
>
> Whether there be any pecuniary value attached to the offices or not, it is clear that the city has no direct pecuniary interest in the suit.
>
> It has been decided that in a suit for something which has an appreciable money value the oath of the appellant may supply the omission of evidence as to the value of the thing in controversy. But we are not prepared to say that a mere affidavit of one that he is interested in a suit between other parties will authorize an appeal by him. We had occasion to decide otherwise in the case of Samuel Johnson.

And the appeal was dismissed.

In Sullivan *vs.* Mount, 21 Annual, 755, which was a contest for the office of board of directors of public schools of the city of New Orleans, Kendall, claiming to be secretary of the board with a salary of $1,800, intervened and took an appeal. Motion was made to dismiss the appeal, upon the ground that Kendall had not such an interest as would authorize him to intervene. Wyly, judge, delivering the unanimous opinion of the court, said:

> What is the matter in dispute? It is the office of school directors, and the books and papers and other property pertaining thereto. To these the appellant sets up no claim whatever. His office, secretary of the board, is not in dispute. From his statements we cannot perceive that he has any interest whatever in the matter

And the appeal was dismissed.

It is perfectly clear that the former decisions of the court were sound, and upon the same principle the court ought not to have taken jurisdiction of the controversy between these returning boards, and manifestly would not have done so but for the fact that the Kellogg government could in no other way be sustained.

When we find a court thus reversing its own decisions, and disregarding well-settled principles of law, we are moved to inquire by what motive the court could have been controlled. By the constitution of that State the governor and two-thirds of each house of the Legislature may remove the judges of the supreme court. The Kellogg legislature, on the day it assembled, impeached Governor Warmoth, in flagrant violation of a statute of the State which provides that before any officer shall be impeached the case shall be referred to a committee, the party accused shall be notified, testimony shall be taken, and if the committee shall decide against the impeaching, that shall end it. The judges of the supreme court who had seen this statute trampled under foot, who had seen Warmoth impeached, and had seen the senate organized as a court of impeachment to try him within six hours after the Legislature assembled, might well conclude that, if they thwarted the purposes of this government, their turn would come next, and that against such a government, sustained by Federal authority, they could offer no effective resistance. They are entitled to the benefit of such palliation as this fact may afford them. History has settled that judges removable at the executive will cannot be expected to act with independence.

Mr. STEWART. If the Senator will allow me to make a suggestion to him, in looking over this opinion it occurred to me, and I had the impression the other day, that this was all a mistake about the supreme court of Louisiana ever having decided the case at all. On the contrary, they decided that it was not before them, and that they had no jurisdiction to decide it.

Mr. CARPENTER. I entirely concur with the Senator from Nevada, and take the same view of all their decisions which he seems to entertain. But the Senator from Indiana takes a different view, and I am answering him.

4. But it is well settled, even in cases where one judicial court is passing upon the judgment of another, that nothing is concluded by the record except the matters directly involved and necessarily determined by that judgment.

In the terse language of a judge of the olden time, "nothing is precluded by the record except the matters which terminate in the judgment."

To quote the language of the Supreme Court of the United States in Hopkins *vs.* Lee, (6 Wheaton, page 114:)

To points which came only incidentally under consideration, or were only incidentally under cognizance, or could only be inferred by arguing from the decree, it is admitted that the rule does not apply.

The supreme court of Louisiana never had the question whether the Kellogg government was the legal government of the State directly before them, nor whether any particular persons had been elected members of the Legislature. In the nature of things no such question could come before them. In a case in which I have shown that court usurped jurisdiction, they did pretend to decide that the Lynch board was the legal returning board of the election of 1872. But it is due to that court, degraded and dishonored by its own decisions as it is, to say that it has never decided and never been called upon to decide that such proceedings as the testimony before us shows that board were guilty of could be the foundation of any legal right.

Mr. STEWART. That is the point to which I would like to call the attention of the Senator. It seems to me it does not make any difference whether the Lynch board was a legal board or not. There is no use in wasting time on that point. I believe it is admitted that it never had anything before it to canvass, and never did make a canvass. I suppose it makes no difference what it was if it never canvassed any returns. I do not suppose, practically, there is a judgment unless the court that assumes to render it has a case before it.

Mr. CARPENTER. The Senator from Nevada and myself do not differ a particle; but the Senator from Indiana and myself do, and I am following his argument.

To proceed with the objections to the estoppel which the Senator from Indiana claims to result from the decision of that court, holding that the Lynch board was the legal board.

5. That court has itself repeatedly decided, and this doctrine is affirmed in its latest decisions, that it has no jurisdiction to inquire into the fact of an election. It held this directly and expressly in Collin *vs.* Knoblock and Bonner *vs.* Lynch.

Collin and Knoblock were opposing candidates for the office of parish judge of La Fourche at the election on the 4th of November, 1872, and Collin proceeded against Knoblock under the intrusion act. The court below found that Knoblock had received a majority of the votes, and rendered judgment in his favor, from which Collin appealed. The supreme court said, (Judge Wyly dissenting:)

It is only under the statute of 1855 that courts can proceed to supervise the counting of votes, correct calculations, purge the polls of illegal votes, and ascertain and establish majorities. This act applies only to cases in which no commissions have issued. It expressly requires that the contestation shall commence within ten days; that it shall be conducted summarily, and it directs the withholding of commissions until the investigation may be completed and the result legally proclaimed.

In cases under the intrusion law courts cannot go behind commissions legally issued. To determine the validity of a commission, they cannot go beyond the returns and report of the legal returning officers for all elections of the State. The returns made by the legal State board and officially promulgated by that board as the general returning officers for the State at large constitute the basis upon which the governor is authorized to issue commissions. These returns are, by the act of 16th March, 1870, made *prima facie* evidence in all courts of justice and before all civil officers, until set aside after a contest according to law, of the right of any person named therein to hold and exercise the office to which he shall by such return be declared elected.

This *prima facie* evidence, it is provided, may be rebutted and set aside; but this, we apprehend, could only be done by proceedings under the statute of 1855. No authority is delegated to the judiciary under the intrusion act to discuss, modify, or abolish the official returns of the regular State returning officers.

As we have already said, the adjustment and compilation of election returns, determining the number of legal and illegal votes cast for each candidate, declaring the result of an election, and furnishing the successful candidate with the certificate; in short, superintending and controlling all the details of an election, belong primarily and properly to the political department of the Government.

It is well settled that the judiciary have no warrant or authority to exercise jurisdiction in matters of elections, unless it be expressly delegated by the co-ordinate branch of the government controlling the political department; and no express authority is granted under the intrusion act to inquire into the correctness of election returns officially promulgated by the legal returning officers. Such a right cannot be assumed as an implied power.

The case of Bonner *vs.* Lynch was a controversy under the intrusion act for the office of judge of the fourth district court. Bonner alleged that at the election of 4th November, 1872, he was elected judge of the fourth district court for the parish of Orleans, and was commissioned by Governor Warmoth; and that defendant Lynch had intruded into and taken possession of the office, and was unlawfully holding and exercising the functions of that office. Lynch demurred that the matters alleged were not of judicial cognizance; that the counting of votes is not a judicial function, and that the court was without jurisdiction *ratione materiæ*. He also plead a general denial, and alleged that he was duly elected to the office, and returned elected by John Lynch, Longstreet, and Bovee, the board of returning officers; and that he was duly commissioned by acting Governor Pinchback. From the judgment maintaining the exception and dismissing the suit Bonner appealed. The supreme court said, (Justice Wyly dissenting:)

The returns are only *prima facie* proof of the results of the election. The question, however, as to the election of officers is a political question, and courts of justice have jurisdiction over them only so far as the political department may have authorized them to exercise jurisdiction. No statute conferring upon the courts power to try cases of contested elections, or title to office, authorizes them to revise the action of the returning board.

The Legislature has seen proper to lodge the power to decide who has or who has not been elected in the returning board. It might have conferred that power upon the courts, but it did not.

The only power the courts have under the intrusion into office act is to decide if one or neither of the contestants has a legal title to the office; and the commission is evidence of that. Having no power to revise the action of the board of returning officers, we have nothing to do with the reasons or grounds upon which they arrived at their conclusions. Admitting everything alleged in the petition to be true, it appears that Lynch was returned by the legal returning board as having been duly elected judge of the fourth district court, and commissioned thereupon by the acting governor of the State; and therefore it is shown that the petition discloses no cause of action.

It cannot be seriously maintained that the judgment of a court which has no jurisdiction to inquire into the fact of an election can, by what it may say upon the subject, preclude Congress. The most solemn judgment of the highest court is void if the court had no jurisdiction; and this court especially renounces jurisdiction to inquire into the subject now under consideration.

Mr. President, any one of these objections—and they are all well founded—would deny to the decisions of that court such effect as is claimed for them by the Senator from Indiana.

And here let me say that such frauds as were committed by the Lynch board in their canvass—frauds conceded on all hands, and testified to by the members of the board themselves—would render absolutely void the judgment of any judicial court having jurisdiction. The judgment of the highest judicial court may be attached collaterally for fraud. And if the statute had conferred upon the supreme court of that State the jurisdiction to canvass the votes and determine who had been elected governor, and it could be proved that in making such canvass the court had been guilty of such frauds as are proved upon this board by the testimony of its own members, taken before your committee, its decision would be utterly void. But let me repeat, it is due to that court to say that no case has ever been presented to it showing the atrocious frauds committed by the board, or calling upon the court to decide whether the frauds committed by the board would invalidate its canvass.

Mr. THURMAN. Has that court ever decided that the Lynch board had any returns before it?

Mr. CARPENTER. No; it is conceded on all hands that the board did not have any returns. The report made by the Senator from Indiana, which I have already read, declares distinctly and in words that the Lynch board never had the returns before them.

I come now to consider the second ground upon which the Senator from Indiana claims that the Senate is precluded from inquiring into the facts of this case. In my remarks the other day, replying to the claims set up by that Senator that Congress was estopped to make inquiry into the validity of the Kellogg government, because the President had recognized it by his proclamation, I expressed the opinion that there was not such a case made to the President of the United States as authorized the issue of his proclamation of May 23, 1873. This the Senator from Indiana in his reply characterizes as a direct condemnation of the Administration; and again he says:

After a lengthy argument *to place the President in the wrong*, to show that he had issued his proclamation of May last without authority, I asked the Senator the question, "Do you mean to say it was issued in violation of law?" After some hesitation he said, "No; not in violation of law, but in the absence of law." Sir, it was either issued by authority of law or in violation of it. There can be but one of these two things. And after showing, or attempting to show, (for he utterly failed,) that the President had been guilty of a great offense—for it would be a great offense if he, without authority of law, *had done this indefensible and wicked thing*—he then turns around and says that it is a good thing after all, and he is glad the President issued the proclamation; it had an excellent effect; as if the exercise of an unconstitutional power could be a good thing, and could have an excellent effect.

Mr. President, the Senator from Indiana, in this paragraph, was endeavoring to demonstrate his own fidelity to the Administration, a thing wholly unnecessary for him to do. His friendship for the President, his interest in the present and future popularity of the President, are well enough known to excuse him from these constantly repeated efforts to bolster himself by denouncing somebody else.

Why, Mr. President, suppose that General Grant were conceded to have fallen into a mistake in construing a particular statute, or half a dozen statutes. God has not conferred all gifts upon any one man. The greatest general of the age can hardly be expected to be the greatest lawyer of the age; and I protest against the idea that I am opposing this Administration, or attacking General Grant, because I suggest that acting upon the advice of the Attorney-General—an officer appointed and compensated to be his legal adviser—he has issued a proclamation where, by a strict and technical construction of the law, it ought not to have been issued. Why, Mr. President, such a judge as Mansfield or Kenyon, Marshall or Story, would listen kindly for days to an argument intended to show that he had decided erroneously upon any legal question; while a justice of the peace might commit you for contempt if you should hint that he had made a mistake. I protest that General Grant should not be defended as a justice of the peace would defend himself. I am as loyal to the republican party, and entertain as warm an affection for General Grant, as the Senator from Indiana; and, believing that a great mistake has been committed in this Louisiana business, as a loyal republican and a faithful friend of General Grant, I desire to see that mistake corrected; and I prefer that it should be corrected *now* by the republican party, rather than leave it as capital to our opponents in the next presidential campaign. I have stated the facts in regard to this business, and no man can gainsay them. And if the republican party be injured, it will not be because mistakes were committed inadvertently and corrected timely by the party

itself, but because the party, after it knew the mistakes, refused to correct them.

The Senator from Ohio [Mr. SHERMAN] only the other day stated that more than one-half of the forty-four million reserve fund had been issued by this Administration in defiance of the law; that he had carefully studied the law in his closet, and he had no doubt about the opinion he expressed; and on the suggestion of the Senator from Illinois [Mr. LOGAN] he said that the Administration had violated the law in the distribution of the currency. The Senator from Indiana did not denounce either the Senator from Ohio or the Senator from Illinois. We are a part of this Administration, and if mistakes are committed, it is our duty to correct them. No man who exercises reasonable prudence and honestly commits a mistake deserves censure; but the man who, convinced of his error, obstinately adheres to it, is neither a true republican nor a true man. I have noticed that some newspapers, in commenting on my course upon this subject, have declared that I meditated a break with the Administration; but I am happy to say this suggestion has only appeared in newspapers which have always been unfriendly to me, and which for months have teemed with misrepresentations of my official conduct and obscene libels upon my private character. No, sir; I speak as a friend, not as an enemy, of the Administration. I desire only to rid the republican party of all cause of offense.

In discussing this subject, after careful examination, I expressed the opinion that the President's proclamation of May 23, 1873, was issued unadvisedly, because the application of Governor Kellogg did not show "a case of insurrection in that State against the government thereof;" the only case in which, under the act of 1795, the President is authorized to interfere. After listening attentively to the criticisms which have been made upon my opinion, and reconsidering the subject, I remain of the same opinion. That opinion, formed as a lawyer, I cannot change to suit the convenience of the politician.

But I was somewhat surprised to hear the Senator from Indiana declare that it was an "indefensible and wicked thing" for the President to issue the proclamation in question if the law did not authorize it. After the great Chicago fire, when thousands of women and children fled from their smoldering homes, and were sleeping unprotected in open fields, this Administration placed at their disposal all the tents and blankets belonging to the Quartermaster's Department of the Army, and sent troops to guard the ruins against burglars and thieves. Certainly no law authorized this proceeding, but it was dictated by the kindliest emotions of human nature. Was it an "indefensible and wicked thing" for the Administration to do this because no law authorized it?

But what the Senator from Indiana styled my attack upon the Administration brought to their feet two distinguished Senators, my friend from New York [Mr. CONKLING] and my friend from New Jersey, [Mr. FRELINGHUYSEN.] The Senator from New Jersey, in order to show that it was not necessary for the State to apply in the language of the statute, maintained that the President had authority to proceed under the Constitution without any statute whatever; and then my friend from New York maintained that no particular form of application by the State was necessary. From the positions assumed by these two Senators, the State governments would be at the mercy of the President. And if the governor of New York should invite the President to come to New York with a company of artillery and help to celebrate the Fourth of July, the President might declare the celebration to be an insurrection against the government of the State, and proceed by declaration of martial law and otherwise to suppress it.

That I may not do injustice to either of these Senators, I propose to quote from their remarks as published in the CONGRESSIONAL RECORD.

The Senator from New Jersey said:

> Domestic violence is less than anarchy; because it supposes the existence of a governor and a Legislature capable of making the demand for protection. This the President is to do; he is the arm of the United States for that purpose; and in the four acts which have been passed administering and carrying out the provision of the Constitution he is recognized as the branch of the Government that shall render protection against domestic violence. The President is by the Constitution required to protect a State against domestic violence when called upon by the State; and the State of Louisiana did call on President Grant for that protection in the very words of the Constitution.
>
> Mr. CARPENTER. Will my friend allow me to interrupt him a moment?
>
> Mr. FRELINGHUYSEN. I will be glad to hear the Senator. I was wishing to be very brief.
>
> Mr. CARPENTER. I simply wish to understand the Senator and not to reply to him. I want to know if he claims that under the Constitution itself the President can act at all without legislation on the part of Congress?
>
> Mr. FRELINGHUYSEN. I do.

Mr. FRELINGHUYSEN. The only point to which I call the attention of my friend is that he did not read all my answer.

Mr. CARPENTER. The Senator made a long speech; I cannot read it all, but I will stop and let him read as much of it as he pleases.

Mr. FRELINGHUYSEN. My answer was this—it was not an hour or a minute. I added:

> The President being required by the Constitution, in its language, "to take care that the laws be faithfully executed," and being required to swear that he will faithfully execute his office, if he knows that the laws are being violated and that an insurrection exists, if called upon by the governor or the Legislature of a State, in the language of the Constitution, to protect the State from domestic violence, he is bound, if he has the requisite force, in the absence of any statute, to protect that State. The Constitution administers itself without the aid of Congress. He is as much bound to do so as to perform the injunction to "take care that the laws be faithfully executed." There is no statute re-enacting that injunction, I believe.

Mr. CARPENTER. Mr. President, there is but one man in the United States who will receive that declaration with joy, and he is the late President, Andrew Johnson. He entertained precisely the views of the Senator from New Jersey; he maintained that he was to execute the Constitution; that he was the United States; that because the Constitution provided that the United States should guarantee a republican government to the State of North Carolina, and he found that State without a government, he, as President of the United States, could execute that guarantee, and set up a government in that State; and if the Senator from New Jersey is right, I do not see how or wherein President Johnson was wrong.

Mr. FRELINGHUYSEN. Will my friend permit me?

Mr. CARPENTER. Certainly.

Mr. FRELINGHUYSEN. The Constitution says that the United States shall guarantee to each State a republican form of government. Our Government is divided into three distinct branches—the legislative, judicial, and executive. Now, I understand that it may be the duty of the judiciary to enforce that guarantee of the United States. For instance, if in any State there should be laws passed which looked to the organization of an aristocracy or a monarchy, it would be their duty under that provision to wipe out those laws, to declare them null and void. So it may be the duty of the Legislature, as it was in the case of the Southern States where there were no governments; and there is where Andrew Johnson did wrong. It may be the duty of the Executive, where the arm of the Government is all that is required. I hold that that guarantee is to be enforced by the judiciary, where it is an adjudication that is required; that it is to be enforced by the Legislature, when it is legislation that is required; that it is to be enforced by the Executive, where it is force that is required to maintain order in a State.

Mr. CARPENTER. The last remark of the Senator from New Jersey seems to me to demonstrate the unsoundness of his views. If the President, under the clause of the Constitution which makes it his duty to take care that the laws are faithfully executed, has power to do all the things which under the Constitution the United States is authorized or bound to do, then congressional legislation can neither limit nor restrict the power of the President, and the necessity of a Congress is not apparent; the President may perform all the duties conferred by the Constitution upon the United States. Then ours is a Government of force, and not of laws. But I am sure that slight reflection will satisfy the Senator that he is wrong. The powers conferred by the Constitution upon the President are few and simple. He is commander of the Army and Navy; he may grant reprieves and pardons; may nominate, and by and with the advice of the Senate appoint, the officers of the United States; and he must "take care that the laws be faithfully executed."

The fourth section of the fourth article of the Constitution provides:

> The United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion; and on application of the Legislature, or of the executive, (when the Legislature cannot be convened,) against domestic violence.

Three cases are here provided for: first, the United States shall guarantee to every State in this Union a republican form of government; secondly, and shall protects each of them against invasion; thirdly, and on application of the Legislature, &c., against domestic violence.

If the President can execute any one of these three guarantees without legislation by Congress, he may execute them all; and, therefore, so far as I can see, President Johnson was perfectly justified in proceeding under the Constitution, without legislation of Congress, to confer upon each of the Southern States a republican form of government. No distinction can be drawn between the constitutional power of the President to guarantee a republican form of government to a State, and his power to guarantee the State against domestic violence. The fallacy of the Senator's argument is that, in reading the Constitution, he substitutes "the President" for "the United States." If the Constitution read "the President shall guarantee," &c., the three things provided by the Constitution, the Senator's argument would be unanswerable. But unfortunately for his position the Constitution provides—

1. The United States shall guarantee, &c.;
2. The Congress shall have power to make all laws which shall be necessary and proper for carrying into execution the powers vested by this Constitution in the Government of the United States; and
3. The President shall take care that the laws be faithfully executed.

Therefore, all the President can do to execute these guarantees of the Constitution is to execute the laws which Congress may have passed for that purpose. The objection made to the course pursued by President Johnson to set up republican governments in the rebellious States was that he was executing no law of Congress in that behalf.

Mr. FRELINGHUYSEN. With the permission of my friend, I will remind him that the Constitution does say that Congress shall have the power to pass all laws necessary and proper to carry these powers into effect; but I think that that is rather begging the question. If it is not necessary, they need not pass the law; if it is not proper, they may not pass the law; and, therefore, as the question between my friend and myself is whether it is necessary, I do not see how his referring to that part of the Constitution helps him. But I will not

further interrupt the Senator now; I will take occasion when he is through, or at some convenient time, to vindicate the view that I have taken.

Mr. CARPENTER. Well, Mr. President, I turn the Senator over to the republican party, which has a record upon this subject utterly at variance with the Senator's present position. President Johnson is the only man who, to my knowledge, has entertained and acted upon the theory of the Constitution declared by my friend from New Jersey.

Mr. FRELINGHUYSEN. I would only say to my friend that his information is very limited; and, if he does not know any authority for it, I will try to show it to him.

Mr. CARPENTER. One of the greatest delights I experience is in having my information enlarged, and I shall listen to that Senator with the patience of a disciple at the feet of a master, when he attempts to show me that, without any legislation whatever, the President can determine that there is insurrection existing in a State, and proceed to put it down in his own way and at his own pleasure.

The Senator from New Jersey having dispensed with the necessity of any act of Congress to enable the President to suppress insurrection in a State, from which it follows of course that it is immaterial whether Governor Kellogg presented a case within the act or not, let me now turn to the argument of my friend from New York, [Mr. CONKLING,] attempting to show that no particular application from the State is necessary. I quote his words, as officially reported:

Mr. CONKLING. The argument of the Senator from Wisconsin, aimed at the act of the President in addressing a proclamation to those threatening the public peace in Louisiana, proceeded on the idea that the President must act upon the information contained in the application from the governor, and upon that alone. He argued as if the whole foundation of that proclamation must be the application of the executive of the State of Louisiana. It seems to me nothing could be more fallacious as a test of the power or of the right or duty of the President thus to act. The Constitution declares that "the United States shall guarantee to every State in this Union a republican form of government, and shall protect each of them against invasion; and, on application of the Legislature, or of the executive, (when the Legislature cannot be convened,) against domestic violence."

Nothing here implies that the United States, or the President acting for the United States, shall know nothing save only from the application, and must be blind and deaf to all else. Take the fact of the impossibility of convening the Legislature; must the President rely and act solely upon the statement of the governor for that? Or is he to judge of it from the statements of the application of the governor and from all other facts he learns? So, as to the necessity of interference; is he confined and concluded, as to jurisdictional power and facts, to the statement made by the governor? Not at all. If turbulence exists or impends in any State of the Union, and the President knows it, or is satisfied of it, and receives only a cry for help from the governor, saying "*For God's sake send troops here to restore order*," the President's power is as complete as if the application recited all the particulars and history of the case, and quoted all the words of all the statutes in any way bearing on it.

Then, proceeding with the argument on that subject, the Senator says:

I am not left alone to insist that the President is to judge whether the case demands his action. I call attention to the case of Martin *vs.* Mott, reported in 12 Wheaton's Reports, page 19, and will read from it briefly. The court says:

"If it be a limited power, the question arises, by whom is the exigency to be judged of and decided?"

Then the Senator, pausing in reading from the book, says, "That is the very exigency now in question;" and then, proceeding with the report, he reads as follows:

Is the President the sole and exclusive judge whether the exigency has arisen, or is it to be considered as an open question, upon which every officer to whom the orders of the President are addressed may decide for himself, and equally open to be contested by every militia-man who shall refuse to obey the orders of the President? We are all of opinion that the authority to decide whether the exigency has arisen belongs exclusively to the President, and that his decision is conclusive upon all other persons.

My friend from New York does not often make a mistake; but in this instance he did, trusting to a digest, and not having the report before him. Speaking of the exigency of insurrection in a State against the government thereof, he referred to the case of Martin *vs.* Mott, and read the opinion of the court to show that in such case the President is the sole judge as to whether the exigency exists which authorizes his interference.

The act of 1795 provides for three exigencies:

That whenever the United States shall be invaded, or be in imminent danger of invasion, from any foreign nation or Indian tribe, it shall be lawful for the President of the United States to call forth such number of the militia of the State or States most convenient to the place of danger or scene of action, as he may judge necessary to repel such invasion, and to issue his orders for that purpose, &c.

In such case no lawyer would question that the power of determining whether the United States were invaded, or in imminent danger of invasion, was vested in the President, who is to act in the case. The decision of Martin *vs.* Mott was made under that clause of the statute. The case was "imminent danger of invasion," during the war of 1812, of the United States. The case came from the State of New York, and the court was speaking of the first exigency provided for by the statute, namely, "imminent danger of invasion" of the United States, where the President has the power of determining whether the exigency exists, because he is required to act if the exigency does exist.

Now turn again to the statute:

And in case of an insurrection in any State, against the government thereof, it shall be lawful for the President of the United States, *on application of the Legislature of such State, or of the executive, (when the Legislature cannot be convened,)* to call forth such number of the militia, &c.

Then comes the third exigency provided for by the statute:

That whenever *the laws* of *the United States* shall be opposed, or the execution thereof obstructed, in any State, by combinations too powerful, &c., it shall be lawful for the President of the United States to call forth the militia, &c.

In the first and the third cases it is perfectly clear that the statute clothes the President with the exclusive right to determine whether the exigency is such as to demand his interposition. The decision of the court in Martin *vs.* Mott was in a case which arose under the first clause of the statute, a threatened invasion of the United States; and in that case every lawyer would agree that the President was vested with the power of determining whether the exigency existed which would authorize Federal interference. And this is all that was decided in Martin *vs.* Mott.

Referring again to this clause of the Constitution, it is manifest from the Constitution itself that in the case of domestic violence in a State the power of determining whether a case for Federal interference exists, and from the act of 1795 whether an insurrection in any State against the government thereof exists, is to be determined by the State, and not by the Federal Government. The provisions of the Constitution and act are conclusive upon this subject. In case of the invasion of a State, which must also be an invasion of the United States, the Federal Government must interfere without application from the State. So, whenever the people of a State are oppressed or afflicted by a government not republican, the United States is bound to interfere without application from the State, because the United States can only receive application from a State through its government, and it is absurd to suppose that a government which was oppressing the people of a State would apply to the United States to interfere against itself. But, in the case of domestic violence directed against the government of a State, it is provided that the Federal Government shall interfere only upon the application of the State government. The reason is plain why the provisions in this case differ from those pertaining to the other cases. The State government is the best judge as to whether it is encumbered by a degree of turbulence which it cannot suppress. And under the act of 1795 the President is authorized to interfere only upon application made by the State government.

But the Senator from New York maintains that no particular form of application need be made on behalf of the State. He says if the President knows that turbulence exists in the State, and hears a cry from the governor, "For God's sake come and help us," shouted through reverberating atmosphere, or sent over telegraphic wires, that is enough. But I submit to the Senator that his proposition cannot be maintained. A court of record cannot decide a case without having a record before it. Why? Because it is a court of record. And what is a court of record? It is a court having a clerk and a seal. Without vanity I think we may say the United States is a Government of record, having a clerk and a seal; and it would be strange if, in a case calling for the exercise of one of the most delicate powers of the Government, no application was required complying with the terms of the statute. But what, above all other things, shows the argument to be unsound is that the Constitution and the act intended to leave it to the authorities of the State to determine whether a case existed to authorize Federal interference. If this be so, the application from a State must show that the State itself has decided that a case exists which, under the statute, authorizes the President to interfere; that is, the application must show a case of insurrection in that State against the government thereof.

I find in volume 6, Calhoun's Works, page 214, a discussion of this subject, as follows:

But if any doubt should still remain that the protection of the *government* of the State is the object, the wording of the guarantee would suffice to remove it. It expressly provides that the protection shall be on the application of the Legislature of the State, or its executive, if its Legislature cannot be convened; and thus vests in the *government of the State*, and not the Federal Government, the right to determine whether there has been a case of domestic violence or not, and also of the necessity and propriety of applying for protection. It is *only on such application* that the Federal Government has any right whatever to interfere. This provision, of itself, would strongly indicate that the Government was the object of protection; but as strong as the indication is, of itself, it will be greatly strengthened by adverting to the reasons for inserting it, deduced from the character of our system of government.

In our complex system, the objects for which governments are instituted are divided between the Federal and State governments. The former is the common government of all the States; and to it is specifically delegated the powers necessary to carry into effect all the objects in which they have a common interest. The latter are the separate and peculiar governments of each, and to them and the people all the other powers are reserved. Among them are embraced those that refer to the internal peace and safety of each State; to the governments of which it *exclusively* belongs to determine what may endanger or destroy them, and the measures proper to be adopted to protect them. It is in strict accordance with this distribution that protection, in case of domestic violence, should be on application of the government of the State against which it is directed. What adds to the force of the reasoning is that the provision is omitted in the other two guarantees, when the cause of inserting it does not exist. That it does not in the case of invasion is clear.

This language was held in regard to the Constitution, which authorizes "the United States" to interfere on application, &c., in case of any kind of domestic violence. But it is equally applicable to the statute of 1795, which authorizes "the President" to interfere, not in all cases of domestic violence, but in a particular kind of domestic violence, namely, insurrection in any State against the government thereof. And it follows that the application ought to show that the State has decided that a case of insurrection against its government does exist; and failing to show this, the President is not authorized

to interfere. Under the Constitution an insurrection of slaves, not against the government of the State, but against the authority of their masters, might constitute a case of "domestic violence," but would not be a case in which the President, under the act of 1795, would be authorized to interfere. (See Federalist, No. 43.)

But whether I am right or wrong in the view I have taken that the President ought to interfere without a formal application showing that the State has decided that a case under the statute exists authorizing Federal interference, is not at all conclusive upon the particular point in discussion between the Senator from Indiana [Mr. MORTON] and myself, because, conceding that the application in this instance was in form, the interference of the President and his recognition of the Kellogg government do not preclude Congress from inquiring into the subject and deciding that the Kellogg government has no validity. It is the duty of the President in such a case to restore order, and, for this purpose and for the time being, he must recognize one of the contending parties as the legitimate government; but it rests with Congress ultimately to decide upon the same question, and its decision is binding upon every department of the Government. This was expressly decided by the Supreme Court of the United States in the Rhode Island case, (Luther *vs.* Borden, 7 Howard, 1.)

Therefore, it is immaterial whether the application in this case was sufficient under the statute or not. If it was, the President's proclamation settles nothing to estop Congress in the matter now under consideration. And with these remarks I dismiss that part of the subject.

Assuming now that Congress has the power to inquire and determine whether Louisiana has such a State government as it is the duty of Congress to guarantee, I come to the consideration of that question. And here let me restate the facts.

By the constitution of that State it was provided that a general election for presidential electors, officers of the State government, and members of the Legislature, should be held on the 4th day of November, 1872. A pretended election for this purpose did take place on that day. The official returns of this election show that McEnery and his associates were elected by about 9,906 majority, and that the McEnery legislature, so called, was also elected. The question arises at this point whether Congress can go behind the official returns of the election. If it cannot, then the question is settled that Kellogg's government was not elected, and that McEnery's was; or, in other words, the Kellogg government is a usurpation.

In the discussion the other day the Senator from Indiana claimed that certain of these official returns were forgeries, and that this was shown in the testimony taken by the committee.

The returns, filling two or three large boxes, were produced before the committee. Mr. Ray, Senator-elect and certified by the Kellogg government, and Mr. McMillan, Senator-elect and certified by the McEnery government, appeared before the committee, and were permitted to act as counsel on their respective sides of the controversy. Some suggestion was made in regard to the integrity of some of the returns. The committee directed them to be submitted to the inspection of Ray and McMillan; and on a subsequent day, and after such inspection, Mr. Ray called the attention of the committee to that point, and all that appears in the testimony is the following.

Mr. Ray, recalled as a witness, on page 1005 said:

> The WITNESS. I desire to call the attention of the committee to a statement at a suggestion made by one member of the committee yesterday. I examined and found, and if the committee will act as experts they will find, that the commissioners of elections in several cases in the parishes have their names forged to the affidavits. For instance, there is one from Madison Parish, [exhibiting the papers,] and so in the parish of Grant also, and in the parish of Point Coupee, and the parish of East Baton Rouge, which, if the committee will examine as experts, they will find it very evident in some cases that they were forged.

These four parishes, according to the official returns, gave Kellogg 213 majority over McEnery. Conceding these to be forgeries, all that any board canvassing the returns under the laws of that State could do would be to reject them; in which case McEnery's majority, as shown by the returns, would be 10,190.

The McEnery canvassing boards, as they were authorized to do by the statute, rejected the returns from five parishes, on the ground of fraud. The Lynch board estimated that these five parishes gave Kellogg a majority of 3,326, and they estimated that the four parishes from which some of the returns were, in Mr. Ray's opinion, forged, gave Kellogg a majority of 3,969. Deducting the estimate of the Lynch board of Kellogg's majority in these four parishes, and in the five parishes, the returns of which were rejected by the board which canvassed them, from McEnery's majority, 9,906, and McEnery would still have a majority of 2,611.

So it will be seen that it is impossible, if these returns are to be considered, to establish Kellogg's election. And the Lynch board, which declared Kellegg to be elected, acted upon testimony wholly apart from these returns; testimony which the Senator from Indiana, in the report from which I have read, declares they had no right to take or consider

But a Federal judge, without a shadow of jurisdiction, organized the Kellogg legislature by a *mandamus* and injunction. Upon this subject I refer to the views of the Senator from Indiana on page 76 of the report. He denounces in as clear language as the majority of the committee the action of Judge Durell. He declares it to be without a shadow of jurisdiction. He declares it to be an unjustifiable and gross usurpation in this very report This is his language:

> The conduct of Judge Durell, sitting in the circuit court of the United States, cannot be justified or defended. He grossly exceeded his jurisdiction, and assumed the exercise of powers to which he could lay no claim. The only authority he had in the matter grew out of the act of Congress of 1870 to enforce the fifteenth amendment, and the act amendatory of that, passed in 1871, which gave to the courts of the United States jurisdiction in all cases in law and equity arising under the former act. Under the first act two classes of cases might arise: first, actions to enforce the rights of those who had been illegally denied the right to vote upon the ground of race, color, or previous condition of servitude; and, second, actions to enforce the rights of those who had been deprived of office by reason of the denial to persons of the right to vote on account of race, color, or previous condition of servitude; and suits in equity, ancillary or in aid of these rights of action, would come within the jurisdiction of the circuit court of the United States, among which would be a suit to perpetuate testimony. But the pretense that in a suit to perpetuate testimony the court could go beyond the natural and reasonable jurisdiction, to decide who constituted the legal returning board under the laws of Louisiana, and to enforce the rights of such as it might determine to be members of that board, and to enjoin others who were not, is without any foundation in law or logic.
>
> In the Antoine case, Judge Durell not only assumed to determine who constituted the legal returning board, but to prescribe who should be permitted to take part in the organization of the Legislature, and to enjoin all persons from taking part in such organization who were not returned by the Lynch board as elected; and this assumption of jurisdiction was made in the face of the express provision in the act of 1870 that its benefits should not extend to candidates for electors, for Congress, or for the State Legislature. His order, issued in the Kellogg case to the United States marshal, to take possession of the state-house, for the purpose of preventing unlawful assemblages, under which the marshal called to his aid a portion of the Army of the United States as a *posse comitatus*, can only be characterized as a gross usurpation.

And yet we know that under that gross usurpation of a Federal judge this Legislature was organized by a *mandamus* and an injunction, and then, under the protection of that organization and in a state-house held by Federal troops, this Kellogg government was inaugurated and set up; and that government is to-day supported by United States troops. The peace of that State is to-day preserved at the expense of the Union.

I was in New Orleans last May; and, conversing with officers of the Army high in authority, they assured me that, in their opinion, if the Federal troops were withdrawn from that State the Kellogg government could not stand a week. I know that Mr. Kellogg was of a different opinion. He thought he could defend himself and maintain his ground without Federal support; but nobody else seemed to think so. And it is my belief, founded upon all that I heard in that city, that, if the Federal troops were even now withdrawn, his government would be overthrown by the people.

The Kellogg government rests to-day not upon the ascertained result of the election, but upon a canvass confessed to be fraudulent and void, and the support given to it by the Federal Government.

I have heretofore enforced the opinion embodied in the report of the Committee on Privileges and Elections, that the pretended election was utterly void in consequence of Governor Warmoth's abuse of his power to control the machinery of the election; and that, although the returns show McEnery's election, yet in fact the people of the State were defrauded of their choice, and McEnery ought not to be considered as the governor of the State. But I am now attempting to show that the government in existence there is without right.

Assuming the case as I claim it to be, two questions arise in regard to the bill now under consideration for holding a new election in that State under Federal authority: first, has Congress the power to pass such a bill? and, secondly, if it has the power, is it expedient to exercise it?

I shall first consider the question whether Congress possesses such power. Many of our friends, for whose judgment I have great respect, doubt its existence; and we all agree that, if the power does exist, it is one of the most delicate attributes of this Government, and ought not to be exercised except in case of necessity. But I maintain that, if the necessity exists, it is our imperative duty to exercise this power discreetly, prudently, but so as fully to meet the existing case and remedy the existing evil.

The Constitution makes it our duty to guarantee to the State of Louisiana a republican form of government. What does the phrase, "republican form of government," mean? I answer, it means a republican kind of government, or a republican government; and that the essential element of a republican government is that its offices shall be held by persons chosen for that purpose by the people; that no government is republican, within the meaning of the guarantee clause, the powers of which are administered by persons not chosen by the people. To construe the Constitution so as to hold that as long as a State government observes the form it may depart from the reality of republican government, is to render the guarantee clause utterly worthless. The Supreme Court has often declared that the Constitution must be so construed as to secure the substantial results contemplated by its framers; that forms and fictions are not enough.

All history demonstrates that the greatest danger to free government is from the usurpation of rulers and the perversion of forms. The cunning hypocrisy of Augustus established a despotism in Rome after the sword of Julius Cæsar had failed. Augustus established the empire in the name of the republic; and long after his power was complete, and the imperial government in full operation, maintained republican *forms;* that is, it was "republican in form," but imperial in fact. Napoleon, the first consul, gradually ripened into the emperor. We have recently seen the republic of Spain, without any change of form, assum-

ing and exercising imperial power. The pretended election of Napoleon III was, in form, republican; in fact, a fraud. And illustrations might be multiplied indefinitely. If republican governments on this continent are ever overthrown, it will be accomplished by employing the forms of a republic to mask departure from its substance. The literature of 1789 shows that our fathers were keenly alive to this fact; and it would be strange, indeed, if in framing a constitution designed, as its preamble declares, to insure domestic tranquillity and secure the blessings of liberty to themselves and their posterity, and in establishing a government to preside over and protect the States, no provision was made to guard them against the greatest and the most common danger that besets free institutions; and yet it will be conceded that no such provision was made unless it is contained in the clause under consideration.

If I am right in saying that it is the vital element of republican government that its rulers are chosen by the people, it follows that the present government of Louisiana, lacking this, is not a republican government. And in regard of the *power* of Congress to interfere at this time, it is evident that, if such power does not exist, it would not if in 1876 Kellogg and his associates should run again and be defeated by 20,000 majority, and Durell should set them up; and in 1880 the same thing should take place, and be repeated in 1884, and so on during Kellogg's natural life. These repetitions would make the outrage more manifest, but would not increase the power of Congress. If Congress cannot interfere in the first year of such a usurpation, it cannot in the fiftieth; because our power is derived from the Constitution, which is the same at all times; and what we cannot do at once, we cannot do ultimately. If Kellogg and his associates should be thus continued in power for twenty years, and avow the purpose of remaining during their lives by the use of the same means, would it be contended that the State had a republican government? It might, indeed, be said that the State had a government republican in form, but it would be true that the form was used to continue a despotism. There is nothing in the Constitution, taken as a whole, nor in the literature of that day, which will justify us in saying that the framers of the Constitution were sticklers for form, and intended to provide that in usurping the functions of free government, and transforming the States into despotisms in fact, the usurpers should be confined to a particular method of accomplishing that result, namely, an observance of the forms of a republican government. It was intended to preserve not the form merely, but the reality; not the fiction but the fact of free government, republican government, a government elected by the people; and that, too, not occasionally, and after long interruptions, but at all times. And if Congress ascertains that at any time such government does not exist in a particular State, its duty is imperative to take the proper steps to give such a government to the State. And what laws may Congress pass in such a case? The Constitution answers this question. "The Congress shall have power to make all laws which shall be necessary and proper for carrying into execution all the powers vested by this Constitution in the Government of the United States"—one of which is the power to guarantee to every State a republican form or kind of government.

Now, in the case before us, what law is necessary and proper to confer upon the State of Louisiana a government chosen by its people? Evidently a law which shall authorize the people of that State to fill the State offices with persons of their own choice in place of the present usurpers. The constitution of that State is republican, the judges of the supreme court are properly in their places, but the political department of the government is held by usurpers. The extent of our legislation in a given case should be measured by the evil to be corrected. In 1865 you found that State without any government whatever, and then you took the proper steps to establish a republican government there. You provided for a convention to frame a State constitution. You provided for an election by the people to fill the State offices and the Legislature. It was necessary at that time to do these things, because there was no government and no part of a government intact in that State. Now it is necessary to do only a part of these things. It is not necessary to frame a constitution, for the State has one adopted by the people. It is not necessary to provide for the election of judges, because the judicial department of that government has not been usurped. But it is necessary to provide for the election of State officers and a Legislature, because those places are held by usurpers; and because the government is not republican in kind, unless its political department, its law-making power, is held by persons who have been elected by the people. I do not see how any one who supported the reconstruction acts of Congress can question the constitutionality of this bill. As certainly as the whole includes its parts, so certainly, if Congress has the power to set up a whole government, and authorize an election to fill all its offices, it has the power to reclaim one department of the government from usurpers and restore it to the people.

It is said that this bill is in conflict with the theory of State rights; but what right can be dearer to a State than the right of self-government? The people have been deprived of this right, and this bill proposes to restore it. The people of every State have a right to demand that the United States shall guarantee to them a government, and a whole government, of their own choosing, and shall rid them of a government which exists only by usurpation. They secured this right by the adoption of the Constitution of the United States, vesting the power in us, and thereby casting the duty upon us, to do this thing. And if any State, at any time, is compelled or permitted to submit to a usurping government, it is because we fail to perform the duty imposed upon us. And whether we fail from timidity, or from party prejudice or policy, it is equally a disregard of our duty.

If I am right in asserting that it is the duty of the United States to guarantee a republican government to every State, and right in saying that a government held by usurpers is not a republican government, then it is impossible to deny the constitutionality of this bill; because, if we have the power to interfere at all, the manner of interference is a matter entirely within the discretion of Congress. The powers conferred upon this Government are sovereign powers; that is, powers unlimited, save as the Constitution regulates their exercise; and they override all State constitutions and laws. This power to guarantee a republican government to the States is an absolute and sovereign power, and its exercise wholly unrestricted by the Constitution. Congress is authorized to do a certain thing, and the mode of doing it is committed entirely to the discretion of Congress. We may do in every case just what the case requires; and in this case it is evident that what this bill proposes is the only remedy, the only way, to give that State for the next two years a government of its own choosing.

Mr. FERRY, of Connecticut. I do not wish to interrupt the Senator, but I should like to ask a question. Who is to decide whether the officers exercising the governing power in a State have been chosen by the people of that State?

Mr. CARPENTER. Ultimately, no doubt, we must decide it.

Mr. FERRY, of Connecticut. Then I understand that in all cases where the officers exercising the governing power of a State have not been elected, or are alleged not to have been elected by the people of that State, Congress has the right to inquire, decide, intervene, and order a new election?

Mr. CARPENTER. I say undoubtedly, as a question of power. My friend is seeking to force me upon what he thinks the great objection to this power; but let me suggest to him that I am discussing the power itself, and not the propriety of exercising it in every case; and that the objection suggested by his question is more properly directed against the exercise of the power improperly than against its existence. It is undoubtedly true that this power might be abused; but the same is true of every power conferred upon the Government. The principal arguments I have heard and seen against the existence of this power are designed to show, and do conclusively show, that the power, if abused, would lead to disastrous results; and the fear is always expressed that if the power were conceded it would be abused. But why is there more danger of the abuse of this than of many other powers of the Government? No one will question, I presume, that, as regards mere power, Congress might to-day decide the existing government of Connecticut not to be republican in form, and take steps to supplant it by another. This would of course be a scandalous abuse of the power. But does any one fear that it will be so abused? There is no doubt of the existence of the power, nor that it was wisely conferred. The safeguard against its abuse lies in the fact that the same proceeding might be taken in regard to any other and every other State; and Senators are not likely to vote proceedings against another State which they would be unwilling to have applied to their own.

Everybody, in the discussion of this question, refers to the election in New York when Griswold was elected, but Hoffman was canvassed in as governor of that State; and it is asked triumphantly, is it the duty of Congress to interfere in such a case? I say *no;* not because Congress did not possess the power, but because such a case would not justify the exercise of it. There is no parallel between that case and this. In the first place, in the New York case, no application was made to the United States, and the United States did not interfere. In this case application has been made, and the usurpers were put in their places by a Federal judge, and are to-day sustained by Federal authority. In the New York case everybody acquiesced. There were not, as in Louisiana, two persons claiming to exercise the functions of the office of governor. The courts of New York had jurisdiction, and the courts of Louisiana have not, to try such a question. In that case the Senate was not called upon to decide anything about it, because no person claimed a seat on Griswold's credentials; while here two persons are claiming the seat; one elected by the Kellogg legislature, and certified by Kellogg, the other elected by the McEnery legislature, and certified by McEnery. In New York there was no question in regard to the Legislature, and there never were two legislatures and two governors. In Louisiana the legislature that was not elected is passing laws, and the governor who was not elected is approving them; and this government was organized and inaugurated by a Federal judge without any pretense of jurisdiction. It is quite evident that the two cases are so dissimilar that the interference of the Government in the Louisiana case to arrest a bogus legislature engaged in passing election laws to continue themselves in office, levying burdensome taxes and repudiating the State debt, oppressing the people and disgracing the nation, would be no precedent for interference in such a case as that in New York. Indeed, each case must be judged of by its own circumstances and surroundings; and while Congress ought not to exercise this power upon slight occasion, or to correct a mere irregularity not productive of important consequences, yet in a case like this it would seem that, if Congress possesses the power, it ought to be exercised.

The Senator from Connecticut must be aware that extreme cases are not proper tests of general principles. There are cases in which Congress should interfere. There are cases in which it should not. There may be other cases of which it would be difficult to say to which class they belong; and where Congress should be in doubt, prudence would dictate that no action should be taken.

Mr. FRELINGHUYSEN. In New York they had a republican form of government, and that is all the Constitution guarantees.

Mr. CARPENTER. This suggests again the question I have already discussed in regard to the meaning of the phrase "republican form." If you merely mean the form of government fixed by the State constitution——

Mr. FRELINGHUYSEN. I was using the words of the Constitution.

Mr. CARPENTER. The words of the Constitution must be construed; and the same word is used in different senses in the Constitution. The constitutional phrase is, the State shall have a "republican *form* of government;" which I claim means a republican *kind* of government, or a *republican* government. If the Senator from New Jersey can maintain that while the constitutional structure of the government is republican it is immaterial whether it be administered by those who were elected or by those who were defeated by the people, then, in Wisconsin, which has a republican constitution, and where at the last election the democrats carried their State officers and the Legislature, while republicans enough to have changed the result staid at home and did not vote, if Governor Washburn had said to his successor, "True, you were elected, but I think I will stay in;" and the members of the old Legislature had said, "We don't like to see democrats in our place; we will hold over," the government thus administered would have been republican in form, if the Senator from New Jersey is right, and would have satisfied the requirements of the Constitution. If this be so the States of this Union are the legitimate prey of fraud and violence, and the guarantee of the Constitution is utterly worthless. A construction of that instrument which gives the people of a State over to the usurpation of their rulers, and denies them all remedy, is, to say the least of it, not wisely devised to insure the domestic tranquillity, or to secure the blessings of liberty to ourselves and our posterity.

Mr. FRELINGHUYSEN. I think that the Senator from Wisconsin strikes out of the Constitution the word "form," and makes the Constitution read that there shall be a republican government. I think that word "form" has great significance. I think the two things that were guaranteed are a republican form of government, and tranquillity, peace, government. If the people of a State have a republican form of government, and if the United States maintain order and peace and tranquillity so that the people can correct their own errors, their own mistakes, I think that then we have done all that we ought to do; and that for the United States to intervene and force an election upon them is taking from them a republican form of government.

Mr. CARPENTER. The word "form" is in the Constitution, but the question is, what does it mean? I think it is synonymous with "kind" or "class," and the phrase is equivalent to "republican government." There is no doubt that the object intended to be secured by this provision was to compel the States to remain republics, and prevent their becoming monarchies; to perpetuate government in which the people should enjoy the right of self-government by electing their officers, and to forbid governments in which the people should be governed either under the pretext of divine right or by usurpation; and any construction of the Constitution under which it fails to accomplish this end must be a misconstruction. Such a construction does injustice to the memory of the fathers; and it is trifling with the whole subject to say that so long as usurpation and despotic power observe republican forms in administration they are protected by the Constitution.

Mr. THURMAN. Will the Senator allow me to interrupt him for a moment?

Mr. CARPENTER. Certainly.

Mr. THURMAN. I wish to make this suggestion: There is nothing in the Constitution of the United States that requires that a State shall have a written constitution. Its constitution may be like that of Great Britain, without one word of writing. Now if the word "form" be taken in its most narrow sense, pray what is the guarantee worth in a case where there is no written constitution of a State?

Mr. CARPENTER. That well illustrates what I was trying to illustrate in another way, and it comes back to this: the question is whether by that article of the Constitution it was intended to guarantee something to a State, or nothing; whether it was meant to deal with the reality of the thing or with the mere fiction and form?

Mr. NORWOOD. Before the Senator passes from that point, I wish to ask him a question; and I will state in advance to the Senator that my object is to get light on this subject, because it is in my opinion the main point in the case, and the one in regard to which I have felt greatly embarrassed. I wish him to state whether he thinks there is but one remedy where a republican form of government has been destroyed or overthrown. The remedy he proposes is by act of Congress to order a new election. Does he consider that a better remedy than for Congress, if it ascertains, as he says it can, by a review of an election in the State, that a minority has overthrown the majority and taken possession of the government, to determine that the majority shall have control of the Government; and, if necessary, to authorize the Executive to see that the majority shall be installed?

Mr. CARPENTER. The Senator, of course, is aware that I do not think that McEnery was in fact elected, although the returns show that he was.

Mr. NORWOOD. I understand that. I am merely asking the Senator whether he thinks it is better to order a new election than to have those put in power whom the returns show were elected.

Mr. CARPENTER. If I believed that McEnery was in fact elected at that election, the logic of the situation would dictate that Congress, if that were necessary, should recognize his government. But, in the first place, I do not believe that the McEnery government has any more right than the Kellogg government. In the second place the McEnery government never had an existence in fact. McEnery abdicated all claim to be governor, and has been, according to the Senator from Indiana, on this floor, representing his government and asking for re-election; so that in this case, and under the circumstances of this case, I do not see how any other remedy can be applied than to send the matter back to the people.

Mr. BAYARD. May I ask the Senator a question?

Mr. CARPENTER. Certainly.

Mr. BAYARD. The Senator used the phrase just now that McEnery had abdicated as governor of Louisiana. Was not that a compulsory abdication? Was it not that he abdicated under the compelling power of Federal bayonets alone? Was there any voluntary abdication? Was it not a mere act of force that compelled him to refrain from exercising the duties of his office?

Mr. CARPENTER. Undoubtedly that is true; but still the fact exists. The McEnery government, as they call it, is no government to-day, and it never has been one. I am not considering why it was not, but simply dealing with the facts. It would be better to say he surrendered than that he abdicated. But it is not to-day a government *de facto*, exercising any governmental powers whatever; and its members are asking for a re-election.

Mr. NORWOOD. The Senator will pardon me one moment. I do not think he answered directly the question I put. There are some here, probably, who think that McEnery was elected, and that he was wrongfully deprived of his office, and that the candidates for the Legislature of his party were also elected. In such a case is the remedy to order a new election, or is it to see that those who were elected are installed?

Mr. CARPENTER. If I entertained such an opinion as the Senator intimates some men may, I should vote in the first place to recognize the McEnery government; and failing in that, I should vote for a re-election.

Mr. FERRY, of Connecticut. I am anxious to obtain light in regard to this matter, and not to make interlocutory arguments. The question is a very grave one, and I want to understand precisely the position of the Senator from Wisconsin. He is deducing the authority for his bill from the guarantee clause of the Constitution. Now, I wish to inquire whether in his judgment the United States under that clause can proceed upon its own information, acquired at its own suggestion, to set aside a *de facto* government because it is not elected by the people, and order a new election without waiting for any application from the State at all? I ask the question because the present proceeding was initiated by the Senator himself, by the introduction of a resolution a year ago, inquiring whether Louisiana had an existing State government. So that this proceeding seems to be initiated by the United States itself; and the Senator will see the connection between my present inquiry and the one I made before.

Mr. CARPENTER. Undoubtedly the United States may do this of its own motion. The language of the Constitution is:

> The United States shall guarantee to every State in this Union a republican form of government.

It is not provided that the United States shall do this upon the application of the State, but it is one of the continuing, imperative, ever-existing duties of the United States to see to it that every State, at all times, has such a government. How can it discharge this duty if it has not the power to determine whether an existing State government is republican or not? This has been conceded, so far as I know, by all judges, lawyers, statesmen, everybody who has written upon the subject. Let me read again what Mr. Calhoun says upon the subject:

> Take, for illustration, what is called the "guarantee section" of the Constitution, which, among other things, provides that "the United States shall guarantee to each State in this Union a republican form of government, and protect each of them, on application of the Legislature, or of the executive, (when the Legislature cannot be convened,) against domestic violence." Congress, of course, as the representative of the United States, in their legislative capacity, has the right to make laws to carry these guarantees into execution. *This involves the right, in reference to the first, to determine what form of government is republican.*

The Senator is familiar with the phrase "the court takes judicial notice." The court takes judicial notice of the general history of the country, of its geography, of its political divisions, and so forth. The mind of the court may not be directed to it for forty years, and yet the court is supposed to have been dwelling on each one of those things all the time. So we are bound to take legislative notice of the condition of the States of this Union, and we are supposed to be pondering upon it hourly. We are bound to take notice of every change that takes place in the government of New York, or of Pennsylvania, because our duty is to see that they always have a republican form of government; and if a change is made which is not republican, then we have a duty to perform, and that duty, under this section,

does not depend upon application made by the State. Mr. Calhoun elsewhere says that the reason is obvious. I read from volume 6, page 215, of his works:

I come now to the last in the order in which I am considering them, but the first as they stand in the section, and the one immediately involved in the question under consideration—I mean the guarantee of a republican form of government to every State in the Union.

I hold that, according to its true construction, its object is the reverse of that of protection against domestic violence.

And speaking of the guarantee of republican government, he says:

I hold that, according to its true construction, its object is the reverse of that of protection against domestic violence; and that, instead of being intended to protect the *governments* of the States, it is *intended to protect each State* (I use the term as explained)—

He has explained before that he means the people of each State—

against its government; or, more strictly, against the ambition or usurpation of its rulers. That the objects of the Constitution, to which the guarantees refer—and liberty more especially—may be endangered or destroyed by rulers will not be denied. But, if admitted, it follows as a consequence that it must be embraced in the guarantees, if not inconsistent with the language of the section. But if embraced, it must be in the guarantee under consideration, as it is not in the other two. If it be added that, without this construction, the guarantees would utterly fail to protect the States against the attempts of ambition and usurpation on the part of rulers to change the forms of their governments and to destroy their liberty—the danger above all others to which free and popular governments are most exposed—it would seem to follow irresistibly, under the rule I have laid down, that the construction which I have placed on the provision, as to the object of the guarantee, is the true one.

That is, that it is to protect the people of a State against the government of a State. Now hear this:

But if doubts should still remain, the fact that it fully explains why the provision which requires the application of the State, in case of the guarantee against domestic violence, is omitted, would place it beyond controversy; for it would be *a perfect absurdity to require that the party against which the guarantee is intended to protect should make application to be protected against itself.*

Mr. MORRILL, of Maine. Will the Senator allow me to make a single suggestion on the point of the guarantee? The point which I wish to submit to the honorable Senator is this: upon the question of the duty of the Government of the United States to guarantee a republican government in fact, whether there are any precedents in our history which justify the inference that that is the duty of the Government, or whether there is any instance in our history where the Government of the United States has undertaken to exercise an authority either to recognize that fact, the power to institute a government republican in fact, or from which an inference could be derived that it could exercise such a power.

Mr. CARPENTER. I see the Senator's point. I concede there is not. I hope there never will be another case like this.

Mr. MORRILL, of Maine. I was going to remark it is manifest that the Government has never attempted to exercise such an authority from the beginning.

Mr. CARPENTER. It has never had occasion to do so.

Mr. MORRILL, of Maine. I suppose we all see most clearly, from the stand point we now take of republican States, that from the beginning we have had in our system States anti-republican in fact—republican in form, but anti-republican in fact. A government which ignored the rights, civil and political, of more than one-half of its people could not by any fair sense be said to be republican in fact; and yet nobody ever contended that the Government of the United States had authority to investigate that question and define republicanism, and so apply it to the States.

Mr. CARPENTER. Mr. President, prior to 1861 there never was a precedent in this country of the United States coercing a State, and the people of nearly one-half of the country maintained, because there never had been a precedent for it, that the power did not exist.

Mr. MORRILL, of Maine. My honorable friend, I suppose, is aware that up to that period no circumstances ever justified the Government in asserting that extreme power which lies simply in the power of self-defense. That was not under the clause of the Constitution which the honorable Senator is now arguing.

Mr. CARPENTER. No; but the argument is just as good against any other power as it is against this. If it is a sufficient answer to a clear delegation of power in the Constitution to say that the power has never been exercised, there is no precedent for it, then it was a perfectly good answer to the power of the Government to coerce a State, because no State had ever been coerced before that time. No occasion has existed until this time calling for any such interference as this bill proposes. When before in the history of this country has a whole State government been conceded to exist by usurpation? When before did a Federal judge assume to organize a State Legislature? When before was a State Legislature organized in a state-house held by Federal troops? Never; and because the case never existed, the precedent has never been set.

These interruptions show how sensitive Senators are in regard to the power to pass this bill. I had proposed to consider the expediency of passing the bill later in my remarks; but let me make one suggestion to the Senator from Maine at this point. If the absence of precedents in our former history, owing to the fact that no occasion has existed for the exercise of this power, is so formidable when the exercise of this power is now for the first time invoked, consider the effect of the precedent we shall set if in a case so aggravated as this we refuse to pass this bill—what encouragement our example will give to lawlessness in all the Southern States. Their circumstances are peculiar. They have just emerged from civil war. A new population has just come to exercise the franchise; the prejudices and bitterness engendered by the strife are not yet subsided, and the elements of society are not yet composed to quiet. Is it quite safe, in this condition of things, for us to declare to them that for the existing state of things in Louisiana Congress can provide no remedy? Will not the ambitious spirits of the future build their hopes upon such a precedent; and will they not infer from it that fraud and violence, if successful in seizing upon the powers of a State government, will be recognized and protected by Federal authority? Is this a wholesome lesson to teach future generations in this country? I beg Senators to pause and consider well the consequences likely to flow from our deciding that for such a case no peaceful remedy exists. Suppose McEnery and his associates should act upon this theory, raise a tumult in New Orleans, butcher Kellogg and his Legislature, and seize the State government. Are you quite willing to say that in such a case Congress could not interfere? And yet how could you, if you cannot interfere in this case? Force gives as good a title as fraud, and is far more respectable than fraud. When a man draws his sword to capture a government he puts his life at hazard, and gives his victims a chance for resistance. But when a man skulks beneath the soiled robes of a Federal judge, to seize what he has no right to, his conduct not only merits censure but inspires contempt.

There are two sides to this question when you look to expediency. I deplore the necessity of interfering in this case as much as the Senator does. But the case is upon us, and in my opinion, looking to the future of this country, non-interference is far more dangerous than interference.

Mr. FERRY, of Connecticut. I suggest to the Senator that I had made no inquiry as to the question of expediency, but as to the question of law. Now, there is one final question of law which I put to the Senator. The Senator remarked in answer to one of my inquiries, and I thought that the remark indicated the weak point in the whole of his argument, that the supreme court of Louisiana had decided that there was no power in the judicial tribunals of that State to set aside this Kellogg election, or pretended election. But in States where the courts have that power, and have exercised it, as they did in Wisconsin, has the United States, under the guarantee clause, a supreme power over the decision of the court between the contending parties?

Mr. CARPENTER. That is only varying the question the Senator put to me before. It all comes back to this: who is to determine whether a particular existing government be republican or not within the meaning of this provision?

Mr. FERRY, of Connecticut. That is not it.

Mr. CARPENTER. Let me get through this point and then I will let the Senator question me further.

Mr. FERRY, of Connecticut. I do not think you understand my question, from the commencement of your remarks in reply.

Mr. CARPENTER. Then I will stop now.

Mr. FERRY, of Connecticut. The court are called upon to decide whether the State officers returned were actually elected by the people of the State. They go behind the return of the canvassers and decide that the officers actually returned were not so elected, and upon their judgment the officers who had been rejected by the canvassers are installed. Congress, or rather the United States—for I use the language of the Constitution now—decides the other way. According to his whole theory, would not the judgment of the United States be supreme, and the action of the State courts in that matter be overruled? And therefore the remark which he made, that there was no law in Louisiana authorizing the courts to act, would be entirely irrelevant in the case.

Mr. CARPENTER. It is true that the fact mentioned by me that the State court of Louisiana had no jurisdiction was irrelevant, except in reply to the claim made by the Senator from Indiana, that the State court decision estopped the Senate. But the question now put by the Senator is only another form of asking whether the power of deciding whether the United States ought to interfere with a State government rests with the United States or with that State. I have endeavored to show, in a former part of my remarks, that this power is vested in the United States, and I read from Calhoun's Works to prove it, and the decision of the Supreme Court in the Rhode Island case, Luther *vs.* Borden, (1 Howard, 1,) is a full authority upon this point:

If all the departments of a State government decide that such government is republican in form, or that its offices are filled by persons elected by the people, and yet we know to the contrary—know that the government is not republican in form, that its offices are not filled by persons elected by the people; know that all the offices of the State are filled by usurpers, colluding together to establish and maintain their own authority; that the governor, the judges, and the Legislature are usurpers and rascals, it is our duty to disregard their decisions, and decide upon the facts as we know them to exist.

Of course it would require a very strong case to induce Congress to exercise the power under such circumstances. I put a strong case; but in a case where, for instance, it was well known that the three departments of a State government were colluding together to maintain themselves in power, in violation of the very constitution and laws they were pretending to administer; and that no election had been held in the State for twenty years; or, if there had been an election in form, it had been so managed by the authorities as to defeat the popular will; and suppose the people, unable longer to endure such tyranny, were rising in arms to overthrow the usurping

government, would the Senator, in a case like that, maintain that the United States did not possess the power to determine the question whether such government was or was not republican? And yet, if we would have power in such a case, we have it in the case before us. The power of the United States to determine whether a State government be republican or not cannot depend upon the extent to which that government has departed from a republican form. A slight departure is as unconstitutional as a great one, and the power of Congress is as complete in the one case as in the other.

Mr. FERRY, of Connecticut. I will not interrupt the Senator again. I rise now merely to say that I have ascertained distinctly the position the Senator takes. I am much obliged to him for his courtesy in replying to my inquiries; but I am compelled totally to differ from his conclusions.

Mr. CARPENTER. The only thing I regret is that the Senator is compelled to differ. I do not complain of his interruptions. I regret that in his opinion, if Kellogg and Company and that supreme court join hands and stand in their places for fifty years, in utter, open, flagrant, corrupt defiance of the election franchise of that State, Congress is powerless to interfere.

Mr. FERRY, of Connecticut. I will explain the remedy by and by.

Mr. CARPENTER. Mr. President, if there is any remedy whatever which the Federal Government can apply, Congress is the exclusive judge of what is the proper remedy; and if in our opinion this bill is the proper remedy, we have as much right to pass it as we have to adopt any other remedy. If the Senator means a remedy inside of the State, in which the Government of the United States has no hand, then he means revolution and violence; then he means the very state of things the Constitution was designed to prevent. He means to say that these State governments are the inevitable prey of fraud and violence; and if a band of ruffians seize upon the sovereign powers of a State, and hold and exercise them for twenty years, there is no power in Congress to interfere.

Mr. FERRY, of Connecticut. I mean to say just this: that under our system of government there is within the State governments a remedy for a usurpation of their governments, or else republican government is a total failure—one of the two.

Mr. CARPENTER. The remedy against usurpation in all free and independent governments is revolution; but under our Constitution this remedy is denied to the people of a State. If a State government is threatened with revolution, the United States, on its application, will suppress the insurrection and restore order; and, when order is restored, it is the duty of Congress to consider the case, and apply the proper remedy, if the government be not such a one as is guaranteed by the Constitution. This whole subject—first, on behalf of the people to be protected in the enjoyment of republican government against usurpers, and, second, on behalf of the State government to be saved from insurrection against its authority—is taken from the States and conferred upon the General Government by this very article of the Constitution. This renders revolutions in a State *impossible*. But if there is a remedy in the State, what is the necessity for this constitutional provision?

Mr. FERRY, of Connecticut. I will not argue the case at length now. I intend, at a convenient time, to take occasion to explain the views that I entertain with regard to the subject-matter and with regard to the remedy for just such a state of things as this.

Mr. CARPENTER. As my friend from Ohio [Mr. THURMAN] suggests to me, suppose the people of a State do not want a republican form of government, are determined not to have one—and that case I desire to press home on my friend from Connecticut. Suppose the people of Connecticut to-morrow unanimously declare that they will have a monarchy, that they are sick and tired of republican government, and that they will have no more of it, that they will have a monarchy, and they take steps to establish one; they say, if you please, "You may call our ruler a governor, but he shall be governor for life, his sons succeeding; the legislature shall hold for life;" and every man in that State wants to have it so.

Mr. FERRY, of Connecticut. The remark that I made was this: that according to our system there is a remedy within the States for the usurpation of a State government. The remedy for the whole people of a State preferring a monarchical government is a very different thing, and that remedy may well be in the Constitution of the United States. The subject-matter before us is the usurpation of a government in the State of Louisiana, and I entirely concur with the Senator from Wisconsin, that the present *de facto* government of Louisiana is root and branch a usurpation; and yet, at the same time, I cannot concur in his remedy. But of course, in this desultory way, I cannot go into an argument to explain the views I entertain with regard to that remedy. I rose in the outset, as I said, simply to get clearly before my mind at least the position of the Senator, that I might understand it when I came to explain my own views.

Mr. CARPENTER. In a debate of this kind I am under the disadvantage of a man in the open field contending with a force in ambush. My friend will not give me his views, but is criticising mine. But the Senator concurs with me in all that I deem sufficient to justify this bill; that is to say, we agree as to the existing evil, and it only remains to decide what is the proper remedy. If the Senator has in his brains a better remedy than this, let him reveal it, and I am for it.

Mr. FERRY, of Connecticut. I intend to do so.

Mr. CARPENTER. If my friend can suggest a better remedy than this bill proposes, I shall abandon the bill and support his remedy. I wish to secure the result the Constitution guarantees to that people; I wish to rid them of such a usurpation as my friend and myself believe now exists in that State.

Mr. President, these interruptions (of which I do not complain) have drawn me somewhat away from the line of argument I intended to pursue, compelled me to interrupt the order in which I intended to discuss the topics involved, so that in returning to my subject I may repeat some things I have said. But I will resume, as well as I can, the thread I had in hand when I was interrupted.

In the first place, if the present state of things in Louisiana amounts to a usurpation, then Congress may prescribe a remedy, or it can prescribe no remedy in case of any usurpation in a State. I had supposed that it was universally conceded that this article of the Constitution was intended to vest this power in the General Government, that the guarantee of republican government was intended to protect the people against usurpation, and that the guarantee against domestic violence was intended to protect the State government against turbulence within the State; and that the jurisdiction to determine whether the state of things existing in a State authorized the General Government to interfere for the purpose of executing the first of these guarantees was vested exclusively in the General Government, not in the State; and I have read from the writings of Mr. Calhoun, the great champion of State rights, in support of this view.

And when it is conceded, as it is by the Senator from Connecticut, that the only existing government in Louisiana is, "root and branch, a usurpation," I supposed Congress had the power, and was obliged, to provide some suitable remedy; and the bill under consideration seems to me to provide the only suitable remedy.

But what seems to me a very important element of this case is, that we are not now considering in the first instance whether the Federal Government ought to interfere. The fact is, the Federal Government has already interfered through its judicial department. A Federal judge, acting not only without jurisdiction, but in confessed violation of an act of Congress, has organized this usurpation; and the question is whether Congress has the power to undo the wrong he has done, by restoring to the people of that State the right of which he has deprived them. Can it be maintained that a Federal judge, in open defiance of Federal law, may take a State government from the hands of the people, confer it upon usurpers, and that Congress is powerless in the premises? It may be said the judge might be impeached. This would punish him, but would not redress the wrong. The Kellogg government would still exist, protected by Federal troops, unless Congress should interfere; and I can imagine no form of interference that would redress the wrong, except to restore to that people, as this bill proposes, the right they have been deprived of, to choose their own rulers. And I shall be curious to hear the Senator from Connecticut point out any other remedy. For that, however, I must wait until he shall see fit to reveal it.

I understand that the supreme court of the State is in collusion with Kellogg, has already corruptly decided many cases in his favor, and will continue in the same course. There can be no judicial remedy in that State, and the remedy of force is forbidden by the Constitution of the United States. This State government will not inaugurate any movement to overthrow itself. The people of the State cannot; because, first, the Constitution of the United States forbids it; and, second, because, if they should attempt it, they would be confronted with Federal bayonets. Now, sir, what is the device locked up in the mind of the Senator from Connecticut which will meet this case?

Let me return once more to this question of power, from which I have been so often drawn to answer the questions that have been put to me. The Constitution provides that the United States shall guarantee to every State a republican government. The State of Louisiana has not such a government at present. What remedy may we employ? I answer, in the language of the Constitution, any proper and necessary remedy; and we are the exclusive judges of the means proper to be employed, provided we possess the power to do anything in the premises. I deny that any power conferred by the Constitution upon the United States is subject to the consent, or falls by the dissent, of any State. The powers conferred upon this Government are sovereign powers; they are unlimited, except where the Constitution itself has regulated their exercise. Where the Constitution confers power over a given subject, and does not regulate the exercise of the power, the power of this Government is as absolute as the power of the Czar of Russia. Take the power to declare war. Has not this Government as much power in that respect as the Czar of Russia or the Sultan of Turkey? Take the power of taxation. In certain particulars it is restricted by the Constitution; but, excepting those restrictions, it is an unlimited and arbitrary power. We may declare war to-morrow, with or without cause, against any nation or all mankind. We may, by the power of taxation, withdraw the last dollar from the pockets of the people and place it in the Treasury. We may put every man, woman, and child into the Army. Take the power to establish post-offices and post-roads. This is one of the unlimited powers conferred by the Constitution, and Congress may establish as many or as few as it pleases, and provide such method as it pleases for carrying the mails.

The Constitution of the United States was intended to classify and distribute the powers of sovereignty between the General and State

governments. It enumerates the powers which shall be possessed by the General Government, but does not, like a code of procedure, prescribe the mode, manner, or extent of their execution. All that is committed to the discretion of Congress. What is proper to be done within the limits of reason is for Congress to determine.

The Constitution says nothing about a military academy; but it authorizes Congress to raise and maintain armies. How they shall be raised, whether by encouraging volunteering or by draft, how they shall be armed, disciplined, and regulated, all that is committed to Congress by that provision of the Constitution which empowers Congress "to make all laws necessary and proper" to raise and maintain armies. Congress has deemed it advisable to establish a school of instruction at West Point as a means of securing suitable officers of the Army.

Now, take this power to guarantee a republican government to a State, and assuming, as the Senator from Connecticut agrees, that the existing State government is a usurpation, and assuming, as I maintain, that a republican government is a government by the people, and that a government by usurpation is not a republican government, and that the United States are bound to correct this evil, no man can deny the constitutionality of this bill, because it provides one, if not the best, remedy for the evil. In other words, if the United States have the power to interfere in this case, the mode in which that interference shall be made is entirely within the discretion of Congress; and by passing this bill we shall determine that this is a proper mode. Those who deny the power of Congress to pass this bill deny the power of Congress to interfere at all; deny—if they concede, as my friend from Connecticut does, that this is a case of usurpation—the power of Congress to interfere in case of any usurpation of a State government. If this be a sound doctrine, then the Constitution of the United States secures to the people of a State not "the blessings of liberty," but the evils of usurpation and despotism. The people cannot by force overthrow such usurpation, because the government *de facto* will appeal to the President, as this government has done, and will be supported by him, as this is. It must be presumed that the clause of the Constitution under consideration was inserted for some purpose; and if not for a case like this, for what purpose was it inserted? To deny that it authorizes Congress to interfere in the most flagrant case of usurpation, is to deny that it has any effect whatever; and if it applies to a flagrant case of usurpation, it applies to every case of usurpation.

But the great objection which this bill encounters is as to its expediency. It is said that to pass this bill would be a dangerous precedent. What is meant by saying that this would be a dangerous precedent? It is a dangerous precedent to hang a man, and it might be argued that if a government were clothed with power to hang a murderer, it might abuse that power, or make a mistake, and hang a man for murder who had not committed that offense. Calomel is a dangerous remedy, and it might be argued that to allow physicians to administer it would set a precedent for them to administer it where it was unnecessary. But all this class of argument merely tends to show that, if the power to pass this bill were conceded, it might encourage the passage of a similar bill in a case where it was unnecessary; in other words, the power might be abused. But if this is a satisfactory argument against this power, it would be against every other power conferred by the Constitution. Chief Justice Marshall said, in a case long ago, that there was no power conferred upon the Government that might not be abused; therefore that a particular power might be abused was no argument against its existence. This power is undoubtedly one of the most delicate of those conferred upon this Government, and its abuse would be attended with wide-spread and disastrous results; but it was thought necessary to confer it in order to prevent revolutions in the States, which would be likely to result in monarchy. It was said in the Federalist the existence of such a power would in most cases render its exercise unnecessary. And so it has proved. For nearly a century no other case has arisen that called for its exercise. But, now that the case has arisen, to deny the existence of this power would encourage the repetition of such wrongs to an extent that cannot be foreseen. We may well wish the necessity for our decision had not arisen; but it has without our fault. If you were crossing Long Bridge, prudence would dictate that you should avoid running off on the right-hand side; but if to avoid this accident you should drive so far from that side as to go off on the other, your very prudence would cause your calamity. So here it is as dangerous not to act when the case calls for action as it is to act when the case does not call for it. And I cannot resist the unpleasant conclusion that for Congress to refuse to act in a case like this, and to deny its power to do so, would be setting a precedent to be followed by fatal results.

There is another consideration we cannot overlook. The Senate is in a situation where it cannot remain passive. Louisiana has but one Senator on this floor. The Constitution says she shall have two. Mr. Pinchback claims the vacant seat in virtue of an election and certificate by the Kellogg government. Mr. McMillan claims the same seat in virtue of an election and certificate by the McEnery government. If we seat Mr. Pinchback, we thereby recognize the Kellogg government; if we seat Mr. McMillan, we recognize the McEnery government. But suppose we refuse to seat either of them, what then? Then manifestly we declare that neither government is entitled to be recognized by us. The Senator from New Jersey, [Mr. FRELINGHUYSEN,] in his speech the other day, declared that he would not vote to seat Mr. Pinchback. Why not? I ask my honorable friend from New Jersey, *Why not?* It is certified to this body in due form by Kellogg, as governor of that State, that Mr. Pinchback was duly elected by the Legislature of the State; from which we understand that he was elected by the Kellogg legislature. Why will not my friend from New Jersey vote to seat him? The only ground upon which he can honestly be denied his seat is, that the Kellogg government is not entitled to elect a member of this body. If not, it must be because that government is not such a State government as is contemplated by the Constitution; and then it is not such a State government as the people of Louisiana are entitled to have. And, when we determine this, we have determined that a state of things exists in that State making it our imperative duty to execute this guarantee of the Constitution, and confer upon that people a State government which will be authorized to elect a Senator to the vacant seat in this body.

And here let me say to my republican friends, as a matter of party policy and political expediency, that to recognize the Kellogg government, and declare it to be the legal government of that State, and yet deny a seat to Mr. Pinchback, who has every title to it which that government can confer, is an affront to the colored race, whose representative he is, which they will not be slow to resent. Let us be consistent. Let us examine this subject and come to a conclusion. If we decide that the Kellogg government is legal, let us seat Mr. Pinchback. If not, let us take steps to set up such a government there as will be entitled to send Mr. Pinchback, or whomsoever else they may elect, as a Senator from that State.

I understand the Senator from New Jersey to favor the policy of letting things in that State drift for a few years, to see what will come of it. But the Constitution of the United States does not make it our duty to establish a republican government in that State after an interregnum of one, two, or three years, but the guarantee is that it shall have a constitutional State government all the time; and if we may omit to perform this duty for three years, we may for fifty years. The power in question is not conferred upon the General Government to be exercised or not in its discretion. The Constitution lays upon us the ever-continuing, never-ceasing duty. When the case arises it is our duty to act at once. The language of the Constitution is—and it is a command—"The United States *shall guarantee*," &c. Guarantee *when;* after what lapse of time? Guarantee always, at all times. And any State left without a constitutional government longer than is necessary for the United States to establish one is deprived of a right secured to it by the express provision of the Constitution; and deprived of it because we neglect the performance of a duty imposed upon us by a Constitution we have sworn to support.

There is another point touching the expediency of passing this law to which I wish to call the special attention of Senators. The present term of governor and other State officers in that State will not expire until 1877. No election of governor can be held under the constitution and laws of that State until the next presidential elections in November, 1876. If this wrong be not sooner redressed by interposition of Congress, it will rankle and fester in our national politics, enter largely into the next presidential campaign, and cast its baneful shadow over the canvass of votes for President and Vice-President in February, 1877. I have already reminded you that in the last count of votes for President the vote of Louisiana was rejected. No serious consequences followed, because the result was not affected by rejecting that vote. But we cannot expect so decisive a result of the next presidential campaign. There may be several candidates; or if there are but two, the vote may be close, and the result may depend upon the vote of Louisiana. Every intelligent man knows that the weak point in our Government, the one from which more than from all others civil war may be apprehended, is in regard to the election of President and Vice-President. Ours is the only free government in the world which does not control the election of its own chief magistrate. But the election of our President depends entirely upon the operation of machinery in the hands of the States. And it seems to me little short of madness to adjourn the difficulties now attending the State government of Louisiana, which are almost certain to be revived in the count of votes for the next President. There is now no temptation to do anything wrong. This State government can be reorganized to the satisfaction of all parties, and thus a most troublesome and dangerous question can be kept out of the next count of presidential votes. And I appeal to Senators to consider the risk we take if we refuse to settle it before that time. My fixed belief is, that had the result depended upon the vote of Louisiana at the last count, there would have been bloodshed in the Hall of Representatives, followed by evils which can neither be enumerated nor estimated. And I implore the Senate to guard against the same danger in the future by administering the remedy now.

The Senator from Indiana, not now in his seat, declaimed against this bill the other day, upon the ground that it would be followed by bloodshed. He said:

First. I will tell the Senate who does not demand it. The republican party of Louisiana does not demand it, it is unanimously opposed to it, regards it as a movement in favor of its enemies, a movement to put it in the power of its enemies. The colored men of Louisiana regard it as a movement to put them into the power of their deadly, their mortal, enemies. Sir, the republican party of Louisiana, as an organization, as a body, composing a large majority of the people of that State, are utterly opposed to this movement on the part of the Senator from Wisconsin.

Then, Mr. President, so far as the democratic party is concerned, the best part of that party are opposed to it, and opposed to it utterly. The business men of New Orleans, I am informed and believe, are opposed to it. I believe it can be shown satisfactorily to the Senate that the business men of New Orleans, the men of property, the men who are interested in the preservation of order and protecting honest labor, are opposed to it. They are not the political friends of Kellogg; they would not vote for him; but they desire the preservation of order; they desire the protection of property. They are opposed to anarchy; they have had enough of it; and they understand full well that the overturning of that State government and all it has done would be a new signal for disorder and the shedding of blood.

Sir, there is blood in this movement, blood and crime in it, such as have characterized Louisiana for the last eight years.

Why, Mr. President, by whom is all this blood to be shed? If all the republicans, a large majority of the people of the State, are a unit in support of Kellogg; if all the decent democrats are for him; if all the wealthy and influential business men are for him, this bill will give them an opportunity to elect Kellogg and his associates, and thus continue them as the State government; and they will hold by a title which we can recognize without dishonor and without danger to free institutions everywhere. Does the Senator from Indiana suppose that the United States, with a whole Army and Navy at hand, cannot preserve the peace in that State while an election is taking place? If they cannot, then this Government had better furl its banners, and be put into the hands of a receiver at once. Such an appeal to our fears is an insult to our understanding.

In contrast with this I will read an extract from a speech made by Mr. Kellogg in this body as late as May 8, 1872. The Senator from Indiana rehearsed the massacres of 1868, and so on. I have no taste to follow him in that direction. I certainly would condemn them as emphatically as he has; but here in this body when representing Louisiana, May 8, 1872, Kellogg used these words in regard to an election in that State:

Sir, I repeat, all that we ask is a fair election, and wherever there is a thief in office in the guise of republicanism, or wherever any man or set of men under color of law, calling themselves republicans, liberal or otherwise, propose to take from the people their right to the elective franchise, their right to be represented by honest officials, I say, in the language of the Bee, and of the majority of the people of Louisiana, let us, if we cannot remedy these abuses otherwise, have Federal interference.

This is the language of Senator Kellogg himself when in this body. He demanded for the people of that State and in their name an honest election, and, if need be, by Federal interference.

Again, he said:

So it is, sir, that I am thus concerned regarding the people I represent, to the end that they may secure an honest government. I say to Senators here, give us all the law you can to secure this result, and the people of Louisiana, and I believe of other Southern States, will hail such action with gladness. Give them a fair election; if you will do so, rest assured the people now will have honest officers.

And right here let me say, do not get the idea that the people of Louisiana are intolerant. No, sir; in all this broad country to-day there is not a State where the people are more loyal, more generous, and more hospitable than they are in the city of New Orleans and in the State of Louisiana. Louisiana is without a Ku-Klux, and peace reigns in her borders. Charity should plead, their grievances considered, a full acquittal and forgiveness for whatever they may have done in violation of law heretofore. The chariot of Mars had swept over them. Their plantations lay in ruins. Their gin-houses and their sugar-houses were in ruins. Many of them were imbued with that sort of despair and recklessness engendered by the war. But, sir, notwithstanding the burdens that have since and are still oppressing them under the guise of outrageous laws, their plantations are beginning to show the result of industry. The din of commerce and the hum of industry are heard in the city of New Orleans and throughout the State. The State, struggling under terrible difficulties, has begun, I am glad to say, its march of progress, and the people do not want any more riots, they do not want any more violence; but they desire to pursue such a course as will invite northern capital and northern immigration, which has stood so long upon the borders of the State, and said, "There is a grand arena, a grand field for investment, and we desire to go thither, but first let us be assured of peace and an honest government." Sir, what the people want is peace. What they want is good laws, honestly administered; but they know well they cannot have this without a fair and honest election.

Mr. President, one seat in this Chamber is vacant which ought to be filled by the State of Louisiana. This vacancy was occasioned by Mr. Kellogg's resignation. But this vacant seat still speaks—speaks in the words of its last occupant, inscribed upon the records of the Senate. His words ought to linger in our ears. His parting appeal to this body was for Federal interference, if necessary to secure an honest election; and I can add nothing to that appeal except to remind you that two years have elapsed since it was made, and no honest election has yet been held in that State.

Interstate Commerce.

SPEECH OF HON. JOHN McNULTA,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

March 6, 1874.

The House having under consideration the bill (H. R. No. 1385) to regulate commerce by railroads in the several States—

Mr. McNULTA said:

Mr. SPEAKER: The bill now pending is the beginning of a series of legislation which will be more important in its results to the masses of the people of the country than any that ever commanded the attention of Congress. That it is defective in some points and deficient in its provisions, I do not doubt, yet it is declaratory of the power and expressive of the intention of Congress to provide a remedy for a great and growing evil, which, if permitted to go on with the gigantic strides it has within the last ten years, bids fair to overturn our whole system of Government.

Commentators upon the civil and common law have taught that there is no wrong without a remedy. In all the opposition that has developed to this measure no gentleman has attempted to controvert the existence of the great evil which is sought to be remedied by this bill.

The first question, then, arises, where is the remedy? It is urged that the provision of the Constitution which provides that Congress shall have power "to regulate commerce with foreign nations, and among the several States, and with the Indian tribes," is not such a grant of power as will warrant the Federal Government in interfering with railroads in the transaction of their business in transporting passengers and freight among the States and Territories; that it was not contemplated by the framers of the Constitution, and no attempt has ever been made, to fix the price for the carrying of passengers or freight, the pay of seamen, or other thing entering as an element of commerce. And the gentleman from Kentucky [Mr. ARTHUR] has with great skill and eloquence presented to the House reasons why Congress should not enter into this "petty inquisitorial meddling" in the "reserved province of contracts," as authority to do so cannot be found even in the faintest shadows or imaginary extremities of constructive or implied powers.

I insist that the power for the passage of this bill is one of the clearest grants of power—not an implied or constructive, but a clearly expressed grant; clear from the language and confirmed by the circumstances which led to the adoption of this paragraph of the Constitution—not limiting the right of traffic, or buying and selling, or the interchange of commodities, but extending it to commerce, in its broadest and clearest sense, as definitely understood then and now.

The commercial article in the Articles of Confederation is in article 4:

The better to secure and perpetuate mutual friendship and intercourse among the people in the different States in this Union, the free inhabitants of each of these States, paupers, vagabonds, and fugitives from justice excepted, shall be entitled to all privileges and immunities of free citizens in the several States, and the people of each State shall have free ingress and egress to and from any other State, and shall enjoy there all the privileges of trade and commerce, subject to the same duties, impositions, and restrictions as the inhabitants thereof respectively: *Provided*, That such restrictions shall not extend so far as to prevent the removal of property imported into any State to any other State of which the owner is an inhabitant: *Provided also*, That no imposition, duties, or restrictions shall be laid by any State on the property of the United States, or either of them.

This was found to be an insufficient power. It was sought by Congress, in 1784, to have a grant of an increased commercial power conferred by the States, which was at that time denied, and afterward a similar resolution was negatived by Congress.

The absence of sufficient power in Congress over commerce was the chief element of weakness in the Government, and one of the principal reasons which led to the adoption of the Constitution, "to form a perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity."

The States had made numerous and conflicting laws regulating commerce, each according to its own interest, and in some cases vindictive in their character, as a punishment to a neighboring State for some real or fancied wrongs. Virginia levied a tax upon the tobacco of North Carolina, for the purpose of excluding it from her ports, where it was sold in competition with the product of that State; and this example was very generally followed by the States along the coast, which brought about a state of affairs that was insufferable.

It was urged, pending the ratification of the Constitution by the States, that this grant to regulate commerce was one of the most important principles proposed to be adopted; that it was a power vital to the prosperity of the Union, and without it the Government would scarcely deserve the name of a national Government, and would soon sink into discredit and imbecility. (Federalist, Nos. 4, 7, 11, 22, 37.) In 1786 Virginia appointed commissioners to confer with such commissioners as might be appointed by other States, to "consider how far a uniform system in the commercial regulations may be necessary to their common interests and perfect harmony," which culminated in the framing of the Constitution in the following year, and which went in operation in 1789.

The first authoritative Federal action on interstate commerce was the adoption of the ordinance of 1787, which had been pending for three years during the pendency of the warmest and most thorough discussion of the proposition to grant the power to regulate commerce to the Federal Government.

In this ordinance for the government of the Northwest Territory it is provided:

The navigable waters leading into the Mississippi and Saint Lawrence, and the carrying places between the same, shall be common highways, and forever free as well to the inhabitants of said Territory as to the citizens of the United States, and those of any other States that may be admitted into the Confederacy, without any tax, impost, or duty therefor.

While the Federal Supreme Court by a divided bench, Judge Taney rendering the decision of the majority, (on a question touching the liberation of two slaves by being brought within this Territory,) decided that this ordinance was merged into the Constitution and ceased to be the law except as its provisions were found in that instrument, the supreme courts of the several States formed from that Territory, as well as the United States circuit court for Ohio, (Judge McLean,) have uniformly held that this ordinance is the supreme law.

It was manifestly the clear intention of the framers of this instrument to keep these highways and the carrying places between them free from tax, impost, or duty.

The language of the Constitution subsequently adopted for this same purpose was broader, more general and comprehensive. "To regulate commerce" clearly meant all that was intended by the ordinance, and more. It meant to make rules for, to govern and control, commerce; which meant to regulate the highways named in the ordinance, and all others.

It will be seen that the commercial article of confederation gave ample power to the citizens of each State to traffic, to buy and sell or interchange commodities in any one of the several States, as it is claimed this clause of the Constitution was intended for.

The trouble was not, did not arise, in buying, selling, or exchanging or trafficking in commodities; it was in the intercourse, the moving of these commodities from one State to another. And the obstructions placed upon this intercourse, which was a constituent element of commerce, were sought to be remedied by granting to Congress the whole power to regulate commerce among the States.

There arises a question as to the meaning of the term "to regulate commerce."

To regulate means to adjust or control by rule or law; therefore to regulate commerce is to adjust or control commerce by rule or law.

Bouvier defines commerce to be—

> The various agreements which have for their object facilitating the exchange of the products of the earth or the industries of man with intent to realize a profit.—2 *Bouvier's Law Dictionary*, 29.

The sense in which the word "commerce" is used includes not only traffic but intercourse and navigation. (9 Wheaton, 190, 191, 215, 229; 12 *id.*, 419; 1 Tucker's Blackstone's Commentaries, Appendix, 249, 252; 17 New York, 488; 4 Johnson's Chancery, New York, 150; 5 *id.*, 300; 6 *id.*, 160; 3 Cowan, North Carolina, 713; 1 Halstead, New Jersey, 236, 285; 1 Brockenbrough, Circuit Court, 423; 11 Peters, 102; 6 *id.*, 515; 3 Dana, Kentucky, 274; 13 Sergeant and Rawle, Pennsylvania, 205.)

The presentation of the law in respect to this power, by the chairman of the committee, seems to me to be conclusive and unanswerable.

In Redfield on Railways, a work found as standard authority in the library of every railroad attorney, we find, (pages 720–722:)

> The natural import and construction of the terms of the Constitution would not seem to admit of much doubt, judging from the language merely. The meaning of the word "commerce," at the time the Constitution was adopted must have been definitely settled, and well enough understood. The word, as well understood, is derived from the Latin *commercium*, and which is found almost in its original form in most of the languages of modern Europe. It means, in its most literal sense, intercourse and exchange both of persons and commodities. It is more nearly synonymous with "traffic" than with any other word in the language probably. Its great natural divisions for ages have been "foreign" and "inland." The regulation of all the former and that portion of the latter which extended beyond the limits of a single State was, as we have seen, by the organic law of our national Government secured to the nation, and the remainder was naturally left to the particular State where it exclusively existed.
>
> It is obvious that the purpose of the provision was not to be confined to future commerce carried on in the same mode it then was, *i. e.*, by ship and boat navigation propelled exclusively by wind. If that had been so, the provision could not have been applied to that large portion of commerce now carried on by steam-power, which has already become very considerable, and is constantly increasing in a rapidly advancing ratio. * * * * * *
>
> The fact that the entire subject of regulating all commerce among the different States, including all the means and appliances by which it was carried on, was committed to Congress, and that thereafter the States were to have no concurrent action in the regulation of the same, would seem to reduce the question of Congress having the power of regulating interstate railway traffic to the single inquiry whether it forms any portion of the commerce of the country which requires to be regulated at all. Those who assume to argue that Congress has no power to regulate the traffic upon these extended lines of railway, reaching from one end of the Union to the other, must, if they would meet the question fairly, either say the traffic on these extended lines of railway, amounting to many millions annually, probably ten times as much as the entire commerce of the country at the time of the adoption of the Constitution, is not commerce at all, or, if it be, is not subject to any regulation or control whatever. For it is certain the States have neither the power nor capacity to regulate to any purpose, or with any efficiency, this interstate railway traffic. It must, then, come under the control of Congress or be left to its own devices and impulses—an experiment never yet tried in any other country.

About fifty years ago, when the navigation of vessels by steam was first fairly inaugurated, it was urged that this provision of the Constitution did not apply to them, upon the same hypothesis that it is now urged that it does not apply to railroads; because the framers of the Constitution knew nothing of the power of steam, and therefore could not be supposed to have intended to legislate particularly in reference to it; that their intention was to limit the meaning of the word "commerce" to traffic and buying and selling, and that it in no way comprehended intercourse and navigation. But the Supreme Court demonstrated the fallacy of this argument. In Gibbons *vs.* Ogden, (9 Wheaton, 1,) Chief Justice Marshall, delivering the opinion of the court, discussing the extent of this power, says:

> It has, we believe, been universally admitted that these words comprehend every species of commercial intercourse between the United States and foreign nations.
>
> No sort of trade can be carried on between this country and any other to which this power does not extend. It has been truly said that *commerce*, as the word is used in the Constitution, is a unit every part of which is indicated by the term. If this be the admitted meaning of the word in its application to foreign nations, it must carry the same meaning throughout the sentence, and remain a unit unless there be some plain, intelligible cause which alters it.
>
> The object to which the power is next applied is to commerce among the several States. The word "among" means intermingled with. A thing which is among others is intermingled with them. * * * * * *
>
> It is the power to regulate, that is, to prescribe the rule by which commerce is to be governed. This power, like all others vested in Congress, is complete in itself; may be exercised to its utmost extent, and acknowledges no limitations other than are prescribed in the Constitution. These are expressed in plain terms, and do not affect the questions which arise in this case, and which have been discussed at the bar. If, as has always been understood, the sovereignty of Congress, though limited to specified objects, is plenary as to those objects, the power over commerce with foreign nations and among the several States is vested in Congress as absolutely as it would be in a single government having in its constitution the same restrictions on the exercise of the power as are found in the Constitution of the United States. * * * * * *
>
> The regulation of commerce, since it has been placed exclusively under the control of the Federal Government, has justified the wisdom of our fathers. But are we to remit the most valuable part of that commerce again to the control of the States, and to the consequent vexations and burdens which the States may impose through whose territories it must be carried on? And must all this be permitted because the carrying is done by a method not thought of when the Constitution was framed?
>
> The completely internal commerce of a State, then, may be considered as reserved for the State itself.

This alone would seem to clearly demonstrate the existence of the power. But the Supreme Court in the Pennsylvania State-tax case (15 Wallace, 232) has laid down the law in its direct application to the principles underlying the measure proposed in this bill. Here the Supreme Court say:

> Beyond all question, the transportation of freight, or of the subjects of commerce for the purpose of exchange or sale, is a constituent of commerce itself. This has never been doubted, and probably the transportation of articles of trade from one State to another was the prominent idea in the minds of the framers of the Constitution when to Congress was committed the power to regulate commerce among the several States. * * * Nor does it make any difference whether this interchange of commodities is by land or by water. In either case, the bringing of the goods from the seller to the buyer is commerce.

It is proposed by this bill to regulate "the transportation of articles of one State to another," in pursuance of this "prominent idea in the minds of the framers of the Constitution;" nothing more, nothing less. To fix a price for the doing of a thing is to regulate the manner of doing it. To suppose that Congress has the power to say how a thing shall be done, and that the corporations have the right to arbitrarily fix the price for the doing of it, is contradictory and inconsistent in itself.

The power to arbitrarily fix the price necessarily implies the power to prohibit. Should Congress say that commerce between the States should be carried on in a certain manner, some lines of railroads might come in and fix a prohibitory rate, saying in effect, notwithstanding the mandate of the law, that it should not be done at all.

The court further say:

> It is not necessary to the present case to go at large into the much debated question whether the power given to Congress by the Constitution, to regulate commerce among the States, is exclusive. In the earlier decisions of this court it was said to have been so entirely vested in Congress that no part of it can be exercised by a State. It has, indeed, often been argued, and sometimes intimated by the court, that so far as Congress has not legislated on the subject the States may legislate respecting interstate commerce. Yet, if they can, why may they not add regulations to commerce with foreign nations, beyond those made by Congress, if not consistent with them? For the power over both foreign and interstate commerce is conferred upon the Federal Legislature by the same words. And certainly it has never yet been decided by this court that the power to regulate interstate as well as foreign commerce is not exclusively in Congress.
> * * * * * * *
>
> The rule has been asserted with great clearness that whenever the subjects over which a power to regulate commerce is asserted are in their nature national, or admit of one uniform system or plan of regulation, they may justly be said to be of such a nature as to require exclusive legislation by Congress. Surely transportation of passengers or merchandise through a State, or from one State to another, is of this nature.

The argument of the inviolability of contract is without force in the pending question. It matters not for the purpose of the passage of this bill whether the charters of railroads are or are not in the nature of contracts between such corporation and the State bringing it into existence.

The provision in the Constitution prohibiting the passage of a law impairing the obligation of contracts is an express prohibition against such action by the States, and no similar provision of restraint appears upon the Federal Government in the exercise of the enumerated powers granted. Section 10 of article 1 provides:

> No State shall * * * pass any bill of attainder, *ex post facto* law, or law impairing the obligation of contracts.

In paragraph 3 of section 9, restraining Congress in the exercise of powers granted, it is provided:

> No bill of attainder or *ex post facto* law shall be passed.

Comparing these parts of the Constitution with each other, and construing the instrument as a whole, in view of the fact that the language restricting the exercise of the power to pass a bill of attainder or *ex post facto* law is almost identical in both instances, and that the prohibition of the passage of a law impairing the obligation of contracts is alone made applicable to the States, the inference is irresistible that a like prohibition upon the Federal Government was purposely omitted from our organic law, that a construction might

not be given which would allow States or individuals to enter into contracts that would restrict the national Government in the exercise of its powers. That the Government could in no instance impair, defeat, or avoid its own obligations, is conceded as one of the clearest principles of paramount law. And it is not proposed to impair the obligation of any contract, even if we should admit that charters are contracts in the broadest sense, that the opponents of this measure might claim for them. It is an incontrovertible principle that the law enters into and becomes a part of every contract.

At the time of the adoption of the Constitution there was no railroad charter in existence. Every charter was subsequently made and is clearly subject to its provisions and such laws as may be made in pursuance thereof by Congress, the same as though there was an express reservation of this character in each act of a Legislature granting a franchise for the construction of a railway. The State could not vest in the corporation a power in conflict with the Constitution.

The whole power was primarily in the States. The power to regulate commerce among the States was granted to the national Government; not a part, but all of this power passed, and whatever power the States possessed the Government now possesses, to the fullest extent that the States did at the time of the grant. Therefore, whatever any State may have done prior to the grant to regulate commerce can now be done by Congress to regulate commerce among the States, without any impediments from rights vested in individuals by contracts. Congress has made none, and no State has power to do so so as to restrict the Federal power. All restraining laws were originally adopted to prevent some evil that existed prior to the passage of the law.

Competition was relied upon as the great regulator of the affairs of men until it was found inefficient in regulating public servants who would take advantage of the necessities of the public and perpetrate extortion and wrong. And in reply to the statement that no man ever sought to fix a rate or price for the doing of the service, the wages of the seaman, the stevedore, the dockman, or the drayman, I need only call attention to the fact that in many of our cities the price of dockage is fixed by local law. The law fixes specifically what sum the drayman shall have for a given service. Here it regulates the price of commerce, as it does in the case of hackmen in almost every city in the Union, for the reason that experience has demonstrated that competition would not do so to an extent to give protection to the public.

In the opening up of our country, ferries and bridges were made across streams. In the absence of the power of government the owners charged such prices as they pleased, but when governments were established the prices for the use of these public necessities were definitely fixed by law. The miller invests his private funds in the establishment of a public mill, and the law steps in and fixes the toll he shall receive for the grinding of the grist. The pay for the services of notaries public and all public officers is definitely fixed by law. The rate of interest for the use of money is fixed by the States. Hotels and places of public resort are under regulation. The Government has fixed by law specifically what price attorneys prosecuting certain classes of claims before the Departments shall have for their services. Some States have made a like provision for the payment of fees for some specified services to lawyers in general practice. It surely cannot be said that the power delegated by the State to the municipality is more effective there than when delegated by Congress.

It is claimed that property in railways is private property and cannot be interfered with or a price fixed for its use; that the owners, by virtue of the provisions of their charters, have the sole power to fix rates for the transportation of passengers and freight, limited only by the common-law provision to what is reasonable. Property in the dock, the dray, the hack, the ferry, the bridge, the mill, in the money loaned, in the services of the public officer, is also private property; but the price for its use has been fixed by law, for the reason that it was held out, like railway property, by the owner for public use, and the owner became a kind of public servant.

Carriers of goods and passengers who set themselves before the public as ready to carry for all who apply, become a kind of public officers, and owe to the public a general duty independent of any contract in the particular case.—*Redfield on Carriers and Bailments*, section 132.

The power to regulate commerce was conferred by all of the States. No State can withdraw or impair it. As the Supreme Court say—

The power, like all others vested in Congress, is complete in itself, may be exercised to its utmost extent, and acknowledges no limitations other than are prescribed in the Constitution.

Mr. STORM. Does the gentleman quote from the Ogden case?

Mr. McNULTA. Yes; from the case of Gibbons *vs.* Ogden reported in 9 Wheaton.

This will also surely come within the rule laid down in McCulloch *vs.* Maryland, (4 Wheaton, 421,) where the Supreme Court adopt as a rule testing the constitutionality of an act:

Let the end be legitimate, let it be within the scope of the Constitution, and all means which are appropriate, which are plainly adapted, to that end, which are not prohibited, but consistent with the letter and spirit of the Constitution, are constitutional.

In Ward *vs.* Maryland (12 Wallace, 430) the court say:

Grant that the States may impose discriminating taxes against the citizens of other States, and it will soon be found that the power conferred upon Congress to regulate interstate commerce is of no value, as the unrestricted power of the States to tax will prove to be more efficacious to promote inequality than any regulations which Congress can pass to preserve the right contemplated by the Constitution among the citizens of the several States.

In Crandall *vs.* Nevada, 6 Wallace, 35, the court decides that a State cannot levy a tax upon passengers, and in the Pennsylvania State freight-tax case, 15 Wallace, 271, nor on freight passing from one State to another, as it would be in violation of the commercial clause in the Constitution. I submit for the consideration of this House if a railway company shall be conceded greater power than the State, the creature more powerful than the creator. All that is charged by railroad companies over a reasonable rate is a tax upon the freight. And the chairman of the committee has not overestimated this tax upon the people when fixing as a reasonable price for that transportation double its actual cost, as estimated by experts. There were collected in excess of a reasonable rate by these extortionate charges from the people $85,000,000 during the past year in violation of law.

In the case of Gray *vs.* The Clinton Bridge Company, referred to by the committee, decided by Mr. Justice Miller, of the Supreme Court, and reported in the American Law Reporter for January, 1868, the learned judge says:

Navigation, however, is only one of the elements of commerce. It is an element of commerce, because it affords the means of transporting passengers and merchandise, the interchange of which is commerce itself. Any other mode of effecting this would be as much an element of commerce as navigation. When this transportation or interchange of commodities is carried on by land it is commerce, as well as when carried on by water, and the power of Congress to regulate it is as ample in the one case as in the other. The "commerce among the States," spoken of in the Constitution, must, at the time that instrument was adopted, have been mainly of this character, for the steamboat, which has created our great internal commerce on the rivers, was then unknown.

Another means of transportation, equal in importance to the steamboat, has also come into existence since the Constitution was adopted, a means by which merchandise is transported across States and kingdoms in the same vehicle in which it started. The railroad now shares with the steamboat the monopoly of the carrying trade. The one has, with great benefit, been subject to the control of salutary congressional legislation, because it is an instrument of commerce. Is there any reason why the other should not? However this question may be answered in regard to that commerce which is conducted wholly within the limits of a State, and is, therefore, neither foreign commerce nor commerce among the States, it seems to me that where these roads become parts of great highways of our Union, transporting a commerce which embraces many States, and destined, as some of these roads are, to become the channels through which the nations of Europe and Asia shall interchange their commodities, there can be no reason to doubt that to regulate them is to regulate commerce, both with foreign nations and among the States; and that to refuse to do this is a refusal to discharge one of the most important duties of the Federal Government. As already intimated, the shackles with which the different States fettered commerce, in their selfish efforts to benefit themselves at the expense of their confederates, was one of the main causes which led to the formation of our present Constitution. The wonderful growth of that commerce, since it has been placed exclusively under the control of the Federal Government, has justified the wisdom of our fathers. But are we to remit the most valuable part of that commerce again to the control of the States, and to the consequent vexations and burdens which the States may impose through whose territories it must be carried on? And must all this be permitted because the carrying is done by a method not thought of when the Constitution was framed?

For myself, I must say, that I have no doubt of the right of Congress to prescribe all needful and proper regulations for the conduct of this immense traffic over any railroad which has voluntarily become part of one of those lines of interstate communication, or to authorize the creation of such roads, when the purposes of interstate transportation of persons and property justify or require it.

One more citation of law to support the exercise of the power by Congress:

It is not doubted that Congress has the power to go beyond the general regulations of commerce which it is accustomed to establish, and to descend to the most minute directions if it shall be deemed advisable; and that to whatever extent ground shall be covered by those directions the exercise of State power is excluded. Congress may establish police regulations as well as the State, confining their operation to subjects over which it is given control by the Constitution.—*Cooley on Constitutional Limitations*, 586.

A denial of the power to pass the pending bill is equaled only by the denial of the existence of a power in the Constitution to save the Constitution and the Union, and arises from a belief that the power ought not to exist; therefore does not exist.

Congress did exercise this power in the passage of the act of March 3, 1873, to prevent cruelty to animals on cars when in transit from one State to another. It is asked if we propose to take the property of individuals out of their hands and use it for the benefit of the public. And if we have power to take railway property, or reduce profits on its use, have we not the same power to compel them to transport freight for nothing, and thereby wholly deprive the owners of the benefits of their property? And if one class of property can be taken, why not another? And is this not the first step toward agrarianism?

I hold, Mr. Speaker, that property in the railway, the farm, or the hammer of the artisan, stands upon the same footing before the law, and is entitled to the same protection. There is no power in either State or Federal Government to divest the owner of his title or restrain him in the legitimate use of his property or the fair profits accruing therefrom, unless for public use and upon the rendering of just compensation for whatever may be taken. Yet every man must use his property so as to not interfere with his fellow-man in the exercise of like rights and privileges. Railways are highways, and no man can put his property in them to restrict the public in their use by exorbitant charges. Primarily it was the duty of the public to construct all highways, but from motives of governmental polity individuals were permitted to make these modern improvements, with an implied un-

derstanding that they should receive a reasonable profit upon their investments.

Let us look at the case of Olcott *vs.* The Supervisors, 16 Wallace, 678, where it is said:

That railroads, though constructed by private corporations and owned by them, are public highways, has been the doctrine of nearly all the courts ever since such conveniences for passage and transportation have had any existence. Very early the question arose whether a State's right of eminent domain could be exercised by a private corporation created for the purpose of constructing a railroad. Clearly it could not, unless taking land for such purpose, by such an agency, is taking land for public use. The right of eminent domain nowhere justifies taking property for a private use. Yet it is a doctrine universally accepted that a State Legislature may authorize a private corporation to take land for the construction of such a road, making compensation to the owner. What else does this doctrine mean, if not that building a railroad, though it be built by a private corporation, is an act done for public use? And the reason why the use has always been held a public one is, that such road is a highway, whether made by the Government itself or by the agency of corporate bodies, or even by individuals when they obtain their power to construct it from legislative grant. It would be useless to cite the numerous decisions to this effect which have been made in the State courts. We may, however, refer to two or three, which exhibit fully not only the doctrine itself, but the reasons upon which it rests. Whether the use of a railroad is a public or private one, depends in no measure upon the question who constructed it or who owns it. It has never been considered a matter of any importance that the road was built by the agency of a private corporation. No matter who is the agent, the function performed is that of the State. Though the ownership is private, the use is public. So turnpikes, bridges, ferries, and canals, although made by individuals under public grants or by companies, are regarded as *publici juris*. The right to exact tolls or charge freights is granted for a service to the public. The owners may be private companies, but they are compellable to permit the public to use their works in the manner in which such works can be used.

By virtue of and under the power of the law the property of the citizen is taken. The axiom of the common law, that every man's house is his castle, is held not to be good in this case. The old homestead, with all the fond memories that gather around it, dearer to the hearts of its occupants than any material things, must be torn down and the tenderest of human feelings violated, the graves of the dead desecrated and torn open, and the bones and ashes of departed kindred and friends removed, to make way for the railway track. And for what? That the capitalist may build a railway to gratify his greed for wealth? No; but in compliance with a universal law, *salus populi suprema lex*. The sacredness of private property is ignored, human affections disregarded, the citizen compelled to convey his property against his most earnest wish, not at a price fixed by him, but fixed by a process of the law, which acknowledges no measure for damages done to the feelings or the severing of the dearest associations. *It is taken for public use.* It could not be taken for any other purpose. The public interest demanded that it should be taken. The citizen yielded obedience, and acknowledged "that regard be had to the public welfare is the highest law." Private rights and private feelings have thus yielded to the public good in the exercise of this extraordinary power of Government in the construction of every important line of railroad in the country. The property of the citizen was taken for the use and benefit of the public. Whenever it shall cease to be used for that purpose the easement of the corporation over it fails, and it must revert to the original owner or his grantees.

Shall it be said that by the law the property of the citizen is forcibly taken by the corporation for the public use, at a price fixed, not by the citizen, but by a process of the law, and that when the corporation has possession of it and its use is demanded by the public for the identical use for which it was taken, the price is fixed, not by the law, but by the corporation, and the law is impotent and powerless? If this be true, it seems indeed that it makes "a great difference as to whose ox was gored."

There is no mutuality in this. It is not justice; it is not, it cannot be law. The great commentator has said that "law is a rule of civil conduct prescribed by the supreme power in a state, commanding what is right and prohibiting what is wrong." This wrong we may safely say is prohibited and not permitted by the law; and where it is done to the injury of the citizen, it is clearly in violation of law.

The gentleman from Pennsylvania, [Mr. STORM,] who preceded me, as against the policy of the bill urges that it places too much power in the hands of nine men. Nine men are to fix a schedule of rates for interstate commerce on each railway, which shall be *prima facie* evidence of the reasonableness of the rates therein specified—nothing more, except to report facts for the information of Congress. These men act under oath, are appointed by the President, subject to removal, and to fine, imprisonment, and disqualification from holding any office of emolument or honor for malfeasance in office. To-day there are *five men*—not railway commissioners, but commonly known as "railroad kings"—who fix schedules of rates, alter, amend, and change the same as their interests or their inclinations may dictate, thereby lowering or raising the price of any product of the soil that is transported over the long lines at their pleasure; fixing rates without reference to cost; limiting their charges only by the ability of the producer to pay; obstructing these great highways of commerce for the purpose of wringing from the owners and occupants of the soil the profits that justly belong to them; appointed without authority of law; acting in violation of law. Because of the inadequacy of remedies, these self-constituted dictators eat out the substance of the people and defy the law.

That the commissioners' control will be infinitely better than the present mode of management I see no room for doubt, and any improvement should be gladly accepted; yet while the commissioners will be an important auxiliary force in arriving at a correct solution of "this problem," I would much prefer a different mode of arriving at what should be charged as reasonable rates. I would prefer that the courts should determine, as a matter of fact, the actual investment in money in each line of railway. Let the officers of the company fix in an equitable manner the rates for doing business, so that the net earnings, after the payment of all actual and necessary expenses and reasonable compensation to all employés for services actually rendered, should pay a net dividend, say, of 10 per cent. on the amount actually invested. If by chance the rates were fixed so low that only 8 per cent. were rendered as a net profit, then, after sufficient notice to prevent a sudden effect upon the markets, they should be raised for the ensuing year, so as to not only bring the 10 per cent., but also the 2 per cent. deficit. And, in like manner, should it be found that the product was too great, the proper sum should be divided and the surplus held and added to the profits for the next ensuing year, and the rates lowered accordingly. A reasonable rate necessarily is a fair compensation for services and a fair profit upon the amount invested, taking into account the risk of loss in the enterprise; and as the pay for services comes out of the gross profits, a net profit on the investment is a reasonable rate.

That this process would bring about an advance in the pay of the employés of the companies I do not doubt; yet the advance in this way would be but a small percentage upon the dividends now made on fictitious stocks. The people living along the line of a railroad by furnishing it with business support it and pay all the dividends that are made. If these profits are invested along the line, as they would be if paid to the workmen, the communities that pay them would derive a permanent benefit from them, which is not the case when they are paid to the foreign holder of fictitious stock. This would be an equitable transaction, they being fairly earned in one case and not in the other.

I know it will be inquired, what shall be done with the fictitious stock? I answer, nothing, save, perhaps, giving to it what is asked for the roads, "the cold charity of being left alone." Allow the road a net profit on the actual investment, and let the companies distribute this to the owners of the road, each according to his interest, and if there arises a conflict of interest they shall settle that among themselves. It is their reasonable profit, and private property, in which the public has no concern.

I deem it safe to make the assertion that there has not been a dollar of money invested by the builders of any important road in the Northwest in the past ten years. I am not surprised that gentlemen shrug their shoulders and look incredulous, but, nevertheless, I doubt if any gentleman can point to an exceptional case. I believe the statement to be correct. "Impossible to build a road without money?" No, not at all; but, on the contrary, one of the easiest of things for one of our railroad kings to do.

The people wanted these improved highways, and charters were freely given. The municipalities along the line subscribe for from five to fifteen thousand dollars per mile of stock, or make a direct donation of that amount, payable in interest-bearing bonds, to be paid by taxes levied upon the people. The work begins and is paid for out of the proceeds of these bonds, and the road in this unfinished condition is mortgaged, not for part of its value, but for so much that the proceeds of these bonds, at eighty to eighty-five cents on the dollar, will pay for the entire construction and equipment of the road, leaving a profit of all the local subscriptions, and often a considerable percentage of the first-mortgage bonds and stock of from five to ten times the amount subscribed and paid for by the municipalities.

The mortgage bonds bearing a high rate of interest are bought at a heavy discount, not upon the basis of the cost of the property by which their payment is secured, but upon the supposed power of the corporation to compel payment for the use of the road in a sum sufficient to pay interest and principal—which has been done, and more—profit up this fictitious stock. Addition large sums for the improvement of these roads and stock issued on this as a basis. This, it is clear, instead of investing money in the operations of the enterprise, takes money out of the road.

I ask upon what principle the people should be compelled to pay profits where no capital was invested? Is it not demanding something for nothing? The innocent holders of this fictitious stock are entitled to no higher rights than the innocent inhabitants along the line of the road. The holder of the fictitious stock stands the same before the law as the holder of a fictitious bank-note, and might as well demand payment from the public for one as for the other. He ventured and lost. The public made no venture, and should not pay individual losses.

Mr. Speaker, one point more, and I will close.

It is urged that the only remedy is in making competition. This was found inefficient in the cases of drays, hacks, ferries, bridges, public mills, and money-lenders. They got up "pools" of the same kind that the railways do, and governmental power stepped in and fixed prices for them. It has not done so for the railways yet, but it will be done. It is their turn next. The other institutions are the oldest, and therefore their evils first felt and first regulated. There is no efficient remedy in competition; there can be none.

In July, 1872, there were in Illinois sixty-two hundred and fifty-

eight miles of railroad, representing a nominal capital of $254,912,563.

Seventy-three per cent. of all the land in the State lay within five miles, 21½ per cent. between five and ten miles, 4 per cent. between ten and fifteen miles, and only 1¼ per cent. more than fifteen miles distant from a line of railroad in operation; from which it will be seen that there is not much land but what should be benefited by the roads when fairly conducted, and but little room left for competing lines, which, if constructed, will be mostly capital unnecessarily invested.

The Illinois railway commissioners have given the following opinion, after a careful and thorough examination, upon the question of competition:

It has also been claimed that competition would sufficiently protect the public; that railroad corporations should be allowed to charge what they choose for transportation, just as the merchant, the mechanic, and the lawyer set their own prices on what they offer for sale, and that the law of supply and demand would regulate their charges. But competition between railways exists only to a limited extent, and soon ends in combination. A railway is in its nature exclusive, and therefore inevitably a monopoly between all stations where there are no competing lines, and in this respect there is no analogy between railways and the common highways on land and sea. There can be no absolute monopoly of transportation on common roads and streets, still less can there be such monopoly at sea—the highway of the nations. There are as many courses in the roads and streets as there are stages, coaches, and omnibuses, and there are as many tracks in the sea as there are steamers and ships. The ordinary common carrier by land or sea is free to choose his points of departure, stopping, and destination, in obedience to the dictates of self-interest and the law of supply and demand. The competing railway carrier is confined to its iron track, and cannot leave it for the relief of the isolated towns and villages on the line of its rival's route. The locomotive has driven away all other modes of conveyance, and these communities are at the mercy of an unrestrained monopoly, unless the Government interferes for their protection. Nor is the condition of communities at terminal and so-called competing points much better, for the competitors are few, and combination readily follows the construction and operation of rival lines. It was an apothegm of George Stephenson, that wherever combination is possible competition is impossible.

Mr. Charles F. Adams, jr., in a speech delivered on the 14th of February last, before a committee of the Legislature of Massachusetts, ably handles the whole subject of competition. "The only thing," he says, "which can enable competition to exist is the presence of competing forces too numerous to combine. Look abroad over this country, and you will see at a glance what competition amounts to so far as railroads are concerned. Take, I pray you, the case of New York and Chicago, two cities a thousand miles apart, between which railroads have been constructed as fast as private capital could construct them. Every gentleman on this committee knows that not a rate is charged between New York and Chicago which is not established by combination. You know that every time the tariff is to be raised or lowered the freight agents of the several companies meet in convention, and they decide how much it shall be raised or how much it shall be lowered, and the change agreed upon takes effect upon all the roads on a given day. You know, every man who has looked into this subject knows, that the only competition which exists is between land transportation and water transportation. When water enters into the struggle, when navigation opens, then the freight agents meet, and rates are reduced; when the lakes freeze up, then the freight agents meet again, and rates are raised. Whether reduced or raised, however, the change always is the result of combination."

Again, let us look at this question from another point of view. The idea of competition certainly implies the existence of several agents. As regards railroads, however, even the combination of competitors is limited to a few localities. Except at competing points—points, that is, upon which railroads converge—transportation by rail is a pure absolute monopoly, affected only by municipal law and considerations of self-interest, and in no degree subject to the influence either of competition or of supply and demand. Now, how large a proportion of all the towns on our railroads are points of railroad convergence? In other words, how many of them can look to competition for even a pretense of protection against monopoly? Take, for example, the Boston and Albany road. It runs through a densely inhabited region filled with manufacturing cities and towns; it is two hundred miles in length; it has eighty stopping places; but of points of railroad convergence—places at which a possibility of competition exists—it numbers just seven. Take again, the Central road of New York, including its Auburn division. It has four hundred and five miles of road in the very garden and central thoroughfare of the continent. On the whole four hundred miles there exists just nine points of convergence. Six hundred miles of railroad, with sixteen competing points, and those inhabiting all the other localities may use the Central or the Boston and Albany, as the case may be, or they may stay at home, whichever they prefer. But is it not something of a mockery to refer this system for its regulation to the principles which control the production of boots and cotton cloths? And if this is so here in the manufacturing East, it is not hard to imagine what must result in the agricultural West, where the very nature of the leading industry renders it impossible for population to concentrate at points of railroad convergence. In the West the mass of the people feel themselves helpless, and hence the angry feeling now prevailing against the railroad companies throughout that region.

We often have reason to believe "that the longest way round is the shortest way home," by seeing our freights hauled two and three hundred miles from the most direct route, and shipped to some central point, and back on the same track past our doors. Water transportation is suggested and relied upon as the regulator. Although its influence is great, it is not sufficient, as will be seen by comparing the following:

Statement showing the entire movement of flour and grain during the year 1873 at Chicago, Illinois.

The great reduction during that portion of the season most favorable to navigation must have been a loss, or an exorbitant profit was charged during the winter months, the latter being no doubt the fact.

Lake (steam) and rail freights for the season of lake navigation in 1873.

Weekly rates of freight by propeller lines to Buffalo or Erie, and thence by rail to New York, Boston, Philadelphia, and Baltimore.

Corn from La Salle to Chicago, shipped July 1, 1873, winter, 9 cents; summer, 7 cents.

First-class freight, winter, 45 to 50 cents; summer, 15 to 20 cents.

Second-class freight, summer and winter, about 30 cents.

I have no doubt that the small difference in the freight on corn in winter and summer is that winter storage for grain is cheaper in La Salle than in Chicago. Consequently the railroad could make nothing by advancing the winter rates on that kind of grain.

It is a well-known fact that but a small percentage of the surplus product lies within reach of the water lines, and that the grossest extortions and unjust discriminations are made upon the short hauls.

To show you the influence of the canal and river over freights, I add:

Route.	First class.	Second class.	Corn.
CHICAGO, BURLINGTON AND QUINCY RAILROAD.			
From Princeton to Chicago	$0 60	$0 50	$0 15
From Kewanee to Chicago	63	53	21

From Annawan to Chicago	60	50	15
From Tiskilwa to Chicago, (125 miles)	50	40	15
From Henry, (on Peoria branch of same road and about same distance as Tiskilwa, but on Illinois River and in competition with canal)			9 to 10
NORTHWESTERN RAILROAD.			
From Dixon to Chicago, (100 miles)	50	45	18
From Morrison to Chicago, (125 miles)	62	56	21
ALTON AND SAINT LOUIS RAILROAD.			
From Chicago to Bloomington, (120 miles)	50	45	15
From Chicago to Lincoln	65	55	18

The amount of the difference of the cost of transportation between the all-rail line and the water line is arbitrarily added to the price for taking it to the water, and the distant producer is thereby deprived of the benefit of the water lines, and the water lines cannot produce sufficient competition to alone remedy the evil.

There is but one remedy, and that is in the action of this Congress; not in the doing of a violent thing, but by giving, as is proposed in this bill, some of the protection thrown around the citizen by the clearest principles of the common law; by the performance of one of the most obvious duties we owe as the representatives of the people under the Constitution and our oath; by the exercise in this great emergency of the power conferred by the States upon the Federal Government to regulate commerce among the different States. If we do our duty we will find and enforce an effective remedy.

Mr. Speaker, I thank the House for the courtesy and attention given to my remarks. Firm in my convictions of the right, and zealous in the advocacy of that right, I cannot but believe that the House will, as it ought to, act favorably on this proposed remedy. Again thanking the House for the consideration shown me, I resume my seat.

Carpenter's Painting of the Signing of the Proclamation of Emancipation.

SPEECH OF HON. R. HOLLAND DUELL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

March 7, 1874,

On the joint resolution in regard to Carpenter's painting of "The Signing of the Proclamation of Emancipation."

Mr. DUELL. Mr. Speaker, I desire to address a few remarks to the House in support of House resolution No. 66, introduced by the gentleman from Ohio [Mr. MONROE] on the 2d instant, and referred to the Committee on the Library. It is in these words:

Joint resolution in regard to Carpenter's painting of "The Signing of the Proclamation of Emancipation."

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Joint Committee on the Library are hereby instructed to make inquiry, and report to the House, whether Carpenter's painting, known as "The Signing of the Proclamation of Emancipation," can be purchased by the United States, and if so, at what cost.

At the last session of the Forty-second Congress I had the honor to propose a resolution of inquiry upon the same subject, but although the Joint Library Committee were unanimously in favor of the purchase of the painting referred to, the proposition failed then for want of time. I thank the gentleman from Ohio [Mr. MONROE] for introducing this resolution now, and I earnestly hope that Congress will make the necessary appropriation at an early day, to the end that this great historical painting may become the property of the United States and be placed, along with other historical paintings, in the Capitol of this nation.

I need not say that the promulgation of the proclamation of emancipation, giving freedom to four million human beings, was second in importance only to the Declaration of Independence. It was a thing well worthy to be made the subject of a historical painting, and that, too, for preservation in the art archives of the nation.

Mr. Carpenter has wisely chosen the one scene by which he could best embody and preserve the memory of the great event; and he has succeeded in rendering the scene and its actors with rare fidelity. He has achieved a historical painting in every worthy sense of that often-abused term. You see before you the old, familiar, plainly furnished room, where our statesmen so often met in council. It was the room wherein Mr. Lincoln and several of the Presidents who preceded him held their Cabinet meetings. There is where the late martyred President, during his wise administration of the Government, toiled and suffered through the long, wearisome years of our national agony. Up and down that room was heard the pacing of his tireless feet deep into the night of sorrow that followed some grave disaster to the arms of the Republic; and out of that room he would emerge with the light of hope and faith upon his furrowed face after some tidings of success.

The grouping of the eight figures in this painting is artistic and admirable, while the faces upon this canvas are life-like and natural. There is Mr. Blair, the Postmaster-General; it is a good likeness today in spite of all the changes time has wrought. There is the rugged honesty of Mr. Bates, the Attorney-General, the legal adviser of the darker days of Mr. Lincoln's administration. There is Caleb B. Smith, to whom the vast interests of the Interior Department were then confided. There is the venerable figure of Mr. Welles, under whose management, whatever his critics may say, our Navy wrought the quickly succeeding miracles of a war which rendered all old-time sea-fighting obsolete. There may be seen the intellectual and dignified Chase, our late Chief Justice, in whose brain our existing financial system took form, and to whom the care of the national purse came as a summons for the exertion of almost superhuman power. There, too, in the foreground of the picture and of the occasion, are the figures of Seward and Stanton, the pen and the sword, the wisdom and the right arm of Lincoln's Presidency. The man whose subtle prudence and profound statecraft kept Europe at bay, while his coworker in the War Department wore his strong heart out and freely wasted all life and strength in presiding over the management of our armies, there they are, drawn to the life, and all but speaking for themselves.

So much for the Cabinet as represented in this picture; but I almost hesitate to speak as I would of the central figure of all. The grief of the nation is still fresh over the untimely end of the lamented Lincoln. His tomb in after times will be a shrine for the pilgrimage of freedom's votaries, and upon his grave the future patriot will rekindle the dying flames of liberty. And when his enemies shall be forgotten, and their memories perish from among men, it will be said of Abraham Lincoln that he—

> Hath borne his faculties so meek, hath been
> So clear in his great office, that his virtues
> Will plead like angels, trumpet-tongued, against
> The deep damnation of his taking off.

There is no other such portrait of Lincoln as the one found in this great painting by Carpenter; no other which began and grew under his own roof with daily studies by the artist, in free and careless moments, such as no other could or did ever have. There is not to my knowledge any other portrait than this which gives so truthfully the prevailing melancholy of that rugged and powerful face, with the added intensity of meaning in the sad, far-seeing eyes, which the deep thought and feeling of such an hour would surely bring. So satisfied was Mr. Lincoln himself with this and the other portraits upon this canvas, and so deeply did he feel the national import and future interest of the occasion, that it was his own earnest wish, as I am informed, that this work should eventually become the property of the nation, as we are proposing at this time.

The original paper of the proclamation as shown upon the canvas is not now in existence. It passed from Mr. Lincoln's hands to the possession of Mr. W. O. Stoddard, formerly assistant private secretary of Mr. Lincoln, and some months after it was presented to the patriotic fair at Chicago, to be sold for the benefit of our wounded soldiers; bought at a high price, and presented to the Chicago Historical Society, it perished amid the pitiless devastation of the great fire, as this picture itself may very probably perish if left to the uncertain protection of private ownership. The paper itself is gone, and so are six of the eight men who met that day to listen to its first reading. Welles and Blair yet remain for a time, but Lincoln, Seward, Chase, Stanton, Bates, and Smith, have passed away from among the generation for which they worked so unselfishly and so well. No reproduction of this picture, no rival work, no similar pictorial trophy of the time and the event is therefore possible. This painting is, and must forever be, absolutely unique and unrivaled, for it is the truth itself concerning the men whom it represents and the mighty deed they did.

The practice has been established, and had its inception at the

completion of the Capitol, that it should from time to time be ornamented and embellished with works of art. The popular conviction now is, however, that such productions of the sculptor's or the painter's genius as found a shrine in this, our nation's gallery, should be confined to literal representations of men or of events whose prominence in our national history would fairly warrant such special commemoration. The very few exceptions to this rule in later days do but emphasize the propriety of its observance. With regard to this picture, then, I would suggest that the history of the Anglo-Saxon race has given the world three great state papers, never to be forgotten, difficult to overestimate. They are Magna Charta, the Decaration of Independence and the Proclamation of Emancipation. Even political partisanship can hardly now be found so bitter as to deny the equal rank of the latter as marking an era of our history; hardly any to refuse a feeling of pride in its world-wide honor and influence.

Allow me, in conclusion, Mr. Speaker, to submit this question for the consideration of the American Congress. Not undervaluing any other embellishment of the Capitol, before what painting or sculpture within these walls, if this painting shall be here, will the people of the next and of all succeeding generations linger with most of genuine interest and with the deepest throbs of patriotic feeling? Will not black and white alike, the gray-headed and the young together, turn from fanciful, from legendary, from doubtful representations, to stand before Carpenter's painting and say, "Here, at least, is truth; this was painted on the spot, and is a reality?"

Legislative and Judicial Appropriations.

SPEECH OF HON. S. W. KELLOGG,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

March 11 *and* 14, 1874.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. No. 2064) making appropriations for the legislative, executive, and judicial expenses of the Government for the year ending June 30, 1875, and for other purposes—

Mr. KELLOGG said:

Mr. CHAIRMAN: I should not have sought the floor on this occasion had it not been that, under the order of the House, I have been for a few weeks past investigating to some extent a large portion of the subjects embraced in this legislative appropriation bill. Under that order of the House I have undertaken, as one of a sub-committee of the Committee on Civil Service Reform, to do what the distinguished gentleman from Massachusetts [Mr. DAWES] said, in his able speech a short time since, ought to have been done years ago, and which had not been attempted by him or by any other member of the House during nearly twenty years of his service here.

I do not know whose fault it was that we have been going on year after year, as gentlemen have told us, with two thousand or more employés in the Treasury Department without law, or rather without any authority of law, except what is found in the successive annual appropriation bills. It certainly was not the fault of the one hundred and eighty new members of the House. It certainly was not the fault of those of us who have been here for one or two Congresses past, but who have never until this session been upon any committee that brought them in contact with the Treasury Department.

This session, under the order of the House, the Committee on Civil Service Reform, if they do not accomplish anything else, have undertaken in good faith to investigate the different Departments, and to find out what is necessary by law for each Department. And the sub-committees will in due time report bills for such Departments as, in our judgment, need reorganizing. We are endeavoring to do this thoroughly, having due regard to all the requirements of an effective and sufficient working force in the Departments on the one hand, and a judicious and thorough economy in the administration of the Departments on the other. If our work, when done, is as good as our intentions and efforts are to do the work well, we trust we shall have the cordial support of the House in carrying it into effect as a law.

Now, in regard to the bill before the House, I have read it with care, for it embraces nearly all the appropriations in regard to the Treasury Department. I have also read Report No. 139 that accompanies the bill, being mainly the testimony taken by the Committee on Appropriations; I have read that report with a great deal of interest and care. I will say this for that committee: able as its members are, and well as they do their work, in my judgment it will be utterly impossible for them to carry out the rule which my colleague, who has just taken his seat, [Mr. STARKWEATHER,] has announced they have adopted, of cutting down one-fourth or one-eighth the force of every Bureau in the Department without regard to its necessities; putting them all upon a Procrustean bed, and cutting the legs of each just short enough to fit it, whether they can bear it or not. I think that gentlemen will find, in the course of the discussion upon the details of this bill, that reductions have been made in some places in the Treasury Department beyond what the interests of the civil service will justify.

I do not look upon it as good civil service to impair the efficiency of any one of your Bureaus or Departments, or to fix the salaries of those in charge of them so low that you cannot get men who will discharge their duties with competency, efficiency, fidelity, and honesty. It is not good civil service reform and economy to cut down any Department or any Bureau so much that the work cannot be done promptly and well, or to pay the officers so small a salary that you cannot get proper and suitable men to fill the places. But it is good civil-service reform, if we can find any useless offices, to abolish them. Wherever we can find an unnecessary or a useless office, we should strike it off. But we should pay those whom we are obliged to employ so that they can discharge their duties honestly and faithfully, and not feel that they must do something else to keep the wolf from their doors.

The Civil Service Reform Committee have been investigating the Departments for this purpose. We have agreed to report a bill to abolish those useless appraisers that the gentleman from Massachusetts [Mr. DAWES] spoke of in his excellent speech awhile ago, although he was chairman of the committee that had that branch of service under its charge all the last Congress. Nor was it his speech that led us into that investigation, as our reply made in January from the Treasury Department, in answer to inquiries from our committee, and made two weeks before the speech of the gentleman from Massachusetts, will show.

I find, in looking over this bill, that there has been a very handsome reduction from the amount of appropriations last year and the estimates for this year. There ought to be a reduction. The bill which I have nearly prepared for reorganizing the Treasury Department reduces the appropriations of last year some $300,000 or more, and dispenses with some three hundred and odd clerks and employés. But it does not make a general cutting down of one-eighth, in every Bureau and division, without regard to its necessities.

Mr. NIBLACK. I wish to ask the gentleman whether, after the examination he has given this subject, he is not fully convinced that no intelligent reduction can be made in any Bureau or Department, without the active co-operation of the head of that Bureau or Department?

Mr. KELLOGG. Certainly; I agree with the gentleman there. But I have found the Treasury Department entirely willing to make all possible reductions consistent with the efficiency of the service.

Mr. NIBLACK. I concur with the gentleman entirely that indiscriminate cutting down by a committee of this House is not necessarily a measure of reform.

Mr. KELLOGG. It will not bear the test of the practical working of the Department to cut down its force in every Bureau in the same proportion.

I think the gentlemen of the committee will in some places correct neir own bill.

I find here that the appropriations by this bill for the Treasury Department proper were last year $2,351,880. This year the Department asked in the estimates $2,384,260—an addition of a little more than $30,000. But the committee have cut down this item to $2,028,720. This is not all.

The expenses of the national loan are for the first time taken out of the permanent appropriations and placed in the form of specific appropriations in the general appropriation bill. The expenses of the national loan are one of the permanent appropriations heretofore spoken of, and of which the gentleman from Massachusetts [Mr. DAWES] complained in his speech a short time since. But this branch of expenditures was made a permanent appropriation, I believe, in the Forty-first Congress, when the gentleman himself was chairman of the Committee on Appropriations. The expenses of the national loan last year were $2,806,000. The permanent appropriation amounted to something like $5,000,000, if I remember rightly; but only the amount I have named was used. This year the Department itself proposed a reduction of almost $600,000, their estimate being $2,236,589; but the committee proposeto cut down the appropriation still lower, down to $2,151,413.50.

Right here I will say that these gentlemen of the committee, able as they are, have doubtless done all that men could be expected to do when charged with the preparation of so many appropriation bills. It is impossible for them, with all their labors, to go through every Bureau and division in the Departments and see for themselves which can bear reduction, and which require, for the prompt and faithful execution of their work, all its present force. This labor the sub-Committee on Civil Service Reform, of which I happen to be chairman, are trying to do, though our labor is by no means completed.

The Committee on Appropriations, in bringing this permanent appropriation into the body of the general appropriation bill, have included what has been known as the loan division in the office of the Secretary of the Treasury—a division through which, in the course of one year, $1,250,000,000 in Government bonds have gone to be examined, verified, canceled, or exchanged for other bonds; a division through which $750,000,000 in bonds passed during the last year.

[Here the hammer fell.]

The CHAIRMAN. One hour of the time allowed for general debate has expired.

M.r GARFIELD obtained the floor.

Mr. KELLOGG. I hope the gentleman from Ohio [Mr. GARFIELD] will yield me the fifteen minutes left.

Mr. GARFIELD. O, I cannot do that.

Mr. KELLOGG. Well, ten.

Mr. GARFIELD. I yield to the gentleman ten minutes.

Mr. KELLOGG. It is useless for me to undertake to discuss this subject in less than half an hour. I know that after the eleven members of the Committee on Appropriations have gone through with the discussion of a bill, it is almost useless for any one outside the committee to undertake to speak upon the subject. After the stream of debate has ran through four or five leading men on our side, and two or three leading men on the other side, it becomes insipid, if not "stale, flat, and unprofitable." But I will do the best I can to say what I intended to say in the little time left me to-day.

The loan division, through which these millions of dollars in amount of bonds pass annually, the division to which every registered or coupon bond sold or exchanged by one of your constituents with another must be sent, is one of the most important in the Department. In such a division as that you must have ability, fidelity, and honesty. To that division $10,000,000 worth of coupons, cut from Government bonds, have come from the other side of the Atlantic in one batch within two weeks past. Yet the Committee on Appropriations propose to put this division in charge of an eighteen hundred dollar clerk. They have made no other provision for it. They do not even make a division of it. I say, sir, that such responsibilities ought not to be put upon any eighteen hundred dollar clerk in the land. It is not a fair compensation for such responsibility; it is not right. It is not good economy, nor is it good civil-service reform. I know the men in charge of that division. They are competent, faithful, honest men, who cannot stay there for any such salary as that.

So, too, of the Bureau known as the Bureau of Engraving and Printing. I think the Committee on Appropriations propose to cut down this Bureau more than it will bear. I never was in that Bureau until during the present session. I have recently been through it carefully with the sub-committee of which I am a member, and I believe there was not one of us who was not perfectly satisfied that it was the hardest-worked and poorest-paid Bureau in all the Departments of the Government, the employés getting but little more than enough to pay their board, as prices are at the cheapest boarding-houses in Washington, with scarcely enough left to keep themselves decently clothed from one end of the year to the other. Gentlemen will remember that the backs of the bonds and notes have been, and are now, partly printed in New York; then they are sent here, where the faces are printed in the Bureau of Engraving and Printing; then they pass through another process in the Bureau for the printing of the numbers; and then by still another process the seals are printed upon them in the Bureau. In addition to the currency and bonds of the United States Government, millions of dollars' worth of stamps are printed in that Bureau. All the sheets of currency and bonds have also to be separated, and prepared for use. For the labor in all this vast Bureau, embracing twelve or fifteen hundred employés, this bill proposes to appropriate the sum of $500,000 only. For printing the backs of the notes and bonds an appropriation of $625,000 is proposed in the bill, and $150,000 for transportation.

I have no time to allude to other branches of this subject; but I presume the gentlemen of the committee themselves will be willing to make corrections in some points when they come to the details of the bill. I have statements from many of the Bureaus and divisions of the Treasury Department as to the actual wants there; and expect to have like statements from the others, and examine them all carefully before the bill for reorganizing the Treasury Department comes up for action.

And now I have a few words to say to my friends on the other side of the House. In the speeches that have been made by them they seem to have followed the cue that has been taken up here, and attempted to prove that, within the last two years especially, there has been an immense increase in the number of Government employés, and a wonderful growth of extravagance in the administration of the Government.

The gentleman from New York, [Mr. WOOD,] in his speech on Saturday last, took the Blue Book, and from it, as he claimed, gave us the tables showing the wonderful increase in the number of employés since 1859, and in the last two years. Looking at the tables, I find that in 1859, during Mr. Buchanan's administration, the number of employés in the civil service of the Government was 44,527, if he has given them correctly. Turning to 1871, twelve years later, I find that the whole number of civil employés of the Government amounted at that time to only 57,605, according to his tables—an increase of only a little more than one-fifth. In view of all the vast interests that have sprung up in recent years, all the interests growing out of the war, I say that no nation on the face of the earth can show a greater economy in the increase of its civil employés under similar circumstances. To talk about its being practicable that the expenses of the Government should be no more to-day than they were in the days of James Buchanan, or at any period before the war, is absurd. You might as well compare the expenses of a couple when newly married with their expenses fifteen or twenty years later, when they have a family of six or eight children around them. [Laughter.] There is just as much difference in the position to which the country has grown; especially when we look at all the pensions, and all the work on bonds and currency, and other expenses that have grown up in consequence of the late war.

A few words more about my neighbor's Blue-Book tables, which he read with so much gusto. He says that in the Blue Book there were eighty-six thousand and odd names in 1873. How does he make it out?

I turn to the Blue Book, and I find that in the War Department he has given us the number of sixteen hundred and sixty-six; and although he designated it as the civil-service list—and that is the way it was spoken and the way it now reads in the RECORD—yet there are less than one thousand on the civil list of the War Department. How his figures were made, and who made them, I do not know. He must have included some of the officers of the Army, and perhaps he included even the cadets at West Point.

And so it was in reference to the Navy Department. He states there are eighty-two hundred and forty-one in the civil service of the Navy Department. I confess those figures somewhat startled me. He says he got them, or they were got, from the Blue Book. A glance at the book will show there is no such number there as the gentleman has indicated.

And I find another interesting fact, in a hurried examination of the book. Turn to this Blue Book, and take it as the gentleman brought it in here. Out of the one thousand and twenty-two pages of that Blue Book, six hundred and sixty-eight pages are taken up with the Post-Office Department alone, and only three hundred and fifty-four pages are given to all the other Departments of the Government. How have the officers in the Post-Office Department increased? Hundreds of pages are given to small postmasters, to route-agents, letter-carriers, postal clerks, &c. The number has increased from year to year until they have grown up to such an extent as to cover these hundreds of pages of this Blue Book. Gentlemen here know how this has happened. It is because of the increase of mail facilities; because of cheap postage and daily mails all over the country. Without the present mail facilities you could not get your mails through New York City. If you would cut down the system from what it is, it would be impossible to get your mails through New York City for a single day. We have traveling post-offices on every great line of railroad. Everybody here knows you could not do it, if you should return to the old system. The chief increase during the last four years, as the statement of the gentleman from New York has shown, has been in the Post-Office Department.

Mr. PACKER. If the gentleman from Connecticut will allow me I would like, in this connection, to make a further correction of the figures taken by the gentleman from New York [Mr. WOOD] from the Blue Book.

Mr. KELLOGG. I will yield to the chairman of the Committee on the Post-Office and Post-Roads.

Mr. PACKER. The gentleman from New York, [Mr. WOOD,] in his speech on Saturday last, stated the "number of the employés of the Post-Office Department as 495 at Washington and 59,730 elsewhere, making a total of 60,225."

The truth is there were, at the commencement of this fiscal year, in the Post-Office Department in this city, but 354 employés, including all the clerks, laborers, and watchmen, &c.; and all the other officers and agents throughout the entire country, including postmasters, contractors, clerks in post-offices, letter-carriers, route-agents, railway-post-office clerks, mail-route messengers, local agents, and special agents, were but 46,656; making a total of 47,010, instead of 60,225 as stated by the gentleman from New York. The Blue Book gives the names of all persons employed, even for a fractional part of the year, and consequently includes the names of incumbents who may have died or resigned, as well as of those appointed to succeed them, and hence the gross inaccuracy of the gentleman's statement.

Mr. KELLOGG. That makes a difference of thirteen thousand and odd in the figures which were given the other day by the gentleman from New York, [Mr. WOOD.] I thank the gentleman from Pennsylvania heartily for his information. He is more familiar, from his position, with the Post-Office Department than I am. I could not see, unless the mail service had increased faster than I supposed, how it was possible that it could have run up from forty-three thousand to sixty thousand or more in two years.

I have something more in detail to say in regard to the tables. The gentleman from Massachusetts, too, gave us some tables—some seven or eight pages of them. I have some tables here, too, but I will not print them in my speech, with the exception of one or two of them. After we have had four or five speeches from leading gentlemen on the committee on each side of the House, in which are spread out at large tables of figures from our financial reports, it seems to me that we have as many figures as we ought to have in the CONGRESSIONAL RECORD. My head feels like an ant-heap of figures when I get through reading one of them. But the fact stands out as admitted by the gentlemen themselves in their speeches, that for the last two years of the administration of Andrew Johnson the average expenditures amounted to about $350,000,000 annually in round numbers; and that the increase ran up to $370,000,000 in 1868, and that then the expenditures run down to $290,000,000 while at the same time we paid off $400,000,000 in that period of the public debt.

[Here Mr. KELLOGG yielded the floor for a motion that the committee rise; when the death of Senator SUMNER was announced.]

SATURDAY, *March* 14, 1874.

The House, as in Committee of the Whole, having under consideration the bill (H. R. No. 1385) to regulate commerce by railroads in the several States—

Mr. KELLOGG. I ask unanimous consent for half an hour to com-

plete a speech which I commenced on Wednesday last—not on this subject.

The SPEAKER *pro tempore*. The House hears the request made by the gentleman from Connecticut, [Mr. KELLOGG.] Is there objection?

Mr. EDEN. I understood that this day was set apart for the consideration of the particular question of transportation.

The SPEAKER *pro tempore*. The Chair so understands, and if objection is made the request of the gentleman from Connecticut cannot be entertained.

Mr. KELLOGG. I am aware that it is only by the unanimous courtesy of the House that I can obtain the floor for the purpose I have indicated.

Mr. EDEN. I do not object to the gentleman's proceeding.

The SPEAKER *pro tempore*. If there be no objection, the gentleman from Connecticut will be allowed to speak on the subject he has indicated for half an hour.

There was no objection.

PUBLIC EXPENDITURES.

Mr. KELLOGG. Mr. Speaker, I thank the House heartily for this courtesy.

When I yielded the floor the other day, for the announcement of that sad event which shocked and startled all at this Capitol, and cast a shadow of gloom over all the land, I was proceeding to make some further remarks on the speech delivered on Saturday last, containing a vast amount of statistics, by the gentleman from New York, [Mr. WOOD,] who I am sorry is not now in his seat. But if I make any misstatements, I shall be very happy to meet him at any time on this floor, and to make ample corrections if such be necessary.

I have a few words more to say in regard to the Blue Book, from which the gentleman, as he said, drew his tables in regard to the Post-Office Department. I have given this matter a careful examination, and find that, as the gentleman from Pennsylvania [Mr. PACKER] kindly informed me while speaking, the gentleman has included in his list, as he gave it here, all the clerks in every post-office through the whole country, railway postal clerks—a class of officers unknown in 1859, with which he made the comparison—route-agents, mail-messengers, all the letter-carriers in every city in the land where the letter-carrier system has been established, some 400 of them in New York City alone, besides those in Brooklyn. If the gentleman when here seeks to bring in a bill to abolish this letter-carrier system in the large cities, especially in New York, I presume many of us will vote with him. But I submit it will give a wrong impression to the country, as the gentleman's speech was evidently calculated to give a wrong impression to the country, to compare this increase in the number of employés with the number of employés in 1859, before either of the systems of railway postal service or letter-carrier service was established. There are certainly none of either class in the Blue Book of 1859.

Then there are one hundred pages of the Blue Book given to mail-contractors. All the mail-contractors in the whole country are included in the gentleman's speech as civil officers. And, reckoning them 60 to a page, for often a name is repeated of a party having more than one contract, and there are not as many names upon a page as in case of postmasters or mail-agents, there are some 6,000 of those. Then there are at least 6,000 special-mail-service men; and those he includes in his speech in order to swell the list to the amount, as he claims, that it has been swelled to in the year 1873. I will read a few names from my own State as they stand at the head of the list: H. E. Allen, $4 compensation during the year ending June 30, 1873; J. Anderson, $2; G. L. Baker, $8.25; H. Ambler, $50; E. H. Bronson, $73; W. C. Beecher $30; J. S. Bunnell, $19; W. H. Binn, $2; and so on. And the highest but one in the whole list in my State received an amount of $300. That is an illustration of the manner in which the gentleman has swelled the list of the civil employés of the Government in the Post-Office Department. Every man or boy who is employed to pick up a mail-bag thrown off at a railroad depot, or from a stage at the door of a country tavern, and carry it across the street to the post-office, for which he receives five, ten, or twenty dollars a year, is put down as an employé in the civil service of the Government. How monstrously extravagant our civil service has become!

But the gentleman's figures were all wrong. He gave the increase, as was stated the other day, as being from 43,351 in 1871 to 60,225 in 1873. Now, Mr. Speaker, deducting these mail-contractors and the special-mail-service men, who cannot in any reasonable or fair sense of the term be called civil employés of the Government, there are just five hundred and twenty-eight pages left of the Blue Book taken up by the Post-Office Department; and if you reckon 80 names to the page, which is more than the average, there are not over 42,240 persons in the civil service of the Post-Office Department, including all the postmasters, all the post-office clerks in every post-office, railroad postal clerks, who did not exist in 1859, route-agents, letter-carriers, and all; and the number, as given by the gentleman's own table, of post-office employés in the service of the Government in 1859, when neither the letter-carriers nor these railway postal clerks existed, was, in Buchanan's administration, 38,234. The contractors and special-mail-service men were included then, as they are now; but their number was much smaller in 1859 than now. And the fact mentioned the other day by the chairman of the Committee on the Post-Office and Post-Roads, [Mr. PACKER,] who has the official figures all before his committee, shows that the gentleman from New York has got his figures 13,000 or more too high in any view of the subject.

So in regard to the Interior Department. The gentleman's table gives the number in the Interior in 1873 as 3,581. I have examined the Blue Book carefully. There are forty-eight pages in the Blue Book covered by the names of employés in the Interior Department. They are not printed as thickly as those in the Post-Office Department, and on comparison I find there cannot be over 70 names on the page. That would give 3,480, so near his figures that it is a little surprising to find it so. But sixteen pages of this portion of the Blue Book, or just one-third of it, are taken up with Indian agencies under the old treaties, all or nearly every one made before this Administration came into power. And in that list, forming one-third of what the gentleman calls the civil employés of the Government in the Interior Department, you will find every blacksmith, every blacksmith's apprentice, every laborer, every farmer, every workingman of any kind or character employed in every Indian agency all over the vast territories of this land. He has got every one of these persons included, and then the total does not come up to his number. And not only that, but in some of these Indian agencies, occupying one-third of his whole list of the Interior Department, he has got the Indians themselves in. I find such employés of the civil service as Little De Cora, Red Blanket, Little Bear, Big Bear, Big Bear's Brother, Gray Wolf, Yellow Bank, Fish Tail, and the like. There is a good part of a column of these Indians in the employ of the civil service in some way or other at one agency alone, and the gentleman calls them civil employés of the Government. Then, in another agency, I find such names as Joe Stine, Stick Joe, Jim Swail, Big Tom, and so on. Why, there are Indians running all through it. I find no Indians in the Blue Book of 1859. They had not civilized the Indians enough then to employ any of them in the civil service of the Government, even at the agencies on the remote frontier.

Mr. ELDREDGE. Why are they put in the Blue Book if they are not in the civil employ of the Government?

Mr. KELLOGG. I suppose they are employed in some way. "Jim Swail" is a herder; "Big Tom" is a farm hand; and "Fish Tail" is a policeman at his agency. I see by the book——

Mr. ELDREDGE. I do not suppose that the compiler of the Blue Book was deceiving the country or anybody.

Mr. KELLOGG. Not at all; but I am showing the character of a number of these employés, which makes such an extravagant increase of officials the last few years——

Mr. ELDREDGE. Is not the gentleman accomplishing this showing that there is an unnecessary number employed?

Mr. KELLOGG. No, sir. I do not know anything about the necessities of the Indian agencies under these treaties. They were established before this Administration. This Administration put its foot on every one of the Indian treaties, and refused to ratify them when they called for unnecessary expenses; but we are obliged to carry out the provisions of these old treaties and employ these men. I presume there are useless men employed at many of the agencies; but the law is, as the gentleman well knows, that we are obliged to employ such men as we have stipulated to employ under those old treaties.

But one word more about the Interior Department. There are some institutions which have been established in this District, and the officers and employés of these institutions are included here. For instance, there is the Government Hospital for the Insane in this District, and the compiler of the Blue Book has put in it every cook, and assistant cook, and laundress, and dairywoman, and chambermaid employed in that institution, and you will find their names here. Here are some of them: Johanna Fitzgerald, cook; Mary Anderson, chief laundress; Eliza Allen, laundress; Mary O'Day, dairywoman; Bridget Davis, table-girl; Eliza Crawford, chambermaid; and so on, and a great many of them. They are all included. Here is also the Columbia Institution for the Deaf and Dumb, and all its employés are included here, which does not appear at all in the Blue Book of 1859; and its employés are of the same description; and all used to swell the list.

Mr. ELDREDGE. Was it a democrat who got up that Blue Book in order to make it appear that too large a number of persons were employed?

Mr. KELLOGG. I do not know whether it was a democrat who got up the book; and I care not, if he did his work faithfully and well; but I am taking the speech of my friend from New York as he made it, comparing the Blue Book of 1873 with the Blue Book of 1859.

Mr. ELDREDGE. But supposing all that is so, because the Blue Book of 1859 did not contain the names of all the officers and employés, is that any reason why the Blue Book of 1873 should not contain them all?

Mr. KELLOGG. Not at all. The Blue Book of 1873 is correct, I presume; but I am only showing the nature of the work of many of the employés who are paraded as a monstrous list of Government officials. If the gentleman will not interrupt me too much, I will endeavor to make no statement but what is true by this book; and I will hold myself ready to answer my friend or any other gentleman on the opposite side in regard to its truth.

Now, a word as to the Department of Justice, where the gentleman from New York said there was an enormous increase, being from 304 employés in 1871 to 728 in 1873. That was one of the points in the table that struck me as astonishing, and I could not understand why such an increase should have been made in the Department of Justice.

But when I turn to the Blue Book I find that of the 728 names about 500 are Metropolitan police, besides the guards for the jails; and these Metropolitan police were not included in the old Blue Book. We have taken the District of Columbia under our supervision and government, and we have some 300 Metropolitan police around the city, now under the Government instead of under the District as formerly, and these have been brought in by the gentleman from New York in order to swell the number of civil employés of the Department of Justice.

But perhaps the most startling figures that he gave us the other day were those in regard to the Navy Department. He stated the increase from 1871 to 1873 to be from 201 in the former year to 8,241 in the latter year. How that could be in the Navy Department, I could not see; but in this case I have taken the Blue Book, from which the gentleman spoke, and had the names accurately counted; and I find that in the whole Navy Department, including not only the civil-service employés, but all the officers of the Navy Department, and all the officers in the Navy, from Admiral down to powder-monkey, if there is such an officer, including chaplains, boatswains, lieutenants, and midshipmen, and throwing in all the cadets at Annapolis besides, there are only 2,349 persons in all the Navy Department, at Washington and elsewhere. There are 131 employés in Washington, according to the Blue Book, but this includes the naval officers here; and yet the gentleman has sent forth to the country, in his table, that in the civil service of the Navy Department, in 1873, there were 8,241 employés. There were but 132 civil employés in the Navy Department, according to the Blue Book, and the gentleman from New York made a mistake of 8,110 in the list of the civil employés of the Navy Department alone. A small mistake for a reliable table of figures, given from the book!

Now for the War Department. I have had an accurate count made of the employés in that Department. The gentleman stated in his table that in 1859 the civil-service employés in the War Department were 336, and in 1873, 1,666. Now, I have had them accurately counted, as given in the Blue Book, at Washington and elsewhere, and not including the officers of the Army; for I find they are not included in the gentleman's table, because if they were they would swell the amount above 1,666. There are at Washington 478, and 514 elsewhere, making 992 in all. You can include West Point cadets and officers enough to make it up to 1,666 if you please; but we are talking about the civil employés of the Government. Compare the number of our Army in 1859 with the number and extent of the service of the Army in 1873 and show me where there is any extravagance in that increase.

Next comes on my list the State Department. That is one of the Departments which the gentleman speaks of as having naturally had a very small increase. He gave the increase as from 373 in 1859 to 464 in 1873. I have had the names accurately counted in the Blue Book in this case also; and I find that in order to make up his number he has included 91 of these centennial commissioners for which our friends from Philadelphia are responsible, and who are in the service of the Government without any pay whatever from the Government.

Mr. KELLEY. And whose traveling expenses and hotel bills are paid by the city of Philadelphia, out of its municipal fund, though they represent the United States.

Mr. KELLOGG. That is true. But those 91 commissioners are put in there to swell the number of civil-service employés in the State Department. I see, also, the seven gentlemen composing the civil service reform commission are in there; and that we all know is a new thing since the Blue Book of 1859.

The gentleman from New York, in the early part of his speech, when referring to the table of figures given in some speech or other, or in some such connection, if I caught his words right, said that "figures do lie confoundedly sometimes." I do not find those words in his speech as revised; perhaps the expression was not quite elegant enough to suit the gentleman's taste, in connection with the rest of his speech. But I submit to the House whether a better illustration was ever given of figures lying than the tables which the gentleman from New York was unfortunate enough to have prepared for him; for I do not suppose that he intentionally and knowingly had those figures so monstrously devoid of truth prepared purposely.

Mr. ELDREDGE. Does the gentleman from Connecticut charge the gentleman from New York with lying?

Mr. KELLOGG. Not at all. If the gentleman had paid attention to what I have just said he would not have asked such a question.

Mr. ELDREDGE. But that the tables lie?

Mr. KELLOGG. That is it. The tables lie. I do not claim that the gentleman from New York knew what these tables contained. Somebody, I do not know who, probably got them up for him.

Mr. ELDREDGE. If you are only accusing the tables of lying——

Mr. KELLOGG. That is all. I hope I have too much sense of propriety and too great courtesy to accuse any gentleman on this floor of anything of that kind. And that it may be plain that I have not misrepresented the gentleman from New York, I will publish right here, as a part of my speech, the tables which he gave us, with the context in his own language. Here it is:

I present herewith a series of tables gathered from the Biennial Register or Blue Book for the years named, which conclusively prove this. Indeed, a general extravagante and waste pervade each of the Executive Departments. The chairman, Mr. DAWES, has referred to some of them, but only to a few. I have followed the line of investigation, which he but began, and present a series of tables, carefully gathered from official sources, which show and prove this:

Statement of the number of employés borne upon the civil list of the United States from 1859 to 1873 inclusive, compiled from the Biennial Register.

Departments.	1859.			1861.			1863.			1865.			1867.			1869.			1871.			1873.

The gentleman brings in his indictment against the republican party at the close of his speech. The specifications run almost through a whole column of the RECORD, from first down to fifteenthly, inclusive, more heads than there used to be in an old-school sermon forty years ago; and it would take more divinity than was ever embodied in one sermon to sanctify such a speech as that. Here is the gentleman's language:.

In conclusion, I present a series of allegations implicating this party. *I defy contradiction as to the accuracy and truth of every one of them.*

* * * * * *

Fourthly. It has increased the civil list from 44,500 persons in 1860 *to* 86,660 *persons in* 1873.

But I have not quite done with the gentleman's figures yet. I will now turn to some of these other figures—to the very first table which the gentleman gave us, showing a large increase, as he claimed, of expenditures, the appropriations for 1873 and 1874, and the recommendations for 1874 and 1875.

The first item is that for the United States mints and assay offices. There is, as he claims, a larger increase in that item, a much larger increase, than in anything else in this table. The others are small. The gentleman has placed the amount appropriated for 1873 and 1874 at $762,180; and the amount recommended for 1874 and 1875 at $1,026,240. Those who have examined the reports know that this work has largely increased the past year. Now I find by examination that the gentleman from New York was evidently led into an error by this appropriation bill. The appropriation bill gives on the last page as the amount appropriated for that purpose $762,180. Now if the gentleman had tested his own figures, and had turned to the estimates, as given on page 26 of the Book of Estimates, he would have found that the actual appropriations for mints and assay offices last year were $953,472 instead of $762,180. Those are the figures given in the Book of Estimates, which comes with the voice of authority from the Treasury Department; and the person who made up these tables for him—if any one else made them up—led him astray by a mistake in the figures which were given on the last page of this appropriation bill.

Mr. GARFIELD. The figures given on the last page of the appropriation bill show what was appropriated in that bill only, and not in the other appropriation bills for last year.

Mr. KELLOGG. Certainly; that is the case exactly, and it shows how heedlessly the gentleman's figures have been prepared. But I find upon looking at the estimates that one item this year is $145,000 for the mint at New Orleans, which is estimated for the coming year, and which

was not in the appropriation bill of last year at all. Besides all that, the report of the Director of the Mint shows that down to last April a large proportion of the expenses of the Mint was paid out of what was called the cent-coinage fund; that more than $100,000 of the expenses of the mint at Philadelphia was paid out of that fund. But last year we changed the law, and the gentleman from New York advocated the change as he says, and voted for it. By that change of law, since the 1st of April of last year, this cent-coinage fund is turned into the Treasury of the United States, and the whole expenses of the Mint and assay offices are paid by appropriations directly out of the Treasury. That, I think, is a perfect answer to the gentleman's figures upon that point, and it shows a reduction rather than an increase of expenditures, though the work has increased and is rapidly increasing.

I suppose that the gentleman from New York, [Mr. WOOD,] in giving his statistics and figures, had not digested or examined them thoroughly to know whether they were correct or not. Probably they were made up for him by some clerk, or somebody else. But whoever did it overshot the mark; he made the charge altogether too heavy. The gentleman, in loading his blunderbuss to destroy the republican party for their extravagance, (for his speech was a veritable blunderbuss, so far as his statement of facts and figures was concerned,) ought to have remembered the fate of the old poet's marksman—

> Whose musket, aimed at duck or plover,
> Bore wide, and kicked its owner over.

Mr. ELDREDGE. I would like to know how it was in regard to the figures in New Hampshire—whether they were a "blunderbuss" that "kicked its owners over." [Laughter.]

Mr. KELLOGG. The figures from New Hampshire are right, of course; the smiling face of my friend over there from New Hampshire [Mr. PARKER] verifies those as right without any more interference of the gentleman from Wisconsin. But the figures of the gentleman from New York were made up for just about that time in New Hampshire; and I propose to have some of them corrected before there is an election in any other State. In my statements I have spoken by the book, and if gentlemen will find any mistakes in what I have stated, as found in this Blue Book, I will make ample retraction on this floor or anywhere else.

The gentleman from Pennsylvania, [Mr. RANDALL,] who is about the only man on that side of the House who has spoken upon the merits of the bill, and who treated it in a sensible way, told us something about what is called the "slush-fund" in the Treasury Department, and which has been used to pay an additional amount to certain important officers, so as to make their salaries sufficiently large to keep them there. Last year that fund in the Secretary's office was only $22,500, and in the Treasurer's office $8,500, making $31,000 in all.

Mr. ELDREDGE. I wish the gentleman would tell us what that "slush-fund" is. The name does not seem to explain it, and a great many do not understand what it is.

Mr. KELLOGG. I will tell the gentleman if he will keep quiet.

Mr. ELDREDGE. And then tell us whether that fund is not a part of the moneys of the Government.

Mr. KELLOGG. I will answer the gentleman if he will not interrupt me longer, for he is taking altogether too much of my time. It is a fund appropriated in the appropriation bills year after year for the purpose of enabling the Secretary and the Treasurer to add certain sums to the salaries of certain important officers in their Departments. Last year it was only $31,000, while during Johnson's administration, when McCulloch was Secretary of the Treasury, he had two hundred and fifty or three hundred thousand dollars a year for this very slush-fund given him by appropriation bills.

Mr. ELDREDGE. That is back pay, is it not?

Mr. KELLOGG. No, sir; it is not back pay; it is addition to the regular pay, which was fixed by law when prices were low, long before the war. I admit it is the wrong way to do it, and we will try to make it right by making the salaries what they ought to be by law, without these extra additions. It works in this way: The Treasurer obtained the services of a cashier, one of the most valuable men in the Department. His salary was $2,800 a year by law. A little bank out in Omaha offered him $3,800 a year and took him away. When this fund was given to the Treasurer he took $1,000 of it and added it to the regular salary, making it $3,800 a year, and got the cashier back again. That is the way it has been applied. We propose to change it all, to abolish the whole of this slush-fund, and to pay each man a proper salary to be fixed by law. Instead of this slush-fund being anything chargeable to this Administration, during the last three or four years the Committee on Appropriations have reduced it from $300,000 a year down to $31,000.

Sir, the expenses and increase of force in the Treasury Department have not kept pace with the increased amount of labor that the results of the war and the growth of the country have thrown upon that Department. There is a willingness to reduce expenses there as far as it can be done safely and with justice to the service. As I said in reply to the gentleman from Kentucky [Mr. BECK] the other day, that Department has cut down its number of Bureaus and divisions largely since 1868. The Secretary has reduced in his office the number from twenty-three to twelve, namely:

The following is a list of the divisions or Bureaus which existed at the close of the Johnson administration: Appointment, Civil Warrants, War and Navy Warrants, Public Debt Statement and Finances, Sub-Treasury, Revenue Marine, Internal Revenue, Stationery, Printing, Libraries, Special Agents, Steamboat Inspection, Files and Binding, Note, Loan, Miscellaneous, and seven Customs Divisions, as follows: Warehouse, Fines and Forfeitures, Rates of Duties, Navigation, and three Law Branches.

Under the reorganization of 1869, these were consolidated, and now exist as follows: Appointment, Warrant, Independent Treasury, Customs, Revenue Marine, Internal Revenue, Navigation, Record and Files, Stationery and Printing, Mail, Note, Loans.

I did not intend, Mr. Speaker, to publish any of these tables, which are official, and I will not publish any of them now except one, which will show the increase of labor and expenditures as compared with the increase of force in the office of the Auditor of the Treasury for the Post-Office Department from 1864 to 1873, inclusive. They were prepared with care at the Department, and not by myself. Any one by examination at the Department can test their accuracy. The table is as follows:

Comparative statement showing the force employed, the business transacted, and the annual rate of increase in the office of the Auditor of the Treasury for the Post-Office Department from 1864 *to* 1873, *inclusive.*

Years.	Number of employés.	Amount involved in postal settlements.	Amount involved in money-order settlements.	Rate of increase of employés.	Rate of increase of postal business.	Rate of increase of money-order business.
1864	135	$25,083,039 98	Not in operation	.....	.....	.....
1865	140	28,250,886 98	$2,652,094 74	3.7	12.6	.....
1866	141	29,739,065 51	7,829,098 77	.....	5.3	195.2
1867	141	34,472,510 33	18,207,202 43	.....	15.9	132.5
1868	140	39,023,193 45	32,174,359 58	.....	13.2	76.7
1869	165	42,042,642 22	49,295,435 95	17.8	7.7	53.2
1870	165	43,771,058 28	67,712,924 98	.....	4.1	37.4
1871	165	44,427,149 50	83,869,785 06	.....	1.5	23.9
1872	173	48,573,618 68	96,557,938 60	4.8	9.3	15.1
1873	198	52,081,687 24	114,416,565 92	14.4	7.2	18.5

Total amount of business transacted	$860,180,257 76
	Per cent.
Average annual increase of employés	4.5
Average annual increase of postal business	8.5
Average annual increase of money-order business	61.4
Average annual increase of entire business	69.9
Increase of employés since 1865	41
Increase of postal business since 1865	85
Increase of money-order business since 1865	4,214.2
Number of post-offices in operation July 1, 1864	19,976
Number of post-offices in operation July 1, 1873	33,511
Increase in post-offices since July 1, 1864	67.8

As to the gentleman from Kentucky, [Mr. BECK,] I will omit to say some things I would have said if he had been here. The gentleman from Ohio, chairman of the Committee on Appropriations, has pretty well disposed of a large part of his speech. He gave us the same old speech that he has given us for five years in succession, and sometimes two or three times a session, with a few additions; a speech reiterating the same charges of extravagance, which he always tells us he is going to prove. Why, sir, take this legislative bill, and you will find that the only place in which the Committee on Appropriations have not made a large reduction in the expenditures of the Treasury Department is in the Internal Revenue Bureau, which the gentleman from Kentucky himself examined, and upon which he made a report to the committee.

One thing I thought he was going to neglect. He began to tell us again about the decline in the shipping interest, and he went on in the same strain in which he has indulged every year for the last five years. But, sir, if he had turned to the finance report, he would have found that during the last year the increase in building of the shipping interest has been almost tenfold what it was the year before. They are building ships now in Maine; they are building ships on the Delaware at Chester; also at Wilmington and other places. During the last year the amount of tonnage built has been nearly ten times what it was in the previous year. I give him an extract from the report of the Secretary of the Treasury, page 23:

The increase in ship-building in the country is decided. Official numbers were awarded by the Bureau of Statistics to 1,699 vessels of the aggregate tonnage of 313,743 tons, while, during the year preceding, the addition to our mercantile marine was only 38,621 tons. Since the close of the fiscal year still greater activity has prevailed in the ship-yards on the Atlantic sea-board. From the 1st of July to the 1st of November documents have been issued to 1,288 completed vessels of 181,000 tons in all, while such returns as have been received, incomplete as they are, indicate that there were building in October last 386 vessels of the tonnage of 177,529 tons; including 69 steamers with a tonnage of 67,007 tons, of which 18 iron steamers with an aggregate of 38,492 tons are in course of construction on the Delaware.

The gentleman from Kentucky admits that the tables given in the speech of the gentleman from Massachusetts [Mr. DAWES] were, in general, right. Sir, that speech, when corrected at the suggestion of the gentleman from Ohio, [Mr. GARFIELD,] shows that the expenses of the Government have been reduced from $377,000,000 in 1868, to $290,000,000 last year, in round numbers. The expenses last year were only $290,345,245.33, aside from the sinking fund, as the gentleman from Kentucky admits.

I quote the table of expenditures as given in the speech of the gentleman from Kentucky on page 14 of the RECORD of March 8:

Year.	Expended by administration.
1867	$357,542,675 16
1868	377,340,284 86
1869	322,865,277 80
1870	309,653,560 75
1871	292,177,188 25
1872	277,517,962 67
1873	290,345,245 33
Totals	2,227,442,194 82

The river and harbor improvements, and the increase in expenditures on public buildings, will account for a part of the increase over 1872, in the year 1873. The gentleman from Kentucky [Mr. BECK] said also that "the Secretary of the Treasury has used a fund of three millions a year in organizing Bureaus and chiefs of staff all through the Treasury Department," referring to the "slush-fund," I suppose, which I have already shown is only $31,000, under the present administration of that Department. And in his second speech, made four days after that of the gentleman from New York, when he ought to have examined the figures before he indorsed them, he used the following language near the close of his speech:

The gentleman from New York [Mr. WOOD] showed conclusively in one of his tables the other day, if anything were needed further to prove what I have stated, that all ordinary expenditures are rapidly increasing to an alarming extent.

If he always indorses paper so recklessly, he will need something more than an increase of salary to honor his indorsements.

Now, the figures as given in the speech of the gentleman from Massachusetts, [Mr. DAWES,] and which the gentleman from Kentucky admits to be correct, and requotes, prove that the expenses of the Government, instead of increasing have been constantly diminishing from year to year down to 1873. We have cut them down something like $70,000,000 or $80,000,000 within the last six years; and at the same time, as these other tables show, we have reduced the public debt nearly $400,000,000, and have cut off about $40,000,000 of annual expense in the way of interest, &c. When gentlemen on both sides admit these figures, I am not to be frightened from my propriety by any charge that the present administration is more extravagant than any other.

I notice that a leading paper of New York City on Monday last, following up the speeches of the gentleman from New York and the gentleman from Kentucky, gave the following table, among others, to show the enormous increase in the expenditures of the Government. It is taken from pages 16 and 17 of the tables annexed to the last annual report of the Secretary of the Treasury. For simplicity round numbers are given for the figures below the hundreds of thousands:

Year.	Army.	Navy.	Pensions.	Interest.
1866	$283,200,000	$43,300,000	$15,600,000	$133,100,000
1867	95,200,000	31,000,000	20,900,000	143,800,000
1868	123,200,000	25,800,000	23,800,000	140,400,000
1869	78,500,000	20,000,000	28,500,000	130,700,000
1870	57,700,000	21,800,000	22,300,000	129,200,000
1871	35,800,000	19,400,000	34,400,000	125,600,000
1872	35,400,000	21,200,000	28,500,000	117,400,000
1873	46,300,000	23,500,000	29,400,000	104,800,000
1840	7,100,000	6,100,000	2,600,000	175,000
1850	9,700,000	7,900,000	1,900,000	3,800,000
1860	16,500,000	11,500,000	1,100,000	3,100,000

Now, sir, it is only necessary to remark, that of course such items as pensions and the interest on the public debt must have greatly increased since the war.

In my remarks to-day I have spoken, as I have said, by the book—the same book which has been referred to by the gentleman from New York, and which he held in his hand when speaking; the book from which have been taken, as was claimed, the statistics which have spread, as my genial friend from New Hampshire [Mr. PARKER] is aware, all over his State, and which are spreading all over the country. I have sought to make some corrections in these figures.

The able speech of the gentleman from Massachusetts, [Mr. DAWES,] which has led to these other speeches, has been the means, perhaps, of misleading some people in the country as to whether extravagance was on the increase in the Government or not. Several days after that speech was made, the New York Tribune—I believe that was the paper, the same from which I have quoted the table—said that two or three leading men on this side of the House, together with my humble self, were preparing to answer it, and were going to engage in the work of "stoning a prophet." Stoning a prophet! Why, sir, if the gentleman from Massachusetts himself were here, he would say, from what he knows of me, that instead of throwing a stone at him, I would throw around him the arms of encircling love. I have loved him long; and he knows it. I have admired him from the time when, as a boy, I rode over the hills in Western Massachusetts to hear him lead off in the lyceum debates in the village of the county in which we lived. Ever since that time I have admired him and his speeches. Only, as he grows older, he grows, I think, somewhat despondent; and is disposed to be frightened as to the future of the country. I think this vein of despondency runs through his recent speech. He gets the blues on about once in two years, when he makes his biennial speech.

The great thing in that speech liable to mislead was his stretching a drag-net over all the expenditures of the Government, the necessary and permanent expenditures which have been heaped up by the war, and which we in recent years under his administration and under other leaders in the House have been steadily reducing. He stretched a drag-net over them all. He piled them up like a mountain mass before our eyes, and frightened the House and the country by their magnitude.

I will say, however, when that speech is carefully studied, it will produce good, in my judgment. It will produce good if it will lead us to a judicious economy in all the expenditures authorized by this Congress. I agree with every one of his conclusions most heartily, that we should not have an increase of the public debt, that we should not resort to any forced loans to meet our current expenditures, but that we should cut down our expenditures by a judicious and careful discrimination, so as to bring them within our revenues during the year that is to come. I believe that he and all of us are now satisfied that we can do this.

I thought at the time the gentleman from Massachusetts rose in his place in December last to announce that there was danger of forty millions more of taxation, that it was unnecessary to alarm the country by saying we might have to impose forty millions more of taxes. I thought then, also, and think now, that any new loan is unnecessary; and that no more taxation is necessary. The country was, and has been, alarmed by it; and it has brought business to a stand-still in some parts of the country in the articles that were proposed for taxation. No man knew what to do, whether to buy or sell, when an uncertainty was hanging over him on this matter of taxation. I believe the RECORD shows that I rose in my place at the time, and suggested that there was no need of sending back the estimates for revision; and the result has proved this to be true. We could have cut down the estimates on the public buildings and other matters ourselves, without alarming the country. And what has all this debate been about? Simply upon the two little bills to repeal the taxes on matches and bank-checks; bills which the Committee on Ways and Means reported unanimously against, and which reports would have been accepted without debate if the committee had not put them at the head of the Calendar.

Few of us would have thought of taking off those taxes this session in the state of the Treasury after the late panic. I trust they will both come off the next session. Both these bills were introduced by me at the last Congress, as well as by others. I did not introduce them this session, in view of the condition of the Treasury. Both of these taxes were repealed by both Houses of the last Congress, and ought to have staid repealed, instead of some other taxes that were taken off. Both of them were put back again by three men in each House, in a committee of conference, contrary to the recorded will of the American people, as expressed by a vote of their representatives in both Houses—a practice that I propose to say something more about before the session closes. And yet gentlemen have been making their speeches upon these little bills, reported against unanimously, for a month—ever since the gentleman from Massachusetts led off in the debate.

Why were these bills placed at the head of the Calendar, before the forty-four million bill, and before the bills for settling the question of the currency? You alarmed the country with the question of more taxes, and the business interests of the country have been paralyzed all winter with the uncertainty of our action upon the question of the currency. We upon this floor, outside of two or three leading committees, have no power over these matters; we cannot say which bill shall be reported first, and which shall go to the head of the Calendar, and we are not privileged to report at any time, as they are. I believe the country desires action at once upon the question of the currency; it wishes to know, at least, whether we will take any action upon it, whether we will increase it or leave it as it is. And if we do not take action soon, I believe that if we could under the law pass appropriation bills for two years within a few days, and adjourn and go home, with no power on earth to call us together for two years to come, it would be a blessing to the country; for it would leave the business men of the country to work out their own salvation, as they would know better what to do than now.

A New Territory.

SPEECH OF HON. M. K. ARMSTRONG,

OF DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

March 14, 1874,

On the bill to create a new Territory out of the north half of Dakota.

Mr. ARMSTRONG. Under instructions of the Territorial Legislature of Dakota, I introduced a bill in the early part of the last Con-

gress, providing for the organization of a separate territorial government out of that portion of Dakota north of the forty-sixth parallel. Notwithstanding the urgent memorials of the Legislature of that Territory upon this subject, Congress has thus far arrived at no definite action in the premises, and the bill is again before the present Congress, backed by the petitions of thousands of citizens residing in the northern part of said Territory.

The only objection raised to the bill in the last Congress was that the proposed new Territory was too thinly settled and too poor in wealth and development to warrant self-government.

These objections, sir, have in a good measure been removed within the past year, and cannot now be fairly urged against the present bill.

Two hundred miles of the Northern Pacific Railroad have been pushed westward across that Territory from the fertile valley of the Red River to the navigable waters of the Upper Missouri. Two newspapers are published in the proposed Territory, and stirring and enterprising towns have been built up at Fargo, Jamestown, and Bismarck on the said railroad, while immigration and settlement are rapidly filling up the accessible river valleys. Steamboats navigate the Red River nearly two hundred miles into the proposed Territory, returning with thousands of tons of freight for the Hudson Bay settlements; while along said stream in Dakota new towns and mills are being established. Nearly four hundred miles of telegraph line are in operation, and at Pembina, Grand Forks, Fargo, and Richville, quite a trade is already carried on in the way of shipping and reshipping freights. United States courts are held at Fargo, Bismarck, and Pembina, and a United States land office has recently been established at the former place, while the settlers are urgently petitioning for a land office at Bismarck to accommodate the increasing settlements in the Missouri Valley. Many large steamboats ply for several hundred miles through the proposed Territory on the waters of the Missouri, and pass far above the mouth of the Yellowstone into Montana, carrying Government freight for the forts and agencies, and mercantile goods for the mining districts. Already several thousand people have gone into this northern territory, and are preparing farms, homes and villages, in anticipation of the favorable action of Congress upon this bill.

As early as 1864 the United States Government virtually declared the Red River Valley open to settlement when it purchased the same by treaty from the Red Lake and Pembina Indians, and invited white settlers to locate upon the newly acquired lands. In accordance therewith, homestead settlers have gone into that country and can be found located in nearly all the river valleys and Northwestern Dakota; especially upon the Pembina, Turtle, Goose, Cheyenne, and Wild Rice Rivers.

Many worthy and adventurous settlers also established their pioneer claims in the country prior to the location of the Northern Pacific Railroad, and upon lands that the Government had proclaimed as open to settlement; but at a later date they were apprised of the fact that a mysterious and undiscovered treaty with the Wapeton and Sisseton Indians made in 1867, covered the whole domain, and reserved these lands for the Indians as against settlers.

Notwithstanding this treaty, the Government had in the mean time ignorantly extended its surveys over portions of this reservation, thus inviting settlements to follow. Not until 1873 did the United States succeed in correcting, by an act of Congress, this blind treaty of 1867; and during this interval the Northern Pacific Railroad Company had pushed its surveyed line through the country and filed its plat for withdrawal of lands with the Secretary of the Interior, February 21, 1872. Hence so soon as this treaty cloud was cleared up by the act of Congress, the railroad survey being on file, immediately attached to all odd numbered sections within its granted limits, thus covering the homestead claims of many of the poor and needy settlers, who, by the ruling of the General Land Office, had acquired no rights to their homesteads while they were upon these lands reserved for Indians, between the years 1867 and 1873; and in face of the fact that Congress originally granted only the unoccupied odd sections to the railroad. These settlers have continued to reside in the Territory; and all those upon odd numbered sections are now put to the hardship and injustice of removing from their improved lands, and beginning new homes upon the even numbered sections, unless relief is afforded by the Government.

Sir, I can but repeat here in behalf of these deserving people what I once said before in this House, in a defense of the early pioneers of the West, that if there is any class of American citizens who are entitled to the same regard from the General Government that is bestowed upon the soldiers who fought the battles of our country, it is the hardy pioneers of the frontier, who venture into the wilds, defying danger, subduing the plains, establishing villages, and planting upon the confines of our public domain the beacon lights of progress and civilization. Rude cabins, uncultured lands, bridgeless streams, uncertain mails, isolated schools, distant markets, and Indian dangers, are few of the many troubles that have been encountered by these early settlers in Northern Dakota. Separated as they are from the settlements in Southern Dakota by a broad belt of uninhabited prairies some two hundred miles in extent, the interests of the two sections are not at all identical.

The northern settlements having been made at a more recent date, they have but a small representation in the Territorial Legislature in comparison with the older and more populous counties in the southern part of the Territory.

Notwithstanding this diversity of local interest between the north and south, no unfriendly feeling exists between the people of the two sections, which is evidenced by the fact that the legislative representatives of southern Dakota have repeatedly memorialized Congress to give to the northern section an independent territorial government.

The proposed line of division would separate Dakota by an east and west line into two halves, approximately; each containing about seventy-five thousand square miles, equal in extent to one of the largest States in the Union. The south half, or Dakota proper, contains at present about thirty thousand inhabitants, and the north half, which this bill proposes to create into the new Territory of Pembina, embraces an estimated population of ten thousand people Very many of the Territories of the United States have been organized by Congress with less than half this number of inhabitants, and with not a mile of railroad within their border.

In 1861 the Territory of Dakota was established with a population of a little over four thousand, and its limits covered all the country between the Red River and the Rocky Mountains. Since then the march of western progress has been such that in 1863 the Territory of Idaho was created by Congress out of Western Dakota, and in 1864 Congress also organized the new Territory of Montana out of what was once a part of Dakota; and still later, in 1867, the Union Pacific Railroad had pushed across Southeastern Dakota, and Congress again erected therefrom a new Territory by the name of Wyoming.

Now, sir, the Northern Pacific Railroad Company has completed one hundred and ninety-five miles of road through Northern Dakota; and the people therein are to-day petitioning this Congress to create the new Territory of Pembina.

True, the plea of economy is raised against this bill on the ground that when the Government is so financially embarrassed as at present, when the United States Treasury is being so rapidly depleted, when the receipts of the national revenues are falling behind our expenditures, it is no time to talk of setting up the new and expensive machinery of a territorial government, thereby involving the country in an additional yearly expense of some $50,000. But, sir, the United States Government should not make treaties and purchase lands of the Indians, and survey them, and open land offices to induce settlers, unless it is ready and willing to afford its citizens the benefits of local government and national protection. It has never been the policy of this Government to take a step backward whenever it has once set out in the march of progress and civilization.

Sir, the total expense to the United States, incurred during the last fiscal year for sustaining the local governments in the nine organized Territories of the Union, amounted to less than $300,000, or only about $33,000 each. The sessions of the territorial Legislatures being, by law of Congress, made biennial, the annual expense thereof to the Government is now only about one-half as much as it was at the time of the organization of the present Territories.

Already the United States Government has expended nearly $100,000 in extending the surveys of the public lands for settlement over the proposed new Territory. Large tracts have been subdivided into sections, a United States land office has been established therein, and the country formally opened to immigration.

The resources of the Territory are as yet but slightly developed, but extensive and valuable coal-fields have already been discovered west of the Missouri River, within convenient distance of the Northern Pacific Railroad, at Bismarck. A very large proportion of the country consists of rich and rolling prairie lands, naturally adapted to grazing purposes; while the valleys of the Territory are favorable to the production of wheat and the smaller grains. The climate is similar to that of Northern Minnesota and Wisconsin in the same latitudes. The occasional dryness of summer, which is now attributed to some portions of the higher prairies in these northern latitudes, will rapidly disappear as the settlement of the Territory increases, and the cultivated fields and planted groves of homestead settlers dot the surface of the country.

The day has passed, sir, when it can be safely said of any portion of the great West that it is utterly worthless. The western portion of the present rich and populous State of Iowa was once pronounced by Thomas H. Benton, in Congress, as a poor country for cultivation and settlement. And the members of this House can well remember when, but a few years ago, portions of the present State of Nebraska and the now populous Territories of Colorado and Utah were described as parts of the great "American Desert," unfit for cultivation and worthless for settlement. To-day one of the public highways of the nation traverses that region to the western ocean, and settlements and villages have sprung up along its track. The climate has changed, rains are more frequent, the soil produces abundantly, young groves have sprung up, and that whole region is becoming an inviting field for immigrants.

The proposed new Territory of Pembina suffers under no such natural disadvantages as those above enumerated. Its larger streams are lined with ample forests of oak, ash, and cottonwood; its numerous deep, clear lakes in the northern part are skirted with beautiful groves and stocked with the finest of fish; while many small creeks and brooks meander through the great prairies, which are in turn everywhere clothed with a luxuriant growth of nutritious grasses.

No single act of Congress, appropriating so small an amount of

money, would so far conduce to the development of this section of the Northwest as the passage of this bill organizing a new Territory out of the north half of Dakota, at an annual expense of less than $50,000 to the General Government. Several times as much money as this is each year appropriated by Congress to clothe and feed the Indian tribes located upon reservations in this same Territory, who, instead of developing our northwestern resources and enriching the nation by their toil, are an incubus upon civilization and progress, and a constant tax upon the revenues of the country.

No rigid census of population or statistical statements of location are required to be furnished of the Indians, as of the white settlers, in order to obtain an appropriation from Congress. It is my own belief, sir, from long residence in the Territory, that, were a tribal census made of all the wild Indians in the United States, there would be found a great reduction in the number that is annually reported for the charities of the Government. Millions of money could be saved by enforcing a thorough system of classifying or listing by name the Indian population of each tribe, band, or lodge, after the manner of enrolling soldiers in companies and regiments. Every Indian has a "local habitation and a name," and belongs to some particular band of his tribe or nation, and should not be loosely permitted to draw his rations under a half dozen assumed names, and at the councils of as many different bands.

Let the national Government do equal and deserved justice by both Indians and settlers in the West, and we will hear fewer complaints of frauds and Indian troubles upon our western borders.

The people in Northern Dakota have struggled with the trials and misfortunes of a pioneer life, and have steadily advanced in civilization and settlement, until they now have their railroads and telegraph lines, their steam navigation and prosperous villages, their public schools and religious institutions. They come to Congress through their petitions of several thousand citizens, asking that they may be invested with the rights and privileges of local laws and civil government. They are intelligent, law-abiding, and industrious. They have planted their homes permanently in the new Territory, as farmers and producers. Unlike a changeable mining population, they have selected their homes for the purposes of agricultural pursuits and abiding industry. All they ask is that Congress shall deal fairly by them, and throw around them the shield and protection of local laws and self-government, which as American citizens they have a right to expect. Give them this, and they will build up a Territory which shall be an honor to themselves and a credit to the nation.

Relations of the District of Columbia to the General Government—Is Washington City the Capital of the United States, or the Capital of the District of Columbia?—The Duty of the Nation toward its Capital.

SPEECH OF HON. N. P. CHIPMAN,

OF THE DISTRICT OF COLUMBIA,

IN THE HOUSE OF REPRESENTATIVES,

February 28, 1874,

In the Committee of the Whole on the state of the Union, on the relations of the District of Columbia to the General Government, and the duty of the nation toward its capital.

Mr. CHIPMAN. Mr. Chairman, the difficulty which I have found in tracing the relations of the District of Columbia to the General Government, and the embarrassment I have experienced in ascertaining important facts upon that subject, have induced me to relieve others of the labor which I have been forced to undertake by presenting a succinct history of these relations; and growing out of this subject I have found equal difficulty in determining precisely what has been done by the nation for its capital in the way of improvements of streets, avenues, parks, reservations, and the like, and what has also been done by the local authorities.

It occurred to me that the great public interest now being felt upon this subject would warrant a careful examination into it, and that I might be able to render the House some service in collating the essential facts; and I shall feel amply repaid if I shall be the means of enlarging the vision of any member toward the national capital, or of enlightening a public sentiment which I believe is ready to demand of Congress that the Government shall no longer neglect the pledges of the early fathers to build here a metropolis which shall illustrate the origin, growth, and progress of our civilization.

PRELIMINARY HISTORY.

One of the first important questions which challenged the attention of the Continental Congress at the close of the Revolution was the selection of a permanent seat of Government. Congress was practically on wheels, and had held its sessions at Philadelphia, Baltimore, York, Princeton, Annapolis, Trenton, and New York City. The fathers saw that the permanency of the capital would have much to do with the permanency of the Government itself, and it became, therefore, one of the first questions seriously considered.

When in June, 1783, Congress, sitting at Philadelphia, felt itself insulted by a band of mutineers whom the State authorities could not quell, the subject of possessing territory for a permanent seat of Government, exclusively within Government control, became a practical question, and continued to be discussed until the adoption of the Constitution.

In October, 1784, after full debate, Congress, sitting at Trenton, passed an ordinance creating a commission, with full power to lay out a district on the Delaware River for the Federal city.

The ordinance and the debate form an important link in the history of the location of the capital, and illustrate the enlarged views thus early entertained, and which were subsequently carried out in the final location of the capital on the Potomac River.

The location upon the Delaware seemed not satisfactory, and it was probably owing to that cause that the commissioners never entered upon their duties; but the subject continued to attract public attention, and came before the Continental Congress in various forms.

The debates which took place and the public sentiment which found expression in pamphlets and newspapers show that few questions have excited greater interest or seem to have been regarded as fraught with greater importance to the country.

Some of the ablest men of the time took part in the discussion, and treated the subject as one eminently worthy to arouse the patriotism of the people.

Without suggesting the various considerations of climate, locality, &c., which led to the establishment at the present spot, I need only, for my present purpose, refer to one on which there was general agreement, namely, that the present and future good of the Republic demanded that the location should be remote from any of the great cities then springing up. It was thought impolitic to attach it even to the suburb of a commercial city, or that it should itself become one, and it was therefore resolved to found a new city with reference only to the convenience, safety, and glory of the nation.

It was directly with reference to this fact that a provision was placed in the Constitution withdrawing from the States all legislative control over the district in which the capital might be located, and placing it in the exclusive power of Congress. This exclusive control was regarded as essential to bestow dignity and independence on the Government.

Upon this question Mr. Madison wrote in the Federalist:

> Without it, not only the public authority might be insulted and its proceedings be interrupted with impunity, but a dependence of the members of the General Government on the State comprehending the seat of government, for protection in the exercise of their duty, might bring on the national councils an imputation of awe, or influence equally dishonorable to the Government, and dissatisfactory to the other members of the Confederacy. This consideration has the more weight, as the gradual accumulation of public improvements at the stationary residence of Government would be too great a public pledge to be left in the hands of a single State, and would create so many obstacles to a removal of the Government as still further to abridge its necessary independence.

But without noticing further in this connection the preliminary history, I assert *that the history of the location of the capital, the declarations of its founders, the provisions of the deed of conveyance made by the proprietors of the soil, the contemporaneous acts, the plan of the city, and the legislation of Congress, show a distinct and unmistakable purpose on the part of the United States to build here a Federal city at Federal expense.* I cannot hope, in the limit which I am forced to place on myself on this occasion, to present more than a skeleton of the evidence establishing this proposition.

LOCATION OF THE CAPITAL.

I have alluded to the debates upon the subject as showing the importance attached to it.

Mr. Scott said:

> The future tranquillity and well-being of the United States depend as much on this as any question that ever had or could come before Congress.

Fisher Ames remarked:

> That every principle of pride and honor, and even of patriotism, was involved in it.

No Senator or Member treated the subject except as one of the profoundest importance; and this feeling must be considered when we come to notice what was ultimately done in relation to it.

It must be remembered that our capital city was located in the midst of a virgin forest; it was literally the creation of the Government. No consideration was allowed to stand in the way of making it precisely what the Government desired it should be, and this purpose was reached after that calm deliberation which characterized all the important acts of the early fathers.

There was involved in the very idea of building up a great political and non-commercial city, with the chief view of accommodating the necessities of the Government, the implied pledge that Government would take upon itself the burden of public improvements in that city.

A city deprived of commerce and manufactures is deprived of the means of self-support. The founders could not have been ignorant of the fact that to make the capital what they designed it to be was impossible except under the fostering care of Government.

A city without revenues could not provide those expensive means essential alike to health and comfort.

To build a great city, as was the evident purpose of the founders this should be, without aid of the Government, and without local

revenues, was an impossibility. No nation before had ever attempted it, and it is absolutely certain that ours never intended to do so.

Turning to the Old World, we find that all the great cities have been either the creation of the state, or have been fostered and aided by the state, notwithstanding most of them have large commerce, manufactures, and revenues.

I will venture to say that since Washington City became our capital, the government of France has expended not less than $200,000,000 upon the city of Paris. Under the first Napoleon over $20,000,000 were expended on public works. Louis Philippe continued these liberal expenditures, while Louis Napoleon surpassed all his predecessors in his zeal for embellishing their capital city. For the ten years following 1859 the expenditures for public works were limited to 18,000,000 francs annually, of which the State paid 5,000,000. During all this period Paris has had a revenue greatly exceeding the expenditures both of government and the city, and her citizens have not felt the burden of this great outlay; while the citizens of our capital, with a revenue but little more than sufficient to pay its ordinary municipal expenses, may be said to have done almost everything that has been accomplished so far toward the realization of its founders.

The act for establishing a permanent seat of government was approved July 16, 1790. It authorized the President to appoint three commissioners, who should under his direction have power—

To purchase or accept such quantity of land * * * as the President shall deem proper *for the use of the United States*, and *according to such plans as the President shall approve*, and also to provide suitable buildings for the accommodation of Congress, for the President, and for the public offices of the Government of the United States, the same to be in readiness by the first Monday of December, 1800.

The language, as well as its spirit, shows clearly that the city was founded for the use of the United States. Its plan was to be formed by the United States commissioners, and approved by the President. No interests were consulted except those of the United States, as we shall soon see. The plan of the city finally adopted was in keeping with the enlarged views of its founders, and in direct and absolute violation of every law which should govern in laying out a commercial or business city.

DEED OF CONVEYANCE.

The commissioners entered upon their duties with great zeal, while the watchful eye of President Washington was always upon them.

The present limits of the city were fixed upon, and on the 29th of June, 1791, the deed of conveyance by the original proprietors of the soil was executed.

The deed was made upon certain special trusts, some of which I will notice as important in showing the purpose of the founders. The first one was:

That *all* the said lands are hereby bargained and sold, *or such part thereof as may be thought necessary* or proper, to be laid out, together with other lands within the said limits *for a Federal city*, with such streets, squares, and parcels and lots *as the President of the United States for the time being shall approve.*

Thus the proprietors parted with all the soil for the purpose of building here a Federal city, leaving it exclusively with the President to select from the whole whatever he might deem necessary or desirable for that purpose. No reservation was made in the deed for the benefit of the proprietors, other than that after the President had indicated all the streets, squares, parcels, and lots that he should deem proper for the use of the United States, there should be—

A fair and equal division of the remaining lots, and the United States should pay for its reservations and lots at the rate of twenty-five pounds sterling per acre.

The deed does not provide for the dedication of any public squares, streets, or avenues to the public use, but the absolute fee-simple vested in the United States, so that the Government could at any time close a street or occupy a public square for such purposes as it deemed proper.

The question as to the scope of the deed in this regard came up early in a dispute between the commissioners and the proprietors. The latter thought that the United States had the right only to use the streets as public highways, and not to alienate them, or divert them to other uses.

Attorney-Generals Lee, Breckinridge, Wirt, and Cushing advised that the United States had the fee-simple title to the streets, and avenues, and reservations, and it was so held in the case of Van Ness *et ux. vs.* The City of Washington. (4 Peters, 232.)

Of this grant the Supreme Court says:

The grants were made for the foundation of a Federal city, and the public faith was necessarily pledged when the grants were accepted to found such a city.

Again:

Congress must forever have an interest to protect and aid the city.

The city was designed to last in perpetuity—*Capitoli immobile saxum.*

No imperial government ever possessed greater powers over the soil than was conveyed in this deed.

This absolute control is further seen in the following clause of the deed, which I will notice:

But the said conveyance to the said grantor—

The Government was to reconvey to the grantor what it did not require—

his heirs or assigns, as well as the conveyance and purchase, *shall be on and subject to such terms and conditions as shall be thought reasonable by the President for the time being, for regulating the materials and manner of the buildings, and improvements on the lots generally in the said city, or any particular streets, or parts thereof, for common convenience, safety, and order.*

Here we have the very construction of the houses and the improvements generally subject to the exclusive will of the President.

Can there be any doubt that the purpose of the Government in making this deed was to leave the purchasers of private lots and the proprietors no judgment on, or participation in, the direction of the plan of the city, or its control after being planned?

There was a handful of people here at the time, a few families composing the proprietors of the soil, that were desirous of retaining their present buildings and grounds, and the little graveyard which they had set apart for the home of their dead, but these were not so sacred as to stand in the way of establishing just such a city and upon just such a plan as the President and his commissioners, acting under authority of Congress, should devise; and it was therefore provided, that "in case the arrangement of the streets, lots, and the like will conveniently admit of it," the grantors shall retain their buildings and graveyard by paying at the rate of "twelve pounds ten shillings per acre for the land so retained."

The private owners of lots did not complain then, nor do they now, that the Government possessed itself thus absolutely of every interest of the city; for if the original idea had been consistently carried out, Washington would be to-day the finest metropolis in the world. But what the citizens from the first have had reason to complain of, and what they now complain of, is, that while the Government has in many ways acknowledged its obligations to build here a great Federal city at Federal expense, it has practically thrown almost the whole burden upon private property, as I shall hereafter show.

PLAN OF THE CITY.

The first record evidence of arrangements made for laying out the city of Washington that I have found, is a letter of General Washington, dated March 11, 1791. In a subsequent letter, of April 30, the same year, he speaks of it as the "Federal city," but in a letter of the commissioners, dated September 9, 1791, they informed the architect, Major L'Enfant, that they had agreed to call the Federal district the "Territory of Columbia," and the Federal city the "city of Washington."

L'Enfant was a French officer who sought service here during the Revolution. Having attracted the attention of General Washington he served near his person; but it was probably through the influence of Mr. Jefferson that he was selected as the architect to plan the future Federal city. Mr. Jefferson, who took great interest in the plan, mentions in a letter to Washington that he had furnished L'Enfant with large and accurate maps of all the principal cities of the continent.

To this French officer are we indebted for the general idea ultimately adopted in the plan, although the one adopted finally and reported to Congress, engraved, and circulated through Europe, was prepared by Major Ellicott.

This plan, as agreed upon, was submitted to Congress in the following message, December 13, 1791:

I place before you a plan of the city that has been laid out within the district of ten miles square, which was fixed upon as the permanent seat of the Government.

G. WASHINGTON.

UNITED STATES, *December* 13, 1791.

If members will take the trouble to examine this plan, now on file in the office of Public Buildings and Grounds, all doubt will disappear as to the fact that the Government intended this city to be developed and improved at Government expense.

The evidences of the intention of the Government to make this a great city at Government expense are everywhere apparent. Standing at the site of the Capitol building as the center, we have this immense area divided by wide streets crossing each other at right angles, while radiating to every point of the compass, and in remote parts of the city crossing diagonally the rectangular streets, are broad, magnificent avenues, with many reserved sites for public buildings, and seventeen large reservations for parks, or for Government use, dotting the plan in all parts of the city.

Of these, varying in width from ninety to one hundred and sixty feet, there are one hundred and ninety-five miles of streets and sixty-five miles of avenues; the area thus appropriated to thoroughfares being more than all the area of the reservations and building lots together.

No one looking at the plan would conclude that convenience and economy for transacting business, which are the first considerations in laying out commercial cities, for a moment entered into the minds of the founders of this great city.

That gentlemen may see by comparison of street areas in other cities how far Washington excels them all in its "magnificent distances," I give in this connection the following table:

Ratio of areas of certain cities.

	Per cent
Paris	25.08
Vienna	35.08
Philadelphia	29.08
Berlin	26.04
Boston	26.02
New York	35.03
Washington	54.05

From this table it will be seen that Paris, thought by many to be the most beautiful city of Europe, notwithstanding its grand boulevards, and its Champs Elysées, has less than one-half the street area

of Washington City. The greater part of the business streets of Paris are, for the convenience of business, made narrow, while their avenues and boulevards are broad and beautiful; but here there is not a street less than double the width of Broadway, New York.

That Government ever could have designed to tax private property in this city for the entire improvement of these streets and avenues is to the last degree absurd.

Mr. Wirt, Attorney-General, in speaking of this plan of the city, said:

I consider sales made under the public exhibition of this plan as amounting to a contract between the public and the individual purchasers, from which it would be unwarrantable to depart.

If the honor of the nation was pledged in this plan, when Congress authorized it to be engraved and sent to the leading cities of Europe, how much more was the honor of the nation pledged that the proceeds of lots should be used to improve the city, as well as that the burden and responsibility of this improvement should fall upon Government.

Every purchaser of Government lots—and Government owned half of all—and every original owner had the right to assume that Government was pledged not only to the plan, but, back of this, to carry out its promises that this should be a Federal city, under Federal protection, and sustained and improved at Federal expense.

The grandeur of this plan, and the magnificent intention of its makers, may further be seen by noticing some of the features embraced in it.

I shall here give the explanations, observations, and references to be found upon the original plan prepared by Major L'Enfant, which is now hanging in the office of General Babcock; the only one in existence, much marred, and scarcely distinguishable in many of its features. I do this as furnishing one of the highest evidences of the purposes of the original founders, and as giving information which is probably unknown to a large number of members.

Observations explanatory of the plan.

First. The positions for the different grand edifices, and for the several grand squares, or areas of different shapes, as they are laid down, were first determined on the most advantageous ground, commanding the most extensive prospect, and the better susceptible of such improvements as the various intents of the several objects may require.

Secondly. Lines or avenues of direct communication have been devised to connect the separate and most distant objects with the principal, and to preserve through the whole a reciprocity of sight at the same time. Attention has been paid to the passing of those leading avenues over the most favorable ground for prospect and convenience.

Thirdly. North and south lines, intersected by others running due east and west, make the distribution of the city into streets, squares, &c., and those lines have been so combined as to meet at certain given points with those divergent avenues, so as to form on the spaces first determined the different squares or areas, which are all proportioned in magnitude to the number of avenues leading to them.

Breadth of streets.

Every grand transverse avenue, and every principal divergent one, such as the communication from the President's House to the Congress House, &c., are one hundred and sixty feet in breadth, and thus divided:

	Feet.
Ten feet of pavement on each side	20
Thirty feet of gravel walk, planted with trees on each side	60
Eighty feet in the middle for carriage-way	80
	160

The other streets are of the following dimensions, to wit:

	Feet.
Those leading to public buildings or markets	130
Others	110
Others	90

L'Enfant then informs us how these lines were drawn. I quote again:

In order to execute the above plan, Mr. Elliott drew a true meridional line by celestial observation, which passes through the area intended for the Congress House. This line is crossed by another line due east and west, which passes through the same area. These lines were accurately measured and made the basis on which the whole plan was executed. He ran all the lines by a transit instrument, and determined the acute angles by actual measurement, and left nothing to the uncertainty of the compass.

I quote again, as showing the grandeur of the idea:

References.

A. The equestrian figure of George Washington; a monument voted in 1783 by the late Continental Congress.

This is the site now occupied by the unfinished Washington Monument.

B. A historic column, also intended for a mile or itinerary column, from whose station (a mile from the Federal House) all distances of places through the continent are to be calculated.

This spot is now what is known as Lincoln Square, near the terminus of East Capitol street.

C. A naval itinerary column, proposed to be erected to celebrate the first rise of the Navy, and to stand a ready monument to consecrate its progress and achievements.

This spot is near the steamboat landing, at the foot of Seventh street.

D. This church is intended for national purposes, such as public prayer, thanksgivings, funeral orations, &c., and assigned to the special use of no particular sect, or denomination, but equally open to all. It will be likewise a proper shelter for such monuments as were voted by the late Continental Congress for those heroes who fell in the cause of liberty, and for such others as may hereafter be decreed by the voice of a grateful nation.

This was to have been our "Westminster Abbey," and its site is now occupied by the Patent Office, while the heroes and sages whose memory was to have been perpetuated in this monumental church lie in unknown graves, unwilling to be mentioned in connection with their country's history, so long as the monument of their leader remains an unfinished, forgotten, and broken column.

E. Five grand fountains intended with a constant spout of water.

N. B. There are within the limits of the city above twenty-five good springs of excellent water, abundantly supplied in the driest season of the year.

These fountains were to have been located: one on Pennsylvania avenue between Twentieth and Twenty-second streets west; another on New York avenue between Twelfth and Thirteenth streets; another on Pennsylvania avenue and Ninth street; one on New Jersey avenue and G street southwest; another on Maryland avenue and Eighth street northeast.

F. Grand cascade formed by the water from the source of the Tiber.

This was at the base of the Capitol.

G. Public walk, being a square of twelve hundred feet, through which carriages may ascend to the upper square of the Federal House.

This is what is now known as the Mall.

H. Grand avenue, four hundred feet in breadth and about a mile in length, bordered with gardens, ending in a slope from the houses on each side. This avenue leads to the Monument, A, and connects the Congress garden with

I. The President's Park, and the

K. Well-improved field, being a part of the walk from the President's House, of about eighteen hundred feet in breadth and of three-fourths of a mile in length. Every lot deep-colored red, with green plats, designates some of the situations which command the most agreeable prospects, and which are the best calculated for spacious houses and gardens, such as may accommodate foreign ministers, &c.

All this ground is familiar to gentlemen of the House. Most of it is occupied for business purposes instead of the spacious dwellings which L'Enfant invited.

L. Around the square, (Capitol Square,) and all along.

M. The avenue from the two bridges to the Federal House, the pavement on each side will pass under an arched way, under whose cover shops will be most conveniently and agreeably situated. This street is one hundred and sixty feet in breadth, and a mile long.

He refers here to Pennsylvania avenue east and East Capitol street, and here we have the only suggestion that the idea of business being transacted in Washington ever entered into the mind of the architect, and he places the shops, as they are found in some European towns, under arcades.

I must remind gentlemen that these are not wild, visionary notions of the French architect which were finally discarded and reduced to plain, practical business notions, such as would govern in laying off a commercial town; but they are ideas which were ultimately crystallized in the shape of legislation, and formed a part of the plighted faith of the nation with regard to its metropolis.

But in this very interesting piece of history, connected with this subject, I must abstract from this original, and to most persons inaccessible, plan some further observations which are recorded upon it, and which form a part of this important history. The architect further says:

The squares colored yellow, being fifteen in number, are proposed to be divided among the several States in the Union for each of them to improve, or subscribe a sum additional to the value of the land for that purpose, and the improvements around the squares to be completed in a limited time.

The center of each square will admit of statues, columns, obeliska, or any other ornaments such as the different States may choose to erect, to perpetuate not only the memory of such individuals whose counsels or military achievements were conspicuous in giving liberty and independence to this country, but also those whose usefulness hath rendered them worthy of general imitation to invite the youth of succeeding generations to tread in the paths of those sages or heroes whom their country has thought proper to celebrate.

The situation of these squares is such that they are the most advantageously and reciprocally seen from each other, and as equally distributed over the whole city district, and connected by spacious avenues around the grand Federal improvements, and as contiguous to them, and at the same time as equally distant from each other as circumstances would admit. The settlements around these squares must soon become connected.

The figures colored red are intended for the use of all religious denominations, on which they are to erect places of worship, and are proposed to be allowed them in the manner as those colored yellow to the different States in the Union, but no burying grounds will be admitted within the limits of the city, an appropriation being intended for that purpose without.

N. B.—There is a number of squares, or areas, unappropriated, and in situations proper for colleges, academies, and of which every society whose object is national may be accommodated.

What a humiliating spectacle, Mr. Chairman, it must have been to those heroes and sages who had passed away from this scene, leaving these grand intentions to be carried out by posterity, to look down upon this Government and behold it selling at public auction for gain the very squares and plats of ground that had been thus sacredly dedicated!

But I shall make but one further extract from this interesting and rare old plan, which is as follows:

This mode of taking possession of and improving the whole district at first must leave to posterity a grand idea of the patriotic interest which promoted it.

What higher evidence could be placed before the committee in support of the proposition which I am now endeavoring to establish?

Patriotic pride could not resist the temptation to remind us that the work which our fathers entered upon was to be handed down as an evidence of the great interest in the future of their country which filled their hearts. Here is the highest declaration of the purpose to take possession of and improve at once as a unit this grand Federal

capital, and to leave to posterity in this plan and in this work "a grand idea of the patriotic interest which promoted it."

But I must not longer dwell upon this old plan, the very atmosphere and surroundings of which are redolent with the touch of Washington, and every line and tracing upon which is sacred.

The emotions that must have filled the hearts of the fathers as they saw laid out here a city which in the vision of the future was to illustrate at once the power, grandeur, and glory of the nation, may well be recalled by us at this moment.

When, in November, 1800, Congress assembled here for the first time, President Adams said:

I congratulate the people of the United States on the assembling of Congress at the permanent seat of their government, and I congratulate you, gentlemen, upon the prospect of a residence not to be changed. * * * *

May this Territory be the residence of virtue and happiness; in this city may that piety, fraught with wisdom and magnanimity, that constancy and self-government which adorned the great character whose name it bears, be forever held in veneration. Here and throughout our country may simple manners, pure morals, and true religion flourish forever.

It is for you, gentlemen, to consider whether the local powers of the District of Columbia, vested by the Constitution in the Congress of the United States, shall be immediately exercised. If, in your opinion, this important trust ought now to be executed, *you cannot fail, while performing it, to take into view the probable situation of the Territory, for the happiness of which you are about to provide. You will consider it as the capital of a great nation*, advancing with inexhaustible rapidity in arts, commerce, in wealth, and in population, and possessing within itself those energies and resources which, if not thrown away or lamentably misdirected, will secure to it a long course of prosperity and self-government.

That Mr. Adams, and all who were working with him to place the Government on lasting foundations, regarded this capital city as the "only child of the Union," whose ultimate greatness and grandeur were to depend solely upon the Government, there can be no doubt.

Later, in laying the corner-stone of the Capitol extension, the spirit of the great and good men of the past seized upon Daniel Webster, who upon that interesting occasion said:

Fellow-citizens, what contemplations are awakened in our minds as we assemble here to re-enact a scene like that performed by Washington. Methinks I see his venerable form now before me, as presented in the glorious statue by Houdon, now in the capitol of Virginia. He is dignified and grave, but concern and anxiety seem to soften the lineaments of his countenance.

The Government over which he presides is yet in the crisis of experiment. Not free from troubles at home, he sees the world in commotion and in arms all around him. He sees that imposing foreign powers are half disposed to try the strength of the recently established American Government. We perceive that mighty thoughts, mingled with fears as well as hopes, are struggling with him. He heads a short procession over these then naked fields, he crosses yonder stream on a fallen tree, he ascends to the top of this eminence, whose original oaks of the forest stand as thick around him as if the spot had been dedicated to Druidical worship. And here he performs the appointed duty of the day.

But let me advance in the argument.

CONTEMPORANEOUS ACTS AND VIEWS.

I am endeavoring, Mr. Chairman, to show to the committee that but one purpose animated the founders of the capital, which was to make it a magnificent metropolis at the Federal expense. In the overwhelming array of facts and circumstances clearly establishing this proposition, I shall next present some contemporaneous acts and expressions of those most prominent in carrying out the wishes of Congress.

In March, 1791, Washington, in a letter to Mr. Jefferson, written from Mount Vernon, felicitated himself upon having reconciled the contending interests of land-owners, and of "uniting them in such an agreement *as permits* the *public purposes* to be carried into effect on an *extensive* and *proper scale*."

In his reply, Mr. Jefferson declares the acquisitions to be "really noble," and adds, "I think very liberal reserves should be made for the public."

Again, writing to the commissioners of the city of Washington, he says:

When you are in the situation to begin opening the avenues, it is presumed those which will be more immediately useful will be first cleared.

While executing the wishes of Congress with regard to the capital, the President found it necessary to make a loan from the State of Maryland. His correspondence shows how deeply interested he was, and what anxious solicitude he felt for the growth and prosperity of the city; and his entire intercourse with the commissioners exhibits a fraternal feeling toward this child of the Union utterly inconsistent with any idea that it was to be built by private citizens. Washington did not, however, live to witness the fulfillment of his wishes. He died on the 14th of December, 1799, nearly a year before the Government occupied the capital he had contributed so much to found.

I have already called attention to President Adams's opening speech to Congress on its assembling in Washington, in which he spoke of this city as the capital of a great nation, for the happiness of which Congress was to provide.

The Senate replied:

We meet you, sir, and the other branch of the national Legislature, in the city which is honored by the name of our late hero and sage, the illustrious Washington with sensations and emotions which exceed our power of description. * * * * Great indeed would have been our gratification if his sum of earthly happiness had been completed by seeing the Government thus peaceably convened at this place. * * * * The question whether the legal powers over the District of Columbia, vested by the Constitution in the Congress of the United States, shall be immediately exercised, is of great importance, and in deliberating upon it we shall naturally be led to weigh the attending circumstances and every probable consequence of the measures which may be proposed.

The House replied:

A consideration of those powers which have been vested in Congress over the District of Columbia will not escape our attention, nor shall we forget that in exercising these powers a regard must be had to those events which will necessarily attend the capital of America.

But without extending these contemporaneous expressions, allow me to read an extract from an article in the Philadelphia Herald of the 4th of January, 1795. This article is a general review of the plan of the city, and commences as follows:

To found a city in the center of the United States, for the purpose of making it a depository of the acts of the Union and the sanctuary of the laws which must one day rule all North America, is a grand and comprehensive idea, which has already become with propriety the object of public respect. In reflecting on the importance of the Union, and on the advantages which it secures to all the inhabitants of the United States collectively or to individuals, where is there an American who does not see, in the establishment of a Federal town, a natural means for confirming forever that valuable connection to which the nation is indebted for liberation from the British yoke? The Federal city, situated in the center of the United States, is a temple erected to liberty, and toward this edifice will the wishes and expectations of all true friends, of every country, be necessarily directed. *The city of Washington, considered under such important points of view, could not be calculated on a small scale. Its extent, the disposition of its avenues and public squares, should all correspond with the magnitude of the object for which it was intended; and we need only cast our eyes upon the situation and plan of the city to recognize in them the comprehensive genius of the President, to whom the direction of the business has been committed by Congress.*

Here, I think, Mr. Chairman, is the absolute proof of my proposition, that contemporaneously with the location of the seat of government it was the well-understood purpose of its founders to establish a city which was to be national, and in whose growth and prosperity the whole country was to take an interest.

This city was to be a grand civic monument—the one spot in which were to be gathered the treasures of succeeding ages, and whatever might tend to strengthen the Union, and combine in one patriotic bond the whole people of the nation.

LEGISLATION OF CONGRESS.

Prior to June 1, 1802, the government of the city was in a board of commissioners, created by the act of the 16th of July, 1790, but on May 1, 1802, an act passed abolishing the office of commissioners and providing that the affairs of the city should be thereafter under the direction of a superintendent, to be appointed by the President.

The improvements of the city were made directly by the United States, and to aid in this a city fund was started from the proceeds of the sale of lots by the United States, which it was thought at the time would, by judicious management, go far toward the development of the magnificent intentions of the founders. And the act to which I have just alluded directed a sale of lots to re-enforce this city fund.

President Jefferson, January 11, 1802, in a message to Congress, says:

If indulgence for the funds can be admitted, these lots will probably form a reserve of great and permanent value.

He further says:

That if the sale is forced for the payment of Government loans he fears the whole property will be sacrificed, and the residuary interest of the city entirely lost.

I understand this residuary interest to be none other than a right to the proceeds of the sale of lots for the purpose of improving the city.

The act of March 3, 1803, fixes the salary of the superintendent and of the surveyor of the city, and makes appropriation for the expenses of their offices, to be paid out of the city funds; but these funds, as we have seen, arose from the proceeds of lots belonging to the United States. This same act appropriates from the Treasury of the United States $50,000, among other things, "for keeping in repair the highway between the Capitol and other public buildings."

Up to this time the government of the city, in all its details, was directly by legislation of Congress. It was found, however, that the growing wants of this young city would require certain local municipal legislation, which it would be inconvenient always to be obliged to apply to Congress for, and the inhabitants were given a charter of incorporation. The mayor was appointed by the President, and the council elected by the free white male tax-payers. The usual powers were conferred, except, however, that no authority was extended over the streets and avenues, other than that the corporation was permitted "to keep them in repair, agreeably to the plan of the said city." This charter expired two years after its creation, and was renewed from time to time until March 5, 1820, when a charter of more extended powers was granted. Meanwhile the interests of the United States passed into the control of an officer known as the Commissioner of Public Buildings and Grounds—now the engineer in charge of public buildings and grounds.

Gradually, as the city increased in population and the Government became absorbed in the consideration of great national questions, and largely owing also to attempts to revive the question of removal of the capital, Congress seemed to have drifted away from its early policy, and left the question of local improvements entirely to the citizens. I do not find that between 1807 and 1823 the Government had expended a single dollar upon the improvements of the streets. The fund arising from the sale of lots, instead of being used for the improvement of the city, was almost entirely devoted to the erection of public buildings.

The revenues of Government in that day were small, and Congress probably found itself compelled to divert the improvement fund, throwing the burden upon private property, or leaving the realization of the early intentions as to the capital to be worked out by posterity.

That by these acts of incorporation permission was given the citizens to carry out the great work which the Government was itself obliged by every consideration of honor to do, is no answer to the argument. If the Government, when poor, could not do this work or encourage the citizens to do it, now, that the Government has grown powerful and rich and amply able to remove the burden to its own shoulders, I insist that the obligation is even stronger to do so. But I was noticing the legislation as tending to establish my proposition; and although the Government has stood by and seen the private property of this District taxed almost to confiscation in the effort to make the city what its founders designed it should be, and has scarcely lent a helping hand, still its legislation nowhere denies its obligations, but on the contrary, whenever any has been passed, it has been in recognition of the theory I am endeavoring to establish.

In the charter of 1820 the Commissioner of Public Buildings is directed—

> To reimburse to the said corporation a just proportion of any expense which may hereafter be incurred in laying open, paving, or otherwise improving any of the streets or avenues in front of, &c., any of the public squares or reservations, * * * out of any moneys arising from the sale of lots in the city of Washington belonging to the United States.

A similar provision was in the act of May, 1826, and the act of 1848, and there was in this last act a still stronger recognition of the duty of the Government. The twelfth section provides that the Commissioner of Public Buildings shall—

> From time to time cause to be opened and improved such avenues and streets, or parts or portions thereof, as the President of the United States shall deem necessary for the public convenience, and he shall defray the expenses thereof out of any money arising, or which shall have arisen, from the sale of lots in the city of Washington belonging, or which may have belonged, to the United States.

The act also directs the Commissioner to keep in repair certain pavements, gutters, footways, &c., around the public squares, reservations, and other property of the Government. Here we have a full recognition of the obligations of Government, but unfortunately the fund mentioned had disappeared, mainly on the public buildings, and by the improvident disposition of the lots had diminished by millions of dollars, so that practically this liberal provision of Congress did little toward its object.

In this review let me return a moment to the action of the Twenty-third Congress.

The city had made such efforts to improve its condition and do the work which the Government had assumed in the beginning that it had incurred an indebtedness of nearly $2,000,000. Its resources had become so exhausted and its burden so great that it was compelled to appeal to Congress for aid. Its Holland creditors were threatening to foreclose on the property, and, as was said in the debates in the Senate on the subject by one of the Senators, "the capital of the nation was about to be sold out to the Dutch." Up to this time the total expenditures of the Government for the improvement of the streets was $208,925.67½, all of which, with the exception of about $10,000, was for the improvement of Pennsylvania avenue and the streets immediately around and adjoining the Capitol and President's Square. Throughout the whole city the Government had expended, with this exception, for its improvement, up to December, 1834, only about $10,000, while it had received from the sale of lots about $750,000. The neglect of Government to carry out its plighted faith, and the extraordinary efforts of the city to discharge the obligations of Government, attracted the attention of Congress at that time, and the subject was thoroughly examined and reported upon to the Senate February 2, 1835.

The report of the committee, Mr. Southard, chairman, goes quite fully into the relations existing between the capital and the Government.

As Congress sanctioned the report of the committee in the highest possible form, by coming to the relief of the city, the positions assumed by Mr. Southard may be regarded as giving the legislative expression of the Congress of that day, and we may well consider what some of these views were. Mr. Southard says that in improving the streets the city authorities "have been misled into expenditures which did not properly belong to them, although," he adds, "the views by which they were governed were of a liberal and public-spirited character." He refers to the unusual magnitude and extent of the city; the great width of the avenues and streets; the creation of the city in that short space of time, and the pressure for public improvements being sudden; that the population is but twenty thousand, more than half of which are people of color and temporary residents, contributing nothing to the city revenue; that, in addition to the large expenditures made from the city treasury for improvement of streets, the citizens have been compelled to create their market-houses, infirmaries, water privileges, lamps, fire-engines and houses, and pay their police, and the like expenses, and adds:

> The committee are of the opinion that the Government was bound by every principle of equal right and justice to pay a proportion of the expenses incurred upon this subject equal to the amount of property which it held, and which was to be increased in value and benefited by it, and this would have been greatly more than one-half. If the streets are its property and to be regarded as altogether under its control, it is not easy to perceive why it should call upon or permit others to keep that property in order; and if the streets are to be regarded as for the joint convenience of the Government and the inhabitants, the expenses of maintaining them should be joint, and in proportion to their respective interests; and that the early action of the Government was in conformity to this principle.

The committee notice also that the immense property of Government, which has been equally benefited by improvement, has been at all times free from taxation, while the property of individuals adjoining it has been subject thereto; that in several States of the Union, where the Government holds landed estate, it has paid taxes upon it, and those taxes have been expended for the ordinary municipal purposes of the place where the same is situated. The hardship to private property-holders in exemption of Government property from taxation is strikingly illustrated when we remember that the Government has been the owner of lots held for sale ever since the capital was located here, and yet these lots not reserved for public use, but held by the Government for speculation, have paid no taxes. The committee conclude their report as follows:

> In the investigation of the subject committed to them, and of the relief to be proposed, the committee have been unable to separate the interests of the District from the interests of the United States. They regard it as the child of the Union, as the creation of the Union for its own purposes. That the design of the Constitution and its founders was to create a residence for the Government, where they should have absolute and unlimited control, which should be regulated and governed by them without the interference of partial interests in the States; which should be built up and sustained by their authority and resources, not dependent upon the will or resources of any State or local interest.
>
> If this had not been the design, a temporary or permanent seat of government would have been selected in some populous city, or some territory, subject to State jurisdiction; and, if this was the design, it is not easy to comprehend either the principle which would prevent the Government from a liberal appropriation of the national resources to accomplish the object, or the policy which could confine the city to the means possessed by the inhabitants for its improvement.

This report is important in many particulars, but more than all in this one, to wit, that it forms the connecting link between the present period and the revolutionary period, and embodies at once the record evidence as well as the tradition and common understanding and belief of the founders of the Republic and those who immediately succeeded them. I believe that upon this evidence any court would convict the United States of a palpable and gross violation of its original purpose in founding this capital city; and the subsequent congressional history as touching this subject confirms the fact, that while in theory this principle has always been acknowledged, in practice it has been almost entirely ignored. But an examination of this legislative history will show that at different periods absorbing subjects have drawn the public mind away from the capital as a national object, but it has been one of the results of the recent war that public attention has returned again to this city. An examination of the statutes will show that more than four times as much money has been appropriated by the Forty-first and Forty-second Congresses for improvements in the city as during the previous seventy years. But I cannot longer dwell upon this branch of my subject.

I think if any question is susceptible of demonstration not mathematical, yet absolutely certain, the one which I started out to prove may now be placed in that category. I have shown the history of the location of the capital, the purpose of its founders, and the obligations of the United States in relation to it. I have now to notice what has actually been done by Government, what has been done by the municipal authorities, and what it is the duty of the national Government still to do.

SOME ERRORS CORRECTED.

A common error prevails over the whole country that the United States at this time pays all the expense of the government of the District of Columbia and the improvements at the capital. Within a week I have been asked by persons high in official position if the United States did not pay for our recent improvements.

Now, Mr. Chairman, I propose to lay bare the short-comings of Government, and place its neglect side by side with the efforts made by private citizens. We are set down as a miserable community of paupers and beggars, hanging on the skirts of Congress for sustenance; whereas the truth is the United States for the past seventy years have kept this people down in a condition of vassalage, squeezing the last possible penny out of them to carry on the very work which the founders of the capital had pledged their faith should be done by the United States.

The United States have stood by and have seen their capital become a by-word and scoffing throughout the civilized world. They have seen the shafts of scorn and contempt and satire pointed toward it without making a single creditable effort to avert them.

Not only this, but they have themselves largely contributed to the condition of things which, until within a few years, made us a just object of contempt.

We shall find in this examination of what has been done and left undone a striking evidence of the utter want of unity of purpose and design on the part of the Government in its exercise of control over this District.

For thirty years it did little more than hew out some paths to the public buildings, and stake off the streets and avenues for the people of the District to improve; the exact amount expended by Government in this period being $20,000—less than $700 a year.

Who can defend this miserable parsimony, and who can justify the conduct of Government in this trifling with a great public duty imposed upon it by the founders of the capital, especially when it is remembered that during the same period it had realized $700,000 from the improvident sale of lots—funds which had been pledged for the benefit of improvements?

Look at your superb Capitol building. There has never been a moment since it was erected when its surroundings would compare favor-

ably with a New England barn-yard. Twelve million dollars in this marble pile, of grand promise without and disappointment within, but surrounded worse than a western court-house. It only lacks a horse-block and hitching-rack to make it perfectly primitive and rural.

Look at the original plan of the city, which drew forth eulogiums from all quarters of the globe, and which occupied many of the best hours of many early patriots, and see how it has been hacked and defaced.

With no common feeling of pride in the capital pervading the country, and thus through the people reaching Congress, and with no one to protest against encroachments upon the idea which found expression in the original plan, the surprise is rather that we have a city left at all of sufficient proportions and form to elicit the admiration of any one.

It has been charged also that we are here not only supported by Government, but that we are an unproductive, thriftless community, drawing from and giving back nothing to Government. When we ask aid, the question is treated from a local stand-point and not a national one, and appropriations are always heralded as so much money given to the people of the District; whereas every dollar expended here by Government is more closely brought home to every citizen of the country than an appropriation in any form that can be named. This is the only spot common to the whole people on the face of our vast empire, where the humblest citizen can come and claim he is in the midst of his own, and where he feels he has a personal pecuniary interest in everything he beholds.

But, sir, I will not allow the impression to go uncontradicted that we feed upon and do not nourish Government. The truth will show that these District barnacles and leeches are the most remarkable of their genus.

The report of the Commissioner of the Internal-Revenue Bureau for 1873 shows (page 153) that the District of Columbia, since 1863, has paid, exclusive of tax on income, into the United States Treasury, $4,695,119.94—more than all the other Territories combined; more than Arkansas, Florida, Kansas, Minnesota, Nebraska, Nevada, or Oregon; *and more than the expenditures of the United States for improvement of the capital since its foundation.* In ten years this tax-burdened District has more than reimbursed the Government for every dollar laid out here for the common benefit of its own and private property.

Need I stop to apply these facts to remove the false impression I am combating?

It would seem to the natural vision that these leeches and barnacles would be profitable to Government if the species could be propagated and sent into some of the States.

Mr. Chairman, this city belongs to the United States. It cannot be wiped out without giving a vital blow to the Government. It cannot be trampled under foot without visiting a wrong upon every man, woman, and child in the nation. It cannot be longer ignored without humiliation and shame. A combination of events has brought the duty of Congress prominently before the country, and members must reach some conclusion, and it must be one they can defend before the world.

I have read the press closely since we have been placed in the crucible, and I say that even the papers most unfair and prejudiced against the *personnel* of our local government and its management, take a high patriotic stand when speaking of the duty of Congress. I have yet to find a paper which advocates the narrow view that the United States shall do nothing toward improving and beautifying the nation's capital, especially as the Government owns half the real estate and possesses absolute proprietary control over every street, avenue, alley, square, park, and reservation in it. Even Mr. Dana's Sun, whose columns pour red-hot lava upon the heads of our officers daily, has never suggested that Congress should stand by and see our people taxed out of their homes to improve Government property, but, on the contrary, has urged just what I urge, that it is the duty of Congress to contribute its just proportion of the municipal expenses.

I appeal to every member of this House whose constituents have visited this city within the last year whether they have not gone home believing it to be the duty of Government to aid in making Washington the pride of the nation; and I appeal to him also to tell me whether he has not blushed with shame when obliged to tell them howl ittle the United States have done to place the capital where it now is.

Why, sir, France expended $15,000,000 to open the Boulevard Sebastopol, in Paris, and yet we must plead as for a charity when we ask this rich people to make a just, fixed, and certain appropriation annually to carry on improvements in which the whole country are interested.

I confess, Mr. Chairman, I weary of this contest year after year to obtain simple justice for the District of Columbia. I weary of the indifference of Congress to the plighted faith of the nation. I weary of the abject dependence of this community and the position of obsequiousness which their agent must submit to lest he offend some congressional propriety or step on some congressional toe. I weary of combating the assumption that the District of Columbia has no rights which Congressmen are bound to respect; and I would turn hopelessly away from these Halls if I did not see around me republicans and democrats who will never willingly see Congress fasten upon this people a perpetual bondage as the result of their unexampled efforts to redeem the nation's capital from disgrace.

No, Mr. Chairman, it is a broader question we are discussing than mere aid to a community; it is whether the plans and purposes of the early fathers shall be carried out and the country's faith be kept; it is whether you shall have here the finest public buildings in the world, and shall hold half of the soil in reservations, and all the streets and avenues in fee, and yet do nothing to light your city, to pave its streets, to protect your houses and Departments from fire and from robbers, to secure proper sanitary protection—in short, whether you will adopt a wise, patriotic, consistent, and well-defined policy toward the capital, and will act with some reference to the common pride in it which all intelligent Americans feel.

STATEMENT OF THE ACCOUNT.

Now, Mr. Chairman, let me endeavor to present to the House the exact expenditures of the general and local government in the District of Columbia for improvements, such as we think should be shared by both governments in some just proportion.

I have obtained from the Treasury Department a statement of the expenditures of the General Government since 1800, and it is of such value in this discussion that I shall spread it at length before the House and the country. It gives the amount, as shown by vouchers in the Treasury Department, expended by Government upon streets and avenues in the way of improvements. I shall omit the description of the purpose for which the appropriation is made, remarking generally that the items cover pavements, sewers, sidewalks, bridges in the city on canal, and Tiber Creek, grading, &c.

Statement of expenditures on account of improvements of avenues and streets in the city of Washington, from 1800 *to* 1871, *inclusive.*

1800	$10,000 00
1823	5,000 00
1824	5,000 00
1832	60,000 00
1833	76,680 00
1834	9,233 70
1838	2,280 00
1842	12,000 00
1843	3,933 26
1846	10,000 00

In 1832-'33 Congress had an improvement spasm, and expended in laying a cobble-stone pavement on Pennsylvania avenue $136,680; and, having thus secured a communication between the President's House and the Capitol, relapsed into its usual indifference, and for the next thirty years did comparatively nothing.

In 1869 the wooden-pavement period began here, by a compulsory law of Congress, requiring owners of property abutting on Pennsylvania avenue to pave it with that costly material. To this forerunner of the new era for Washington Congress contributed $321,575. The appropriation for 1870, immediately following this, was $2,051.76, and strikingly illustrates the utter lack of a policy toward the District, or any comprehension of its needs.

Then came the new District government and the Forty-second Congress, and with them a regeneration of the capital.

Since George Washington consecrated the seat of government, and John Adams baptized it in the name of the patriot fathers, no Congress has shown anything like the intelligent, practical, and patriotic devotion to the nation's capital exhibited by the Forty-second Congress. It placed to the credit of the improvement fund $3,597,801.18—more than three times the amount voted by the forty-one preceding Congresses, while the citizens submitted their property and purses cheerfully to the awful demand of the board of public works, and gave in two years $11,175,978.76, which, added to previous expenditures of the District—$9,199,431.94—makes the appalling sum of $20,375,410.70!

Now, compare the two governments, local and national. The former has expended an average since 1800 of more than six times the amount expended by the latter.

There never has been a time when the interest of Government here was not equal to that of the private property-holders, even if we look

at the question in its narrowest form. The account, therefore, at this point would stand thus:

Expended by District of Columbia	$20,375,410 70
Expended by Government	4,600,586 70
	15,774,824 00
To reimburse District of Columbia excess of expenditures one-half of difference	7,887,412 00

To make the account square, Congress should appropriate this sum.

This is the exact statement of the account between the national and local governments at this time in the matter of improvements of streets and avenues, including the system of sewers.

The expenditures of the national Government I have upon the authority of the Secretary of the Treasury; and the expenditures of the local government upon the authority of the governor of the District, in his return to the present committee of investigation, printed page 461.

To further illustrate the share which Government has borne of the ordinary necessary expenses of the city, let me notice some of the branches of the local service separately. I have heretofore claimed that the United States should bear at least half of the municipal expenses of the District of Columbia. I do this upon the evidence which is to be found throughout the whole period of our history, that the interest of the General Government has always been regarded as at least half of that of the local government. It was so treated by Congress in 1835. (See report of Senator Southard, February 2, 1835.) It was so treated in 1858. (See report of Senator Brown, May 15, 1858.) And the recent careful valuation confirms this apportionment. (See Governor Shepherd's answer, pages 461, 462.)

When the founders laid off this capital city, they must have contemplated that at some time, beside paved streets and sewers, it would need a police force; a supply of water; means for lighting the streets; a board of health officers for sanitary protection; a fire department; a system of common schools; and, in short, the usual requisites for securing health and protection common to great cities. They saw that while these were wants of any city, they would, from the nature of the plan of this one, be greatly augmented, and much more than ordinarily expensive. The broad streets and avenues, and the frequently recurring public squares and parks, necessarily contemplated a city here whose inhabitants would be widely scattered over the area.

To protect such a community by proper police, by fire department, sewers, gas, and the other comforts of city life, it would necessarily be more expensive to the inhabitants than in those densely crowded cities where the same facilities would reach a much larger number at the same cost. And we have here another reason for concluding that the original purpose was to hold the Government responsible, in part at least, for securing these necessary privileges.

I propose briefly, in this connection, to present to the committee, as near as I am able, from data which I have procured from officers of the Government and from Federal records, precisely what the local and what the national Government has done in this regard.

POLICE.

On the 23d of August, 1842, an act of Congress was approved organizing the police force known as the "Auxiliary Guard."

Previous to this that service had been performed by constables, whose compensation was derived from fees. The Auxiliary Guard was paid exclusively by the General Government, and was increased from time to time by acts of Congress, until August, 1861, when the present Metropolitan police was substituted; and for the better protection of the interests of Government the United States assumed entire police control within the District.

For three years, to June 30, 1864, this force was paid exclusively by the United States, when by an act of Congress the number of employés of the board of police was increased 50 per cent., but the act required the local authorities of the District to pay for this increase.

On the 11th of March, 1851, the corporation of Washington organized a salaried police force, consisting of fifteen men, and in 1858 increased the number to twenty-five. This was the first and only police force organized by the local authorities, and continued until the organization of the Metropolitan police. The chief of this department, Major Richards, informs me that by an approximate estimate, which he has been able to make from official records, he finds that the United States have paid for police service in the District, since August 23, 1842, to the expiration of the present fiscal year, about $2,400,000. The cost of the police force to the local authorities since March 11, 1851, has been about $1,148,643.33. Here we have the highest recognition of the duty of Government to aid in the payment of municipal expenses. Here the obligation is fully acknowledged and fully discharged; but while the wisdom and justice of it must be admitted, it will seem strange to members that this is the only department of the local government adequately sustained, and, with one or two exceptions, the only department in the least assisted.

WATER DEPARTMENT.

March 3, 1859, Congress enacted a law for the preservation of the works constructed by the United States for bringing the Potomac water into the cities of Washington and Georgetown, for supplying the water for all Government purposes, and for the use and benefit of the inhabitants of said cities.

The act extended to Washington and Georgetown the right to supply their inhabitants with Potomac water from the aqueduct mains, and to make laws and regulations for its distribution, subject to the restrictions of the act of Congress, and it was specially provided that *no expense should devolve upon the United States in consequence of this distribution;* and the act further provides that *whenever the supply of water is found no more than adequate to meet the wants of the General Government, the engineer in charge of the water-works shall stop the supply to the said cities.* The same act authorized the corporations to fix the water rates, and provided that they should *never be a source of revenue,* other than sufficient to provide a supply of water.

A later act of Congress authorized the corporations to levy a tax to pay for mains which they might lay for the supply of the inhabitants.

But I am informed by the water registrar of the District, Colonel Lubey, that the revenues derived from water rents have barely met the outlay.

Here we find that the supply of water brought to the city at the expense in the first instance of the General Government, was done for their sole use; and although afterward it was ascertained that the supply was ample for the use of the Government and the inhabitants, and the corporations were allowed to avail themselves of it, Congress nevertheless reserved the exclusive control over the right to the water as against the inhabitants.

The United States have expended upon the water-works about $3,500,000, while the inhabitants of the District, in laying mains, the erection of fire-plugs, hydrants, &c., have expended about $1,500,000. The daily consumption of water in both cities is eighteen million gallons, of which it is estimated that the Departments of Government use and waste fully one-half. No more important or useful improvement has been undertaken by Government. The result has been to bring an inexhaustible supply of water to the capital at a cost of three and a half millions. This is certainly gratifying when it is remembered that the city of Baltimore expended for a like purpose over four millions; Boston twelve millions; Brooklyn twelve millions; Philadelphia six millions; and New York City over twenty millions.

GAS.

The Washington Gas-light Company was chartered in 1848, and since the use of gas here the United States has paid for lighting streets and avenues $272,340.40. The corporation of Washington and the board of public works have paid $415,087.29 The gas was introduced into Georgetown in February, 1854. The corporation paid for gas supplied to 175 lamps, from 1857 to 1866, $38,965.30. During that period the United States caused to be erected 115 lamps on Bridge and High streets, and paid for gas to supply the same, $34,650.45, but refused after 1866 to light them longer. The corporation thereafter paid the expense to 1871, amounting to $28,991.50, after which the territorial government increased the number of lamps, and paid up to July 1, 1873, $21,698.40. Total paid in Georgetown by local authorities, $85,340.35. Total paid by the United States in Georgetown, $38,465.30. Formerly, and until a recent period, the United States paid for lighting their squares and the lamps around them, Pennsylvania avenue, and other streets, but these are all now lighted by the District government. With the exception of 103 lamps at the President's House and around the Capitol building, every lamp in the District is paid for by the District government. In 1868 the General Government refused to light Four-and-a-half, Sixth, and Twelfth streets, across the Mall, and in 1870 refused to light the avenues, and in 1872 refused to light the streets bordering upon the public squares, and in 1873 ceased to light inside of the squares. At one time the Government paid for 715 lamps, and now but for 103, while the District is paying for 3,130, at an annual cost of about $150,000.

I need not speak of the uses of gas, or of its indispensability, both to the Government and to the city. All must concede this, when it is remembered that not only the comfort of those here in the service of the Government demands the use of it, but the safety of the Government buildings and Government interests generally make its use indispensable; and yet substantially the whole burden is now thrown upon the citizens.

HEALTH DEPARTMENT.

No one can deny that a sanitary and health department is of equal importance to the general as well as the local government.

The United States are morally responsible for securing to their servants at the capital, not only every proper and needed comfort, but protection against disease so far as it is possible. The United States are also responsible for securing the protection and health and comfort of foreign ministers resident at the capital; and these two interests, mentioning no other, are always large and increasing; but until the last Congress made an appropriation, I have been unable to discover any expenditure on the part of the General Government to support our health department.

I have not been able to ascertain what the local government expended prior to our organic act. Our present very efficient board of health is a department of the General Government.

Congress has appropriated for its uses	$69,000
The District government has appropriated	83,000

FIRE DEPARTMENT.

Many years ago Congress made a small appropriation for erecting

an engine-house in the western part of the city, and later a similar appropriation for the engine-house of the Columbia fire company near the Capitol.

During the rebellion the United States maintained at the capital what was known as the Government fire brigade, composed of three steam fire-engine companies; but it was independent and separate from the city fire department, and was kept with reference more particularly to the protection of Government property. They remained here five years; but the brigade was disbanded in 1869, and the engines sent away from the city.

The present city fire department was organized in 1865, and has cost the city of Washington, since its organization to the present time, $605,000. At least two more engines are very much needed. With more valuable interests to protect than any city in the country, and with a larger area in proportion to the population, we have a smaller fire department than any city in the Union of our population. In this department the United States has taken no interest whatever, and contributes to it absolutely nothing; and yet the scattered records of the Government in all parts of the city, exposed daily to fire, are of incalculable value.

PUBLIC SCHOOLS.

From an early day efforts have been made to attract the attention of Congress to the importance of sustaining here at the capital a common-school system. When the Government entered upon its land-grant policy in aid of education, efforts were made to obtain a grant for this District; and I believe the Senate passed a bill for that purpose, but it failed in the House.

The atmosphere of Washington in those days was not favorable to common schools; and besides the District then, as now, was looked upon as of little consequence, and by its very abject attitude toward the Government inspired contempt rather than interest or pride.

Public schools dragged along without any assistance from Government, and in 1861 cost the city $26,000.

With the war came a vigorous growth in population, mainly from the North. Finding no free schools here worthy the name, they united their efforts with the local authorities and enlarged the school facilities, and increased the school fund, so that I find that during the three years commencing 1870 the total expenditures for this purpose reached the sum of $1,095,000. With absolutely no school property worth mentioning in 1861, we now own real estate amounting to over $1,000,000.

In 1861 the number of pupils attending public schools could not have exceeded 4,500, and included no persons of color. Since 1863 the city of Washington has extended facilities to this class of children, so that there are four thousand colored pupils on the rolls now. Besides paying the current expenses of their schools, permanent building sites have been purchased, and school-buildings have been erected for them to the value of $250,000.

While I cannot go into this subject fully, but must refer to the argument addressed to the Forty-second Congress, to be found in the Globe of January 27, 1872, I will be pardoned for pointing out a few of the reasons why the General Government should aid our public schools. I think no one will question that we have done all in our power to make the school facilities adequate to the needs of the community; and yet the startling fact remains that there are in the city of Washington of school age 25,935 persons, while there are seats provided for only 11,910, leaving 14,025 persons without the benefit of public schools. Of this number 6,759 are reported by the Commissioner of Education as pupils in private schools, leaving 7,266 absolutely destitute of all school privileges.

Why should the Government assist in educating these children? I answer—

First. That the superintendent of schools reports that upon an examination he finds only 26.82 per cent. of parents or guardians of pupils are tax-payers; or, in other words, 73.18 of the parents whose children attend school pay no taxes. I am aware that generally a considerable percentage of parents whose children attend public schools do not pay taxes, but the percentage here is so unusually large as to challenge attention, and I think that when the reason for it is known a strong argument will be discovered in favor of Government aid.

Secondly. In the report of the superintendent for 1872–73 a table is given, from which I find that of the children attending public schools in the city 3,037 were the children of parents in Government employment, or 30.79 per cent. Some of these persons pay taxes, but a comparatively small number. Usually they have no income but their salary, and the uncertain tenure of office deters them from investing in real estate.

Thirdly. From the same report I find that 32.46 per cent. of the school population are colored, and an examination of the United States census will show that this large proportion is due to the results of political causes, rather than to any economic or social law. Most of them were invited here by the laws of Congress which first gave them freedom, and next the ballot, and where they have felt peculiarly under the protection of the Government, and they now number about one-third of the whole population. From no fault of their own, but rather by reason of their peculiar condition—due to the laws of the country—they are unable to assist very materially in supporting the common-school system.

These two classes which I have named have a right to demand of the General Government some provision for school advantages.

Education here should be free as air, and the District government will never discriminate against any one class, but it will continue to demand of Congress some assistance in this direction. The embarrassment to the District government which we find running through its whole system is here felt even more than elsewhere, to wit, that so large a portion of the property of the District is exempt from taxation.

The United States have no right to expect, and ought not to expect, to retain the services of honest, faithful public servants at low salaries, and force them to live at a place where they will have none of the comforts or necessities of life, or the privileges which will enable them to rear their families properly. Nor have the United States any right, moral or other, to hold out special inducements to any class of our fellow-citizens, inviting them to take up their residence under the shadow and protection of Government at its capital, and cast the whole burden of taxation to furnish these persons with educational advantages and privileges upon the private citizens.

But aside from these special considerations, the policy of the Government, long established, should control its action in this matter. It has already given in aid of public schools nearly one hundred million acres of public lands. Over thirty-four and one-half million acres have gone to the other Territories. We have a greater school population than some of these Territories ever can have. Besides this magnificent land grant, other special and valuable assistance has been extended to the States and Territories in aid of education.

At one time $37,000,000, the proceeds of public lands, were distributed to the States, and much of it for the benefit of public education. It cannot be that the District of Columbia was excluded because it has contributed nothing to the support of Government; for an examination will show that this District has paid into the Internal-Revenue Bureau since its organization, as I have shown, more than all the other Territories combined, and more than several of the States that might be named. I am utterly at a loss to discover any reason for refusing aid, while there are many that must appear convincing why the Government should aid this important work.

I have been unable to ascertain the cost of public schools prior to 1860, but since that time to the present the total expense has been $2,168,000 The Government has not paid one penny, and its donation of a lot, formerly General Jackson's stable-lot, made some years ago, did not exceed in value $1,000.

ACCOUNT—SECOND STATEMENT.

I have thus, Mr. Chairman, gone over about all the expenses which enter into the local government, and I will again state the account with the United States, as affected by the items just mentioned:

Expended by old corporations and the new government for improvements since 1800	$20,375,410 70
Expended by same for police department	1,148,643 33
Expended by same for water department	1,500,000 00
Expended by same for gas department	415,087 29
Expended by same for health department	83,000 00
Expended by same for fire department	605,000 00
Expended by same for public schools, (since 1860)	2,168,000 00
Total expended by local government	26,295,141 32
Expended by General Government for improvements since 1800	$4,600,586 70
Expended by same for police department	2,400,000 00
Expended by same for water department	3,500,000 00
Expended by same for gas department	272,340 00
Expended by same for health department	69,000 00
Expended by same for fire department	.....
Expended by same for public schools	.....
Total expended by General Government	10,841,926 70

ACCOUNT—THIRD STATEMENT.

I know, Mr. Chairman, it is claimed that our citizens enjoy the public parks and reservations in common with Government, and that we should make some allowance for the amount expended heretofore exclusively by Government upon these public grounds. I suppose, however, that no one would insist that the citizens should share the expense of the grounds immediately connected with the Departments, the Capitol, and President's House. But, to leave no room for cavil, I have procured from General Babcock a statement of appropriations made by acts of Congress for the improvements in the parks, reservations, and grounds around the public buildings since December, 1834. Prior to that time I have ascertained the expenditures for this purpose from the report of the Commissioner of Public Buildings and Grounds, appended to Senator Southard's report of February 2, 1835.

General Babcock's report to me is a tabular statement of the date of the acts of Congress, the amount of the appropriations, and for what purpose made. It is of too great length to embody in my remarks, but I will give the results. It covers expenditures on the Capitol grounds, at the President's House and grounds, the grounds of all the different Departments, and, in short, everything but the public buildings themselves. It includes the Mall and reservations generally, and the small triangular squares at street intersections, and also the salaries of officers, amounting to nearly $150,000.

With this explanation I will restate the account from the balance shown in second statement already given:

Grand total expended by District government for all purposes		$26,295,141 32
Total expended by the General Government, as shown in second statement, for municipal expenses, streets, &c	$10,841,926 70	
Total expended by Government around public buildings, and on squares, parks, &c., to December 29, 1834	49,119 00	
Total expended on public grounds, parks Capitol and President's House, Smithsonian, and grounds around the Departments, as per General Babcock's report, since 1834	1,978,318 09	
Grand total of Government expenditures		12,869,363 79
Difference between expenditures of the United States and the District of Columbia, in favor of latter		13,425,777 53
Necessary to reimburse the District of Columbia, being one-half the difference		6,712,888 76

I should observe that some items of the expenditures given by the Treasury Department as improvements of streets are also included in General Babcock's statement as improvements of squares, parks, &c., and really increase the credit side of the account of the Government; but I have not separated them, as it involved an examination of vouchers for which I had not the time to devote. The amount will not exceed $100,000 probably, and may fall below it. I must also observe that I have given the District government no credit for its expenditures on account of salaries of officers and employés other than those connected with the board of public works. Still, Mr. Chairman, it will be seen that, after allowing the United States credit for every cent it has expended which in the remotest degree has contributed to the joint benefit of the local and General Governments, we find the United States indebted to the District of Columbia in the sum of $6,712,888.76.

If I am right in my assumption, and I think that the closest calculation will not materially change it, that the United States should reimburse the District its excess of one-half the expenditures here for the common good, I am brought to the statement of the first duty of Congress, namely, to appropriate money sufficient to make this reimbursement.

If we were trying this case on a bill in equity, there would be a large item of interest properly chargeable to the United States on account of the advances made by the District government. There would also be another large item in the proceeds of sale of lots, and interest upon the amount. These, if considered, would more than double the balance which I have shown to be due.

But we seek to drive no hard bargain with the United States, and would not even ask reimbursement if we had a business interest, manufactures, trade, commerce, or revenues, to which we could look in the immediate or remote future for reimbursement.

But, sir, if we have any rights which can be enforced by an appeal to a sense of common justice, to a sense of national honor and fair dealing, I must believe that this first duty which I have pointed out will sooner or later be discharged.

Our statute-books are filled with precedents for reimbursements to the States upon precisely the same principle as that involved in this claim. I would not pretend to give the number of millions of dollars which have been appropriated by Congress to refund to States moneys which they had paid out for the common benefit of the whole people.

The second and imperative duty of Congress is to devise an intelligent apportionment of the expenditures at the seat of government.

It is not of half so much importance that large appropriations should occasionally be made, as that there should be a fixed and definite sum appropriated annually, which shall be disbursed with reference to an intelligent and wise development of the extraordinarily beautiful plan of our capital city. An appropriation annually by Government, which would not exceed five cents *per capita* of the whole population of the United States, together with local taxation, would sustain a fund sufficient in twenty years—yes, even in ten years—to make here a city unparalleled for its beauty.

There is no city in the Old World of which I have any knowledge that can compare for a moment with ours in the magnificence and grandeur of its plan. In all London there is not a street or avenue, after leaving the public parks, over which there is the least pleasure to drive. Almost the same thing may be said of Paris, with the exception of two or three boulevards and the Champs Elysées. Unter den Linden, of Berlin, is paved with Belgian pavement, with surface drainage through its gutters, a rough, unkempt, untidy, and disagreeable street, and one must go beyond the western gate for a pleasure drive. The Ring Strasse of Vienna is a broad macadam avenue encircling a busy hive of active industries, whose devotees are crossing and recrossing and traversing this busy thoroughfare, rendering a pleasure drive upon it next to impossible; and here, as in Berlin, for air and refreshing recreation, the inhabitants are driven beyond the confines of the city. So of Brussels; so of Munich; so of Rome; so of Naples, except, perhaps, a portion of Chiai; so of Florence, except its suburban drives.

But here, when the bordering grass of our broad avenues and streets shall have become a mat of green, and our many varieties of beautiful forest trees shall lift their heads aloft and throw their grateful shade over lawn and pavement, the beautiful vistas which will be opened up, the superb works of architecture, which in our public buildings surpass anything in the world of their kind, breaking in picturesque variety the view, with the lovely spring and autumn skies which overspread us for half the year, will make Washington City what its founders promised for it.

True the capital cities of the Old World have their splendid monuments and works of art, old and time-honored and splendid private mansions, that are a delight to behold; but seen, and known, and familiar with, one must go beyond all these for that rest and recreation which of all things, to the thoughtful, overtasked mind, is indispensable.

Monuments, statues, and works of art will come to us in time; they are the result of many years; they will add a charm to the capital; but whether we ever have these or not, nothing can prevent this city from being the most delightful on either continent, if Government will only extend to it that fostering care which its founders promised.

Your ten thousand, and rapidly increasing number, of overworked, brain-weary public servants will have only to step from their offices or their homes into the open street to be in the midst of repose and quiet, and in the grateful presence of lawn and forest. The wisdom of our patriot fathers, who secured our public servants from the close, hot, and feverish atmosphere of a crowded, dense city of strife and panic and money-getting, and placed them with quiet and rural surroundings, is being vindicated day by day, as the growing wants of Government invite here the best blood of the nation to assist in its management.

What even small appropriations will accomplish when regularly made is so favorably exemplified by the present engineer in charge of public buildings and grounds, that I point to his work as a complete demonstration of the wisdom of this course. He has made the desert smile and the waste places blossom, and yet his expenditure has not been felt. A similar policy pursued toward improvements outside the parks and reservations, added to local effort, will repay the outlay a thousand times.

Nothing can be more clear, upon even a cursory view of the local government and its relations to the parent Government, than that the United States have never acted upon any well-defined theory, or with any consistency or unity; that while it has been just—indeed, almost generous—in certain directions, it has been parsimonious and mean in others; that its policy has been fitful and vacillating and uncertain, and calculated to keep the citizens of the District government in the most deplorable and abject condition.

What is needed above all things here is a consistent, well-defined policy on the part of Congress in the support of this District government. I think the local government has the right to ask that a proper balance-sheet should be struck between the United States and the District of Columbia.

The United States should have credit for its expenditures on behalf of improvements in the District of Columbia, and generally its aid in maintaining the local government, excluding, of course, those appropriations which are made to all the Territories or States. The District government should have credit for all its expenditures of like character. The United States should then appropriate a sufficient sum to meet its just proportion of the difference in favor of the District of Columbia. And there should then be determined a fair and just proportion of future expenditures to be borne by the United States and by the District of Columbia.

I have no special theory or choice as to how this common fund—the appropriations made by Government, and the revenues derived by taxes upon the private property—shall be managed or disbursed.

I believe, however, that a more inexpensive form of local government can be devised than the present one; but as the property of private citizens and the interest of private citizens are equally involved with those of the Government, I believe that in any form which may be finally adopted the people should have a just representation. I do not believe that the general principle which underlies our theory of government ought to be violated, because of any peculiar political relations which this District sustains to the General Government.

I believe the people here are as competent to determine what is to their interest as the people of any other community; and as our theory of government submits that question to a vote of the people in all communities, and has done so in this for seventy years, I cannot give my consent to see this principle violated.

The large interest of Government here I concede can have no other representation than that provided by Congress, and Congress must judge as to the best means for protecting its interests.

I shall quarrel over no form Congress may prescribe. Give us some guarantee that the Government will henceforth do its duty, and will lift some of the burdens under which we are groaning, and we will cheerfully trust the wisdom of Congress to provide a just government for the District. Our interests are common. We who have chosen this city for our homes will never be found wanting in devotion to it as the nation's capital. I point with pride to the efforts of our citizens in former years, and especially under the new government, as proof of what we shall always stand ready to do.

The monuments of this devotion are seen on every hand. Ingratitude, envy, and hate of the hour may blur the vision of some, and shut out all generous and patriotic emotions from the hearts of others, but the work of the last two years will vindicate itself, and the prominent persons in this era of Washington's regeneration will stand side

by side in history with the founders of this noble city. No man must hope for justice in his day. This is the age of slander; and if it were not for the courageous souls scattered here and there in public life, we might surrender hope and succumb to the ghouls.

There is one brave man who has dared to lift up his voice out of the midst of clamor, and remind Congress of its duty. He did it under a sense of high official responsibility. He did it, too, not upon the recommendation of some head of Department, and upon second-hand evidence, but from actual observation of the progress of improvements here. I will venture to say that no one man in the District of Columbia, not even the governor himself, has been the daily witness of so much of the work in its detail as this man. Like his great prototype, Washington, who watched the unfolding of the plan of the city with the same keen interest that a botanist would the unfolding of a rare flower, or an artist the development of a great picture, President Grant has watched the rescue of the capital from national disgrace, and, unsolicited, his strong sense of justice plainly reminds you of a duty too long neglected.

Mr. Chairman, I began my remarks by reminding gentlemen of the paternal interest felt by President Washington in the future of this beautiful city, and the deep solicitude shared by his patriotic associates around him for its future prosperity. I showed how the seal of the nation's plighted faith was stamped thus early upon it. I may, I think, with becoming fitness conclude my remarks by quoting from President Grant's annual message to this Congress. He says:

> Under the very efficient management of the governor and the board of public works of this District the city of Washington is rapidly assuming the appearance of a capital of which the nation may well be proud. From being a most unsightly place three years ago, disagreeable to pass through in summer in consequence of the dust arising from unpaved streets, and almost impassable in the winter from the mud, it is now one of the most sightly cities in the country, and can boast of being the best paved.
>
> The work has been done systematically, the plans, grades, location of sewers, water and gas mains, being determined upon before the work was commenced, thus securing permanency when completed. I question whether so much has ever been accomplished before in any American city for the same expenditures.
>
> The Government having large reservations in the city, and the nation at large having an interest in their capital, I recommend a liberal policy toward the District of Columbia, and that the Government should bear its just share of the expense of these improvement. Every citizen visiting the capital feels a pride in its growing beauty, and that he, too, is part owner in the investments made here.

Mr. Chairman and gentlemen of the committee, I have endeavored to do my duty by pointing out yours. I commit the subject to your earnest, intelligent, and patriotic consideration.

Finance—Currency.

SPEECH OF HON. JOHN A. LOGAN,

OF ILLINOIS,

IN THE SENATE OF THE UNITED STATES,

March 17, 1874.

The Senate, as in Committee of the Whole, having under consideration the bill (S. No. 432) to amend the act entitled "An act to provide for the redemption of the 3 per cent. temporary-loan certificates, and for an increase of national-bank notes," the pending question being on the motion of Mr. BUCKINGHAM to refer the bill to the Committee on Finance, with the instructions adopted on the motion of Mr. MERRIMON—

Mr. LOGAN said:

Mr. PRESIDENT: I dislike very much to trespass again upon the time of the Senate on this question of finance; but some statements have been presented and some assumptions made which I do not feel willing to let pass unnoticed. And since the first conflict between the opposing parties appears to be the one which is to decide the issue, so far as this body is concerned, it is perhaps as well to discuss the subject now as to go over the whole field at another stage.

My chief object in addressing the Senate at this time is, however, to reply to some of the arguments presented by the Senator from Missouri, [Mr. SCHURZ,] and to call attention to a few facts which I think have been somewhat overlooked, notwithstanding the length and wide range of the discussion.

As no attempt has, so far, been made to controvert the statements I heretofore made in regard to the amount of money in European nations, they may be considered as admitted, and the argument on this basis, with which the advocates of specie payment started out, must now be considered as abandoned by them. I have no desire now to inflict upon the Senate an array of statistics on this point; but to show that my figures were not exaggerated, notwithstanding the statistical statement recently placed upon our desks, I will call attention to some further evidence in regard to the amount of money in England. I find that the amount of gold alone in circulation is, according to the Bank of England estimate, £105,000,000, or about $520,000,000. (See Westminster Review, October, 1873, page 136.) It is true, Jevon's estimate is £80,000,000, and that of the Chief of the Bureau of Statistics, which is based on Jevon's, is but £84,000,000; while others estimate it as high as £120,000,000; but that of the Bank of England is considered by English writers as the most reliable. I now have here before me the London Economist of December 13, 1873, with a list of all the private and joint-stock banks of England, and of all the Scotch and Irish banks, with the amount of circulation and specie reserves of each.

If to the amount of gold in circulation we add the silver and bronze money, the amount of coin and bullion in reserve in the banks, and the notes in circulation, we shall have an amount considerably larger than that given in my former speech, as I had not then collected all the data on this point

Amount of money in Great Britain.

Amount of gold in circulation, according to the Bank of England estimate, (see Westminster Review, October, 1873, page 136)	$525,000,000
Amount of silver coin in circulation. (Bureau of Statistics, page 10)	75,000,000
Amount of bronze in circulation. (Bureau of Statistics)	5,740,000
Total coin circulation	605,740,000
Notes of the Bank of England	$187,259,000
Notes of private banks, (November, 1873)	13,606,675
Notes of English joint-stock banks, (same date)	11,958,550
Notes of Scotch banks, (same date)	29,468,290
Notes of Irish banks, (same date)	38,208,640
Total paper circulation	280,501,155

(London Economist, December 13, 1873.)

Amount of bullion and reserves:

Bullion and coin in Bank of England	$112,259,000
Specie reserves in Scotch banks	19,646,000
Specie reserves in Irish banks	14,874,000
Total coin reserves	146,779,000

(Speech, page 26; London Economist, December 13, 1873.)

Adding these several amounts together:

Coin circulation	$605,740,000
Note circulation	280,501,155
Coin and bullion reserves	146,799,000
Total, counting five dollars to the pound	1,033,020,155
Deduct 3 per cent. to reduce to the true amount	30,990,604
	1,002,029,551

I have followed the estimate of the Bureau of Statistics in regard to the amount of silver in circulation, but, judging from the Mint statistics, I think this is too large, and would place it at about $40,000,000, which would reduce the total to $967,000,000. Even if we take the Bureau estimate, and add the coin and bullion reserves not included, and the additional gold in circulation as estimated by the Bank of England, we find the amount to be over $938,000,000, or $70,000,000 more than my former statement.

Total circulation, (Bureau)	£141,239,000
Coin reserves not included	15,774,000
Addition to equal Bank of England estimate	20,450,060
Bullion reserves, Bank of England	16,000,000
Total	193,463,000

Equal to $938,295,000 at gold value. Deducting the reserves, we find the amount in circulation to be $784,182,000, nearly twelve millions more than my estimate, calculating the pound sterling at its true value in gold. I will here add my former tables in reference to France, Germany, and England, which I presented on the 19th of January, 1874, as follows:

United States.

Greenbacks	$350,000,000
National-bank notes	300,000,000
Reserve	44,000,000
Fractional currency	50,000,000
Gold and silver	125,000,000
Total amount of money	869,000,000
Deduct gold and paper reserves	200,000,000
Total actual circulation	669,000,000

Amount money *per capita*, $21.72; amount circulation *per capita*, $16.72.

England.

Bullion in Bank of England	$113,259,000
Notes of the bank (including reserves)	187,259,000
Notes of other banks in circulation	85,425,000
Coin admitted to be in circulation	500,000,000
Total amount of money	884,943,000
Deduct reserves	112,259,000
Total circulation	772,684,000

Population, April, 1871, 31,817,108; amount of money *per capita*, $27.80; amount of circulation *per capita*, $24.28.
(American Annual Encyclopedia, 1872.)

Germany.

Bank circulation	$315,000,000
Cash reserves	205,000,000
Coin in circulation	776,000,000
Total amount of money	1,296,000,000
Reserve	205,000,000
Total amount in circulation	1,091,000,000

(Bagehot's Lombard Street; North American Review, January, 1874.)
Population, (including Alsace and Lorraine,) 41,058,196; amount of money *per capita*, $31.56; amount of circulation *per capita*, $26.60.
(American Annual Encyclopedia, 1872.)

France.

Circulation of the Bank of France	$550,000,000
Coin and bullion on hand	160,000,000
Gold and silver as per Bonnet (deducting that in bank)	940,000,000
Total	1,650,000,000
Amount as per Baird, (deducting amount in bank)	$540,000,000
Total amount, as per Baird	1,250,000,000

Population, (exclusive of Alsace and Lorraine,) 36,102,921; amount of money *per capita*, first estimate, $45.70; amount of money *per capita*, second estimate, $34.62. (Bagehot's Lombard Street; North American Review, January, 1874; Revue des Deux Mondes, November 1, 1873.)

And let these speak for themselves.

But, sir, it is unnecessary for me to pursue this proof any further, as the Senator from Missouri, in his recent speech, appears to have wholly abandoned his *per capita* argument, brought forward in his first speech with such a flourish of trumpets.

What, therefore, is the fair inference to be drawn from this sudden silence on the subject of statistics? Are figures and facts of no value in this debate? If they were so valuable as testimony at the outset of this discussion, how does it happen they are now thrown to the "dogs," and the theories of Mill, Price, and Amasa Walker substituted in their place? Why is it that they are wholly ignored while the statements of Marco Polo, whose history of his travels was once in great doubt as to whether it was fiction or fact, but is now considered authentic, are substituted as arguments on this floor in regard to finance? Sir, the simple reason for this change of tactics is that they were wrong, and they cannot face the facts and figures, knowing that when correctly presented they are against them; and knowing that an appeal to other nations for evidence on this subject will show clearly that the amount of money we have is too small for the population, wealth, and business of the country.

It is a little singular, Mr. President, that the contractionists on this floor do not attempt to rely either upon facts or figures to sustain their position, but wholly upon theory and assumption; and as an evidence of this I need only to refer to the recent speech of the Senator from Missouri. Why, Mr. President, even the few facts and statistics presented in his former speech seem to have been abandoned in the latter. But many of the theories and assumptions of the former were reiterated with great emphasis in the latter. The same tirade against "irredeemable currency," the same outcry against speculation and gambling, the same assumptions in regard to interest, and the same sophistry in reference to the farmers and laboring classes, were repeated; but his facts and figures were carefully omitted, and no attempt was made to present any new ones, or to controvert those brought forward by those opposing his views.

This, Mr. President, is somewhat significant, and indicates, as it seems to me, the basis on which the contractionists stand. *Theory* and *theory* alone, although in nowise applicable to the present facts or conditions of the business of our country; and, sir, when practical facts produce a different result from the theory laid down, theory must fall, and the facts must stand. To sustain this proposition I will read from one of the political economists so much relied on by our theoretical friends. Bowen, in his American Political Economy, quotes from John Stuart Mill, as follows:

> Political economy is a *deductive* science so far as it reasons from assumptions, not from facts. It supposes an arbitrary definition of a man as a being who invariably does that by which he may obtain the greatest amount of necessaries, conveniences, and luxuries with the smallest quantity of labor and physical self-denial with which they can be obtained in the existing state of knowledge. It predicts only such of the phenomena of the social state as take place in consequence of the pursuit of wealth. It makes entire abstraction of every other human passion or motive, except those which may be regarded as perpetually antagonizing principles to the desire of wealth, namely, aversion to labor, and desire of the present enjoyment of costly indulgences. * * * * *
>
> The conclusions of political economy, consequently, like those of geometry, are only true, as the common phrase is, *in the abstract;* that is, they are only true under certain suppositions, in which none but general causes—causes common to the whole class of cases under consideration—are taken into the account. In proportion as the actual facts recede from the hypothesis, the political economist must allow a corresponding deviation from the strict letter of his conclusion; otherwise, it will be true only of things such as he has arbitrarily supposed, not of such things as really exist. That which is true in the abstract is always true in the concrete, *with proper allowances.* When a certain cause really exists, and, if left to itself, would infallibly produce a certain effect, that same effect, *modified* by all the other concurrent causes, will correctly correspond to the result really produced.—*Bowen's American Political Economy*, page 11.

That is from Mr. Mill; and in reference to which Mr. Bowen says:

> All legislation which is designed to affect the economical interests of society, or which relates immediately to its commerce, agriculture, or manufactures, is, in truth, an application of the principles of some system of political economy to practice, be that system a wise or a mistaken one. It is often a very injurious application of them, because the circumstances which actually limit the principles are lost sight of, and the abstractions by which they were obtained are forgotten. Mischief results; and "practical men," seeing that the consequences do not square with the theory, call in question the science itself, instead of attributing the error to the faulty application of it. Hence arises an unhappy dissension between theory and practice, to the lasting detriment of both.
>
> The political economists themselves are somewhat to blame for this result, by pressing too eagerly for the reduction of their favorite doctrines to practice without regard to the particular circumstances of each case. The general doctrine of free trade, for instance, which may be correct when applied to two nations which are similarly situated in every respect, which have grown up under the same institutions and the same laws, and in which the profits of capital, the wages of labor, and the ratio of population to territory are nearly on a level, is extended, by a hasty generalization, to two countries that are contrasted with each other in all these respects, and in its application to which, to say the least, the correctness of the principle is very doubtful. We have in this country the largest extension of the system of free trade which the world ever witnessed; we have free trade between Maine and Louisiana, between California and Massachusetts; and no one doubts that the system is equally beneficial to all these States. But before the system is carried out between England and the United States we may reasonably inquire whether it will not necessarily tend to an equalization of profits and wages in the two countries, and whether it is desirable here to hasten the operation of the causes which are rapidly reducing the rates of both to the English standard. This subject will be considered hereafter, but I may say here that the question does not relate to the correctness of the general principle in economical science, but only to its applicability under particular circumstances. That all terrestrial bodies gravitate to the center of the earth is a general law which is not disproved by the floating of a "cork in a basin of water."

Here political economists themselves say that the principles relied upon by these gentlemen, which are nothing but their theories, are not applicable in all cases to all countries; but that the principle is correct when carried out as applying to a condition of things which is in accordance with the theory; and yet we have been told that we despise books of political economy. We do not; but we say that political economy on finance, from an English stand-point, does not square with the condition of this country.

The writer further says:

> Another prejudice against political economy has arisen from an error of an opposite character; from too strict a limitation of it to the causes affecting the increase of national wealth, the other interests of a people being undervalued or left out of sight. The English economists of Ricardo's school have most frequently fallen into this error; looking merely to the creation of material values, they have tacitly assumed that this was the only interest of society [illegible] which legislation should have in view.

What legislation? What end? The writer says, that the school of Ricardo, and those men who follow him have, is looking merely to the creation of material value. They have tacitly assumed that this was the only interest of society, and [illegible] the only end which legislation should have in view—creating more wealth in the hands of the wealthy and taking it from the less wealthy.

> The proposition on which they act, though they seldom directly enunciate it, is, that the augmentation of national wealth is at once the sign and the measure of national prosperity. We may admit that it is so, *if the wealth be distributed* with some approach to equality among the people. But if the vast majority of the nation is beggared, while enormous fortunes are accumulated by a few—if pauperism increases at one end of the social scale as rapidly as wealth is heaped up at the other—then, even though the ratio of the aggregate wealth to the aggregate population be constantly growing larger, the tendency of things is downward, and, sooner or later, if a remedy be not applied, society will rush into degradation and ruin.—*Bowen's American Political Economy*, pages 12, 13.

So much, then, for the theory of political economists when they write from a stand-point in reference to the London exchange, or in reference to the condition and wants of a people confined in narrow limits, where their business and their exchanges are made every day and where they nearly all are circumscribed within the limits of cities. Then this theory of Mill, of Ricardo, of Bonamy Price, and the other authors that are so frequently alluded to by these Senators, will apply. But, says this political economist and says Mr. Mill, the circumstances must be such as to relate to the principle, or else the application is not good.

Then, sir, I will only ask whether the circumstances and present condition of the people of this country are such as to justify an application of these principles, that relate only to the condition of the people in England, circumscribed in area, and whether we should not consider the greater opportunities afforded for transactions of a business character in this country?

But, sir, leaving that for the moment, I will say that even the chairman of the Committee on Finance, [Mr. SHERMAN,] abandoning the high stand he at first occupied, has gone back, as a final resort, to the records of the past to hunt up the former statements of individual Senators. Has he also abandoned his guns, and left the field of open warfare? A question like this, bristling on every hand with facts concerning its various phases, certainly does not need a resort to the past expressions of an individual Senator to sustain a true and correct position in reference to it. The Senate will long remember the difficulty the Senator found himself in by referring to former records on this question, his own speeches having been immediately produced showing him the leading advocate in the Senate Chamber of the same principles now advocated by our side of this question. It is strange, sir, but it is true, that men like the chairman of the Committee on Finance do within a short period of time change their opinions on great questions.

Sir, with a century of history behind us, marked with all the vicissitudes known to a republic except death, with the history of England for centuries, it would seem as though facts and illustrations might be produced to sustain a correct theory on this subject, without relying wholly upon the opinions of political economists, and without hunting up the previously expressed views of Senators.

What is the great burden of all the arguments against an increase of the currency, and against any attempt to repeal the restrictions of the present banking law, so as to prevent monopoly and give to all equal rights? It is "speculation, speculation, speculation!" Sift all their arguments of their rhetorical flourishes, extravagant assumptions and theories, and this will be about all the substance that will remain. And yet they fail to tell us what train of horrors is to follow in the wake of speculation.

Certainly, Mr. President, I am not wrong when I say that the fear of speculation was the chief, if not the only prominent, objection of the Senator from Missouri. Yet I failed to learn what fearful results were to follow from speculation, except that he charged to this cause the late panic in monetary affairs. I admit that the panic has been very injurious in many respects to the business of the country; and

if it was brought about by a speculation produced by a redundant currency, then I will concede that this will form a strong argument against continuing the same financial condition which preceded it. I have no desire to avoid the full force of this argument if the facts in the case sustain the theory. But if, upon an examination, the Senator is found to be wrong on this point as to the facts, his whole argument falls to the ground, and with it all his anathemas against an irredeemable currency. Does he not know that England, with her boasted financial system, which is held up before us by contractionists as a model, has had many panics; one in 1784, in 1793, in 1810, in 1819, in 1826, in 1837, in 1847, and again in 1857, and one in 1862? Is it not a historical fact that panics are common to all commercial countries, and occur at times not to be accoun ted for on any reason able hypothesis?

But, sir, if an examination shows that there was nothing in the character of the currency to produce speculation or panic; if it shows that there was not a redundancy, then I ask in all candor, is not the Senator's whole argument without any force? And I call special attention to these two propositions, on which hangs the entire force of the contractionists' arguments, so far as they refer to the recent panic: it must have resulted from a superabundance of the currency or from its character, or their theory is wrong.

Now, let us examine these two points candidly and dispassionately, and with a desire to profit by the lesson; and with the facts which have already been presented here it will take but a moment to do this.

But let me first state their argument. It is this: A redundant currency induces speculation; speculation produces panics; the only way to remedy the evil is by a resumption of specie payment, which we all know at this time can only be done by reducing the currency.

Now, it has been shown here that the amount of money in the United States, in proportion to population and wealth, is less than in England, or France, or Germany. If there is a redundancy in the United States, then the condition of England and Germany and France in this respect must be far worse. If the redundancy here led to wild speculation and panic, how does it happen that a greater redundancy in France and England has not resulted in a like disaster at the same time? That they have a greater amount according to population and wealth than we have cannot be controverted. If it could be, it would have been done long ago. If we have a superabundance, then they must also have a superabundance. If the excess here produced disaster, the same cause ought to produce the same effect there, especially as the panic here produced great alarm there. But such has not been the case, and consequently, so far as this evidence goes, it proves their theory erroneous.

But we are met by the reply that in England and France they have paper based on gold. Then we must infer that the panic was not due to an excess of the currency, but to its character; that it was not on account of a redundancy, but on account of the kind of currency we employ. Do these Senators not know that the greatest panics the commercial world has ever witnessed were when the paper money was based on gold alone, both in Europe and in this country? And is it not a further fact, well known, that gold currency induces speculation just the same as paper currency does? But, sir, who ever heard in this country of an attempt being made to contract the circulation of gold currency? An attempt was once made by the landed proprietors of England to induce the Parliament to prohibit increased circulation of gold, so as to produce a reduction in prices and wages, and give them a greater power and control; but it did not prevail.

But, sir, that the panic was not due to the character of our currency is proved by the history of the panic itself, and by the steady decline in the premium on gold during the past four or five years. We all know that it was not caused by a depreciation of our currency, for this never was better than during the panic; it was good previous to the panic; it was better during that time than at any other; and is good now. No, sir, the cause was not attributable to the character of the currency, but to a money famine, as all the evidence will show, and to nothing else. In the very midst of the panic we saw the leading bankers and business men of New York pressing and urging the President and the Secretary of the Treasury to let loose twenty or twenty-five millions more of the same paper for their relief; the very same men who to-day denounce it as a disgrace to our Government. It was good enough when they were in trouble; but now, since New York, Boston, and Philadelphia have, as the Senator from Missouri tells us, increased their piles by the addition of over twenty-three millions, it has become a miserable, "shameful" currency, a "disgrace to the nation." And right here, although leaving for the moment my line of argument, I want to call attention to one very significant fact which the Senator's figures reveal.

He tells us that of the $25,000,000 greenbacks issued the past year, and since the panic, those three cities have received nearly twenty-four millions, while the rest of the country received but little more than one million. Now they want contraction and a speedy return to specie payments. Is it any wonder? Is there anything strange in this? Nothing whatever; it is very natural. But it is a little strange, at least it appears so to me, that the honorable Senator who resides in and represents Missouri, which received scarcely enough of it to pay for a steamboat, should stand here in this Hall as the leader in the effort for contraction and the war on greenbacks. Now that these cities have been relieved, by pouring into their coffers these millions, and say they have enough, it does seem strange to me that the Senator from Missouri should say to his constituents, who are asking for but a little share, "Nay, be still, you don't know your own wants; you are led astray by a taking catch-word; just wait awhile, and you will recover your senses." I have no doubt the Senator thinks he is taking the wisest course for the welfare of his people and the nation; but still I am so dull as to retain a lingering opinion that if more was good for New York, a little more at least might be good for Saint Louis; but perhaps this is a mistake, and grows out of my not thoroughly understanding first principles, as taught by Marco Polo and the Chinese classics.

My friend from Missouri read Marco Polo to the Senate, and he has had the country papers producing Marco Polo's revelations in reference to China just as though no other human being had ever read Marco Polo's travels. Now, in order that this thing may be well understood as to Marco Polo, I will call the attention of the Senate for a few moments to this nomadic writer. It is known by all the school-boys, even, who Marco Polo was. Marco Polo, Nicolo Polo, and Maffeo Polo, three brothers who were born and raised at Venice, large merchants, in the thirteenth century, about the year 1255 started on a trading expedition for the purpose of selling and trading jewelry for other commodities. Marco Polo visited the interior of China, and there he found, as the Senator said, that the Khan, the imperial power of one of the districts of that country, had a fashion of minting certain character of paper, and I will read what he says:

> In this city of Kanlalu is the mint of the Grand Khan, who may truly be said to possess the secret of the alchemists, as he has the art of producing money by the following process: He causes the bark to be stripped from those mulberry trees the leaves of which are used for feeding silk-worms, and takes from it that thin inner rind which lies between the coarser bark and the wood of the tree. This being steeped, and afterward pounded in a mortar, until reduced to a pulp, is made into paper resembling (in substance) that which is manufactured from cotton, but quite black. When ready for use, he has it cut into pieces of money of different sizes, nearly square, but somewhat longer than they are wide. Of these, the smallest pass for a denier tournois; the next size for a Venetian silver groat, &c.

The Senator read that to prove that paper money had been made in the thirteenth century, (he said a thousand years ago,) by the Khan, that circulated; and he compares our character of paper money to this. If the Senator would only read a little further, he would find that this money depended upon the will of the Khan and not upon its being based upon any credit or faith of government or anything else, as ours is; and yet he reads that and compares it with the money of this country. That may be a very cheerful and proper way of showing to the people of this country that we are a set of ignoramuses and know nothing about the basis of money or currency, and try to convict those that desire an increase of the currency of desiring to have a character of currency corresponding with that which the Khan of a district in China by his own will issued to the people. The man who uses such arguments must think his hearers are without any knowledge on this subject. If the Senator from Missouri would only read a little further he would find that in the thirteenth century, in other districts in China, where the use of paper money existed, and long before, there were manufacturers in certain towns named, and thousands of persons employed at good wages, and that the people dressed then in a dress corresponding almost to the people in more civilized countries. And he will find, according to this very man's statements, that the people then were advanced a thousand years beyond what they are to-day. I do not go to Chinese classics for my theory of currency; I do not desire to adopt their theory, nor does any one else that I know of; and if the Chinese, as he asserts, tried paper money a thousand years ago and then returned to specie, and specie alone, without having any other circulating medium but that, we have in their present condition an evidence of the result. What is it? Isolated from the world, idolaters, semi-barbarous, governed by superstition, less enlightened and less advanced to-day than they were in the days of Confucius, their only ambition when they come into enlightened nations being to wash clothes and become menial servants to others. If the credulous old Venetian is correct, then the example is against the theory of the Senator from Missouri and not in support of it. But will he compare the money of China in the thirteenth century, based on nothing but the will of a despot, to our money based upon gold-bearing bonds of the best Government in the world? He may do it, sir; but the people will not agree with him.

But, to return from this digression, let us now proceed directly to the consideration of the arguments of the honorable Senator from Missouri. And in doing this I shall refer to both of his speeches, as I suppose he has no desire to withdraw from any position taken in either.

In his last speech he sets out with this remark:

> I want it distinctly understood that the object of the remarks I am going to make will be distinctly this: I desire to show, first, that the gentlemen who favor an expansion of the currency labor under an essentially erroneous conception of the nature of the difficulties for which they want to provide; and, secondly, that the remedies which they propose will not effect a cure at all, but will rather aggravate the evil.—*Congressional Record*, February 24, page 1718.

And, with the apparent intention of enlightening us, he proceeds to the discussion of these points, and, to show us that we are mistaken as to the evil which needs a remedy, makes two assumptions: first, that a continued depreciation of currency which is properly secured, as compared with gold, is a sure sign that there is an excess, that there is more than the business of the country requires; and this, he says,

remains unanswered. Mr. President, this assumption has been answered over and over again. I answered it in my speech on January 19, by presenting a table showing the decline in the price of gold, and appreciation of greenbacks, from January, 1865, up to January, 1874, from which statements, then made, I will now quote:

No, sir; the price of gold is regulated just as the price of any other article of merchandise is, by the supply and demand. It is needed in this country for but two purposes—to pay interest on the public debt, and pay duties on imports. I have labored pretty hard for a few days past to get the facts and figures to verify every proposition that I make, as far as I can, and I have here the figures showing the price of gold from January, 1865, down to January, 1874:

Date.	Price.	Difference, per cent.	Date.	Price.	Difference, per cent.
1865—January	234½		1869—May	144⅜	Rise 12⅝
May	128⅜	Fall 106	December	119¼	Fall 24⅜
October	149	Rise 20¼	1870—January	123¼	Rise 4
1866—March	136½	Fall 12½	March	110¼	Fall 13
April	125	Fall 11½	July	122½	Rise 12¼
May	141½	Rise 16½	November	110¼	Fall 12½
June	167½	Rise 26½	1871—September	115⅝	Rise 5⅜
September	143⅜	Fall 24½	December	108⅜	Fall 7
December	131¼	Fall 12	1872—August	115⅝	Rise 7¼
1867—September	146⅜	Rise 15¼	December	111⅜	Fall 4¼
December	133	Fall 13⅜	1873—April	119¼	Rise 7¼
1868—August	150	Rise 17	September	114	Fall 5¼
November	132½	Fall 17⅝	October	108	Fall 6
			1874—January	111	Rise 3

Thus it will be seen that the price of gold has been on a sliding scale downward from 1865 to the present day, and during the crisis, and during the issuance of a portion of the reserve of greenbacks, it has been lower than at any time since the date first mentioned. By examining this table you will find that the variations in the price of gold are not regulated by the amount of currency in any way whatever, but are regulated by the time of payment of duties and interest, and according to the bulls and bears of New York, without any reference whatever to the greenbacks or the currency, the amount great or small.

If that be true, then I ask, what is there in the assumption the Senator makes that the continued premium on gold is evidence that there is an excess of currency in the country? It shows that his assumption is false, that it has no basis whatever, but that the facts are just the contrary from his statement.

And, sir, we also know that some of the most experienced financiers of our country who now favor a resumption of specie payments assert directly the opposite both as to fact and principle. The New York Chamber of Commerce, in the memorial which I alluded to in my former speech, assert positively that the present amount of currency is necessary to keep our commerce in motion. I now quote from the memorial of the Chamber of Commerce of New York, page 8:

Whatever policy might have been judicious before, it is vain to talk of contraction now, when three hundred and fifty millions of greenbacks and three hundred millions of national-bank notes are employed unceasingly to keep the wheels of an extended commerce in motion.

This is answered by the very men, or a portion of those who here a few days ago presented a petition for contraction. But a few weeks ago they asserted that the present amount of currency was absolutely necessary to keep the wheels of commerce in motion. Thus you see, Mr. President, the Senator's assumptions are contradicted by the statements of his own adherents, in this unexampled raid upon the credit and money of our country. Again, these same memorialists assert "that our currency can be brought to par without decreasing the volume." Now, without adopting either proposition, I present this opinion of astute financiers and specie-payment advocates to show the Senator that the money-lenders in his own camp did, only a short time since, stand in direct opposition to him, both as to fact and principle.

I will call attention to a few articles in the New York and Boston papers on the condition of the business of the country at the present time. The Senator remarks that there is no necessity for an increase of currency, that currency is piled up everywhere, and that business is going on, and quotes from the papers of the country to show that business is active. Let me read, for the benefit of the Senator, two or three articles that I have taken recently from some of the leading papers in the large cities.

The New York Times, Friday, March 6, says:

THE STATE OF TRADE.—It is not to be concealed that the prospect for general spring trade is far from encouraging. There is a feeling of hesitancy in the business community, which finds very uniform expression among merchants, not only in our own city but from all parts of the country. Explain it how we will—and there are conflicting opinions in regard to the cause—the fact is not to be questioned. The ordinary enterprises which usually spring into active operation as the season of navigation on the northern rivers approaches, are this year entered on with notable timidity, or are wholly avoided. The importers, the manufacturers, and the jobbers—three classes who together supply, directly and indirectly, the retail trade of the country—are agreed that there is a dullness little less than stagnation in every quarter, and the opinion of those engaged in transportation is in substantial harmony with that of the other classes.

This is taken only a few days ago from one of the leading papers in this country, which advocates a contraction of the currency and a return to specie payment. Yet it is bound to confess the fact that there is a general stagnation in business throughout the whole country.

The New York Tribune, March 9, says:

The week opens upon the same stagnant condition of business—

What same stagnant condition? The same before alluded to as existing throughout the country and of which the people are complaining so bitterly, and of which we are trying to convince the Senate. It goes on to say:

The week opens upon the same stagnant condition of business which gentlemen at Washington have succeeded in bestowing upon the country for the last two months. Until they can be coaxed or driven into doing something which shall give the business community a definite knowledge of what the volume of the currency is to be, no revival need be expected. Men will not buy or sell cloth till the length of the yard-stick is fixed.

The Tribune, of course, lays the stagnation of business to Congress. This is to be expected, as Congress is now made the scape-goat for all the ills that the country is heir to; and when it is found that the stagnation of business is disproving their arguments, what is the result? They always attribute it to Congress; they are at fault; nobody else but Congress. I presume Congress brought about the panic. I presume that Congress kept the panic going, and I presume, according to their doctrines, Congress will keep it up for years. But, nevertheless, accuse what you may, the fact still remains that there is a stagnation in business throughout the whole country. The fact of the stagnation of business is admitted, and the country can well understand the cause.

I will also read an article from the Boston Journal of Commerce, Saturday, March 14, 1874:

STATE OF TRADE.—The spring trade thus far has not come up to the expectation in our own city, and the question is put more often than usual to the market reporters of facts and current prices who visit men in most descriptions of business, "Don't you find it more dull than usual at this season?" while at the same time the principal commercial journal of New York asserts that there is no disguising the fact that the spring trade has thus far been disappointing, and it is therefore natural that a more or less dissatisfied feeling should pervade business circles. The disappointment is the greater because the fall trade, which promised so fairly, and looked so healthful and cheering, was nipped in the bud by the money panic, and the business which was expected was not realized. But if the goods would not sell in the fall, they would be required in the spring; for the country was everywhere reported to be unusually bare of stocks of goods and merchandise, and the impression prevailed among the greater portion of our mercantile men—the jobbers particularly—that they should and must have a good spring business. The natural reaction which usually follows a season of depression in trade was confidently expected; but the confidence has not been sustained in the event.

Then, sir, we view the decline in the enterprises of the land, as well as the stagnation in business everywhere, as patent facts, staring us in the face, in opposition to the unsupported assumptions of the Senator.

In the second place, he undertakes to show us that we are mistaken in regard to the difficulty to be overcome, by denying directly that there is an insufficiency of currency. Now, I undertake to say, and I think I can demonstrate it, that the only proof the Senator attempts to present on this point is, in fact, directly against him.

If the Senator's argument is of any force whatever, it must be because it applies to the financial condition immediately preceding the panic; for, if redundancy caused the panic, that redundancy must have existed previous thereto. If an increase now would flow to New York and New England, for the purposes of speculation, the same must have been true previous to the panic, if there was an excess then. And now, if a still greater excess be added thereto, would not this excess seek another and more profitable place of investment? This must be correct if the Senator's argument is correct. Now let us examine the facts in the case and see whether they sustain this view of it or not. I have shown that the difference between gold and paper decreased rather than increased during the panic, when the very opposite should have been the case if redundancy was the cause of the panic. In the second place, it is a well-known fact that the bankers and leading business men of New York, by joint action and individually, demanded of the Government more paper money—not gold but greenbacks—that "irredeemable, miserable paper" which had brought on the disaster, according to the Senator's view!

In order to show that I am correct in saying that they did appeal in the manner I have stated, I will call the attention of Senators to what the Secretary of the Treasury says in reference to this point in his last financial report. After discussing the panic, and what he considers as the cause that produced it, speaking of the business men of New York, he says:

In this condition of things great pressure was brought to bear upon the Treasury Department to afford relief by the issue of United States notes. The first application came from a number of gentlemen in New York, suggesting that no measure of relief would be adequate that did not place at the service of the banks of that city $20,000,000 in United States notes, and asking that the assistant treasurer at New York should be authorized to issue to those banks that amount of notes as a loan upon a pledge of clearing-house certificates, secured by ample collaterals, and for which certificates all the banks were to be jointly and severally responsible.

This proposition was declined, yet it shows that these very men during that time appealed to the Secretary of the Treasury, not only to do this act, but in doing it to violate the very law under which he was acting, in order that they might be relieved from their distress. Relieved how? By issuing this irredeemable currency that has been so fearfully denounced here in this Senate Chamber. More than that; they not only appealed to the Secretary of the Treasury, but they besieged the President, the Executive of this nation, and the Secretary both, gathering around the hotels in excited crowds, with despair on every countenance, sending in their most select and best-known citizens to plead for a release of twenty to twenty-five millions, to satisfy their wants and save them from ruin. Was there enough money there then for the wants of business and trade? He must certainly be a bold man who ventures to affirm this. Yet if the Senator

from Missouri is correct, money was redundant and the excess had been drawn into New York, the great center, as he asserts, of speculation. Then, sir, so far as the facts go, they agree with the statement of the chamber of commerce, that there was no redundancy; in fact, so far as they show anything, they show just the opposite. We may theorize and explain with all the sophistry we are masters of, yet these facts remain unimpeached and unimpeachable.

One day he reads the money articles in newspapers to show that money is easy in these cities now, and the next he presents statistics to show that Boston, New York, and Philadelphia have received twenty-four out of the twenty-five millions of the reserves issued during the year since the panic. This explains itself, and proves, as clearly as facts can prove anything, that what the bankers and merchants said during the panic was true, that they needed more money for the transaction of business. And the very fact that money is now piled up in the great cities, if correct, proves that business is stagnant elsewhere, and that the vast operations in the interior which previously kept it in circulation have been curtailed. But, sir, with all the boasting of these bankers that money is now so plentiful with them, it can only be obtained on the very best class of paper on short loans and on call.

In order to satisfy some gentlemen that I am not misstating the facts in this case, I will give the views of some business men to show that the statement of Senators made upon this floor in reference to money being obtainable in New York and other places at fair rates of interest is not the fact. I have a letter here from a gentleman in Ohio, a constituent of the excellent chairman of the Committee on Finance. The letter is as follows:

HAMMONDSVILLE, JEFFERSON COUNTY, OHIO, *March* 12, 1874.

DEAR SIR: We are watching with interest the discussion of the financial question in Congress. We think in this important matter you are taking the right ground. While favored depositors can obtain all needed funds to carry on their business, especially when, like the present, there is a plethora of currency in the money centers, what is the condition of things throughout the country? Outside of the money marts stringency without accommodations or facilities has been the order of the day. And let an outside party with security unexceptionable apply for accommodation, and he is refused upon the ground that larger depositors must be cared for. The business community has suffered all through the panic, and is still suffering, for want of means to prosecute the legitimate business enterprises.

While money in New York is quoted even as low as 3 to 4 per cent. on call, the best institutions in that city demand at the rate of 12½ per cent. per annum to outsiders, while the favored can obtain it at 7 per cent., giving them an advantage of 5½ per cent., because they do business in the said money mart. We hand you rates demanded by an institution with which we have done business for a number of years. Is this state of things fair? Is this great country to be retarded in its onward march toward development, prosperity, and greatness, because a comparatively few will profit thereby?

The whole principle is cruel and oppressive. Let there be currency enough to supply all the legitimate wants of the country, so that all that can furnish the needed security can obtain a supply, both in city and country, leaving the user of funds to be his own judge as to how much it will be safe for him to secure. In short, let demand and supply be the predominating principles to govern the whole matter of our currency, as well as, or the same as, all other matters touching the well-being of the country.

May you carry out successfully your views in the premises is the wish of your obedient servants,

W. H. WALLACE & SONS.

General LOGAN, *United States Senate.*

With this letter they sent me an answer from a banker in New York to an application made by them to borrow money, which is as follows:

FIRST NATIONAL BANK, NEW YORK, *February* 6, 1874.

DEAR SIR: We will do some good Cleveland paper, thirty days, 7 per cent. and ⅛ per cent. exchange; sixty days, 7 per cent. and 1 per cent. exchange. This is the best we can do on an account that runs so small as yours.

Respectfully,

GEORGE F. BAKER.

W. H. WALLACE & SONS,
Hammondsville, Ohio.

There is an application from a firm to borrow money on first-class paper. The bank will do the paper at high rates of interest on thirty and sixty days, but only do that because the account was small, and if they had a larger account they would do better.

I also have a letter here that I will read, from a business man in New York, showing that he has hundreds of thousands of dollars of property that he is willing to put up, and yet he cannot get one dollar of money unless he has bonds that are worth one and a quarter each on each dollar he gets, and then pay a high rate of interest. He says:

NEW YORK, *March* 8, 1874.

Hon. JOHN A. LOGAN, *United States Senate:*

I see it admitted in debate by some friends of ample currency in the Senate that money is plenty in New York. This is not true in the sense in which it is made. To be sure, among stock gamblers and the banks with which they are confederated, and who thrive upon usury and the frequent opportunities for loaning at ⅛ per cent. a day on safe collaterals, money is frequently quoted at very low interest. This is upon call. Not so in all other business. For over six weeks now past I have had out application for loan upon city lots. The case is this: A friend of mine held a mortgage upon four full city lots, situated on Seventy-seventh street, within three hundred feet of the residence of Hon. FERNANDO WOOD, among the most desirable property in all the city, and which at auction would bring somewhere from twenty-five to forty thousand dollars. The mortgage, with a rich bondman, a gentleman of fortune whose interest had always been regularly paid by a banking-house, was for $15,000, having two and a half years yet to run. My friend authorized me to offer $1,000 bonus for getting it cashed. It bore 7 per cent. interest, payable semi-annually. I placed the application in the hands of numerous respectable negotiators of loans, men who daily advertise large sums "to loan on good real estate in the city and county of New York or Brooklyn." It is not yet taken. The money-lenders all through demanded a bonus of $1,500 to cash the mortgage. At last one came down to $1,200, and lawyers' fees, &c., for search of title, about $250. This is to my certain knowledge a fair picture of the value of money on this first-class property in the city of New York, and if the application extends outside of the city, in remote parts of the State, the loan cannot be obtained at all.

I have a property covering about one-quarter of the land embraced in the village of Niagara Falls, including a canal, which with the lands stands me in over $600,000. I cannot borrow $50,000 on this property, even at 12 per cent. In the face of such a condition of money in New York, it is only fair that the truth should be told. There has not been a period for three years past but when I could borrow one-quarter of its value, to erect factories and mills, at 7 per cent. Mine is not an isolated case, it is only a type; and every money negotiator in New York knows the fact to be so, and I may safely challenge contradiction.

I also have a letter from a firm in New York, or a member of the firm, well known throughout this country—the firm of Peake, Opdycke & Co.—written, however, to another party, in which this gentleman says:

NEW YORK, *March* 11, 1874.

DEAR SIR: * * * * * We are in favor of more currency in some way, for the country needs it. Give us the $400,000,000 of greenbacks if we cannot have more currency in any other way, and also give us free banking.

We need some action speedily on the currency question, so we can know what to depend upon in arranging business action in the future, for you know in large mercantile operations we have to make calculations for months ahead.

Yours, truly,

W. I. PEAKE.

I introduce these letters merely to show that the people of the country, and business men too of the East, do not look upon this condition of things in the same light that Senators here, who have presented their views, look upon it, and that it is not true that the business of the country is in a good condition, as has been stated here.

Mr. WRIGHT. Will the Senator from Illinois allow me to interrupt him?

Mr. LOGAN. Certainly.

Mr. WRIGHT. I have a letter on the very point he is now discussing, and with his permission I will refer to it. It is a letter from a gentleman who may perhaps be regarded as the third largest capitalist in his own city, written to me a few days since, in which he says:

While a great many capitalists and banks are opposed to an increase of currency the great manufacturing and agricultural interests want more currency.

He also says:

The West needs something to give confidence and to enable business men to carry on their business different from what it now is. The fact of such large accumulations of currency in New York banks only goes to show that business is stagnant, and that what money is there cannot be had to carry on the great industries of the country.

I read this, being exactly in the line of the argument the Senator is making.

Mr. LOGAN. I am very much obliged to the Senator, for it is exactly in the line of my argument, and is a true statement of facts, too.

Mr. President, there are other facts in reference to this question which the Senators have not alluded to, which they do not tell us, and which perhaps will throw some light on this subject.

It is well known that during the panic the banks in the leading cities formed associations and issued certified checks based on imaginary deposits, which were used as substitutes for money, and these were issued to the amount of millions of dollars. In the city of New York alone, if I recollect rightly, some $20,000,000 of these checks were issued to supply the place of money, and in this way only did the banks of New York find the ability to get through the clearing-house and save themselves from bankruptcy. And yet, according to the assumption of the Senator from Missouri, it was a superabundance of money that caused them to devise this scheme to save themselves. If there was such an excess, why did these astute financiers resort to this expedient? Why was there such an appeal for more money by all those papers now arguing so strenuously for resumption of specie payment? And yet, if the Senator's argument has any force in it, he must maintain there was an excess, and that this was directly or indirectly the cause of the panic.

Why did he not give us some facts in regard to the monetary affairs in his own State? In his own city of Saint Louis, following in the wake of New York, they substituted clearing-house certificates for money, and in this way passed themselves through the panic. I suppose that is the kind of evidence which convinces the Senator from that State that they had a surfeit of money at the same time in his own city. Why did he not tell us what the rate of interest is in the interior of Missouri, that we might judge of her wants? The large cities appear to have a strange fascination for him, so far as this debate is concerned; and although he undertakes to instruct the farmers and producers of the West as to what is best for them, he takes good care not to go to them for evidence. I believe he did in one instance allude to the statement of some one at Omaha, but, unfortunately for his theory and assertion, this correspondent informed him interest ranged there from 12 to 24 per cent. Sir, this letter is but a specimen of hundreds that I and other Senators from the West receive from our constituents. Let the Senator read the various papers from Indiana, Illinois, Iowa, Wisconsin, Missouri, Kansas, and Nebraska, and he will find nine out of every ten telling us that they have not enough money for the business of the country. Are they all mistaken in regard to their own wants?

Money articles from Chicago papers have been read here to create the impression that the West is flooded with currency. Does not the Senator know how these money articles are made up? If not, I will tell him. A reporter goes round to the banks and asks the question,

"How are loans to-day?" "Is money easy?" What must be the answer of the banker who has his credit to sustain? As a matter of course that is all lovely. So these papers make up their reports; and they are paraded here as evidence before the country that money is plenty. That is, the bankers say that money is plenty, and yet nobody can get it from them. The people say it is not plenty; the bankers to keep up their own credit and business say it is; therefore Congress must agree with the bankers, and disbelieve every other character of evidence. But in spite of all this, as all the Senators are aware, I have already presented petitions from thousands of the citizens calling for an increase of the currency. I have also presented the petition of many members of the Illinois Legislature to the same effect.

Iowa has spoken officially through her Legislature, as I am informed. And four out of every five of the Senators and Representatives from that section tell the same story; and the same story is repeated morning, noon, and night, from all parts of this land, except from the mouths of the money-lenders and the money-brokers.

I will now read from the Agricultural Report, coming from different sections of the country and given here officially, to show the condition of things throughout the whole land, not in one State, but all around through the different States. In the monthly report for last January, a writer to the Commissioner says in reference to Montcalm, Michigan—I do not know anything about the place; the Senators from that State do; there is such a place, I presume:

Corn, oats, and hay have not been so low for years as now, on account of a decrease in the business of lumbering. Owing to the tightness of the money market, there is but very little being done in that line this winter. Flat River runs through this county. Last winter two hundred million feet were put into this river. This winter the highest estimate is twenty million feet.

That is the condition of the lumber business in one portion of Michigan; last year two hundred million feet were put into the river, this year but twenty million.

I will also read an extract from a report from Perry, Alabama:

To show the prospects, I will refer to two rentings for the present year: Eight hundred acres of prairie lands, as good as any land in the county, rented for seventy-five dollars.

The whole eight hundred acres in Perry County, Alabama, rented for seventy-five dollars in January last, so this man says. What else?

Five hundred acres of good prairie land rented for eighty dollars; good improvements on each place.

This is the condition of things in that country; and yet we are told that money is superabundant; that it is like the leaves upon the trees when the autumn frosts come, and it will fall and cover the earth around, according to the arguments advanced by Senators here representing the Finance Committee on this floor, and the Senator representing in part the State of Missouri.

Here is the report from Attala, Mississippi:

The agricultural industry is mostly made up of small farmers, who are themselves inured to labor, and are doing very well under the improved prices of all products—though "the panic" has now greatly deranged the prices of everything, reducing them nearly one-third, except of corn, which remains the same as last year, that is one dollar to one dollar and a quarter per bushel. Our corn will have to be supplied from other States.

I will now read an extract from Cedar, Missouri, the Senator's own State. I do not know anything about this place. The Senator from Missouri on my left [Mr. BOGY] will recognize the locality in his State that this refers to:

The failure of banks and the almost total absence of money in this section have compelled farmers to hold their stock and produce. Many who have purchased with a view of selling the past fall have to hold and feed over, notwithstanding the great scarcity of feed. This state of affairs has produced a stringency and hardness upon the masses, the like of which has never been known here. The farmers, in the perhaps vain hope of ousting those in high places to whom they ascribe a great part of their calamities, are organizing granges in nearly every school district, and their strength is only limited by their ability to get means to pay an initiation fee.

The Senator [Mr. SCHURZ] here expatiates upon the condition of the country, while from his own State, published officially in the city of Washington in one of the official reports, it is shown that in one district in his State they cannot obtain money to move a bushel of their crops, and that there is such hardship there as has never been known since Missouri was a State. Yet he as one of the organs of that State stands upon this floor and says that money is plenty. Now, I ask, does all this evidence that is being produced here every day prove nothing to Senators? Are they so astute, so able, and so great that no evidence can make an impression upon their minds except the intuitive knowledge which they have themselves and by which they will alone be guided? Will the Senator from Missouri, in the face of all this testimony, tell the people that they are not aware of their own condition; that they do not know their own wants? If I understand the force of language, this is exactly what he has been doing. If what I have stated be true—and I do not think it can be controverted—I should like to know who it is that "labors under an essentially erroneous conception of the nature of the difficulties for which we want to provide"—we who judge from the facts before us, or those who rely upon abstract theories alone?

The second primary proposition laid down by the Senator from Missouri is, "that the remedy we propose will not effect a cure at all, but will rather aggravate the evil;" and against this is directed the great part of his argument. Against any proposition for an increase he raises the cry of "irredeemable currency," "inflation," "gambling," and a host of other fearful chimeras hatched in his own fertile imagination. Senators use the word "inflation" to scare old women and children, a word which does not properly apply to money at all, but would more properly apply to those persons who, by being encouraged by the money-changers of the land, have recently become the advocates of contraction and extortion. In his first speech he says:

You can, and you will, by this measure, revive and endow with new and greater strength all those pernicious influences which our inconvertible currency has exercised for the last eleven years upon the business of the country.

Notice carefully this language, "pernicious influences;" notice the time, "for the last eleven years." Now, I should like very much to know what "pernicious influences" our currency has exercised over the business of the country for the last eleven years. Is the Senator wholly oblivious to our progress and development during that period? Has he been wrapped in a Rip Van Winkle slumber all that time, dreaming over Ricardo, Mill, and Price? Why, sir, it has been shown again and again during this debate, by official reports, by figures and facts, which not even the Senator from Missouri will dare deny, that the past eleven years form a period of prosperity unexampled by any previous period of our history as a nation. Is this one of the "pernicious influences" to which he alludes? He appears to have a mortal dread of New York gold-gambling; yet this currency withstood the most stupendous gold-ring combination the world has ever known; and lately the panic has scarcely produced a ripple in the premium quotations; nor has this long debate, holding as it were millions suspended in uncertainty, been able to affect it as much as 2 per cent. Are these some of the "pernicious influences" of this money to which he alludes?

The Senator has become so absorbed in his theories, and so infatuated with the arguments of New York and Boston bankers and commercial men, that he seems wholly to have forgotten that he is from the West. It is somewhat strange to me that he does not sometimes refer to Saint Louis and Missouri for his illustrations. Why has he not told us some of the "pernicious influences" of this currency on the industries of Missouri? Why has he failed to tell us that her real and personal property in the past eleven years has increased from $501,000,000 in value to $1,285,000,000; and the value of her farms from $230,000,000 to $393,000,000? Why has he also failed to tell us that her manufactured products have increased from $41,000,000 to $206,000,000? Why has he failed to mention the fact that the manufactured products of Saint Louis County alone amounted in 1870 to over $158,000,000—nearly four times as much as those of the entire State ten years previously?

Are these some of the "pernicious" results produced by the use of this "irredeemable currency" in his own State? Were these the effects of speculation in the chief city of Missouri? Why has he failed to point to the facts in that section of which he is presumed to have the most intimate knowledge? Why did he not, as a proof of his position, point us to deserted farms, idle manufactories, and languishing business during those eleven years of "miserable currency" and "irredeemable paper," against which he thunders forth such fearful denunciations? For the simple reason, Mr. President, that the facts at home are all against him. Are we to presume that while he is so familiar with all the writers on political economy, and the monetary affairs of Europe, he is ignorant of the condition of his own State? By no means, sir. And if the facts were in favor of his position we may be sure that he would be the first to avail himself of them. But they are against him, and for this reason he passes over them in silence.

There are a number of valuable tables and statistics found in our public documents which have a strong bearing on this question. And as Mr. KELLEY, the honorable Representative from Philadelphia, has anticipated me and collated them, I will merely call attention to them, and introduce them here from his speech of the 8th of this month.

Table showing the receipts from customs.

For the six years they were as follows:

1856	$64,022,863 50
1857	63,875,905 05
1858	41,789,620 96
1859	49,565,824 38
1860	53,187,511 87
1861	39,582,125 64

After 1861 the revenues were derived from customs, internal taxes, and direct taxes; and the amount collected in each year was as follows:

1862	$50,851,729 35
1863	108,185,533 96
1864	212,532,936 05
1865	295,593,048 88
1866	490,248,219 12
1867	446,645,582 01
1868	357,340,334 82
1869	339,170,573 10
1870	379,667,223 81
1871	349,948,917 05
1872	347,012,464 49
1873	302,134,091 35

A comparison of these tables, with our knowledge of the monetary condition of the country, will show in an unmistakable manner the effect of a sufficient and insufficient currency on the receipts of our Government. There is over $188,000,000 difference between now and 1866, when we had the largest amount of currency. When our currency

was at its highest figure our revenues amounted to $490,000,000, and the people of this country paid their taxes without complaint. They paid $490,000,000 and complained not; and to-day, with $188,000,000 decrease in taxation, they pay with complaint every day, and tell us the money afforded is hardly sufficient to pay the taxes placed upon them at this time, although much lower than they were before.

Mr. KELLEY then proceeds to show the relation of currency to immigration as follows, during our convertible currency into gold:

Let me, therefore, proceed rapidly to examine the facts of the case, and, continuing the line of illustration I have presented, let me recur to table "G," page 10, of the appendices to the report of the Secretary of the Treasury. It is a statement of the receipts of the United States from March 4, 1789, to June 30, 1873, by calendar years to 1843, and by fiscal years ending June 30, from that time. This statement shows that the total receipts of the Government, during its whole existence, prior to June 30, 1873, from customs, internal revenue, and direct taxes, amounted to $5,289,467,480.30. During the seven years to which I have heretofore referred, to wit, from 1856 to 1862 inclusive, the amount received from these sources—and I shall consider the receipts from no others—was $362,874,580.75; the average receipts per year having been something over $50,000,000. During the same years we received 1,033,697 immigrants. The immigration into the country is an element of wealth and taxable power that cannot properly be omitted from such a consideration as that in which we are now engaged. I therefore propose to present the two subjects in parallel columns:

Years.	Revenue.	Immigration.
1856	$64,022,863 50	200,436
1857	63,875,905 05	251,306
1858	41,789,620 96	123,126
1859	49,565,824 38	121,282
1860	53,187,511 87	153,640
1861	39,582,125 64	91,920
1862	50,851,729 35	91,987
Total	362,874,580 75	1,033,697

I pause for the present but to invite attention to the facts that the revenue received in 1856 was over $64,000,000, but in 1861 the receipts had sunk to but little more than $39,500,000, and that immigration, which in 1856 was over 200,000, had by 1861 fallen to less than 92,000. These were the results produced: Every industry of the country was paralyzed; no effort was making to develop its resources, and the vast army of unemployed laborers had served notice upon their brethren in their respective fatherlands that they were better at home, let them endure what governmental oppression they might, than they could be in a republic which denied its citizens permission to earn wages by employing their industry upon its boundless stores of multiform raw material.

Let me now present the receipts from the same sources, and the number of immigrants received for another series of seven years, beginning with 1866:

As I have said, the total receipts from the foundation of the Government to the close of the last fiscal year were $5,289,467,480.30. Let me now show that more than one-half of the whole sum, or $2,710,033,324.40, was recived in the years 1866 to 1872, inclusive, during which the volume of our inconvertible currency was at its maximum. The annual receipts and number of immigrants were as follows:

Years.	Revenue.	Immigration.
1866	$490,248,219 12	318,494
1867	444,645,582 01	298,358
1868	357,340,334 82	297,215
1869	339,170,573 10	395,922
1870	379,667,233 81	378,796
1871	349,948,917 05	367,789
1872	347,012,464 49	449,483
Total	2,710,033,324 40	2,506,057

The average receipts per year during this period having been $387,147,617.77, or more than $30,000,000 per year in excess of the total receipts of the last seven years of convertible currency.

In this connection, as also bearing upon this point, and as standing directly opposed to the theory of the Senator from Missouri, for reduction instead of an increase of money, I give the following additional statistics, as furnished by Mr. J. C. Dore, of Chicago, to the National Board of Trade, with his remarks, as follows:

I have, in order to elucidate my ideas still further, and to show that we have not an excess of currency, obtained a statement of facts as to the products and manufactures of the country. And it appears to me that if these arguments are of no use—if these statistics have no force in enabling Congress to determine the requirements of the country in respect to the necessary amount of currency—it might be about as well to abolish all the Bureaus which furnish such information, and which are attended with so much expense.

The total number of manufacturing establishments in the United States and Territories, in 1860, producing the value of $500 and upward, was 140,433; in 1870, 252,148. Hands employed in 1860, 1,311,246; in 1870, 2,053,996. Amount of wages paid in 1860, $378,878,966; in 1870, 775,584,343. Value of materials used in 1860, $1,031,665,092; in 1870, $2,488,427,242—a great deal more than 100 per cent.

The value of products for the year 1860 was $1,885,861,676; and in 1870 it was $4,232,325,442. These figures certainly show very remarkable results. The wonderful increase of the value of products is largely to be attributed to the increase of labor-saving machinery.

The value of live stock in the country in 1860 was $1,089,329,915; and in 1870 $1,525,560,457, an increase of 50 per cent. The amount of wheat produced in 1860 was 173,104,924 bushels; in 1870, 287,745,626 bushels. The amount of Indian corn in 1860 838,792,742 bushels; in 1870 it was less—but that was an exceptional year, and should not be taken as a fair showing—it was 760,945,559 bushels; in 1872 it was 1,100,000,000 bushels. The hay crop in 1860 was valued at $18,083,896, and in 1870 $28,316,048. This crop has increased materially in price as well as in amount. The valuation of real and personal estate—a very important item in my judgment—in 1860 was $16,000,000,000; and in 1870, $30,000,000,000. The exports of Indian corn, rye, wheat, &c., in bushels, in 1860, was 8,800,000; in 1870, 39,000,000; and in 1871 45,000,000, flour not included.

I have offered these statistics, showing the rapidity of growth in the country in population and material wealth, to prove that a very much larger amount of money is requisite to transact the business of the country now than in 1860 when the population, wealth, and industries were so far below what they are now.

But, sir, how does the Senator from Missouri attempt to answer the array of facts heretofore presented in reference to population and business? He has with a wave of the hand referred us to the interior of Africa with its teeming millions of savages, and asks us if they require an equal amount of currency. Sir, such a dodge as this would only be worthy a less enlightened man. He might as well refer us to the wild Comanche Indians of the West, or a herd of buffalo, and ask why they should not have an equal amount of currency with enlightened nations. Does he think that this Senate is made up of a set of asses, or that the people are so ignorant that they will not see the absurdity of comparing the wants of savage barbarians without trade, commerce, or wealth, or any medium of exchange other than shells, beads, skins, and the like, with the wants, business, commerce, and currency of a great people like this? Sir, this argument is not worthy of any other notice.

Do these tables prove nothing? Do they show the "pernicious influences" upon the country, spoken of by the Senator, or does he wish to return to the days of 1859 and 1860, to find good influences on the industries and energies of the people as compared with those of the succeeding years? These questions he must answer in his own conscience. Does the Senator wish to disregard facts and experience in this country, or will he refer the matter to Ricardo, Smith, Mill, or Amasa Walker, to ascertain the amount of money his State of Missouri has, or how much she needs for the transaction of her business? Would he check her growth, or cripple her industries, and put her back to her condition in 1860 and 1861, because the bulls and bears of New York gamble in gold and stocks? Such would appear to be the tendency of his arguments; such would most certainly be the result of his theory if carried out. Has he ever seen a time, or does he ever expect to see a time, when speculation and gambling in stocks will not be carried on in Wall and Broad streets, in New York? Are there not places and times in every civilized nation on earth when and where speculation is rife? When he refers to speculation, when he says that our currency is the cause of speculation, and that speculation is the cause of panics in this country, does he expect that intelligent people will believe such assumptions? If he does, I wish to call attention for a few moments to a few facts in reference to speculation, and to show that it exists and has existed to a greater extent in other countries, and especially in countries where the money was gold and silver, than it ever has existed in this country, or in my judgment ever can exist here.

In 1695, and from that period to 1701, in Scotland, there was a scheme gotten up by a man by the name of William Paterson, called the Darien scheme. His idea was to establish a great city on the Isthmus of Darien and connect the oceans, and to do that he devised this scheme and issued stock which was taken by the Scotch. In order to show Senators and the country the condition of things then and the character of this scheme, let me just read for a moment:

The Darien scheme having thus received the sanction of public authority, Paterson opened the subscription. Instantaneously the whole country was thrown into a ferment. The frenzy of the Scotch nation to sign the solemn league and covenant did not exceed the rapidity with which they ran to subscribe to the Darien company. The nobility, the gentry, the merchants, the people, the royal burghs, without the exception of one, and most of the other public bodies, subscribed. Young women threw their little fortunes into the stock; widows sold their jointures to get the command of money for the same purpose. Almost in an instant £400,000 were subscribed in Scotland, although it is known that at that time there was not above £800,000 of cash in the kingdom. Extensive premises were built in the neighborhood of Bristo Port, Edinburgh, to serve as an office for the company, and as warehouses in which to store up the rich merchandise, the silks, the gold, the spices which the company's ships were to bring from across the Atlantic.—*Chambers's Miscellany*, volume 10, No. 172.

There was a speculative scheme gotten up in Scotland as far back as 1695, to establish a grand city on the Isthmus of Darien. The Scotch subscribed, paid in their money; they sent six ships to Darien loaded with emigrants. They nearly starved, became sick, a portion returned; the bubble burst; the scheme ended; the people of Scotland were the losers. Yet gold and silver was the money then in use in that country. I ask whether it was the character or the amount of the money in Scotland at that time that produced this bubble?

Mr. CAMERON. I wish to remind the Senator that there was another Scotchman, John Law, who got up the Mississippi scheme.

Mr. LOGAN. I will call attention to that. I want to show that afterward. I will give the Senator from Missouri bubbles enough that have burst in other countries besides this, where people have been injured—if the Senate has the patience to listen to me—to show that his whole theory of speculation on account of our currency is on a false basis and is as fallacious as anything can be.

There was another speculation called "the Mississippi scheme," gotten up by a man by the name of John Law, born in Edinburgh, Scotland, in 1671. His father was a noted goldsmith and banker. The young man, possessing a prepossessing appearance and excellent education, became a great schemer. In 1694 this man—who is the same John Law to whom my friend from Missouri refers—having gotten into a quarrel in England and killed his antagonist, was cast into prison for murder, where he remained for five years, but was afterward pardoned out and went to France. Here he induced the people to believe that he had a theory of finance which would make that

country rich; and finally obtained authority from those in power to test his theory. This he did by starting a bank; not based upon the faith and wealth of the government, as we propose, but based upon gold after the manner which you who favor specie payment now propose.

And to make it more secure, he required that the gold with which the paper was to be redeemed must be of the same fineness and quality of that existing when the paper was issued, so as to prevent alloy and insure redemption in pure gold. The matter was under the direction of the French government, and Law was made the principal director of the bank, which was also a government institution. Thus the scheme was started, and prospered for awhile.

He then attached to it what has been called "the Mississippi scheme," named after the Mississippi River, which flowed through the lands then owned by France, upon which stocks were issued, which stocks were made a part of the assets of the bank controlled by Law.

The issue of money went on until it was so far in excess of the basis that there was no power of redemption. When the day for redemption came the bills were presented in such amounts that the supply of gold, which was the only basis, was wholly inadequate; and, there being no other security of any value, the bubble burst; and the great financial scheme of John Law, a true advocate of specie payment, went to naught; and he went forth a vagabond to wander over the face of the earth.

Such is the history of another one of the schemes of money based upon gold. That was not caused by an irredeemable currency that the Senator speaks about, but by the very kind of banking that he himself has been in favor of; and he calls our attention to the fact, and accuses every Senator who is in favor of an increase of the currency of attempting to establish a John Law scheme in this country. Why, sir, there are other schemes, and I might call the Senator's attention to many, some of them modern.

There was the South Sea scheme, started by the celebrated statesman, Harley, Earl of Oxford, in 1711, which produced a great bubble, and which we all know was based upon gold.

But the strangest speculative mania which history records was the Tulipomania of Holland. There among the good, old, quiet, steady Dutch, where money, and hard money at that, has always been plenty, in 1634 citizens of every class from the highest to the lowest were suddenly seized with a desire to speculate in tulip roots. And to such an extent was this carried that it has since been termed in history the *Tulipomania*. The tulip roots or bulbs were sold just as stocks are now sold in market. Certain varieties, which were very rare, brought enormous prices, and were only sold to the wealthy and noblemen; other more common varieties were sold at less prices. They were sold to be delivered at a certain time; if the price rose between the time of sale and delivery, the purchaser paid the difference, just as in stock transactions. This mania raged in Holland in 1634, and even spread to other countries. Was this owing to the character or abundance of the currency? Yet the Senator from Missouri insists that the mania for speculation has been caused by the currency of our country; and that we are advocating a theory which will produce a similar state of affairs. Was the tulip mania of Holland caused by a superabundance of irredeemable paper? I would ask him to explain.

There was another singular speculative mania that raged in this country between 1830 and 1840. I do not recollect the exact year, but perhaps some of the older Senators here do. I believe they called it the *Morus multicaulis* speculation, a kind of tree producing leaves on which silk-worms are fed. For a time people in some sections went crazy over it. I know that in my own country two or three men lost their little fortunes by engaging in this wild scheme. Was that attributable either to the character or quantity of money then in use? I want the Senator to tell me.

I want now to call his attention to a speculative mania that occurred in England in modern times, in 1824 and 1825, and in 1845—a railroad mania that raged to such an extent that the people were perfectly frantic in that country, producing such a condition of things in reference to dealing in stocks as never has existed in this or any other country except England. Was that caused by the quantity or character of the money then in use there?

He says that speculation in this country is produced by the character and amount of our currency. Let him tell me what caused this speculation in railroad stocks in England, in 1824 and 1845. Was it the character of their money? The money of England was at that time based on gold; nor was the amount then by any means excessive, as it was previous to the discovery of gold in California and Australia. And yet, as the Senator ought to know, the rage for dealing in railroad stocks, was carried to an extent never known in this country. And these stocks not in railroads building or to be built, but wholly imaginary ones. Schemes started without any intention of carrying out the enterprises. I suppose the Senator from Missouri will attribute that mania to the currency of that country, as he attributes all the speculation of our country to the character and quantity of our currency. The one is just about as true as the other.

Does the Senator imply that he can stop speculation? Is he going to stop speculation by making a raid on the money of this country? Can he stop gambling by creating a money panic? Does he expect to improve the condition of the country by reducing it to poverty? Will he beggar the country and stop the wheels of enterprise because some men engage in reckless schemes? His colleague [Mr. BOGY] who certainly cannot be charged with any love for a paper currency, tells us that Saint Louis needs more money, and that her business is suffering for want of it. He even goes so far as to say that even the evils of inflation, which he by no means estimates lightly, would be less injurious to them now than contraction.

On what, then, does the Senator base his assumption of the "pernicious influences" of this currency, when all these facts confront him, uncontroverted and undenied? Does he suppose that all the rhetoric of Hamilton, Coleridge, or Mill can convince a man that he has one hundred dollars when his own eyes tell him there are but fifty? No more can he convince the people of the West and South that they have an abundance, when their hard daily experience shows them just the contrary.

So hard is the Senator pressed by the evidence of our rapid increase in wealth and business that he ventures to introduce a new axiomatic proposition into the canons of political economy. Here it is:

> I know it is said that our general business has grown so immensely that not only not the same aggregate amount of currency, but not the same ratio per head, would be sufficient. I ask, sir, would an increase of business transactions at the same, or even a greater, rate render necessary a corresponding increase of the volume of the currency? I answer that it would not.

In other words, it is all folly to suppose that we need any more money now than we did in the days of Washington; or that Saint Louis needs any more money to carry on her business than Jefferson City or Saint Joe; that the New York merchants were all mistaken during the panic when they thought they needed more currency; that the chamber of commerce of that city are wholly ignorant of first principles when they contend that we need the present currency to "keep the wheels of our extended commerce moving." He then goes on to tell us that the business can be done through clearing-houses by means of bills, checks, &c. He imagines himself again in New York City, and seems to forget that the farmers, mechanics, and country traders of Missouri and Illinois do not have clearing-houses scattered all over these States at every village and cross-road. The Senator and others on that side of the question contend that money is so plentiful in New York that interest is very low, and the supply greater than the demand; and then proceeds to argue that if more banks were allowed in the South and West, the issues would not stay there, but would flow to the East. If they have too much already, and more than necessary to supply the demand—as he argues—I should like to know what would draw it there, unless it be to pay loans made to other sections, which those sections ought to have the facilities to obtain at home. If these cities can transact their business with bills and checks through clearing-houses, and require but a small amount of money; if money is already a drug there and interest so low, while it is excessively high elsewhere, how can it be that money put afloat in North Carolina and Missouri will flow into the place where it is most plentiful and not needed without flowing out again? And yet the Senator argues that money seeks the best market, and would not even admit, as suggested by the Senator from Pennsylvania, the preference for home loans at lower rates.

This may be in accordance with the Senator's idea of the teachings of John Stuart Mill and Bonamy Price; but, as a plain matter of fact, it appears to me to contain inconsistent and contradictory propositions.

In other words, he tells us in one breath that money will seek the place where it is in greatest demand and the best price can be obtained; while in the next he informs us that it will flow away from the place where it is in greatest demand to the place where it is already superabundant.

But the most singular portion of the Senator's speech was his attempt to convince the Senator from North Carolina that his State would lose more than it would gain by attempting to establish more banks there. For if, as he argues, an act should pass allowing more banks to be established in that State, not having the bonds, they would have to go to New York to buy them; and for each $1,000 spent they would only have about $865 to put into circulation. Consequently, for each bank established with $100,000 worth of bonds, the circulation in that State would be decreased $13,500.

I find that there is a remarkable agreement between the letter of B. F. Nourse, published in the Boston Financial Record, and our friend, the Senator from Missouri, on this subject.

Let us read from a newspaper article:

> In the debate on the currency question in the Senate on Tuesday last, Mr. MORTON, alluding to the speech of Mr. SCHURZ, said, "The cheapest of all political learning is that obtained by cramming." That the hit was a palpable one is shown by the following coincidence between a passage in Mr. SCHURZ's speech and a recent letter of Mr. B. F. Nourse, published in the Boston Financial Record. Mr. Nourse says:
>
> "The more bank currency we have, the less capital will there be to loan. The bonds, $1,000,000, required to be deposited for an issue of $900,000, are worth at least $1,120,000. The bank invests in bonds $220,000 more than the amount of currency received. Then it must hold a reserve against the circulation, 15 per cent. in the country bank, or 25 per cent. in the redeeming cities—an average of over 20 per cent.; say $180,000 in legal-tenders against the $900,000 in circulation. Therefore it is that of every $1,120,000 invested in bank currency there are $400,000 dead capital. Before the investment the whole $1,120,000 was loanable; after the investment only $920,000 can be loaned."
>
> Mr. SCHURZ said:
>
> "The Senator from Indiana had argued that the organization of new national banks would be to increase the currency, as money would be loaned by them and

returned to the bank every thirty, sixty, and ninety days. That argument was a fallacy. Persons to establish these banks must buy bonds in New York to deposit in the Treasury, in order to get circulation. A $1,000 bond would cost $1,120. The money to buy this bond would be taken out of the home circulation, and for that $1,000 bond they would get just $900 circulation; so that it would cost $1,120 to get $900."

By the substitution of $1,000 for $1,000,000 Mr. SCHURZ very ingeniously appropriates as his own the argument and illustration of Mr. Nourse, and promulgates them to the world from the national Senate Chamber.

Does he not know that the amount paid for the bonds would go into general circulation, and that the 90 per cent. issued as circulation on the bonds would be that much added to the volume of the currency? And does he not know further that the 90 per cent. issued as circulation for the bank in North Carolina would return home, or an equal amount of other bank circulation, every thirty, sixty, or ninety days, according to the time upon which loans were made by the bank, and thereby become a local circulation? Does he not know that money returns to the place where it is issued; and does he not know that where a bank is not established the circulation is afloat and has no attraction except for investment, and naturally flows away from that country and returns to the banks again where it started? Does he not know that one of the great benefits to a community in banking is to localize the currency and have that currency or an equal amount of it circulated in that vicinity? Does he not know that one of the great advantages to the people is this, that where the circulation is local and the borrowing can be done at home, the interest is paid at home, and the $10,000 interest paid on $100,000 loaned in your own State increases the amount of money in your State, whereas if that interest were paid to Rhode Island or Massachusetts it would deplete the amount of money in your State $10,000 and increase the amount of wealth in Rhode Island $10,000? Does he not know that? Is he so devoid of knowledge in this particular that he is willing that his own people shall pay interest as long as they live, to other States, increasing their wealth and decreasing the wealth of his own people, rather than to have banks established in his own State and have loans effected at home? I should like to know if this is the policy he adopts for his own constituency.

But, sir, it may even be possible that there are a few bonds in North Carolina; but, even supposing there are not, if the proposed increase is granted, it is possible that those who hold bonds elsewhere might be induced to bank on them there, where the investment would pay such good interest. I presume the Senator and people of North Carolina would like to have the privilege of trying the experiment.

I am inclined to think that the Senator from North Carolina looks upon it as rather severe to have the poverty of his State cast in his teeth as a reason why she should not have the same privileges allowed to her as to other States. Possibly this is sound theory, but it is rather severe practice, to say the least of it, in my judgment. I would have been glad if the Senator had included Illinois and Missouri in his illustration of his view on this point; for I would like the Senate to have before it the response which would come up in answer thereto. I am rather disposed to believe that Saint Louis would undertake to furnish a few millions of bonds if she had the opportunity to do so. And even Chicago, although burdened, as the Senator contends, with a superabundance of money, would, I think, risk a few more thousands at least. Possibly some of those plethoric New York bondholders might conclude they could turn an honest penny by establishing a few banks out there; and perhaps we might, with our grain and pork, catch a few drops from the stream ere it flowed back to the great ocean.

Why, sir, I sympathize most sincerely with the Senator from North Carolina. His constituents tell him, as our constituents tell us, that they need more money to carry on their business operations, and to develop the resources of the State. He makes known their condition here, and argues in their behalf with fervor and eloquence. But he is met by the Senator from Missouri, who seemed anxious to induce him to rest content with his condition, with the reply that if we issue more currency New York and the East, although burdened with money, will get it all, and you will be no better off then than now. And if we authorize you to establish banks this will only leave you in a worse condition, for it will take money away from you instead of giving you more. Truly, sir, this is rather a gloomy prospect for that State, which is so anxious to extend her business and give employment to her people. Perhaps the matter might be remedied by getting New York, while she is annexing Brooklyn, also to annex the State of North Carolina.

Mr. President, it has been left for the Senator from Missouri to administer soothing-sirup to all the States in behalf of the interests of New York and New England. As well might he say to these States, "Hold on; you know not what you want. You will be ruined by more money, as you do not know how to use it. Borrow from the East and pay a high rate of interest, and transfer annually the amount from the profits arising from your capital, in your own State, to Rhode Island, Massachusetts; or Connecticut; it will finally absorb your capital and wealth, and make you poor indeed, but will make them rich. This, however, will aid them to build up manufactories, and increase their banking capital, while you shall till the soil and become mere hewers of wood and drawers of water for them." This is his logic, this his theory, and to this he appears to be bending all the powers of his mind.

But, sir, the Senator from Missouri reaches the climax in the following statement on this point:

> The greater the inflation, therefore, the more speculation will control the currency, and the less a proportion will be left for legitimate business. Far from giving greater facilities to the transactions of legitimate business, increased inflation will only tend to increase the want far in excess of the supply. Inflation will increase the want, for it will run up the premium on gold, and have the effect of raising general prices, rendering thereby a greater volume of currency necessary to effect the same exchanges. Inflation will not in proportion increase the supply, for it will drive a larger proportion of the currency into the channels of speculation, and divert it from the channels of legitimate business. One hundred millions will not help you, and if you put out two hundred millions it will help you still less, for the appetite will not be satisfied; it will only be stimulated by the supply.—*Congressional Record*, February 24, page 1730.

This is certainly a startling doctrine if true, and ought to cause us of the West and South to plead with Congress to make all possible speed to draw in the greenbacks and contract the circulation. The greater the volume of money in circulation, the less we get; the less the volume, the more we get. Truly this is refreshing news, and if the correctness of the theory can only be established, we can easily devise a remedy. We have only to direct the withdrawal of the excess of bank currency from those States which have more than their share, and by thus tapping the eastern reservoir, a proportion of what is left will then flow South and West, and business will revive, and we will again be on the high-road to prosperity. It will not come until it is reduced. How does this proposition suit the Senator from Rhode Island? Will he come to the rescue, following the Senator from Missouri in this grand scheme of reform and recuperation? Will he empty some of the redundancy out of his pockets and retire it, and decrease the amount, that more may flow out to his needy neighbors, and that he may have more at home? According to the doctrine of the Senator from Missouri, it will most certainly result in filling them fuller than they were at first.

Mr. President, the Senator from Missouri attempted to amuse the Senate and galleries by describing his effort to teach "Old Tatum" astronomy, and the obstinacy with which Old Tatum relied upon facts, as he saw them, instead of theory. The story is by no means new, but I suppose the Senator met with him again. But when the Senator presents a proposition so new and wonderful as this, "that the more you get the less you have, and the less you get the more you have," I think he beats Old Tatum's astronomy, and presents a proposition that Newton would scarcely have accepted as a part of his theory.

This, Mr. President, might be considered simply as an attempt to amuse by a display of oratory and the power of sophistry, if it stood alone; but when we bring together some of the different propositions laid down by the honorable Senator, and compare his arguments and illustrations with those of eastern capitalists, the whole matter assumes a much more serious phase, and the cry of the West and South against this eastern monopoly will appear to be not wholly without ground. I have no desire to array one section against another, for we have already experienced the bitter fruits of such a course; but I do desire, if in my power to do so, to induce eastern Senators to look at this matter in a broad and national point of view. Here we are told by the Senator from Missouri that, if we issue million after million of currency, it will only increase the amount in the East and lessen the amount in the West; and that if we authorize more banks in these needy sections the result will be just the same. And this we find is the very line of reasoning used by eastern capitalists and money-holders. And when a proposition is made to remove some of the bank surplus from the States which have an excess, the Senator from Rhode Island, with the utmost honesty and candor, tells us that a number of years' experience has shown that his State has but the normal amount needed to transact their business, which I believe is now about sixty dollars *per capita;* while we of the West and South have only about from two to thirteen dollars *per capita.* Is it any wonder, then, that when we see such a strong attempt on the part of the East to curtail the amount now in circulation, and such arguments as these used to accomplish this end, we should look upon it as a movement on the part of the East to control the vast industries of the West and South, by controlling the money-power of the nation?

Sir, I charge no Senator with intending such a result as this, but I do claim that such would be the effect, and that the people of the West look upon it in this light. I do not wonder so much at eastern Senators who look at the matter from their stand-point (I will not say a selfish one) taking this view, but when those from the West are found in the very front of this policy, I cannot help thinking they have had their better judgments blinded by the arguments and reasonings in favor of capitalists without hearing the reasonings of the less opulent. Are we to presume that the present extensive movement among the farmers and laboring classes of this country has no foundation in actual grievances? Are we to believe that the present labor combinations and workingmen's unions are wholly without significance? Are we so silly as to suppose they can be convinced that lessening the amount of currency will increase the price of wages and products? Even if we could do this, they would soon learn by experience that we had deceived them, and would by their ballots drive those from power who did it. Sir, it matters not what the theory of political economists may be, the experiment now is dangerous; yes, dangerous in the extreme. The laboring classes and producers have learned the use of money and the advantages of good prices for their labor; they have, for the past ten years, learned its advantages; and call it irredeemable or what you will, they have learned to believe in its soundness. Are we then so blind as to think that they will see it withdrawn without a severe struggle? No, sir, we are badly deceived if we have any such idea as this. They prefer to fight their own bat-

tles with speculators and monopolies, and they will, if we give them the weapons to do it with.

But there is one very material fact in this connection which Senators appear to have entirely overlooked. They seem to forget that while our issues were largest in amount they had no circulation worth mentioning in the South, but were confined to the North and West; but since that day eleven million people have been added to the number to be supplied, and an area equal to an empire in extent. In comparing our condition and wants before the war with our condition and wants now they forget that four million slaves have been made free and are now learning the lessons of self-support and business life. These, sir, are no small items in the account. And those who talk so flippantly in regard to Senators who are guided by facts, would do well to consider them. And when they denounce our currency in such unmeasured terms, they would do well to remember that it has stood successfully a test that no other paper currency has ever undergone, with the whole amount nearly double what it is at present, confined almost exclusively to the Northern States, and while an unprecedented internal war was raging the gold-brokers of New York were plying all their arts against it. When the war ceased, and the wall of separation was withdrawn, and the wants of a nation increased in numbers nearly one-third, and an area nearly one-half, doubled in activity and operators, all to be supplied with a medium of exchange, just then we commence a reduction in the volume of our currency, and when we take into consideration the amount in circulation in 1865 and 1866, and the amount in circulation now, it is no wonder the people look upon this attempt at still further contraction as something alarming; and in order to show the condition the country must be reduced to if the currency be not increased but contracted, I will give the following tables, showing the amount of currency in circulation in the years 1865 and 1866:

1865.

National-bank notes outstanding	$171,321,903
Legal-tender and other notes	698,918,800
State-bank notes, (estimated)	58,000,000
Total	928,240,703
Seven-thirties of 1864 and 1865	830,000,000
Total	1,758,240,703

1866.

National-bank notes	280,253,818
State-bank notes	9,748,025
Legal-tender and other notes	608,870,825
Total	898,872,668
Seven-thirties	830,000,000
Total	1,728,872,668

Since which time contraction has gone on until the whole amount of currency of every kind now outstanding is only $742,000,000. Add the twenty-five millions of reserves, since issued, making $767,000,000, as shown in the following table:

1873.

National-bank notes	$339,681,799
State-bank notes	1,188,853
Legal-tender and other notes	401,527,267
Total	741,797,919
Seven-thirties outstanding	274,100
Total	742,072,019
Add twenty-five million of reserve issued	25,000,000
Total	767,072,019
Amount of currency in 1865	928,240,703
Amount of currency in 1873	767,072,919
Amount of contraction	161,778,784
Add the seven-thirties	829,725,000
Total contraction	1,018,167,784

If we estimate the population of the portion of the United States using this currency in 1865 at thirty millions, it gives a *per capita* of nearly thirty-one dollars, excluding the seven-thirty bonds.

Senators will admit this was a contraction if we include the seven-thirty bonds in the calculation. But let us exclude them, and wes till find the contraction has been $180,448,000 since that time. Yet some on this Senate floor tell me that we have had no such thing, and they try to make me believe it. Perhaps some Senators will dispute these figures. If any one disputes them, I refer him to a book written by the Secretary of the Treasury, on the Currency, and put forth by him as such Secretary, (pages 94 and 96.) I also refer him to the report of the Comptroller of the Currency, commencing at page 2, where the amount of currency for the various years is given. I have taken the report of the Comptroller of the Currency, and the Finance Report of the Secretary of the Treasury, and made this statement from them, and know that it shows correctly the amount of contraction which has taken place in the currency of the country since 1866. And by whom was the larger amount used? It was in circulation in the Northern States alone, exclusive of the people of the South, for but little of this money went into circulation in that section until after 1866, and after this contraction began.

Now, sir, in looking at the prosperity of the country then, and its want of an equal prosperity now, who is there that can say that we have a sufficient amount of money, at this time, unless it be one who is working in the interests of the few against the many, of capital against labor, of the money-lenders against the money-borrowers, of the moneyed power of the East to control all the industries of the South and West, and finally of the old countries against the young and growing.

Right here, sir, let me give an illustration of what the theories of some of these gentlemen would do with this country, by reading from one of the great teachers on political economy, who has been before our Committees on Finance this winter, thundering into their ears the necessity of a contraction of the currency, who is also one of the great lights whom our friend from Missouri delights to honor. I read from The Science of Wealth, by Amasa Walker, page 238. In speaking of the national banks he says:

> The Government has out, as we have seen, four hundred millions, an amount almost double the circulation in 1860, and of course much more than the natural wants of the country require; so that the three hundred millions furnished by the banks was just so much in addition to the previous redundancy. Not a dollar of it is now wanted, or has ever been needed. The result has been an excessive derangement of the monetary affairs of the country, and of all trade at home and abroad.

There is one of the great writers on political economy in 1868. He says, when we reduced our currency to $400,000,000, it was more than we needed, and was a redundancy of currency; and the $300,000,000 bank-notes added to it was just that much in excess of redundant currency, and was not then and never had been needed.

Now, I have but one or two remarks to make in reference to this. If we never needed more than $400,000,000 in this country, and did not even need that, will my friend from Missouri or my friend from Ohio tell me how you would have paid your Army? You would have had to pay money. How would you have kept your business going? Does not any man that knows anything, who can figure up two and three to be five, know that you cannot keep an army of one million men on $400,000,000, and also allow for the business of a country like this? If a man does not know that, he does not know anything about armies. If a man will sit down and make the calculation, in two minutes he will see that that amount of money would not have kept the Army paid and supplied; and yet this writer says we did not need it then, we never did need it, and do not need it now, and that it is all a redundancy of currency!

There is where my friend from Missouri gets his idea of contracting the currency, perhaps; and I expect our friend, the Senator from Ohio, gets some of his ideas there. I have not a word to say against our friend Walker, because he is a writer on political economy. If a man in this Senate should attack the theories of a writer on political economy, he would be set down by our contraction friends as wanting in knowledge. The political economists know all things, and facts amount to nothing. It is true Mr. Walker has written a great deal. He has made some strange figures and some strange illustrations. He says a leather cap is better than a paper cap, and so it is; that an iron plow is better than a wooden plow, and so it is; and many other things which are true. As a scientific man, he may be a success. As a political economist, in the light of our friends from Missouri and Ohio, doubtless he is a success; but as a political economist, writing for the benefit of mankind other than bankers and the rich and opulent, he is a failure. I do not know how extensive this thing of writing is in the Walker family. We have a book written by a person by the name of Walker other than Professor Walker—Dr. Mary Walker, of this city. She has written a work called Hit. I have not read the Hit; I do not know whether it is a hit or not; but if it teaches the theory of finance, and exhibits as much ignorance as there is in that Science of Wealth, by Professor Amasa Walker, about the necessities and wants of this country, I do not want to read it; I want to save myself that trouble. [Laughter.]

There is another great fact connected with this question which appears to be forgotten in this debate: that near the close of the war, and for a year or two after it, when our currency was so much more abundant in proportion to those using it, and before the South was fully opened to its use, the system of cash payments became almost universal in the interior of the country, and, in fact, in most business transactions everywhere. But the increased demand to supply the wants of the South, and in consequence of the system of contraction adopted by the then Secretary of the Treasury, forced the people to expand the credit policy in a corresponding ratio, or to curtail all the works of improvement and manufacturing which had been undertaken during this period. It was therefore the contraction and increased want of currency, and not a superabundance, which produced the necessity for running in debt, of which there is so much said on this floor. Why, sir, the people were never freer from debt in proportion to the business done than in 1865, at the close of the war, when Mr. McCulloch began his system of contraction, and at the very time eleven millions more of people were to be supplied.

Was it to be supposed that the activity and energy which the adequate supply of money had put into operation, and which was giving prosperity and happiness to the country, would suddenly dwarf itself to suit financial notions without a severe struggle? The inevitable result was an expedient to meet the consequent want, and credit was expanded. At the very moment, above all others, when an adequate supply was needed, the opposite course was adopted; and right here

lies the true cause of the late panic, which resulted from a money famine, and not from an excessive supply. But still, like Patrick Henry's cry of "beef, beef," the cry of the Senator from Missouri is "speculation, speculation!" Speculation in what, and where? The bulls and bears of New York use only a portion of the currency in their operations. In what kind of speculations, then, is it used? In railroad schemes and stocks. Admit it. Can railroads be built without labor and materials? Are not laborers by the thousands drawn from the cities and given employment and wages; do not our western farmers supply them with provisions? Does not Pennsylvania furnish the iron, and New Jersey the engines? The money paid for the construction is scattered through the country in a thousand rivulets; inventive genius is pressed forward into new fields of discovery; manufactories which have been lying idle are started into active operation; the farmer finds a home market for his produce at a good price, and his widening fields, expanding barn, and new dwelling show the effect. But we are told that the bubble will soon burst, and that those who hold the stock will find it worthless. It is true this often turns out to be the case in reference to railroad and other stocks; yet still the road is there, giving life and activity to a newly opened section; the profit to the iron manufacturers is still in their pockets or in their business; the enlarged farm, barn, and dwelling are still there, and the way to market open. The speculators may be injured, but the laborers and producers, as a whole, are not to any very great extent. I am no advocate of wild and reckless speculation, but the disastrous effect of speculation in stocks as a general rule falls on the right parties—those who indulge in it. But in his numerous allusions to this, as connected with the recent panic, the Senator from Missouri has failed to mention one very important fact, and one which he, so familiar with European affairs, certainly should not have overlooked. It is this: that a large portion—yes, a very large portion—of the railroad bonds thrown into market, to carry on the larger railroad schemes of this country, has been taken in Europe. And why taken in Europe? Because there they have money and we have not; and not only does the profit, that is the interest, go there on them and our Government bonds, but it is paid in gold, and keeps our country constantly drained of all the gold we can produce or obtain. And we are told that most of the loans now made in Europe are required to be paid in gold.

Let us take one example: the Northern Pacific Railroad scheme claimed to be wholly on a gold basis, as I understand. Jay Cooke, adopting the theory of these Senators, determined to secure those who held these bonds from all the evils and vicissitudes of a fluctuating currency. He determined to take "the great steamer of five thousand tons, and, defying the storm and angry sea, break his course" through the waves of a fluctuating money. We all know the sequel. Was this one of the sins of the greenbacks? I am rather inclined to believe it was for the lack of greenbacks, and not on account of their being in excess of the business wants of the country. No, sir; it was want of faith in the enterprise on which the bonds were predicated which caused them not to be taken in sufficient amounts to carry the enterprise through, and Jay Cooke not being enabled to procure the money, when the money was not in the country to be procured, that caused the explosion of the scheme. But perhaps I have not looked far enough into the Senator's model authorities, "Marco Polo" and "Amasa Walker," to see the connection between the cause and effect.

Mr. President, this cry of "speculation" and "gambling" is the veriest sophistry, coupled with an attempt to injure the credit of our country. We know, and these Senators know, that millions after millions of railroad bonds and State bonds are now held in Europe, which have been negotiated there in the last five or six years—I do not know the amount, but it is admitted to be several hundred millions—and yet Senators here are raising a cry of alarm, as though the heavens were about to fall, because we propose to increase the circulation a few millions, secured by the wealth and gold bonds of the Government. Come back to specie payment, they say, and the mania for speculation will be cured. Why, sir, are they trying to create an alarm about our money and the credit of our Government, both in Europe and at home, for the benefit of speculators, the very class they so roundly denounce? It would seem so indeed. Many ungenerous people even say so. I will not, however.

Speculators are ever ready, however, to catch up such words of alarm sounded in high places, and use them to their own advantage; and the junior Senator from Massachusetts [Mr. BOUTWELL] was right in saying "Such a course injures our credit more than our outstanding notes."

In this connection, and in order to show the correctness of my position and that the Senator from Missouri is mistaken so far as the facts go, I will introduce from the last report of the Comptroller of the Currency the following table, showing the condition of the New York banks for the past five years:

Condition of the New York banks for past five years.

Resources.	October 9, 1869.	October 8, 1870.	October 2, 1871.	October 3, 1872.	September 12, 1873.
	54 banks.	54 banks.	54 banks.	50 banks.	48 banks.
Loans on United States bonds on demand	$9,414,376 00	$9,012,964 10	$5,661,498 50	$3,180,738 35	$2,938,875 98
Other stocks, bonds, &c., on demand	48,650,888 51	53,809,602 90	70,185,331 18	53,409,624 68	57,916,139 34
Loans payable in gold				3,411,738 28	4,381,571 00
Loans, all other	100,237,639 30	105,146,590 54	122,806,969 10	123,183,624 55	133,924,310 47
Overdrafts	241,054 67	112,928 40	215,166 19	225,675 50	182,459 04
Bonds for circulation	41,762,450 00	40,856,550 00	38,337,600 00	34,312,100 00	33,870,100 00
Bonds for deposit	1,474,000 00	700,000 00	4,569,000 00	1,066,750 00	650,000 00
United States bonds on hand	5,011,500,00	6,569,750 00	5,684,050 00	4,310,700 00	3,332,400 00
Other stocks and bonds	6,514,988 07	6,990,261 39	5,949,250 03	4,400,397 21	4,552,797 40
Due from national banks	13,952,536 46	12,617,724 05	15,342,721 82	13,225,611 01	15,740,765 99
Due from State banks	1,806,730 94	2,472,529 36	3,173,841 40	3,232,205 48	2,077,286 04
Real estate, furniture, and fixtures	7,422,039 95	7,833,189 04	8,034,205 88	8,061,352 99	8,460,984 33
Current expenses	1,103,007 65	1,222,525 00	1,250,116 17	1,117,471 34	905,622 11
Premiums paid	805,508 82	921,615 25	1,232,601 10	804,339 19	706,179 69
Cash items	3,487,581 39	2,330,751 92	2,765,929 97	3,649,474 86	2,658,709 53
Clearing-house exchanges	78,555,991 12	66,527,335 53	75,858,034 12	89,971,391 35	67,897,740 69
National-bank notes	1,755,346 00	2,691,519 00	1,833,474 00	2,724,791 00	2,618,583 00
Fractional currency	611,751 74	331,076 76	294,857 09	293,901 62	338,394 32
Coin	1,792,740 73	1,607,742 91	1,121,869 40	920,767 37	1,063,200 55
Gold Treasury notes	16,897,900 00	7,533,900 00	7,590,260 00	5,454,580 00	13,522,610 00
Legal-tender notes	21,070,062 00	17,648,577 00	32,044,183 00	27,004,485 00	21,468,530 00
Three per cent. certificates	12,050,000 00	11,140,000 00	500,000 00	575,000 00	
United States certificates of deposit				5,855,000 00	10,810,000 00
Clearing-house certificates	15,945,000 00	17,015,000 00	17,895,000 00	5,585,000 00	
Total	390,563,093 35	375,152,133 15	422,345,958 95	395,976,719 78	389,486,310 48

Liabilities.	October 9, 1869.	October 8, 1870.	October 2, 1871.	October 3, 1872.	September 12, 1873.
	54 banks.	54 banks.	54 banks.	50 banks.	48 banks.
Capital stock	$73,218,100 00	$73,435,000 00	$73,235,000 00	$71,285,000 00	$70,235,000 00
Surplus fund	17,768,667 71	18,835,099 19	19,468,615 29	20,878,877 81	21,923,211 45
Undivided profits	10,964,277 76	10,039,181 42	10,388,683 51	11,049,162 30	11,210,470 03

Reserve, 24.4 per cent.

It will be seen by this that their condition at the commencement of the panic was not materially different from that of the previous years, and that the extended loans give no evidence of superinducing that extravagant speculation which has been charged on the currency as the cause of the panic. It makes it certain that we must look elsewhere for the cause than in the extraordinary drain of money for speculative purposes. The amount of the entire loans for each year, exclusive of the item of "other stocks, bonds, &c., on demand," as shown by this table, is as follows, using millions in round numbers only: in 1869, $109,000,000; in 1870, $114,000,000; in 1871, $128,000,000; in 1872, $130,000,000; in 1873, $140,000,000; the last being in excess of the previous year only ten millions, an amount certainly too small to indicate an unusual drain for vicious speculation.

If speculation in this time had increased to an extensive degree, the error cannot be charged to the character or the amount of our currency, any more than the "tulip mania" was chargeable to the kind or quantity of money in Holland during that strange excitement, or the Darien scheme to the money of Scotland. That there has been during the past seven years an extensive speculation in railroad stocks is certainly true. But when we learn that contraction of our circulating medium has kept pace almost with indebtedness for carrying out great enterprises, it is morally certain that it has not been owing to the amount of currency in circulation in this country. Add to this the debts contracted by States, cities, towns, &c., and this fact becomes too clear to need further proof.

If this mania for running in debt is traced to its true cause it will not be found in the character or amount of our currency. It will not be traced to its superabundance, but to its constant contraction during the last few years, during which our need for it has increased so rapidly. But it is said the panic has to a great extent shut us out from borrowing abroad. This is doubtless true, and in many respects it is well that it is so; but this very fact increases the necessity for more money at home. Let us have the means of borrowing at home, and thus keep the interest here, and stop the constant drain on our resources for the benefit of foreign money-lenders.

But, sir, the immense legitimate business put into operation through the influence of a greater amount of money must languish if all its resources are suddenly cut off. And what must be the further effect if, in addition, we now still further contract the currency? Does the Senator from Missouri want to see the iron manufactories, not only of Pennsylvania, but of Saint Louis, lying idle, and the owners and operators thrown out of employment? The venerable Senator from Pennsylvania understands too well the interests of his own State to advocate such a destructive policy as this.

Sir, turn this matter as we will, and look at it from any side whatever, and it does present the appearance of being a stupendous scheme of the money-holders to seize this opportunity of placing under their control the vast industries of the nation. Therefore I warn Senators against pushing too far the great conflict now going on between capital and labor. It is not our duty to legislate exclusively for either, but as far as possible to try and harmonize the interest of the two. Capital rests upon labor; but when it attempts to press too heavily upon that which supports it in a free republic, the slumbering volcano, whose mutterings are beginning already to be heard, will burst forth with a fury that no legislation can quell. Both should be equally fostered and both equally protected.

And here let me quote from a Michigan authority, the Berrien County Record, to show the feeling in some parts of that section on this subject; and I quote this, not because it is from any particular paper, but because the language is a true statement of the case:

> It is a lamentable fact that the financial question is leading to a conflict between capital and labor, money and production. The capitalists, the possessors of money, who stand isolated from the laboring and producing classes, are getting themselves a hostile array to oppose with might and main every effort to increase the currency of this country to something like an equal ratio with other commercial nations. The East, especially the Wall streeters and banks, want no more money. They prefer to have the volume of currency limited so that combinations may be entered into and the money cornered. Every time a few millions of the currency are locked up in the East, the West suffers, the products of the West decline in price, and the western producer suffers, while the eastern capitalist makes money. The time has come when this state of affairs should and must be remedied. The interests of the South and West are identical on this point, and unless the East will yield to that which is just and right, the result cannot be otherwise than disastrous in the end. This the money-lenders of New York will learn, but perhaps not until it is too late.
>
> It is folly for contraction and specie-payment Senators and Representatives in Congress to be talking constantly about the evils of an irredeemable currency. The people have tried it, and are perfectly satisfied with it. They have been suffering, as were the entire business interests of the West and South, from the gradual but certain contraction of the currency which has been in progress since the close of the war. The people have and do fully realize that their most prosperous times were when currency was the most plentiful. It is true it was not so good for the money-lender and the capitalist, but for the laborer, the manufacturer, and the producer, for three-fourths of the people of the entire country, it was far better than it is to-day.

What, Mr. President, does this hue and cry against our greenbacks mean? What is intended by branding them with such epithets as "irredeemable currency," "debased paper," "disgrace to the nation," "lie on its face," &c.? What do Senators, even those who helped to give origin to this money, mean by comparing it to confederate scrip, French *assignats*, and the Chinese money of the thirteenth century? Why, sir, one would almost be led to think we have a gold-room here in this Senate Chamber. One would think, from their frantic declarations against depreciated paper and speculation, that a John Law was at the head of our financial affairs, and that we were on the point of starting him on another Mississippi scheme. Sir, there is no parallel between the two. His paper was not based upon a secure foundation, hence in no sense similar to our money, or that which we now propose, except that it was stamped on paper; but in one particular it was similar to the plans proposed by our specie-payment advocates—it was to be paid in gold on demand; but when the alarm came among the people, and they demanded their gold, and it was not there with which to redeem the notes, of course a crash came, the whole thing went up in a balloon, and the people of France were the sufferers. We have had experiences even in this country of bank-notes being based on gold, when the banker did not have the gold, nor did he ever expect to have it; and when the banks failed to pay, the people who held the notes were the sufferers—a state of things which never can exist under our present system while our Government, with all its wealth and resources, stands at the back of our currency, unless these gentlemen succeed in destroying the credit of the Government by their attempt to bind it hand and foot and turn it over to the money-changers. Their success in either proposition, of at once returning to specie payments or redeeming the greenbacks with a 5 per cent. gold-bearing bond, as proposed by the chairman of the Finance Committee, would accomplish this result. The idea of returning to specie payments at this time, with the amount of specie in this country, is too absurd to admit of argument.

But, sir, in order to show these gentlemen—but they do not need to be shown, however, because they know it themselves—that it is impossible to return to specie payments at once or within any short time, it is but necessary to take the report of the Secretary of the Treasury. With his annual report is communicated that of the Director of the Mint, who says:

> It is true that the mines of the world produce annually about one hundred millions of gold; but in considering this as a stock to be drawn upon for coinage, it must be remembered that the consumption of gold in the arts has largely increased during the last twenty-three years, and now approximates to about twenty-five millions per annum.

That leaves about $75,000,000 per annum of gold to go into coin as a circulating medium. He further says:

> The coin, except as to the Pacific-coast States and Territories, being as a general thing in the Treasury and banks, the present time is a favorable one for estimating the amount of gold and silver coin in the country. From the most reliable data obtainable, the gold coin is estimated at $135,000,000, and subsidiary silver $5,000,000—total $140,000,000.

Making the total amount of coin in this country, of gold and silver, $140,000,000. With $742,000,000 of paper to be redeemed, with interest to be paid upon about $400,000,000 of railroad and other securities in Europe, with interest to be paid amounting to $60,000,000 per annum by this Government to foreign countries, with a drain of from fifty to sixty millions of our gold for traveling expenses of travelers abroad, and with a production in the country not beyond $60,000,000, I want some mathematician to tell me how we are to return to specie payments. If he can, I shall be obliged to him. While the balance of trade is against us, while we are paying about $50,000,000 of gold to Cuba alone, and export there of other articles but about $15,000,000, who will tell me how we can resume, with that flow of gold from this country, at this time? I hope some good genius will arise and dictate to us the manner in which it is to be done, because none of us can now devise the plan.

Sir, it would seem, if we judge by the arguments and plans of the eastern bankers and brokers, that there is behind this a scheme to fix upon the necks of the people an interest-bearing debt of $400,000,000, in order to drain the public Treasury of twenty millions annually in gold for the benefit of those who have capital to buy up the greenbacks. Why does every scheme proposed by those in favor of contraction contain some plan for converting the greenbacks into interest-bearing bonds, free from taxation? Somehow these two propositions, in some shape, are found in every plan they bring forward.

Sir, the scheme is a grand, and I might say startling one, that may well arouse the people of the country. Withdraw the greenbacks by converting them into these interest-bearing gold bonds, and thus add twenty millions annually to the profits of the money-lenders, and not reissue the greenbacks, thereby contracting to the $400,000,000. Then allow them to make the additional profit by banking on them. Require all the country banks to pool their gold reserves in New York, and the whole money-power of the Union is in their hands; and, having drained the Treasury of its gold reserves, there is no check left upon the power which will be centered at New York. The interior banks and the public Treasury itself will be at their mercy.

Mr. President, in order to satisfy the Senator from Missouri that other men of equal experience with himself entertain views somewhat different from his own, I will read some extracts from a letter of Mr. Isaac Buchanan, in response to an article published last fall in the Chicago Inter-Ocean, attributing to Mr. Buchanan the honor of having first suggested our present financial system to Mr. Salmon P. Chase, then Secretary of the Treasury. This letter is published in the Spectator, a newspaper published at Hamilton, province of Ontario, Canada, November 26, 1873, in which the contractionists will find something from a Canada stand-point worthy of consideration.

Mr. Buchanan quotes from a communication in the Evening Telegraph, as follows:

> In the case of England the above simply means that with about $350,000,000 of specie, and over $5,000,000,000 of bank and other credits, she has undertaken to

make the larger volume interchangeable at pleasure with that portion of the smaller—about $116,000,000—which is within the control of the banks, and that a small abstraction from the amount will render it entirely impossible to settle even the trifling portion of the $5,000,000,000, which is at any one time called for in days of financial quiet.

In the struggle to retain this trifling amount of specie, immense interests are crippled or entirely sacrificed, large numbers of workmen are eventually thrown out of employment, and society is disturbed in its relations, the rich being made richer and the poor poorer. These terrible things are done because mankind still barbarously worship the golden idol.

The reformers in England have for half a century been endeavoring to improve the condition of the masses, but not knowing the cause of the disease, their remedies have utterly failed to produce a cure. If the British government would take into its own hands, where it belongs, the issue of the currency, furnish from time to time such a volume as the business of the country demanded, and make it interchangeable with consols, England might one day reach stable financial and industrial ground. Circulating notes which would cancel any debt as they moved, would cause a curtailment of credit, and crises having nothing to start from or feed upon, would be an utter impossibility. Then might the poor and the moderately rich hope to rise; but such crises as that of 1868, from which Great Britain took five years to recover, if often repeated in the future, will render such improvements out of the question. Let our own people learn by the lesson which is now being given to them abroad—

Referring to this country—

as they have from that at home, and all will soon be well with us.

Mr. Buchanan proceeds to say:

I wrote the same views as this letter contains in the New York newspapers in 1837 against "A Hard-Money Bigot," I being then president of the Board of Toronto, and having arrived from England at New York in the midst of the money panic. In May, 1837, I was mainly instrumental in getting the Upper Canada Parliament called together at Toronto to save this country from the effects of the specie suspension in United States, and my evidence can be seen in the journal of the assembly at that time. You know I differ from the original paper-money or "taxation-notes" advocates in England by my insisting that the legal tender should have gold as its security though not as its standard. And the details of my views were expressed as follows at the international banquet given at Hamilton on 1st August last:

"No conspiracy against humanity was ever so Machiavellian, or so fatal, as the aristocratic class interest and hard-money conspiracy against mankind in England has been. England had paper money forced on her at the end of last century by the necessities of the continental war, and through it she triumphed not only in her wars but in her far greater achievement of securing the prosperity and happiness of her own domestic industry, or, in other words, of the great mass of her people. It was seen that the question of labor and the question of money are one question; the solution of the one being the solution of the other; plentiful, and therefore cheap money, being a convertible term for plentiful and well-paid employment; but the people in those days had no legislative power to guard this great blessing even if they had the intelligence, which we may fairly infer they had not, seeing that even in the present day, after the working classes have got votes, they seem humbugged into the idea that the possession of the power to reform is reform, and they do not exercise the power given them by their votes to do away with class legislation, the opposition to which cost hundreds of their fathers their lives on the scaffold and at the block, ten years before the reform bill passed; and the operation of which class legislation has caused, and still causes, the degradation and misery of the proletarians it has created, and of the better class who have been ruined by its hard money and contraction of the currency."

Sir, here we have evidence of past experience in England, so far as the effects upon all save the aristocracy is concerned, and as we will have in this country upon all but money-holders, should the Senators succeed in their schemes of oppression.

But let us return once more to the speech of the honorable Senator from Missouri. He tells us that increase will injure the poor men and laboring classes of this country; because they have $950,000,000 deposited in the savings and other banks, and two hundred and fifty millions of wages owing to them, and if you increase the currency you will depreciate it and cause them to lose to the amount of the depreciation.

Then the poor are not so poor after all, as they are generally thought to be, as they have on deposit three times as much money as has been spent annually in the entire Union for construction by all the railroads which have been built. They have, if the Senator is correct, more money on deposit than there is money in the United States; and if they should all demand their money now, there is not enough in the whole country to pay it. This is certainly no indication of great distress; but perhaps it is one of the "pernicious influences" of the "irredeemable currency" we have been using for the last eleven years. The Senator should be careful how he handles his weapons, for this, if correct, is more against his theory than for it. According to his theory it was an excess of paper currency that either directly or indirectly caused the panic; then all this hoarding must have been done during that period of excess; it must have been done during that period of wild speculation of which he speaks. If this is so, then such a condition of monetary affairs certainly is not oppressive to the poor and the laboring class. It is also strange that if an excess runs the money all to the eastern cities, only to be used in gambling and speculation, there should have been such opportunities for the laboring classes throughout the country to accumulate such a large amount. Somehow the Senator's arguments and theories do not appear to fit together very well; and the few statements of fact he presents agree still less with them.

What are the facts in the case? Look at New York to-day. While a few are giving grand receptions and sumptuous entertainments, surrounded by all the luxuries of wealth, it requires all the energies of the benevolent to feed the hungry thousands who are daily pleading for bread, with emaciated forms and sunken eyes, which tell with fearful reality the tale of their sufferings. I am glad to know that the people of that city are responding willingly to this appeal for relief. Even in my own city I learn there is also much destitution and suffering, which calls for the assistance of our citizens, and to which are they quietly responding. And such is the case in all our larger cities to a greater or less extent. The want of money for the business of the country had strained credit until the crash came; a large portion of the productive operations ceased, and the employés were thrown out of employment, and hence the present distress. Is not this a plain statement of facts, known even to the boys on the street? But the Senator from Missouri tells us they have money hoarded by the millions. I presume this will be good news to them, and that they will be asking for some of it as soon as they read the Senator's speech.

Let this suffice in regard to his theories and arguments. The show of oratory and well-rounded sentences fail to hide their fallaciousness from view. Prick the bubble anywhere with reason or fact, and it bursts into air. With one hand he has reared a huge man of straw, and with the other he has destroyed it.

Let us therefore turn for a moment to the question before us, lest we forget it in this butterfly chase. No one is here, Mr. President, asking the Government to set in motion her presses to grind out an unlimited quantity of "irredeemable paper." No one is here asking for an issue of currency which is not well secured, and by a gold bond backing it at that. No matter what propositions may have heretofore been presented, nor how good nor how bad they were, there is nothing of the kind now before us. The simple question in substance is this: shall we increase to a moderate degree the present bank currency under the present banking law, especially in those States which have not received their proportion according to wealth and population? Or, to change the form but not the substance, it is this: shall simple justice and equality be extended to the Western and Southern States; shall the farmers, mechanics, business men, and producers of the West be reduced to the condition of hewers of wood and drawers of water for eastern capitalists; shall they be forced to give their labor, toil, and sweat to eastern money-lenders for interest? This, Mr. President, is the real question before us. Twist it, turn it, and manipulate it as you will, this is the real point at issue.

As an evidence of the monopoly in this matter, and of the injustice which is being done the West and South, I present the following table from the last report of the Comptroller of the Currency, which exhibits the apportionment of the whole amount of circulation authorized by law ($354,000,000) to the different States and Territories, upon the basis of population and wealth as given in the census returns of 1870, together with the amount outstanding and authorized, and the excess and deficiency:

SOUTHERN AND SOUTHWESTERN STATES.

States and Territories.	Apportionment on population.	Apportionment on wealth.	Aggregate apportionment.	Outstanding and authorized circulation.	Excess.	Deficiency.
Dist. Columbia	$604,560	$743,400	$1,347,960	$1,530,091	$182,131	.....

WESTERN STATES.

Ohio	$12,234,726	$13,151,100	$25,385,826	$23,876,370		$1,509,456
Indiana	7,714,871	7,469,400	15,184,271	14,706,415		477,856
Illinois	11,659,230	12,496,200	24,155,430	17,824,209		6,331,221
Michigan	5,435,357	4,230,300	9,665,657	7,485,043		2,180,614
Wisconsin	4,841,403	4,141,800	8,983,203	3,253,316		5,729,887
Iowa	5,481,081	4,230,300	9,711,381	5,674,385		4,036,996
Minnesota	2,018,445	1,345,200	3,363,645	3,330,414		33,231
Kansas	1,672,754	1,115,100	2,787,854	1,825,496		962,358
Nebraska	564,592	407,100	971,692	809,500		162,192
Total	51,622,459	48,586,500	100,208,959	78,785,148		21,423,811

A single glance at this table is sufficient to show the gross injustice and unfairness with which the Western and Southern States are being treated in this matter. The Eastern States, New York, and New Jersey, together, have received one hundred and eighty-two millions, or considerably over half the amount to be distributed to the entire Union. Massachusetts was entitled to but four-fifths of the sum apportioned to Illinois, yet her excess, over the amount she was entitled to under the law alone, amounts to nearly three times the amount received by Illinois; and Rhode Island, the smallest of the group, receives seven times as much as North Carolina. Is it any wonder, then, that these sections cry out against such inequality and such injustice? If you of the Eastern and Middle States need what you have, we do not desire to take it away from you; but we do ask you to deal with us with equal generosity.

But in order to show still further the extent of this injustice, especially in its bearing on my own State, I will introduce here some other statistics from the report of the Commissioner of Internal Revenue for 1873, showing the amount of internal revenue received from the New England States as compared with that received from Illinois.

Receipts of internal revenue for 1873.

Maine	$212,893
New Hampshire	324,089
Vermont	67,475
Massachusetts	3,669,950
Rhode Island	322,701
Connecticut	871,871
Total	5,468,979
Illinois	16,470,208

From this it will be seen that Illinois pays three times as much internal revenue as all New England. But look at the table of the money distribution and see how the two compare: New England $110,489,966, while Illinois receives but $17,824,209, just one million and a quarter more than the annual amount of her internal revenue.

In order to show the relation of taxation to the amount of circulation, I give the following statement of the taxes the people have annually to pay:

State tax, 1870	$68,051,208
County tax, 1870	77,746,115
Town and city tax, 1870	134,794,108
Total	280,591,521
Customs, 1873	188,089,592
Internal revenue, 1873	113,729,314
Tax on circulation of national banks	6,830,037
Marine-hospital tax	333,003
Steamboat fees	259,092
Direct tax	315,254
Tax on seal-skins	252,181
Grand total	590,399,924

The total active circulation was, according to my former estimate, $669,000,000, showing that there are but $78,600,000 more of circulation than the annual tax which has to be paid. And this, Mr. President, is not done through the clearing-house mentioned by Senators, but is paid directly by the people to the various collectors. Will any one tell me that there is a redundancy of money, and that business would prosper with less, when it requires nearly the whole of the volume in circulation to be turned over to the tax-gatherers annually, and much of it locked up in the different State treasuries one-fourth of the year?

Sir, our western country is indebted largely to eastern capitalists.

In the census report of 1870, collated by Mr. Walker, on page 5, this statement is made: "Hundreds of millions are owned in the East, in the form of mortgages on the real estate of the West." Not a few millions, but hundreds of millions. You do not find anywhere in this report that the East owes the West or the South anything; but the South and the West are indebted to the money-lenders of the East in hundreds of millions of dollars. When we Senators from the West appeal to the Senate in behalf of our constituents, and ask you not to reduce the volume of the currency to a gold standard at once, and reduce the value of property 10 or 11 per cent. by bringing things to a gold standard, for if you do the hundreds of millions we owe to the East must be paid on the gold standard out of our property, on which it was loaned at a currency standard, you persist in saying that it is right that this should be done and you insist on crushing and grinding the very life out of the western people, because they are debtors to those in the East who have money to loan; and I am sorry to say that foremost in the van leading this raid on the debtors of the West are the Senators from Missouri and Ohio, both representing western constituencies; but I do not believe their constituents can agree with them—I am sure they cannot. Why is it that representatives forget the interests of their own section and stand up here as the advocates of the gold-brokers and money-lenders and sharks, the same class of men whose tables Christ turned over, and whom he lashed out of the temple at Jerusalem?

If we can have no more money than we require to pay our taxes how are we to improve our country and produce sufficient of profits on our present capital to pay these debts? Will you shrink the value of our property to a gold basis, and then by forced sales impoverish us? This would only be worthy of a Shylock indeed; and it is not in harmony with our present civilization.

Turn for a moment to another view of this many-sided question, and see whether it indicates an excess in the amount of our currency. When Senators speak of clearing-houses and bank-checks, do they forget that this is but another form of money which marks the business wants of a medium of exchange? Take, for instance, the London clearing-house. The amount of checks passing through this for the year ending April 30, 1873, was $30,000,000,000, or nearly $100,000,000 per day. Check this for three days, and what would have been the effect upon the business of that city? The amount of currency exchange alone which passed through the New York clearing-house for the year 1873 was $33,972,773,942, or $111,022,137 per day, exceeding even the boasted business transactions of the clearing-house of the world; yet the average daily balances, paid in settlements of clearings, were but $3,765,921, or less than 4 per cent. of the amounts which changed hands. Does this indicate that England needs more money than this country? Suppose this mill should cease grinding for a few days, what would be the consequence to the business of New York? Suppose that money should be required in each transaction, do you think there would long be a surplus in that market? I am rather inclined to think petitions from that city would roll in here in such a flood that the Clerk's desk would be overwhelmed with them. As money is getting to be a drug there, suppose the Senator from Missouri tries his hand awhile at thundering against the bank-checks, and thus relieve that overburdened city of its surplus. These checks are but paper based chiefly on faith in the drawer, and also on that irredeemable currency the Senator from Missouri so much dislikes. Suppose he withdraws them, or portion of them, from circulation. If this should be done, how much money do you think would be required for that city alone? Why, sir, the entire circulation of the United States would scarcely furnish a supply; and even with this amount we must suppose a complete return to the original hands every six days. The money circulation of the city, it is admitted, would not run the business for one day. But, by means of these checks four dollars in money are made to perform the work of one hundred. Now pass from the metropolis to the country and see how the case is there. No clearing-house is provided there to supply the place of money by means of bank-checks. When a dollar is paid, it must be paid in money; and business being done in rural districts on this basis, who can say there is enough currency to properly act as a medium of exchange?

Is it not strange that every argument used here as to the excess of our currency is made from a New York stand-point, and from a clearing-house stand-point, although clearing-houses only exist in the large cities, and actual money is required in every small town and rural district? It shows that when men get to the Senate of the United States they forget the laboring man, the muscle, the bone, the sinew that makes the wealth of the country, in the advocacy of the interests of moneyed men. Some gentlemen seem to imagine themselves the representatives here of clearing-houses or banking institutions alone. If I were to tell them that bank-checks could not be passed through a clearing-house in the little city of Carbondale, where I used to live, they would open their eyes in amazement at learning that I represented anybody except the clearing-house interest of Chicago. They should remember that business is not done in this country as it is in London; it is not done all over the country as it is in New York; the people require a medium of exchange, money with which to transact their business.

Let us look at this subject, Mr. President, in that broad and liberal view the great expanse of our country, its vast resources and rapid increase and development, require; and here let me quote some tables

and comments from the recent speech of my friend from Michigan, [Mr. FERRY.]

I now submit a table of population and increase or decrease for respective years, being the latest comparison officially obtainable:

Countries.	Date.	Population.	Date.	Population.	Gain or loss.	Per cent.
Great Britain	1863	29,800,000	1871	31,800,000	Gain, 2,000,000	.7
France	1863	37,380,000	1872	36,100,000	Loss, 1,280,000	.35
Germany	1863	35,430,000	1871	41,060,000	Gain, 5,630,000	1.6
United States	1860	31,443,321	1870	38,555,983	Gain, 7,112,662	2.3

Not to be unjust in this tabulated comparison of European countries in the percentage of gain or loss given here for a less number of years than a decade of the United States, I add the proportion to make up for the deficient years, and find Great Britain's increase of population for ten years to be .8 per cent.; the loss of France 4.4 per cent.; the gain of Germany nearly 2 per cent., while that of the United States is 2.3 per cent.

Let me now give a table of area, railroads, and telegraph lines, in miles, of the same countries, respectively, for 1873:

Countries.	Area.	Railroads.	Telegraph lines.
	Sq. miles.	*Miles.*	*Miles.*
Great Britain	121,111	15,497	22,000
France	204,091	10,954	26,226
Germany	208,619	13,095	22,076
United States	3,611,844	71,109	70,511

With this relative extent of territory of the several countries, the vaster area of the United States in comparison is illustrated with significant force in the great system of railways and electric wires creeping apace with the development of the territorial and commercial demands of the nation. With 6,427 miles of road constructed in 1872, and 4,005 miles in 1873, in these two years building nearly as much as the whole railway system of France, and but little less than the whole of Germany, the financial wants of a nation like this find no adequate measure by the comparative needs of compact nations, covering less than one-eighteenth part the territory of the United States.

With such rapidly increasing wealth as the late census has revealed, and the constant increase of our population in far greater ratio than that of European nations; with the multiplied enterprises necessitated by such development, this growth must either be facilitated by sufficient means, or be dwarfed by a policy looking more to contraction than to expansion of the riches and prosperity of the nation. Every intelligent observer knows well that the broader the country the greater the time consumed in making exchanges, and of necessity the greater volume of circulation needed to carry on the same total of labor and business.

Let us also remember in this connection that the latent energies of the South are yet to be developed to that extent of which they are capable, and which a former mistaken policy never brought to light. The mountain streams of Virginia, West Virginia, and Tennessee furnish a power which, with a liberal policy, will give employment to thousands of hands and immense capital, and open up a new market for the products of southern plantations. The vast coal fields of Indiana and Illinois contain an unlimited store-house of power which we were just beginning to develop when the panic came and crippled this new industry which promises such bright hopes for our future. The vast iron resources of Missouri are as yet but just beginning to be developed. Inventive genius has not yet exhausted its power. Give it an opportunity of developing its resources, and the time is not far distant when by new appliances and more perfect machinery, we will no longer have to look abroad for those things which can be produced at home. But to do this capital must have the means of converting itself from one form into another; to do this there must be an ample medium of exchange which can be readily and conveniently exchanged and transferred.

Let us remember that the productive soil of the West and South assists labor to rapidly increase the material wealth of that section, and that it needs a corresponding increase in the medium of exchange.

Let us remember that the South is just entering upon a new life, and is rapidly waking up to a knowledge of her vast resources; and that almost the entire amount of her medium of exchange for this work has yet to be supplied.

Let us remember that the four million freedmen who are just starting into life as citizens also need the sinews of business in the battle of life.

When we take all these facts into consideration, shall we halt in the line of duty for a few moneyed men and capitalists whose vessels are already sufficiently ballasted to outride the severest financial storm?

Carry out the theory of the contractionists and what must be the inevitable result? Every enterprise and industry must be dwarfed in like proportion. The busy hum of the spindle will cease its sound in many a mill which now gives employment to hundreds of active hands, and supplies the comforts of life to many a happy home. The bright blaze of many an iron foundery, which gives life and cheerfulness to the grand scenery along the streams of Pennsylvania, will cease to gild the night with its rays. And the same industry in my own city and that of the Senator from Missouri, which has been so rapidly increasing of late, will be crippled, and hundreds who now find employment there will be compelled to seek a home elsewhere for want of work. The undeveloped resources of the South and West, which we have just begun to appreciate, will rest in abeyance until a wiser policy shall bring them into use.

But I need not describe in detail the depressing effects which must follow if we adopt the views of the contractionists. We will bequeath to our descendants a heavy burden of debts and taxes, with the means of paying them dwarfed, and the vigor and energy of business cramped and hampered for want of a sufficient medium of exchange.

I will here read an article from the Inter-Ocean, of February 28, 1874:

The republican party, which has fought and won so many political battles, which has performed so grand a service to the country, is to-day passing through the most critical period of its history. It has always been emphatically the party of the people. It was born to protest against oppression. It lived to grind to powder the most insolent oligarchy that ever antagonized the theory and practice of equal political rights. It was but natural that a free and intelligent people should flock to the standard of an organization which did not hesitate to offer as a sacrifice to the spirit of exact justice to all, the lives and fortunes of all. The call of the masses of the people to the republican party now is as pronounced, as urgent, and as imperative as it was in 1861, when Senators stalked out of the capital, breathing treason, and hurried southward to inaugurate the crusade of rebellion and carnage. Nor are the principles underlying the two contests materially different. Slavery is only another name for greed. The black man was not held in bondage for the mere pleasure of the ownership, but that *the white man might subsist, in idleness, off his labor*. On the strength of this supreme greed of a few thousand owners of black men, all the millions of the white men of the South were wrought up to a fury of passion, pressing them forward to the sacrifice of their lives and fortunes on the altar of a false cause.

What is the situation to-day? The same battle is being waged in a different field, with different weapons. In the national Senate Chamber a bitter contest is in progress by the representatives of the moneyed aristocracy, on the one hand, and by the representatives of the masses of the people on the other. The proposition on the part of the capitalists is to grasp and firmly hold the largest possible percentage of the profits of all the labor of the country. They want high rates of interest whereby they may tax traffic, and low rates of wages whereby they may tax labor. By contracting the currency they secure both of these objects, for they force traffic to supplicate the banks for loans, and drive labor to beggary; and as the necessities of merchants render more pressing their importunities for loans, the rate of interest is advanced to cover the increased risk, and as the demand for labor declines the price also declines.

On the other hand, the proposition of the people, those who live by labor and traffic, is to expand the volume of currency, thereby cheapening money, and so stimulating manufacturing and other industries into such activity as will insure employment to the laboring classes at remunerative rates of wages. No contest was ever more clearly defined. At no time in the history of the country, not even in the instance of the rebellion, has it been more evident that the interests of the many clash with those of the few.

Mr. President, I feel it my duty, in behalf of my constituents and what I believe to be the best interest of the whole country, to raise my voice against such a course.

And in order that we may relieve, so far as we can, the present financial distress, I have voted, and still shall vote, for the proposed increase of $46,000,000 of bank currency. Not because I think it adequate to the wants of the country, but because it offers a partial remedy; and if it is the best we can obtain, I feel it to be my duty to aid, as far as I can, in granting relief.

I believe the wisest plan would be to remove the present restriction on national banking, so far as relates to the amount of circulation, and make it free to all alike who comply with the conditions. In other words, wipe out that feature which now makes it a monopoly, and renders one portion of the country dependent upon the other for its currency.

Sir, this is the only true and equitable ground; this is the only plan by which we can place all on an equal footing in regard to this matter.

While it would leave to wealth, capital, and financial ability all their rights and all their legitimate advantages, it would give to the humbler classes the opportunity to enter into competition on equal footing, so far as the privilege is concerned. It gives to them the power to combine and protect themselves against being forced to give all their hard earnings to the money-lenders for interest.

Sir, I would make it free that the farmers, where they desire it, may combine and establish banks for their own benefit, and thus assist them in moving their products, or aid them to hold them in times of depression and low prices. As it is now, the receivers and purchasers alone control this matter. I would give to the farmers and producers the means to counteract this influence, and protect themselves against this power.

I would give, in this way, to the mechanics and business men of small capital the same means to guard their interest and assist their operations.

And why should we not do this? It is simple justice, it is right; and there is no just ground for withholding it from them.

If free banking is not dangerous with the greenbacks retired, as the gentlemen who disagree with us say it is not, how can it be any more dangerous with them under the present law? Greenbacks form a limit, and business another, and these two will limit and restrict the circulation in the country. With the bond of the Government deposited and 90 per cent. of it given in circulation, with a $100 gold-bearing bond at the back of ninety dollars of currency, if our Government is worth what we estimate it, if it is the Government that we pretend it is, if it is the responsible Government that we say it is, if this is the energetic people, the industrious people, the people of honor, as we claim in this country, when you give them the opportunity with their honor, their will, and the means and all combined to secure the payment of this currency, I ask where the danger is in a currency of this kind? If our Government is not good, then our currency is not good; if our Government is good our currency is good; and with a Government so cherished, so endeared to the people of this

land that they would spend billions upon billions of money and rivers and rivers of the best blood to preserve it, I ask you where the man is who will stand up here and curse it and say it is not responsible for the circulation of the country? Why, sir, men who have by their attacks indirectly assailed the character and credit of this American Government have sinned against the enlightenment of this age.

But Senators still cry against pledges unfulfilled. Why, sir, the country does not ask you to fulfill them now in our present condition. I have heard of no one that has asked for these pledges to be fulfilled now, except a few Senators on this floor have asked it, and a few bankers and moneyed men, when they found that Senators would advocate it, sent in a petition here, said to represent $500,000,000, not so many honest citizens, as every one has a right to petition, but dollars. Well, I like that. I like in a free country to see gentlemen get up and say, "We represent so many dollars." Under the Constitution every citizen of the United States has an equal right to petition the Congress of the United States, no matter whether he has a dollar or whether he has not. On this theory, I suppose, if a man was going to vote, he would be asked how much money he had; if he petitions Congress, how much money have you got? A petition representing money weighs more with certain Senators than a petition representing muscle, industry, and brains. Well, sir, if we have got to that point in this country, that petitions are weighed by the amount of money they represent, I think John Randolph's expression about the man who owned a jackass where it required $250 of property to allow a man to vote would be applicable. Said he, "Suppose the jackass died before the election, you could not vote, could you?" "O, no." "Which would vote, then, you or the jackass?" That would be the question; which is petitioning here, the money or the man? If you present a petition representing money, and you do not pay attention to one that does not represent money but do to the one that does, it is a marvelous affair, it is a wonder it had not been framed and a resolution passed to hang it upon the wall of the Senate for future ages to gaze upon and see how much money was represented in a petition at one time to ask the passage of a law giving them greater power to continue their extortion upon the people. Would not that read well in the future history of this great Republic? And yet certain gentlemen seem to think that money and wealth is all that has a right to be legislated for in this Chamber. Is its influence greater than brains, than muscle, than honesty, than industry, than justice—ay sir, than all things else? If this is to be our future policy, may God help the Republic.

Sir, in our boasted Republic of equal rights, as a principle which is the very mainspring of our life and prosperity as a nation, I desire to see that equality applied to that which is the life of our business and commerce—the currency, the money of our country. The principle of equality in man, and the same principle of equality in rights to do business in this land, should apply to all its citizens.

I have, sir, with others on this floor been contending for the masses, against the concentration of the monetary power of the country in the hands of the few. With them I have used whatever power and influence I have to break the strength of the moneyed monopoly which mistaken legislation has already made, and which the contraction policy would further strengthen. With them I have battled against that policy which would swell the volume of our national interest-bearing debt, and deprive the people of a currency which they approve and with which they are satisfied.

Sir, the people know their wants. They also know their rights; and if we prove recreant to our duty they will take the matter in their own hands and put those here who will strike down the feature of monopoly now connected with national banking; and if national banks must continue, they can only do so by removing the restrictive monopoly feature. If that is not done, they must go down, and the defenders of their grasp upon the people must go down with them.

Railroad Monopoly.

SPEECH OF HON. W. S. HOLMAN,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

March 17, 1874.

The House having under consideration the bill (H. R. No. 1385) entitled "An act to regulate commerce by railroads in the United States"—

Mr. HOLMAN said:

Mr. SPEAKER: I have listened with great pleasure to the very interesting and ingenious argument of the gentleman from New Jersey, [Mr SCUDDER.] But I think, sir, the arguments submitted, especially in the concluding remarks, are much more specious than sound. There is always a disposition, in discussing a proposition involving even remotely constitutional powers, to indulge in brilliant generalizations. Gentlemen are reluctant to come down to the simple, practical details of a measure; It is so much easier to indulge in general terms and pleasant and eloquent abstractions than to deal with the dry matter of fact.

I do not agree with the gentleman from New Jersey upon the main questions involved in this bill. I wish to call the attention of the gentleman and of the House to the real question. What is the scope and purpose of this bill? The answer to this inquiry, I think, will show how absolutely irrelevant are most of the arguments against the pending measure that gentlemen have advanced.

If it were true, as the gentleman has argued, that this bill proposed to delegate to the commissioners referred to in the bill legislative power, there would be but one answer: "It cannot be done; legislative power is vested in Congress by the Constitution; it is a power that admits of no delegation." But, sir, is there any approach to a delegation of power here? Is there in this bill anything more than the prescription of certain principles of law and rules of evidence that shall prevail in the courts of justice in litigation between the citizen and railroad companies engaged in the commerce between the States of the Union? If there were anything more than this involved in this bill I should be apprehensive that we were trenching upon doubtful powers. But let us take up this bill and look at its provisions, and I think it will be apparent how irrelevant the eloquent speeches on constitutional power, which gentlemen have indulged in, are to the measure before the House. Let me read the few lines that involve the real gist of this measure, that express the real substance of the bill:

That each and every line of railroad extending into or through two or more States, and employed in carrying freight or passengers between points or places in different States, and whether owned or operated by one company, corporation, or person, and known by one name, or owned and operated by several companies, corporations, or persons, and known by several different names, shall be regarded as employed in commerce among the several States.

That no such company, corporation, or person so engaged in operating a line of railroad into or through two or more States, as aforesaid, shall charge, collect, demand, or receive more than *a fair and reasonable rate of toll or compensation* for the transportation of freight of any kind, or of passengers, or for the use or transportation of any railroad-car upon its track, between places in different States.

This is the fundamental provision of the bill, that railroads engaged by combination of lines in the interstate commerce shall transport passengers and freight at "*a fair and reasonable rate.*" Can gentlemen question the soundness of that proposition? The bill merely proposes that Congress shall adopt, with reference to common carriers in interstate commerce, the principle of the common law; nothing more, nothing less. The common carrier is bound to transport at fair and reasonable rates. The regulation of commerce among the States—*interstate commerce*—would seem to be exclusively within the control of Congress. If regulated at all, it would seem that it must be done by Congress. Among the powers delegated by the States to the Federal Government and vested in Congress is the power—

To regulate commerce with foreign nations, and among the several States, and with the Indian tribes.

And if Congress has the power to regulate commerce between the several States, Congress has unquestionably the power to adopt the principle of the common law with reference to common carriers, where those carriers are engaged in commerce among the States. Therefore, when Congress says that these railroads, which by combination are carrying freight or passengers into or through more than one State, shall transport this freight and these passengers at fair and reasonable rates, thus asserting the well-known principle of the common law, will gentlemen contend that Congress is overstepping its authority? Will they assert that we are assuming a doubtful power when we propose the re-enactment of a principle of the common law, a law regulating common carriers, recognized as a just rule for centuries?

Mr. ELDREDGE. Will the gentleman allow me to suggest an answer to that?

Mr. HOLMAN. Certainly.

Mr. ELDREDGE. The common law required common carriers to fix reasonable rates; there is no doubt about that proposition. But the common law never assumed to fix in advance the rates at which common carriers should carry freight or passengers.

Mr. HOLMAN. I fully agree with the gentleman. The common law did not and could not fix the rate of compensation, except that it should be reasonable.

Mr. ELDREDGE. The common law recognized the right of the courts to set aside the rates fixed because they were either fraudulent or unreasonable to such an extent that the contract itself—being so hard a bargain—was void at common law, on the ground of its being unreasonable, unjust, inequitable.

Mr. HOLMAN. My friend from Wisconsin will excuse me; he and I agree on that point. I am not now considering the question as to how this reasonable rate should be ascertained. I am merely laying down the proposition (and neither my friend from Wisconsin nor any other lawyer will, I think, controvert it) that Congress possesses, as to transportation among the States, the power of enacting the common-law rule that that transportation shall be at fair and reasonable rates. If my friend from Wisconsin or the gentleman from New Jersey controverts that proposition, I should be glad to know it, because this principle lies at the foundation of the bill. It does not contain a provision that is not designed to give practical effect to that manifestly just proposition of the common law.

Mr. ELDREDGE. Does my friend claim that at common law any tribunal or court ever assumed the power to fix the rates in advance?

Mr. HOLMAN. I am not discussing that proposition at all. I am

merely considering the first and prominent feature of this bill in which Congress undertakes to prescribe the rule of the common law, that those who transport persons and freight from one State to another shall do it upon fair and reasonable terms. There, sir, is the "hard-pan" of this measure.

Mr. ELDREDGE. That is not this bill.

Mr. HOLMAN. That is this bill. That is the whole substance of the bill. All else about it is the mere machinery for carrying that fundamental maxim into effect.

Mr. Speaker, I go one step further, because there is only one other fundamental proposition in the bill, that *prescribing a rule of evidence.* Now, I know gentlemen cannot say that the prescription of a rule of evidence which shall apply to commercial transactions among the States is not within the scope of the authority of Congress under its power to regulate commerce.

If Congress can declare that common carriers, engaged in commerce among the States, shall transport passengers and freight at "fair and reasonable rates," then Congress can certainly prescribe the rules by which such fair and reasonable rates can be ascertained. This, indeed, is involved and embraced in the power of Congress to establish courts of justice. And if beyond the simple re-enactment of a rule of the common law there is anything in this bill beyond establishing rules for ascertaining what are fair and reasonable rates for transportation, thus giving effect to that rule of the common law, I should like to see it pointed out.

If Congress can prescribe the rule to regulate commerce among the States, has Congress no power to prescribe the mode of giving effect to that rule, determining the kind of evidence applicable, and how it shall be applied, and upon whom the burden of proof shall rest? Then, sir, how are you to ascertain what is fair and reasonable? By the courts? I should like the learned gentleman from New Jersey [Mr. SCUDDER] to answer that question. Will he say that it is not competent for Congress to empower the courts of justice, established by the Federal Government, to determine what are fair and reasonable rates and to prescribe the rules of evidence? That is the next step in the inquiry. No one will question that the courts of justice may determine what are reasonable rates and that Congress may prescribe the rules of evidence by which they shall be ascertained.

Congress may declare by general rules what shall be evidence, what shall be presumptive, what conclusive, and upon whom the burden of proof shall rest, in cases cognizable in the Federal courts.

This bill, as to common carriers, proposes to prescribe rules of evidence as to what are fair and reasonable charges for transportation among the States. The whole of that is embodied in a single proposition in this bill, which is to be found in the eighth section—evidence for the courts, presumptive evidence. The important and controlling parts of the bill, the first and second sections, I have already read to the House. The eighth section prescribes the application and the rule of evidence in a suit between the citizen and the railroad company, to give to the citizen the benefit of the common-law rule of fair and reasonable rates.

What is that eighth section? It is that any corporation, company, or person being engaged in the operation of any line of railroad *into or* through two or more States as aforesaid, who shall, after such schedule shall have taken effect in relation thereto, be guilty of extortion by charging, collecting, demanding, or receiving more than a reasonable rate of toll or compensation for the transportation of freight, passengers, or cars over or upon any such line, shall forfeit and pay for each offense a sum of not less than $500 nor more than $5,000, to be recovered by action to be brought in the name of the United States in any district or circuit court of the United States, or if in a Territory, in any district court of the United States therein, in the form of an action of debt, or by such other form of action as may be provided by the law of the State in which such action is brought in like cases; and it shall be the duty of the district attorney for the proper district to institute and prosecute all suits for the recovery of the penalty aforesaid; and the corporation, company, or person being guilty of such extortion shall also be liable to the party injured thereby for the damages caused by such extortion, including a reasonable sum for attorneys' fees, to be fixed by the court trying the case, which such injured party may recover by action in his own name in either of the courts aforesaid; and the form of the action may be the same as in case of a suit to recover the penalty as hereinbefore provided.

Either party to any action brought under the provisions of the act shall have the right to a trial by jury; and in any action instituted under its provisions, whether it be a suit to recover the penalty aforesaid, or a suit by the party injured to recover damages as aforesaid, any number of separate and distinct violations of the provisions of the act may be stated separately in separate counts, and a recovery may be had upon each.

If, upon the trial of any such suit, brought either to recover said penalty or to recover damages as aforesaid, it shall be made to appear that the defendant has charged, collected, demanded, or received, for the transportation of freight, or passengers, or cars, a rate of toll or compensation greater than that fixed by the schedule aforesaid, then, and in that case, such defendant shall be deemed and held guilty of extortion and liable therefor, unless such defendant shall show affirmatively that the rate charged, collected, demanded, or received for such transportation was, nevertheless, fair and reasonable.

The third, fourth, fifth, sixth and seventh sections of the bill provide for the appointment of a commission, and directs their mode of procedure to determine what are fair and reasonable rates for the transportation of persons and freights by these railroads; and directs them to prepare a schedule of such rates, and file a copy in each district court; and provides that, when that schedule is so made and determined by these commissioners, it shall simply be presumptive evidence that the charges so determined are fair and reasonable. So much for the schedule. This schedule is, then, simply presumptive evidence of what are fair and reasonable rates for transportation of passengers and freights by railroad—interstate commerce—and throws upon the railroad corporation the duty of repelling that presumption. Talk about excessive legislative powers, when you are but prescribing a simple rule of evidence in a court of justice, when you are simply adopting a rule of evidence for putting the citizen upon a footing where he can stand up with something like equal chances side by side with a compact and solid corporation, which has been guilty, as he may allege, of extortion in the employment of its vast powers in controlling the commerce and business of the country.

Mr. ELDREDGE. The gentleman asks, more particularly in his remark addressed to the gentleman from New Jersey, [Mr. SCUDDER,] whether there is anything wrong in this proposition. It strikes me there is great wrong, and the moment I suggest it to my friend from Indiana I think he will acknowledge it. It reverses the rule of evidence. Here is a crime, a *quasi* crime, denominated extortion in the bill, and the party charged with that extortion is made presumptively guilty, according to the very terms of the bill. He has to prove himself innocent. The rule of evidence in regard to criminal cases is entirely reversed; and the party, upon the mere charge, must stand guilty of extortion, unless he is able affirmatively to prove his innocence.

Mr. HOLMAN. My friend states the proposition with reasonable fairness, and it is a proposition I am perfectly willing to meet. The rule prescribed by this bill does change the usual rule of evidence which prevails in litigation between citizen and citizen. But what becomes of the argument of my friend from New Jersey, [Mr. SCUDDER,] of delegated legislative power? The bill simply modifies a rule of evidence.

Mr. ELDREDGE. I do not admit that that is all that it does.

Mr. HOLMAN. That is all that it does. It modifies, and in some sense reverses, the common rule of evidence. Now, the question is not as to the power of reversing a rule of evidence, for the gentleman from Wisconsin admits that the legislative power may determine that; but the question is where the burden of proof in such litigation shall rest. Shall it rest on the citizen or the corporation?

Mr. ELDREDGE. I do not believe that the legislative power can determine that in all cases. I do not believe it is in the power of legislation to declare a man guilty of a crime without proof of the fact; and even if it could be done, it is not in accordance with the policy or spirit of our laws or of our institutions that a man is to be declared guilty without proof of a criminal act. But in this case you make him guilty, and he has to clear his skirts of the crimes charged.

Mr. HOLMAN. I agree with the gentleman, if there is no proof; but this is not properly legislation in reference to a crime. Extortion at common law is a crime. If committed by a citizen, he was subject to indictment at common law; and there presumptions of innocence should prevail in the absence of all proof. But here obedience to the law is sought to be enforced by a penalty. The action for the penalty is a civil action. It is the only way you can reach these corporations. It is not by a criminal proceeding, but through a civil action, you enforce the penalty. You can recover against the corporation a penalty for the extortion; and there is no reason why, in such case, you should not adopt the rules of evidence which are reasonable in any other civil action; for, unfortunately, you cannot, except by a pecuniary penalty, punish the corporation for its extortions injurious to the whole people; and you are conferring by this bill upon a citizen who has been wronged and oppressed by the corporation by extortion, by a like civil action, the right to recover the damages he may have sustained. And you are fixing a rule of evidence that, upon certain facts being made to appear against the corporation, creating a reasonable presumption against it, the burden its proof shall fall upon it to show, if it can, to court and jury that of charges have been fair and reasonable.

Now, I am perfectly willing to stand upon the proposition that just and legitimate legislation by Congress and by every State of the Union upon this subject, within the scope of their respective powers, requires, from the nature of the case, such a rule of evidence.

Is the rule proposed unreasonable? Can the citizen obtain justice without it? Is it possible for the individual citizen to devote the necessary time to the inquiry as to what are fair and reasonable charges for railroad corporations to make? Are the facilities within his reach to prove affirmatively what are extortionate charges? Can he reach the books and records of the corporation? Why, sir, he must devote not only such time to such an inquiry, even as to a comparatively short line of railroad, as would virtually deny him a remedy, but he must bring to the task an ability in affairs far beyond the experience and attainments of most of us. He charges that the railroad corporation has violated its obligations to the public by extortionate charges against himself, and the burden of proof rests upon him, when in the nature of things the proof alone is in the hands of the defendant.

What chance has the citizen for justice in such a contest? The books and records of the corporation are perhaps in some remote city; and

the cost of the road, the watering of the stock, the creation of fictitious capital, the enormous mortgages on the road and its income, resorted to for the purpose of adding at once millions to the wealth of the unprincipled managers, and whatever may seem to enter into the question of reasonable charges on the basis of capital apparently invested, and the amount of business done, are all matters known to the corporators, but how shall the citizen unaided drag them from their hiding-places and lay them before a court?

This bill proposes simply that after investigating the cost, the expenses of running of the various railroads of the country, the real and the fictitious capital, the frauds and swindling of fictitious stocks, and reaching as far as may be what would be reasonable charges for transportation on the basis of honest investment and honest management, that a schedule of such charges shall be prepared, and that this schedule shall be presumptive evidence that the charges in that schedule *are fair and reasonable*. If the railroad denies the fairness of the schedule, the question comes before court and jury. There is the right of trial by jury. Can the corporation complain of that? My friend from New Jersey [Mr. SCUDDER] has said that the schedule of charges is to be final, even beyond the revision of Congress; that the commissioners are vested with legislative power, a power that is "final," to use my friend's own vigorous words—a power that is final. In truth the schedule is but evidence, indeed only presumptive evidence. This bill but prescribes a rule of evidence for the courts, a just and reasonable rule. Congress does not revise. The courts of justice revise and review the evidence, and juries weigh it and pronounce their verdicts under the safeguards and sanction of law. Is there anything to complain of in this? If the rates of charges are in fact unreasonable, cannot the corporation, the sole depository of all the facts, readily prove it?

Will you leave these corporations absolutely irresponsible? Will you perpetuate their power to manipulate and magnify their capitals by the countless subterfuges of stock-jobbing, invented by Wall street to defraud the country and tax its industries, and permit dishonest inflations of capital and pretended cost to create presumptions against the citizen, and yet refuse to arm him with a reasonable rule of presumption which will compel the corporation to disclose the facts? If you do, sir, you simply deny justice to the citizen, and leave him the slave of monopoly. Out of this system of irresponsible corporate powers have grown up these enormous and hitherto unexampled fortunes in your commercial centers, coined out of fictitious stocks, oppressing labor in countless forms, marring and imperiling our free institutions of government, and destroying the just and equal rights of our people.

I do not understand the solicitude felt for these corporations. Is it an unreasonable thing to say to a railroad corporation, possessed of full knowledge of its affairs, with its books under its own control, with the cost of its construction unknown except to those connected with its affairs, the burden of proof shall lie upon you to repel, if you can, a reasonable presumption based upon an examination of your affairs? Is it unjust to say to them there is a reasonable presumption that you are charging excessively, and it is for you to show that your charges are not excessive? Is that an unreasonable rule to adopt between the powerful corporation and the private citizen who has been the victim of extortion? I say it is a reasonable rule. It gives the citizen no more than an equal chance with the corporation before the courts of justice.

Mr. SCUDDER, of New Jersey. I do not like to interrupt the gentleman, but, with his permission, I would suggest a question to him there.

Mr. HOLMAN. I have no objection to being interrupted by the gentleman. This is a subject which ought to receive the closest scrutiny.

Mr. SCUDDER, of New Jersey. If the regulations established by this bill be regulations of commerce which belong, under the Constitution of the country to Congress, can these regulations be passed upon by twelve men?

Mr. HOLMAN. Passed upon by twelve men?

Mr. SCUDDER, of New Jersey. As a jury.

Mr. HOLMAN. Cannot the evidence of reasonableness, or want of reasonableness, of the rates of transportation be passed upon by a jury?

Mr. SCUDDER, of New Jersey. No; that is not the question. The question is, if the question of the reasonableness and validity of the regulation of commerce by Congress can be determined by any jury?

Mr. HOLMAN. Cannot Congress prescribe rules to regulate commerce among the States, and establish rules of evidence in the Federal courts? This rule of evidence is that where, upon official inquiry under oath, a conclusion has been reached that a given rate for transportation is reasonable and proper, the duty shall be devolved on the corporation to show, if it can, before a court and jury that it is not reasonable and proper, but that some larger charge is reasonable. I admit that if the question of what is reasonable and proper did not go before a court and jury there would be some force in the brilliant generalities in which my friend from New Jersey has indulged. To fix an arbitrary rule and give the corporation no hearing would be unjust.

Mr. ELDREDGE. But leaving out the brilliancy, ought not the Constitution to read, in order to bear the construction my friend puts upon it, that Congress may regulate commerce or make rules regulating it subject to be reversed by a jury of twelve men?

Mr. HOLMAN. Courts and juries are in the main employed in determining questions of fact under the laws of evidence in commercial transactions. Some of the rules of evidence established by Congress are much more arbitrary than the one proposed here.

The gentleman from Wisconsin has, within my certain knowledge, voted for a law which authorized the Secretary of the Treasury to prescribe commercial rules under which men might be punished criminally without any action of Congress whatever, upon the rules prescribed.

Mr. ELDREDGE. What law is that? I have voted for a great many strange things, but I forget having voted for any such law.

Mr. HOLMAN. Let the gentleman look back to the legislation of 1871, and turn to the law regarding the commercial channels through which merchandise was to be carried to the inland ports of entry, and he will find that Congress allowed the Secretary of the Treasury alone to prescribe the rules governing those commercial transactions, under which penalties may be enforced.

But, again, let me call the attention of my friend to some other legislation. We passed a bill a year or two ago—so recently that my friend cannot have forgotten it—under this power to regulate commerce, an act to secure the lives of passengers on steam-vessels; and by that law we delegated to a board of supervising inspectors the power to prescribe rules under which citizens might be punished criminally. These two acts, passed so recently that the original bills are scarcely off our tables, passed almost without comment, and with none as to constitutional power; and yet when it comes to a contest between the citizens with a power which has grown into such magnitude that no one citizen can fairly resist, it is claimed that you cannot even prescribe a reasonable rule of evidence which will give the citizen a reasonable foot-hold in a court of justice, and arm the people with a reasonable power of resistance to oppressive extortion.

But, sir, leaving that subject, I assume that this bill, so far as its substantial qualities are concerned, simply enacts the common law with reference to corporations engaged as common carriers in the commerce of the States, and then prescribes a reasonable rule, by which the citizen shall be put on an equal footing with the corporation.

I come now to consider what I deem an incidental question, which the gentleman from New Jersey has discussed so well, and in regard to which so many eloquent things have been said within the last two weeks; and yet I cannot regard the question of the constitutional power of Congress over commerce as in fact in issue.

I am not willing that Congress should assume any doubtful power; and even a power vested in Congress, in my judgment, should not be called into use if from the nature of the subject the several States of the Union can as well give that power effect in promoting the general welfare of the country. Congress should be confined to powers which are in their nature national, and leave all questions of local legislation exclusively to the several States.

The States may unquestionably control and regulate the railroads within their respective borders, and the transportation of passengers and freights confined to their limits.

But the power to regulate commerce among the States and with foreign nations has been exercised by Congress from the beginning. I find as far back as 1790 an act, full of details, regulating commerce upon the high seas. Gentlemen cannot close their eyes to the fact that the power to regulate the interstate commerce is vested in Congress under exactly the same clause of the Constitution and in the same terms in which it is authorized to regulate commerce with foreign nations. This act of 1790, embracing fifty-three sections and going into minute details, was passed by the men who formed the Constitution. Not one of those fifty-three provisions is less a regulation of commerce than this prescription of a rule of evidence in the interstate commerce. Let us see what Congress thought about the power then. I read the last section of the act in regard to providing for the comfort and safety of crews of vessels and furnishing provisions:

> And in case the crew of any ship or vessel, which shall not have been so provided, shall be put upon short allowance in water, flesh, or bread, during the voyage, the master or owner of such ship or vessel shall pay to each of the crew one day's wages beyond the wages agreed on for every day they shall be so put on short allowance, to be recovered in the same manner as their stipulated wages.

Now, my friend from New Jersey [Mr. SCUDDER] would have said in 1790, when the men who framed that law had but recently risen from the work of providing for the American people this grand instrument, the Constitution, "You cannot do any act by which the profits of this commercial business may be diminished. You cannot interfere with the business of the citizen." And on the question of expediency he would have said that there was no necessity for such legislation; that competition between ships engaged in commerce would regulate all this. But our fathers thought it prudent under this power to regulate commerce, having used in the Constitution the most vigorous and comprehensive words "the power to regulate," as expressive of their purpose, to apply that power at once to the regulation of commerce.

That they should have used in the Constitution this word "regulate," to prescribe rules—not one rule, but all rules—was but the natural outgrowth of the condition of things which impelled the people of the thirteen States to the formation of that instrument. The fact that restrictions were imposed within the limits of the several States on the commerce of the country was so repugnant to their

mutual interests, that a new compact had to be formed; and we are told that a principal motive for the Union and the adoption of the Constitution was to invest the Federal Government with the power to regulate foreign commerce and commerce among the States, to escape from the discordant policy and mutual jealousy of the States.

And a similar condition of things is now upon us in a different form. Here is this new and grasping power which has grown up in our midst, this marvelous development of our own times—a power which our fathers could have contemplated only as a possibility, already the absolute master of our varied industries, and controlling and directing commerce in every State. The fact is evident that it has become already able to control and regulate the commerce of the country for its own benefit, and restrain and tax it without limit, as was the case in the thirteen States under the Articles of Confederation; and it presents now for our consideration very much such a question as our fathers had occasion then to meet.

Is Congress powerless to resist the extortionate exactions of this new power? The various acts of Congress with reference to steamboats engaged in commerce between the States, from the time steam was first applied to the promotion of commerce, and steamships on the lakes and oceans, to the last act passed by Congress, assume the power to regulate commerce without limit. No act prescribes a limit on charges for passengers or freight, for the oceans, lakes, and rivers are the free highways of commerce and monopoly impossible. There is no one of these acts but is broader in its scope than this power to prescribe a rule of testimony to ascertain what is a reasonable charge for the transportation of the person and property of a citizen from one State to another.

Jefferson sneered at this as "the art of definition," which is always connected with the abstract discussion of constitutional power. The language here used in the Constitution seems too clear and definite to admit of controversy. Congress shall have power "to regulate commerce with foreign nations and among the several States and with the Indian tribes." And yet in the interest of these corporations the arguments against the power and policy of interference by Congress have been endless, and it seems questionable whether any other regulating power, except that of Congress, is available. I have yet to see the opinion delivered by the Supreme Court of the United States, from its beginning to this hour, which even questions the power of Congress to regulate interstate commerce, or which recognizes such a power in the States.

Why did the Supreme Court annul the legislation of Nevada, imposing a tax on stage-coaches and railroads of one dollar for every passenger transported beyond the limits of that State? It was because States could not exercise such a power. Why? Because the power to regulate commerce between the State of Nevada and every other State of the Union was a power vested in Congress alone. Why did the Supreme Court declare void the law by which Pennsylvania sought to impose a duty of two cents per ton upon all coal mined in that State, and shipped beyond her borders? It was because Pennsylvania was assuming the power to regulate commerce between the States, and that power was one reserved to Congress under the Constitution.

Mr. ELDREDGE. Does the gentleman think that Congress could have imposed a tax of one dollar *per capita* upon passengers from Nevada under the power to regulate commerce?

Mr. HOLMAN. No, sir. There is a principle of public policy entering into our Government, and standing side by side with the Constitution, and a part of it, which I admit would be in conflict with the exercise of any such power. I do not believe that Congress has any such power.

The bent of my own mind is always to resist the exercise by Congress of even the power it possessed unless it appears to be absolutely demanded by the public good, and yet I would not abridge any power conferred on Congress by the Constitution.

Mr. ELDREDGE. Will the gentleman give a reason why Congress could not impose a tax of a dollar each upon every person who may pass through the State of Nevada, or the State of Maryland, under the authority to regulate commerce?

Mr. HOLMAN. That has nothing to do with the question before us. I do not propose to enter into that discussion. I am very confident that in his opinion Congress does not possess any such power, and I fully agree with him.

Mr. ELDREDGE. I suppose that the real reason is that to do any such thing is not a regulation of commerce.

Mr. HOLMAN. Well, sir, that is not a safe ground. Two of the clearest minds and most accomplished jurists we have ever had upon the Supreme bench have differed with the gentleman from Wisconsin. I refer to Chief Justice Chase and Mr. Justice Clifford, the latter one of the strongest and most vigorous intellects that ever adorned that bench. Both of these great jurists held, as the gentleman is well aware, in the State of Nevada case, that the power which the State of Nevada exercised, or rather attempted to exercise, in imposing that tax was a power to regulate commerce. The gentleman is, of course, aware of that.

But, sir, I again refer to the opinion which has been already frequently alluded to, delivered by Chief Justice Marshall in the case of Gibbons *vs.* Ogden, so generally considered the leading case on this question of the power of Congress over interstate commerce. If that case decides anything clearly and beyond question, it is that where the subject-matter of commerce in its nature is national, the rules with reference to it cease to be within the authority of the States, and are exclusively within the constitutional power of Congress. Where the subject is in its nature national; where it pervades and extends into different States of the Union, it is subject solely to the regulation of Congress.

In the case referred to (Gibbons *vs.* Ogden, Peters's Supreme Court Reports, volume 5, page 562,) Chief Justice Marshall said:

> This power, like all others vested in Congress, is complete in itself, may be exercised to its utmost extent, and acknowledges no limitations other than are prescribed in the Constitution. These are expressed in plain terms, and do not affect the questions which arise in this case, or which have been discussed at the bar. If, as has already been understood, the sovereignty of Congress, *though limited to specific objects*, is plenary as to those objects, the power over commerce with foreign nations and among the several States is vested in Congress as absolutely as it would be in a single government having in its constitution the same restrictions on the exercise of the power as are found in the Constitution of the United States. The wisdom and discretion of Congress, their identity with the people, and the influence their constituents possess at elections, are in this as in many instances—as that, for example, of declaring war—the sole restraints on which they have relied to secure them from abuse.

This great jurist, in this opinion, further says:

> But when a State proceeds to regulate commerce with foreign nations or among the several States, it is exercising the very power that is granted to Congress, and is doing the very thing that Congress is authorized to do.

And again:

> It is obvious that the Government of the Union, in the exercise of its express powers, that—for example—of regulating commerce with foreign nations and among the States may use means that may also be employed by a State in the exercise of its acknowledged powers; that, for example, of regulating commerce within the State.

And again:

> Vessels have always been employed in the transportation of passengers, and have never been supposed to be, on that account, withdrawn from the control or protection of Congress.

And the following passage in this early opinion of our Supreme Court indicates the boundary line between Federal and State authority:

> The genius and character of the whole Government seem to be that its action is to be applied to all the external concerns of the nation and to those internal concerns which affect the States generally; but not to those which are completely within a particular State, which do not affect other States, and with which it is not necessary to interfere for the purpose of executing some of the general powers of the Government. The *completely* internal commerce of a State, then, may be considered as reserved for the State itself.

Mr. Speaker, my only purpose in this inquiry is to ascertain what the powers of Congress are over this subject, and how far the several States possess the power to regulate and control those corporations.

I come to the last important case decided by the Supreme Court bearing on this subject. I refer to the Reading Railroad Company *vs.* Pennsylvania, (Wallace's Supreme Court Reports, volume 15, page 232,) decided in December, 1872. The State of Pennsylvania had, by statute, imposed a tax of two cents per ton on all coal mined in that State and transported by railroad companies. No question was made as to the right of the State to impose this tax on coal transported to places within the State.

Mr. Justice Strong, in delivering the opinion of the court, stated the case thus:

> The case presents the question whether the statute in question—so far as it imposes a tax upon freight taken up within the State and carried out of it, or taken up outside of the State and delivered within it, or, in different words, upon all freight other than that taken up and delivered within the State—is not repugnant to the provision of the Constitution of the United States, which ordains that "Congress shall have the power to regulate commerce with foreign nations and among the several States."

And the learned judge, in considering this question and delivering the opinion of the court, said:

> It has indeed often been argued, and sometimes intimated by the court, that so far as Congress has not legislated on the subject the States may legislate respecting interstate commerce; yet if they can, why may they not add regulations to commerce with foreign nations beyond those made by Congress, if not inconsistent with them, for the power over both foreign and interstate commerce is conferred upon the Federal Legislature in the same words, and certainly it has never yet been decided by this court that the power to regulate interstate as well as foreign commerce is not exclusively in Congress. Cases that have sustained State laws, alleged to be regulations of commerce among the States, have been such as relate to bridges or dams across streams *wholly within a State*, police or health laws, or subjects of a kindred nature, not strictly commercial regulations. The subjects were such as (in Gilman *vs.* Philadelphia, Wallace's Supreme Court Reports, volume 3, page 713,) it was said "can be best regulated by rules and provisions suggested by the varying circumstances of different localities, and limited in their operation to such localities respectively." However this may be, the rule has been asserted with great clearness, that whenever the subjects over which a power to regulate commerce is asserted are in their nature national, or admit of one uniform system or plan of regulation, they may justly be said to be of such a nature as to require exclusive legislation by Congress. (Cooley *vs.* Port Wardens, 12 Howard's Supreme Court Reports, page 299.) "Surely transportation of passengers or merchandise through a State, or from one State to another, is of this nature. It is of national importance that over that subject there should be but one regulating power."

And the court held the statute of Pennsylvania void as being an unauthorized regulation of commerce.

I again say, Mr. Speaker, that I present these authorities only with a view to ascertain what the constitutional power of Congress and of the States is over the subject of commerce, and not to fortify any dogmas of my own, for I should prefer to find the powers of the States over these corporations as agents of commerce sufficient to enable them to impose the restraints on them now absolutely demanded.

Is it possible to say that this rule laid down by the Supreme Court

does not apply to this vast system of railroads which pervades and penetrates every State and section of the Union? Can gentlemen deny that one *rule of evidence* for commercial transactions in determining fair and reasonable rates of transportation may apply equally to interstate commerce everywhere in the Union, and that in its nature the rule must be national? The Supreme Court, in this opinion, seem to have decided that the interstate commerce by railroad can only be regulated by Congress, for the subject in its nature is national; that from the necessity of the case, from the terms employed in the Constitution, the regulation of that national interest must be by the legislation of Congress.

But, again, we have been accustomed of late years to regard Judge Redfield as a great authority on the law of railroads. In the number of the American Law Register for January of the present year, in a very able discussion of this whole subject, and reviewing the opinion of the Supreme Court last referred to, Judge Redfield, after quoting the passages which I have quoted from that opinion, says:

> This being the final declaration of the court of last resort, we need occupy no more time in showing that the entire question of the regulation and control of railway fares and freights, upon lines of railway extending across the line of two or more conterminous States, belongs exclusively to Congress; for this very question was directly involved and squarely decided in the case from which we have just quoted the language of the opinion of the court. If, then, there is any control or power of regulation over the traffic upon through lines of railway, it must be sought for exclusively in Congress. Unless we are prepared to say that one of the most unlimited and overwhelming monopolies it is possible to conceive of, after it is once set in operation, may safely be committed to the impulses of its own selfish instincts and interests, without any supervision or control whatever, we may demand the interposition of Congress in this matter.

Again the same author says:

> The object is one, no doubt, of most unquestionable magnitude; scarcely less than that which existed under the old Confederation, when every State was struggling to enact commercial regulations of such a character as to bring the most advantage to itself, and at the expense of any or all the others. If this was then felt to be intolerable in a commercial country, not less so is the present complication, where all business and almost existence itself is at the mercy of railway transportation. It has become so indispensable to the very existence of the country, and such an overwhelming monopoly that the very life of all the internal trade and commerce of the country is already at its mercy, and must forever remain so, unless Congress shall interpose some effective remedy. The States have, as we have seen, no power to act in the matter of interstate communication, and this is the principal seat of the difficulty; and if the States had now the same power they had under the old Confederation, it needs no argument to show that forty independent Legislatures could never agree upon any effective system of interstate commercial intercourse; or, even if they could agree upon such a plan, which is scarcely less than impossible, they have no combined judicial machinery to carry it into effect. There could be no hope of relief from any imaginable source but in the national prerogatives.

Such is the current of authority upon this question from the early period of our history, through multitudes of decisions, to the present time. The growing and already overwhelming power of these corporations has forced this subject upon and will demand the best effort and judgment of legislators and courts for years to come. I am seeking for the truth. I am trying in this discussion to ascertain by the light we already have what and where the constitutional power is that shall restrain the now unlimited power of this new force in the field of our industries and on the highways of our commerce, but I am forced to the belief that the language used by Judge Redfield is no stronger than will be uttered by the Supreme Court of the United States, the final arbiter, whenever the proper case shall come before it for decision.

In view of these authorities, let me inquire of my friend from New Jersey how this rule of commerce would be established, if not by Congress? How would he regulate and control the shipment of freight from New York to his own State? Does my friend say that that interstate freight, in the progress of its transit from one State to the other, can be regulated by the laws of New York or by the laws of New Jersey? I do not think my friend would regard that ground tenable.

I wish it were otherwise, consistent with the general welfare. There never should be a law enacted by any vote of mine in Congress affecting, in the remotest degree, the business industries of the States if there were any effective method of avoiding it through the local agency of the several States. By no consent of mine shall the powers of Congress in legislation, or the subject-matters of legislation, be enlarged or increased. And yet, when Congress has been invested with a power by the Constitution and the public welfare demands its employment, I will not hesitate to give full and complete effect to that power. The State, as to "completely internal commerce," may curb and regulate its commercial agents. Each State may unquestionably regulate the charges for transporting passengers and freights "completely," to use the term of the illustrious Chief Justice, within her borders. The chartered franchises of the corporation will not shield it from such regulation and control. The State, not the corporation, is the sovereign. But what as to the commercial intercourse among and between the States? This is the subject of national and not of State legislation, and involves the larger portion of our industries. To shield this vast interest in its countless forms from the oppressions of monopoly would seem to demand the powers of the National Government. There seems to be no other remedy. No matter how exorbitant the charges, how oppressive, if it is interstate commerce, New York cannot regulate it; New Jersey cannot regulate it; no State can regulate it.

The corporations deny the right of Congress to interfere with their affairs; yet I remember that only a few years ago these interstate railroad combinations themselves appealed to Congress to exercise this power to regulate the commerce passing from and into and through the State of my friend from New Jersey. Only eight years ago they appealed to Congress to regulate commercial intercourse between New Jersey and her sister States for the purpose of breaking down an intolerable railroad monopoly, even against the railroads, and Congress promptly granted the relief, and new lines of commerce passed freely across her borders.

When that appeal was made in behalf of railroad corporations against railroad corporations, I found gentlemen who are now standing by the corporation raising no question of the right of Congress to interpose; and we are now told that Congress is powerless to interpose in behalf of the people. Congress then gave the benefit of this great constitutional power to legislate in behalf of interstate commerce, and New Jersey and her sister States have been deriving benefit from it ever since. I have never heard that New Jersey raised her voice against it.

The solicitude for the great corporations, the anxiety shown lest injustice should be done them by Congress, is quite remarkable. Every presumption must, we are told, be indulged in their favor. The sacredness of vested franchises is dwelt on with refreshing earnestness. Why should the words of the Constitution be distorted from their natural meaning in behalf of perpetual franchises?

I find some vigorous words in regard to corporate power from Chief Justice Taney. In the case of Charles River Bridge *vs.* The Warren Bridge, (11 Peters, 544,) quoted in the Binghamton Bridge case.

Chief Justice Taney, after referring to the indignation even of the British courts at the overreaching power and arrogant pretensions of the corporations of England, so greatly to the detriment and injury of the people that even the English courts—inspired by the spirit of old Coke—cried out against them, said:

> It would present a singular spectacle, if while the courts of England are restraining within the strictest limits the spirit of monopoly, and exclusive privileges in the nature of monopolies, and confining corporations to privileges plainly given them in their charter, the courts in this country should be found enlarging these privileges by *implication*, and construing a statute more unfavorably to the public and to the rights of the community than would be done in an English court of justice.

And shall Congress abandon the duties of its great public trust for fear monopoly may be shorn of some of its power to injure and oppress?

It strikes me with astonishment that here in America there is an effort being made day by day on this floor to torture the language of the Constitution into forms that may shield these corporations from a proper and legitimate control by the only power which can reach their interstate transactions. However much we may regret the exercise of power by the Federal Government, we must still more deplore and condemn the grasping selfishness and uncontrolled power of this vast body of corporations, formed and organized by the liberality of the people—not for their own unlimited profit, but for the public good—who now oppress the country, and hesitate at no corruption that will increase their power.

Now as to the necessity of this legislation.

The rule sought to be prescribed by this bill as to interstate commerce is the same which has been adopted in the State of Illinois, and in other States, to regulate their local commerce.

The board of railroad commissioners of Massachusetts, with Charles Francis Adams, jr., at their head, in their report made last January, speaking of the efforts of Illinois to control her railroads, say that that State has encountered repeated failures, because the very magnitude of the subject is such that no reasonable body of men could expect entire success at the beginning; for the power which in thirty years has absorbed over one-tenth of the wealth of the Union, certainly could resort to expedients in legislation producing failure and delay. At last some reasonable rules and regulations are reached. The Massachusetts board say:

> In addition to these general principles of decisions the railroad commissioners of the State [Illinois] were further directed to prepare schedules or tariffs for the several roads, which they were empowered to change as might prove to be expedient, and the charges contained in these schedules were to be judicially held to be reasonable until decided to be otherwise by a verdict of a jury. In other words, the effect of the law was to shift the burden of proof in each particular case of alleged extortion upon the corporation; the schedules of the commissioners were not declared to be in themselves reasonable, but were declared *prima facie* evidence of what was reasonable, and it devolved upon the defendants to prove that they were otherwise.

This brief statement of the Illinois railroad law, and effect and design, presents fully the design and scope of the present bill. I like the language throwing the burden of proof upon the corporation, which knows the fact, instead of upon the citizen, who does not know the fact.

Mr. ELDREDGE. Would my friend from Indiana make a distinction as to the rule of evidence between an individual and a corporation?

Mr. HOLMAN. I would consider it a proper rule of evidence which throws the burden of proof, where a fair presumption has been raised, on the party who had the proof in his possession, while his adversary had not the proof in his possession. There is no injustice in this.

Mr. ELDREDGE. The gentleman does not answer my question. Would he make one rule for a corporation and a different rule for an individual?

Mr. HOLMAN. I unhesitatingly would in cases where the corporation would otherwise have an unfair advantage. I would regard myself as legislating very unjustly if I left the citizen and the corporation subject to exactly the same rules of evidence, and did not give the citizen some effectual method of overcoming the artificial advantage which the corporation might possess, and thus give them an equal footing in court.

I do not believe there is a State of the Union which has not found it necessary to legislate so as to deprive the corporation o the advantage resulting from its artificial structure. Corporations have rights and franchises beyond the citizen, and cannot complain if the law seeks to equalize them in the courts of justice. But the other proposition, that the burden of proof may, on a fair presumption being raised, be properly thrown upon the corporation that has the proof in its possession, is a proposition too reasonable to be denied.

Mr. ELDREDGE. Suppose that one individual owned a railroad running through a State right by the side of a corporation also running a railroad through the State, would it be reasonable to make one rule for the corporation and a different rule for the individual owning another road?

Mr. HOLMAN. The rule should equally apply to both, if the rights, franchises, and sources of knowledge were equal.

Gentlemen will readily recall many instances where the law raises presumptions upon the proof of given facts by which the burden of proof is thrown upon the adverse party. The official certificate of a head of a Department of a given fact throws the burden of proof upon the defendant. The law makes the mere certificate evidence of the facts recited, sometimes presumptive only, and sometimes conclusive.

These Massachusetts commissioners further say in their report:

The law went into operation upon the 1st day of July, 1873. Although the corporations refused to acknowledge its validity, on the ground that it, no less than the previous law, was an infringement of their chartered rights, they declared their intention of revising their tariffs in strict conformity to its provisions so far as they related to the matter of discrimination. Accordingly a new set of tariffs was arranged by them, to take effect on the 1st day of July. The State commissioners and the friends of the law allege that these tariffs were prepared, however, with a view to rendering the law odious by bringing its oppressive features, where any such could be developed, into prominence.

And these gentlemen add:

It is not improbable that such was the case.

Here the State of Illinois alone attempts to free her people from the oppressive grasp of the monopolies, but it is apparent that railroads passing through that and adjoining States in the prosecution of the interstate commerce may defy Illinois and defeat, in the main, her legislation; for they assert that Illinois is attempting to regulate commerce not entirely confined within her own limits, but interstate commerce, and they deny her power to do this. Hence, as this railroad system is national, it would seem that the legislation to reach the evil must be national. If all of the thirty-seven States of the Union could adopt the same system of laws, it is possible that the States themselves might regulate this subject and curb these great monopolies. But you cannot hope for such a thing. Judge Redfield has pointed out the insurmountable difficulties.

No one can doubt that the power of the railroad corporations of the whole Union—and their interests to resist any restraints are a unit—could at least produce conflicts in the laws of the several States, and thus render all legislation, except as to the purely local traffic, abortive; so that, from the absence of uniformity of legislation in the States through which a given railroad passes, it would be impossible that the rights of the citizens should be properly protected, and, indeed, any limitation whatever imposed on the corporation; for it would seem from the authorities already quoted that even if uniform legislation could be secured in all the States, such laws could not operate on the interstate commerce.

Indeed these railroad corporations have ceased to be a body of separate and distinct corporations as organized in the several States, but have already become by combination one system, organized into three or four vast joint-stock companies, the members of which are the corporations of the several States, with absolute and uncontrolled power of monopoly and controlling and taxing at their own will the industries of the people of the United States from one ocean to the other and from the lakes to the Gulf. They have outgrown by combination all limits but the limits of the nation. The seats of this imperial power are not found in the several States where the original corporations were formed, but in remote cities—Baltimore and New York, Philadelphia and Boston. They have made their power of monopoly national, and yet we are told the people are powerless to assert national prerogatives to curb their extortions. And the citizen is to be left solitary and alone to assert his rights against such a power, unaided even by reasonable presumptions of law.

Now, Mr. Speaker, one other fact. We have heard fervent appeals to the Constitution against this bill. It is singular how we shift ground here in this House on constitutional questions. This subject has been before Congress once before. I brought it to the attention of the House of Representatives in 1864. It was then sufficiently manifest that at an early day the exercise of this power by Congress would be inevitable, unless the whole country was to be left at the mercy of these monopolies. It was then manifest, as it is now, that it was not the intention, and had not been, of these corporations to content themselves with a reasonable profit on their investments. When was monopoly ever moderate in its demands? The power of monopoly was too great; and great power inevitably leads to great abuses.

Everybody in this country knows that that which is made to represent the wealth of these corporations, the bonds in various forms, and the stocks, represents a wealth far beyond the capital actually invested, and on which reasonable profits should be made. Everybody saw years ago that the thing to be condemned and resisted was the systematic struggle of these corporations by the consolidation and monopoly to make the industries and labor of the whole country pay a profit on fictitious capitals.

It was very manifest in 1864 that the railroads were determined that their fictitious stocks should pay dividends. The times were favorable for such schemes, for the attention of the whole country was engrossed by the then impending struggle for the Union. Taxation was inevitable, and the railroads were resisting taxation.

When I brought this subject to the attention of Congress, I brought it in the best form I could under the necessities of the hour. Congress was considering the subject of the taxation of railroad corporations; it had imposed a tax of 2½ per cent. on the gross earnings, and inasmuch as in New York and some other States east of the mountains had, as to some of their roads, limited the charges for passengers, the people on that side of the mountains having been much more vigilant and considerate of their rights as to these corporations than the States of the West, they were not able to add this tax of 2½ per cent. to the charges which they were authorized to make. Congress, therefore, was proposing to enable them to escape bearing the burden of the tax themselves by providing that a railroad corporation might add the tax imposed upon it to the cost of transportation of persons and freight, notwithstanding it was limited in its charges by the act creating it. This was a case in which the interference of Congress was invoked in behalf of the railroad.

[Here the hammer fell.]

Mr. HOLMAN. I ask for a few moments longer.

Mr. WILSON, of Iowa. I ask unanimous consent that the gentleman be allowed to proceed.

There was no objection.

Mr. HOLMAN. Congress was asked by the republican leader of this House to override the legislation of the States fixing the cost of transportation, by permitting citizens to be taxed by the railroads to pay the very tax which was imposed upon the corporations. I then brought forward this proposition in an amendment:

That whenever any railroad company shall demand or receive a rate of tax for passengers over and above three cents per mile for each mile that any passenger may be carried, the excess over such rate shall be deemed and taken as a tax levied upon such railroad company, to be returned and paid in the same manner as is provided in this act for the collection of the per cent. on the gross receipts of said company: *Provided however*, That nothing herein shall be so construed as to authorize any railroad company to charge and receive a higher price for the conveyance of passengers than shall be allowed by the laws of the State chartering the same.

Would any gentleman suppose that that was a violation of the Constitution? But, sir, strangely enough the appeal to the Constitution on behalf of railroad corporations came from the other side of the House. A gentleman from Vermont appealed to the doctrine of State rights against this manifestly just and fair proposition.

In submitting this proposition to the House I said:

I trust the importance of this proposition will secure it some consideration. I think no more important subject has been brought to the attention of this committee since the consideration of this bill commenced. It will be observed that the duty imposed on the gross amount of the receipts of railroads is 2 per cent., and the question is whether that 2 per cent. duty imposed upon the railroads shall be paid by the railroads themselves or by the traveling public who are compelled to resort to that mode of transportation. The effect of the amendment is to compel the railroads to bear this duty, and if they charge more than three cents per mile—which is a very fair and liberal compensation—that surplus shall be deemed a tax, and be paid into the Treasury of the United States instead of into the treasury of these corporations.

Mr. GANSON. I would suggest to the gentleman that if the whole excess over three cents a mile shall go into the Treasury of the United States, no railroad company will charge more than that. I therefore suggest that he make the amount so to be paid in one-half.

Mr. HOLMAN. I think my proposition will very effectually accomplish the object I have in view. It is to prevent the railroad from adding the tax to the fare on travelers. If they charge more than three cents a mile let the people have the benefit of it through their Government. If you simply propose to tax them upon their gross earnings, they will add not simply 2 but 4 or 5 per cent., and in some instances 10 per cent. upon the travel of the country by the increased fare they will exact. It is asserted that railroads are compelled to increase the fare with the tax. I have compiled from the American Railroad Journal a statement of dividends of a number of the leading roads, East and West, to repel that pretense, and indicate their earnings at the present rates. I ask that it may be read by the Clerk.

The statement, which was read, is as follows:

Dividends and price of stock of certain railroads during the past year.

Railroads.	Dividends, per cent.	Price of shares.
Illinois Central	7	130
Terre Haute and Richmond	13	125
New York and New Haven	12	160½
New Castle and Frenchtown	9	.....
Indianapolis and Cincinnati	9	100
Michigan Central	8	141½
Camden and Amboy	10	186
Central New Jersey	10	175
Buffalo and State Line	11	201
Cincinnati, Hamilton and Dayton	10	132
Cleveland, Columbus and Cincinnati	20	170
Cleveland, Painesville and Ashtabula	33½	180
Columbus and Xenia	15	.....
Little Miami	15	140
Pittsburgh, Fort Wayne and Chicago	10	114
Pennsylvania	8	75½
New York Central	7	135½

Mr. HOLMAN. I take the dividends on the Illinois Central from other sources than the Journal referred to, but equally reliable.

Mr. MORRILL. I desire to ask the gentleman from Indiana whether that percentage is not calculated on the capital of these roads merely, and not on all their indebtedness?

Mr. HOLMAN. I understand that these are the dividends declared on their capital stock. I take the statement from the American Railroad Journal.

Mr. MORRILL. Many of those roads have got three or four times as much money represented in their indebtedness as in their capital.

Mr. HOLMAN. A single instance will illustrate how these dividends are made, and whether the basis is reliable or not. The Illinois Central declared a dividend of 7 per cent. during the past year, and still had remaining of cash assets, after the paying of the last February's dividend, $2,000,000. That is but one of many instances indicating the extraordinary profits of these roads. I take this statement from a leading New York paper. Under the influence of the war the profits of most of the leading roads have more than doubled in four years. The capital is mostly held by European capitalists, from whom you receive no other tax than what is imposed upon the roads themselves. They are managed with no reference to public interests or convenience, but only for their own profit, favored monopolies; and yet you impose upon them less tax than the individual citizen must pay, and give them an opportunity—yes, you invite them by the proviso I propose to strike out—to impose the tax you impose on them on the traveling public who possess no remedy against their exactions. The enormity of this proviso I will not attempt to argue. It is infamous, and only needs to be read to be condemned.

Mr. Price, of Iowa, opposed the proposition, and said in the course of his remarks:

It is impolitic to authorize or restrict railroad companies, for they will always manage in some way to escape from your restrictions.

Mr. Farnsworth, of Illinois, supported the proposition, and said:

We might as well come at once and declare a tax upon passengers on railroads, for unless you place restrictions in the way, the railroad companies that you tax will exact their taxation out of the passengers. They will increase the rates of fare so as to cover the taxes twice over. This we can prevent them doing in a very simple, easy manner, such as the gentleman from Indiana proposes.

Mr. James C. Allen, of Illinois, supported the measure, and in the course of his remarks said:

Now, sir, gentlemen who know anything about railroads, in the West particularly, know that as soon as the tax bill passed last Congress they advanced both their passage fares and their freight charges, not in proportion to the tax imposed on them, but upon the principal roads in the West they advanced their fare one cent a mile; and I believe some of the roads running eastward to New York advanced their freights from seventy-five cents to $1.50 on a barrel of flour, and on a barrel of pork for which they formerly charged $1.25, they now charge three dollars; so of everything in proportion.

Mr. MORRILL, of Vermont, answering the gentleman from Illinois, said:

I desire to ask the gentleman a question. I ask the gentleman whether he does not think that these are State institutions which ought not to be interfered with by the Government?

Mr. James C. Allen, in reply to this, said:

Mr. Chairman, we in the West suffer enough now from the exactions of railroad corporations; we have in one sense become their slaves.

The proposition was defeated, but it was evident, from the spirit of the debate, that the oppressive exactions of these corporations would be ultimately resisted.

Mr. E. B. Washburne, of Illinois, was, at the time of this debate, in the chair, and therefore did not engage in the discussion, but he was an earnest supporter of this attempt to limit railroad charges, and was, during his long period of service in this House, the most able, effective, and persistent enemy to the encroachments and exactions of corporations.

Now, sir, having considered the end sought to be accomplished by this bill, namely, declaring that charges made by railroad corporations engaged in interstate commerce shall be fair and reasonable, and the prescription of a rule by which such fair and reasonable charges shall be ascertained by court and jury, I come to consider the necessity of such legislation as resulting from the policy of these corporations.

It must be admitted that the right of eminent domain and sovereign prerogatives which have been employed under the authority of the several States in the creation of these railways, appropriating the property of the citizen and subordinating his rights to a corporation, would never have been tolerated except to promote a high public purpose. Certainly all this has not been done and these corporations invested with perpetual franchises simply for the aggrandizement of the stockholders. Such an interpretation of the laws which underlie this vast system of railway corporations would be repugnant to the spirit of our institutions. No, sir; these railways are public highways, and these corporations are invested with great franchises for public purposes, and the aggrandizement of the stockholders is subordinate, and must be subordinate to the public purpose of securing commercial channels at a reasonable cost to the people. The good faith of the States and of the nation require that these corporators shall be entitled to charge and receive a reasonable compensation for transportation based, perhaps, on the capital actually invested, nothing more; and no charter granted by any State can receive any other interpretation. A charter attempting anything more would be still subject to this limitation by the law of the highest public policy.

I deny that a State of this Union can clothe a corporate body with a portion of her sovereignty and with unlimited power to tax the industry of the people by the monopoly even of advantages, and beyond and above legislative control. "If the Dartmouth College case sustains such pretensions—grants of the State sovereignty from the control of successive Legislatures forever—I deny its authority at this day." But the power of Congress to regulate commerce is not limited by special franchises.

This vast net-work of railways by the consolidation of corporate power not only monopolizes the channels of commerce, but monopolizes all advantages, and its power is wielded by a handful of successful adventurers. A handful of men emerging from the stock-gambling chambers of Wall street have almost the entire labor of the country at their mercy. A convention at New York of a few railroad kings, made such by the successful manipulation of stocks, determine what tax the industries of the country—this great nation of farmers and mechanics and workmen in every field of productive industry—shall bear. The country has seen how competition disappears before consolidation.

It is said that there are 73,539 miles of railway in the United States, of the assumed value of $3,159,423,057, exceeding one-tenth of the entire value of the real and personal property of the United States, the value of the real and personal property of the United States being estimated, according to the census of 1870, at $30,000,000,000. It is said that this $3,159,423,057 of railway capital is represented by bonds to the amount of $1,571,578,944, and capital stock to the amount of $1,607,844,113, and that the gross annual income of these railways is $473,241,055, and that their net annual earnings amount to 5.2 per cent. These figures indicate the magnitude of the subject, and the creation of this immense capital within a few years explains the overgrown estates which shrewd adventurers have accumulated.

Here is the most imperial power of centralism that the world has ever witnessed. With the leverage of this monopoly the railway managers seek to force the industry of the country to pay interest and dividends on the fictitious values represented by bonds and stock.

Let us see how this pretended wealth, to give real value to which the country is to be taxed, is created.

I read from the recent report of the committee of the New York Association on Railway Transportation. The high character of this association is a guarantee of its correctness:

The obligations of the New York Central and Hudson River Railroad at this time amount to about $90,000,000, while it is susceptible of proof that the total cost to its stock and bond holders was less than $35,000,000; 8 per cent. dividends are regularly paid on the former sum, thus imposing an annual burden on the commerce of this State and city on sixty-five millions of fictitious capital, amounting, at 8 per cent., to over $5,000,000. The outstanding obligations of the Lake Shore and Michigan Southern Railroad now amount to about seventy-five millions, for which not more than twenty-five millions was ever paid by its stock and bond holders. The watering of stock, in one form or another, has been practiced by nearly all of the principal companies in this country, and it is estimated that about one-third of all the stock of railway companies in the United States has been issued upon a fictitious basis.

I believe this to be a fair example of the methods by which this immense body of bonds and stocks (and it is wealth to the holders of these bonds and stocks) has been created which now rest heavily on the labor of the country. This vast body of real and fictitious capital is made available and productive by the uncontrolled monopoly which a few men have obtained over the commerce and business of the country.

Take another instance, the Cedar Rapids and Missouri Railway, a land-grant road well known to the House. I am assured by a gentleman of the highest respectability familiar with the facts, that in the construction of that road, two hundred and fifty-nine miles in length, two gentlemen, one formerly a member of this House, obtained the entire land grant, amounting in value to $23,000 per mile, of that road; of the first-mortgage bonds, $16,000 per mile; of the stock, $16,000; of the income bonds, the first charge upon the income of the road after the payment of the interest on the first-mortgage bonds, $3,000 per mile; local subsidies of towns, townships, counties, and the State of Iowa through its swamp lands in the counties through which the road passed, $1,200 per mile; making an aggregate of $59,240 per mile, and the gentleman states that the road was never equipped with rolling-stock, but was leased on completion to the Chicago and North Western road, and the whole cost of the construction of the road was $11,800 per mile, leaving a profit on this enterprise of $47,440 per mile. The bonds—first mortgage, $16,000 per mile, and income, $3,000 per mile, and stock $16,000 per mile; in all $35,000 per mile—will represent the capital invested, while the actual cost is $11,800 per mile, leaving a fictitious capital of $23,200 per mile.

And we are told that this road, which constitutes and must constitute a part of one of the channels of our commerce between many of the States of this Union, is to be permitted by the leverage it possesses to control the business of the country to derive a revenue, not on the basis of $11,800 per mile, but on the sum of $59,240 per mile, and the country must pay a tax on a fictitious capital twice as large as the real.

It was to promote such schemes as these that the rich inheritance of the people, the public lands, have been applied—a cursed monopoly of lands, followed by an unlimited power of extortion, and gentlemen tell us no remedy shall be applied. Take another instance.

The Union Pacific Railroad cost the nation $94,640,287.20. It actually cost the Credit Mobilier to build it $50,720,958.94. Here is a fictitious capital of $43,929,328.26, and the United States is made a party to this fraud upon the people, a natural result of this system of subsidies; and yet some gentlemen propose that the Government shall go into the business of building railways and canals!

Conscious that I have already occupied more time in the discussion of this subject than I should have done, I wish to say, in conclusion,

simply that while it seems to me this legislation is inevitable; that the evil is such that it can be reached only by national legislation; that it must be so reached, or these imperial corporations, surrounded by perpetual franchises and high prerogatives of power, sovereign corporations within sovereign States; no, States subordinate to their own irresponsible corporations—would restore, if it were possible, the feudalism, in a mercenary form, of the Middle Ages; a people oppressed and spoiled by petty despots and looking in vain to their Government for relief. A feudalism sordid and mercenary, not the chivalric plundering of the olden time, yet a feudalism that will build up as of old imperial estates, consigning multitudes to poverty and wretchedness.

Our people justly complain of the increase of official salaries as begetting cupidity in public affairs and increasing the public burdens. Have gentlemen considered the enormous salaries paid by these corporations and assessed upon the labor of the country—salaries such as monarchies delight in?

I thank God that history cannot repeat itself, notwithstanding the maxim to the contrary; for the world moves. The nearest approach to the repetition of history which can be conceived would be inevitable if the doctrine of perpetual franchises and vested rights of corporations were accepted by the American people, and the mercenary and sordid spirit of monopoly was permitted to rule the nation. And yet we are told the people have no power to regulate these powerful monopolies. I think, sir, the footsteps of the power that will peacefully and firmly lay its restraining hand on the aggressive and monopolizing power can now be distinctly heard. The people are still their own masters.

I have said this much in reference to the general features of this bill. But indispensable as I deem this legislation to be, there are serious objections to some features in this bill.

Among the great evils of the country is the magnifying of public employment, the enlarging and increasing of public employment. There is no necessity for creating a new bureau, with its army of employés, to give effect to this measure. This is a serious objection to the bill. The cupidity inspired by this multiplying of public offices is intolerable. There never was a bureau established in this capital that did not furnish a leverage for an expense far beyond that of the bureau itself. I must appeal to the gentleman from Iowa [Mr. McCRARY] to abandon that feature of the bill. There is too much machinery about it. A good measure should not furnish an excuse for fastening another horde of cormorants upon the Treasury.

Again, one other very grave objection to this bill, almost insurmountable to my mind, is the appointment of these nine commissioners. I do not care what party is in power; the result would be the same. Whatever party might be in power these commissioners would be appointed largely under partisan influences. It is absolutely necessary for the success of this legislation that it should receive the recognition and cordial support of the country. That great body of men, the producers of our wealth, should have the most implicit confidence in the acts of this board of commissioners. If they are appointed under partisan influences, as they inevitably would be under this bill, they would from the beginning be subjected to severe suspicion. A mistake, a suspicion of their integrity, or of favoritism in their proceedings, would render the whole commission odious, and would, perhaps, postpone for years the application of a proper remedy.

I think a far better mode would be to take men whose employments are and have been such as relieve them from all active connection with party politics, and have familiarized them with public works, and whose rigid educations fit them for severe and impartial inquiry into facts, and whose integrity is beyond question. We have such a body of men in our employment.

I refer to your Corps of Engineers. If a provision was ingrafted upon this bill authorizing the President to detail five engineers of the regular corps who had been in service not less than ten years, I must believe that the act would be received with universal approval. Their pursuits eminently qualify them for this duty. In the expenditure of late years of millions annually on public works, not a whisper of suspicion against their integrity has been heard. If you select as commissioners men who have heretofore been engaged in railroading, you incur the risk of suspicions arising of favoritism of the corporations. If you employ men who have never been in railroad employment, it would require years for them to familiarize themselves with the details of this business.

In this Corps of Engineers, men singularly above suspicion, you get a body of men whose labors will command the respect and confidence of the entire country. No other branch of your service stands in public confidence like this corps. Through all periods of the war, and since that time, these gentlemen, with defalcations on every hand, have been above suspicion or reproach. They are among the most accomplished of our scholars, and devoted to their professions. These are the men for this work if impartiality and firmness, ability and experience are the qualities desired.

I must say that the gentleman from Iowa, [Mr. McCRARY,] who deserves the credit of inaugurating this attempt to accomplish by appropriate legislation a most important result would, in my judgment, render the country a most invaluable service, if, instead of proposing nine gentlemen taken from civil life, and who will be charged from the beginning with partiality, he would propose to devolve upon the Corps of Engineers this important work. And then, sir, no army of new employés would be fastened on the Treasury. I make this suggestion earnestly. What can be more appropriate? A body of men whose pursuits and whose high character for integrity would at once not only qualify them for this investigation, but assure the absolute confidence of the country in the results of their labors.

Mr. Speaker, I do not think this bill, if it becomes a law, will be found fully adequate to the purpose designed. There may be years of patient investigation before the question of regulating and controlling these corporations shall be solved. I believe the only effective remedy will be found in national legislation. The constant vigilance of the people can alone give effect to this or any other measure of reform. Their vigilance can alone secure the integrity and firmness of those who shall be employed in prescribing rules for restraining the extortions of these powerful monopolies. Indeed, sir, without the constant vigilance of the people republican government cannot be maintained. That vigilance is fully aroused; and the best boon that Heaven can vouchsafe to this nation is that it shall sleep no more.

Mr. SCUDDER, of New Jersey. I wish to say to my friend from Indiana [Mr. HOLMAN] that the fallacy of all his legal argument is this: he calls the determination of commissioners in fixing the rates of transportation mere questions of evidence.

Mr. HOLMAN. Not questions of evidence, but rules of evidence.

Mr. SCUDDER, of New Jersey. Well, rules of evidence; the gentleman can have his amendment.

Interstate Commerce and Opposition to National-Bank and Tariff Monopolies.

SPEECH OF HON. JOHN D. C. ATKINS,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

March 24, 1872.

The House having under consideration the bill (H. R. No. 1385) to regulate commerce by railroad among the several States—

Mr. ATKINS said:

Mr. SPEAKER: The evils sought to be remedied by this bill may be cured in a different way, in my judgment. These evils are the result of a system of measures which to the casual thinker may appear illogical; but to my mind no effect was ever more plainly traced to its cause. The subject is a comprehensive one, and strictly considered affords ample scope for discussion; but when viewed in the light which I have suggested, the field is enlarged beyond the limits appropriate to a single speech. And yet, with my convictions of it, I must embrace this more general view, even at the sacrifice of greater thoroughness in the discussion of particulars. In adopting this view of the subject, I shall speak of the injustice of some of our laws and of the necessity of reform. I would not be viewed as a political Cassandra or a complaining censor. I do not speak from the stand-point of sectionalism or partyism, but I trust from that broader and nobler basis, the good of the whole country. I am conscious that the prejudices which have grown and hardened into practical usage in this House may cause the majority to misinterpret my motives; but having faith in the truth of my utterances, I entertain no fears of misapprehension by the people at large, and more especially by those whom I have the honor to represent upon this floor.

The bill now under discussion presents to my mind serious difficulties, viewed either from an affirmative or negative stand-point. If we look on the one side at the overgrown railroad monopoly which threatens to overshadow all other interests, possessing now over one-tenth of all the property of the country, real and personal, being $3,159,423,057, its interests in one sense forming it into a grand consolidated combination, which extends from State to State, and spans the continent from ocean to ocean, and threatens by its vast wealth and corrupting influences to usurp the prerogative of government itself, we may well inquire if there is not some power lodged somewhere to check the giant strides of this huge Colossus.

The advocates of this measure plant themselves upon that clause of the Constitution which authorizes Congress "to regulate commerce with foreign nations, and among the several States, and with the Indian tribes." The discussion has been ably conducted upon both sides. For myself, though ever jealous in the concession of doubtful powers to the Federal Government, my mind, I confess, inclines strongly to the opinion that Congress has jurisdiction of interstate commerce to the extent of enforcing its perfect freedom and preventing any obstruction to it which the spirit of fraud and extortion or State jealousy might interpose. The utter impracticability of the different States in the old Confederation agreeing upon any system of regulations by which commerce could be carried on successfully among the States was the chief and leading inducement to establish and ordain the Constitution under which we live. On the other hand, there are those who have ingeniously and ably argued the unconstitutionality of the pending bill both as to its principle and its details.

Laws are very often constitutional, and at the same time highly inexpedient. If Congress possesses the power claimed in this bill to fix the rates of freights and fares upon railroads extending across two or more States, which is stoutly disputed by able gentlemen on this floor, the expediency of such a measure, involving such vast interests and subjecting them to the exclusive control of Congress, is certainly an experiment which should be maturely considered, and only adopted when it shall become evident that the evils now justly complained of by the people cannot be remedied elsewhere and by totally different agencies. For myself I think they can, short of an appeal to congressional action.

It is true the immense power which the railroad companies possess over the products of industry, especially those of agriculture, rendering them by extortionate charges comparatively valueless when remote from market, has become a sore burden; and yet, in engineering around one evil, are we not imminently exposed to a more alarming danger in investing Congress with the duty of controlling absolutely all the great and varied commercial interests of the country? As commerce among the States is so intimately interwoven with all the affairs of the people, to throw them before Congress for legislation would be to concentrate at the Federal capital all those subjects which happily heretofore have devolved upon the local authorities. The evils growing out of such centralization would, I fear, in the end more than counterbalance the temporary disadvantages which these corporations have subjected the people to; and I have concluded, after mature reflection, that this bill is not the best mode of escape, and that, so far as it is concerned, it—

> Makes us rather bear those ills we have,
> Than fly to others that we know not of.

The Supreme Court of the United States has decided that it is admissible for the States, through their Legislatures, to tax the gross earnings of any railroad company operating within their limits. That decision affords a very important check upon the spirit of monopoly and extortion which seems to have seized the functions of these corporations in these degenerate days.

Again, the right of eminent domain is an attribute of sovereignty, and no Legislature of a State has the right to grant to a corporation franchises which are in conflict, or may afterward be used to conflict, with the interests of the citizens of that State. A Legislature so acting transcends the limits of its rightful powers, and the people, who are sovereign, can resume those franchises which are used by the corporation as an engine of oppression. The original object in granting the franchise was for the benefit of the people, that the corporation might serve them as a public carrier, and not for the sole benefit of the corporation. Hence, when it fails to subserve the purposes of its creation, and becomes an oppressor instead of a benefactor of the people, it is essentially within the power of the State to correct the evil by withdrawing the franchise.

No State ever intends to destroy itself or voluntarily surrender its power to protect itself against harm. To yield that principle would be to surrender the liberties of the people and State sovereignty into the hands of a Legislature or its creature, a corporation. The Legislature is not sovereign; it represents sovereignty; it is only an agent; it may misrepresent the sovereign will. And shall we be told that sovereignty shall not protect itself against the abuses of its agents and creatures, by a resumption of franchises which have been abused? If it cannot, then the liberties of any State may be bartered off by an ignorant or knavish Legislature.

If this reasoning be correct, it follows that every State through which a railroad may run may through its convention protect the public interests against the unjust exactions of the corporation; and under the decision referred to, the power is vested in the Legislature to reduce any company to reasonable terms through the power of taxation. What more, then, is needed to secure reasonable fares and freights for the transportation of persons and things? It is not sound public policy to cripple or destroy the railroads; and, under the view here expressed, they cannot charge extortionately for their service as public carriers. Under the common law they would be required to charge only reasonable rates.

The attention which is everywhere awaking to the superiority of water transportation over railroad for heavy and bulk freights, and the growing favor with which it is being viewed by the people, State Legislatures, and Congress, together with reform in the currency which will prevent panics, retrenchment in expenditures, and the reduction of the present protective tariff to a simple revenue standard, with greater fidelity in the collection and disbursement of the public moneys, and the people encouraged to a diversity of industries and practical domestic economy, will solve the much-mooted problem of cheap transportation; when the railroad companies, from necessity, will become the allies of the people as public carriers instead of their oppressors.

The oppressions of the railroad companies are not the cause of the general poverty of the people, but rather are the effect of that poverty, which has been brought about by the very agencies of which I have just spoken. It is in this view that I desire to discuss this question, waiving any direct further argument to the expediency or the jurisdiction of Congress over the subject, other than to add that the appointment of a commission by Congress and clothing it with legislative power is in violation of a well-settled principle of common law in both England and America, that power delegated cannot be relegated—*delegatus non potest delegare*.

The evils and inequalities to which I have referred trace their immediate development to the era of our great civil war, and have descended to us as a kind of inheritance from that memorable drama. Yet it must be confessed that from the inception of the Government their germ existed, although generally in an inactive state. The opportunities and necessities of the war, however, vitalized the seed which has taken root and grown into a mighty power, subordinating every interest of the people and the Government itself to do its bidding. I allude to the power of capital.

The ablest writers upon political science have ever held the interests of capital and labor under judicious and just laws to be harmonious, if not identical; but the history of American legislation for the past dozen years has produced an irrepressible conflict between these great agents. Instead of co-operating to each other's mutual advantage, they are now at war with each other. No monarch of the Old World, sustained by the bayonets of a hireling soldiery, exacts unwilling tribute from his subjects with more unsparing hand than does this prince of fortune, enthroned in the hearts of too many of the rulers of the people, whose fiat in this Capitol is law; whose janizaries fill the land as tax-gatherers, official or unofficial, demanding everywhere, with Shylock remorselessness, its ill-deserved tithes from labor, until a cry has come up from all over this broad land—from professions, mechanics, and agriculture—to the doors of this Congress, demanding relief from those burdens of inequality, and asking for all only "justice, that venerable virtue without which freedom, valor, and power are but vulgar things."

At no former period of this country's history has there been such universal unrest of the public mind. The apprehensions for the existence of the Government have given way to feelings of foul suspicion and wide-spread distrust of the public officials; and the people are waking up from their Rip Van Winkle sleep to find that the system of abuses and violations of equal rights of citizens which grew out of the plea of "military necessity to save the life of the nation"—a phrase ever courted by the corrupt and ambitious—is fastened upon the general polity of the Government, by which the few are benefited at the sacrifice of the rights and interests of the many. I propose to notice some of these evils. I will first notice the financial evil.

The public mind of the people and their representatives, staggering under the pressure of the late panic, the bastard offspring of an unlawful alliance between the national banks, bondholders, and a few railroad kings, has been diverted from the consideration of the true cause of the present national financial distemper. The Congress, the press, and the country have exhausted the fields of political science to find a cure for our pecuniary ills. The theories of political scientists down to the paper resolves of the last village chamber of commerce, have been passed in review before the eyes of the country, hoping to find some principle or fact which might serve as a key to the solution of the financial problem; and yet we are not much nearer a satisfactory conclusion than we were at the beginning of the crisis, except that the House, on Monday last, voted to increase the legal-tenders to $400,000,000.

If we did not owe a large national, State, and municipal debt, amounting to billions, much of which is in the hands of foreign holders, and if we did not as individuals owe to each other a very large private debt, then indeed a much smaller sum or volume of currency might answer our purposes. But since these obligations are upon us, and as the annual interest we owe abroad consumes largely more than the sixty-six millions of gold and silver products annually exported, and as the United States in the last ten years have exported over $700,000,000 in specie, there is not the metal in the country to serve as our medium of exchange, however desirable and however in accordance with the theories of certain financiers, who have voted for chartering national banks, own large shares of stock in these institutions, and now clamor for gold and silver or their equivalent. The doctrine is sound in theory; but these theorists have forced a condition of things upon the country that, to reduce that theory now or in the early future to practice, would bankrupt the debtor class, which is mostly the agricultural and retail mercantile class of the country. To be compelled to pay their indebtedness in a more valuable currency than the currency was when the debt was contracted will produce wide-spread financial disaster, besides legalizing the immorality of such injustice.

A plain statement of a few leading facts, it seems to me, should suffice. Deducting the loss and the reserve which the redemption banks are required by the law organizing them to keep constantly on hand, there is of legal-tenders and national-bank notes about $620,000,000 in circulation. This would, if distributed, be about $12 for each soul of the 43,000,000 inhabitants. Of that amount the New England States have $31, the West have less than $7, and the South has something less than $3 *per capita*.

The Western and Southern States have a large territorial area, thinly inhabited, with comparatively no facilities for exchange as New England and the North have; and yet the West has less than one-fourth, while the South has less than one-tenth as much. While one dollar in New England and in New York City would perform the office as a medium of exchange, three dollars in the South and West would not perform it so well, on account of the diversity and scattered situation of the population of the latter sections of the country.

Even the dense population of England has nearly $25 *per capita*, while Germany has nearly $26, and France nearly $35.

Now, these facts demonstrate that in this country, so full of resources, so comparatively new and undeveloped, and yet developing more rapidly than history gives any account in ancient or modern times of any other country, (without particularizing it will be enough to illustrate the growth and progress of this young Republic, its masterly leap into the arena of a first-class power, in the last fourteen years having gone up in wealth from $14,000,000,000 to $30,000,000,000,) a much larger volume of currency is required to fill the various channels of commercial intercourse than in those old countries where the regular order of things has not been disturbed for centuries by any startling events of progress which have marked the civilization of this, but a few years ago, western wild—such as the acquisition of a vast area of uninhabited districts except by a few nomadic tribes of savages; the founding of flourishing villages, populous cities, and great States, springing full-orbed, as Minerva from the brain of Jupiter; the opening of mines, of farms; the building of railroads and tunneling mountains; the opening and bridging of rivers, and the erecting and conducting of all the varied arts and industries of private enterprise.

Now it is the duty of this Government—of every government—to furnish a uniform currency; one that will do for the capitalist as well as for the laborer. It is admitted we have not the metal, as has been stated. Why, then, cannot the Government issue its own Treasury notes, based upon its sacred faith, to be redeemed hereafter in coin, making them a legal tender for all debts, public and private, except the interest on the public debt, and repealing all charters heretofore granted to national-bank corporations, and thus save $21,000,000 gold interest paid to this favored class for the exclusive privilege of shaving the people at the rate of 15 to 20 per cent.? A currency thus constituted would command the respect of the people and would be equivalent to gold.

As to the amount that should be issued, it does not matter materially if the sum is not greater than $800,000,000. Each State, according to population, should be allowed its equal distributive share, so that the unjust and unequal condition of things which now exists, producing painful alienation, should not hereafter be tolerated. But our poverty is every day thrown in our teeth, and we are told that we have not the capital with which to purchase the bonds and currency. It is true that the South has been plundered as never a conquered race was before in the history of civilized warfare. But our resources are great and our recuperation wonderful.

It is idle to say that the South, with her annual cotton crop worth $227,000,000; the South and West, with their other crops aggregating for export about as much more, have not got the basis which will command their share of the circulating medium. It is not for the want of resources, but for the unjust discrimination which this Government has practiced for a series of years towards these two sections, that to-day finds them powerless, as it were, in the hands of the Shylocks and money-changers of Wall street.

Frequent applications during this session of Congress have been made to the Comptroller of the Currency for an exchange of currency for United States bonds without effect by members for their constituencies in the West and South, and they were invariably told that the entire amount authorized to be issued by law had been drawn. Who drew it? Capitalists of the East and North have thus appropriated their own share, and much of the shares belonging to the West and South; and yet we are told by the Representatives of those sections, when we demand the redistribution of the currency, and ask to be allowed to establish national banks in our midst, that we have no capital with which to command currency, which is not true; and the Treasury officer tells us that the currency is all issued.

I am not speaking at random. I have submitted applications myself for some of the Patrons of Husbandry, of Montgomery County, in my district, and was denied the currency, while the little State of Rhode Island has $61 *per capita*, and Tennessee has $2.62 only per head. I am in favor of repealing the statute which authorizes the whole brood of monsters; but if that cannot be attained, then I trust banking will be made free to all citizens alike, and that no privileged class shall be allowed to enjoy the monopoly.

If there is too much currency and a healthy condition of it requires contraction, why are the North and East unwilling to give up any part of the lion's share which they so tightly clutch? The East has nearly three dollars to one that she is justly entitled to. Was it this greed that made a Massachusetts Secretary of the Treasury pay $40,000,000 to bondholders in excess of what they were entitled to under the law creating these bonds, by paying the gold instead of currency? If the law under which the Secretary redeemed these five-twenty bonds admits of doubtful construction, then it was conceived in sin and hypocrisy, and if it is clear that they were to be redeemed in currency, as Hon. Thaddeus Stevens declared upon the floor of the House, and who, I believe, reported the bill from the committee, and therefore should be recognized as good authority, then their payment in gold becomes an oppression of the whole people, not to use a harsher phrase.

Many do not understand the law creating the national banks. The system is organized chiefly in the interests of the bonded aristocracy of the great cities—who are drawing semi-annually from the Treasury 6 per cent. in gold upon their United States bonds, which, too, are exempt from all kinds of taxation—while other people are taxed upon everything they own or live upon. Capitalists hypothecate these bonds with the Comptroller of the Treasury simply as collateral security, and draw 90 per cent. of their face value in currency, upon which they go to banking, loaning it to their customers at from 10 to 20 per cent. per annum. In other words, the Government exempts United States bonds from taxation, pays semi-annually 6 per cent. in gold interest upon them, and authorizes the bondholder, if he has, say, as much as $100,000, by becoming a banker, to issue $90,000, which he loans to the people upon real-estate mortgage or other indubitable security at a ruinous rate of interest. First, the bondholder pockets on his bonds $6,000 in gold interest drawn from the Treasury; and next he makes the interest upon the $90,000 of banking capital, which is generally from ten to twenty thousand more.

I wish in this connection to add that in the early days of this session I introduced a joint resolution, instructing the Committee on Banking and Currency to report a bill providing for the payment of the bonds of the Government known as the five-twenty bonds, which are now due to the amount of $400,000,000, in currency, as the act of Congress authorizing their issuance plainly defines. Had that been promptly done, coupling it with the repeal of the national banking system, we should now have reduced our national debt $400,000,000, and would have annually saved to the Government, that is to the people, $24,000,000 in gold interest now paid semi-annually to the holders of this class of bonds.

But the people are languishing under the terrible afflictions of a distempered financial system by which bankers and railroad kings, with their retinue of gambling speculators in bogus stocks of various kinds, have been enabled to inflate or contract, at their option, as it may best suit their infamous schemes, and thus to subject the values of all property to the standard of their greed and lust for lucre.

It is believed and asserted that the Government has given countenance, and moral, if not actual, support to these speculating schemes, by which court favorites have reaped heavy profits in these illicit transactions. In any event the farmers of the West and South, that dividends may be declared upon watered stock or fictitious capital, have been victimized by the extortionate tolls upon their produce *in transitu* to the sea-board. These pressing evils of stringency in the money market and high freights are the result of combinations between the banks and a few railroad monopolists, by means of which the farmers' products are bought up at half-price, and overgrown fortunes are suddenly amassed for those who belong to the ring.

These combinations, by which "corners" are made at the expense of honest labor, can be prevented by the States taxing the gross receipts of the railroads, and if need be by resuming their perverted franchises, and by Congress passing an act repealing the national banking system, or else throwing wide the door and making it free to all. By this means the weight which now hangs like an incubus upon the producing and mercantile classes will be only partially removed. I undertake to say that all legislation, whether State or national, which confines itself strictly to these two propositions—transportation and currency—will fall far, very far, short of effecting a permanent cure.

The disease is more deeply rooted—it is nearly constitutional through mere precedents; certainly it is chronic. It pollutes the very blood of the arteries of the body-politic, not because it is inherent or is necessarily found in the Constitution—it is not in the Constitution; it is abnormal; the result of malpractice, the prescription of false political doctors, fatally bent upon maintaining a system which will preserve and pamper a few, but is death to the million.

Sir, the real foundation of all this disturbance in the land; the scarcity of money in some sections and plethora of it in others; the penury of the laboring classes, and the enhanced purchasing power of the money of capitalists; the low price of subsistence products in the West, and the high price of every article they consume to keep their bodies from freezing in the keen rigors of the northern blast, this wail of distress that comes up to the doors of this Capitol and forces its unwelcome sounds into the very ears of this Congress, all, all is the natural product of seeds sown long ago, as before suggested, and which have brought forth abundant harvests of penury for the masses, but of overgrown wealth for the few; and of the subordinating of States and sections as fair by nature as God's sun ever shone upon, as fertile of soil as the boasted Nile, and as salubrious as the sunny climes of France or Italy, to the ambitious and selfish greed of a small section of the country.

Now, sir, it is to this great fact that I call the attention of the whole country as solemnly as I know how. But, sir, more particularly do I wish to reach the people of Tennessee, my native State. Nor do I address them as partisans, but as patriotic citizens of a great Commonwealth, whose energies, if properly directed, will in the next decade carve out a destiny for her and achieve a victory in moral and material development which shall place her side by side with the foremost of her contemporaries in the great sisterhood of States. In spite of Federal legislation some of the States can do much toward obtaining relief, if they will but improve the advantages which nature has bountifully spread before them.

Before proceeding to notice specifically the operation and effect of the protective system upon the prosperity of the whole country, and especially the exhausting drain it makes upon all other industries

except the darling objects of its parental care, in which light I particularly desire to view it onthis occasion, I wish to submit a few local facts, and to accompany them with a few practical suggestions of domestic economy.

If these monopolies of the tariff, and national banks particularly, (of which costly transportation is the legitimate offspring, as I think is clear,) cannot be reached through legislation—and I confess I see no hope of that for some years, as the political complexion of both Houses of Congress is at present constituted—then must the people turn and look into their own domestic economy for relief. Indeed it is perhaps wise, if not necessary, that they adopt that course in any event.

I cannot resist the temptation just here, although it may seem a little foreign, to speak for the State I in part have the honor to represent. With the advancement she is now making in manufacturing, her liberal invitations and treatment of immigrants, her fostering encouragement and substantial support given to schools, colleges, and universities, until she has fairly won the honor of wearing the proud title of the "Athens of the South," it will require but a few years of self-denial and habits of strict economy and intelligent industry, to place ourselves upon the high plane of material independence. Tennessee is not surpassed by any State in the Union in point of climate, fertility of soil, adaptation to the growth and maturity of all the great staples of North America, except sugar. Her mountains are full of minerals, especially iron and copper, and of exhaustless coal-measures; and added to all these advantages there is a superabundance of water-power, not surpassed, if equaled, on the continent. What, then, is our manifest duty? Make ourselves wholly independent of the tariff, of the money-changers, and the railroad rings. How? By diversifying our industry, and from our fertile soil first produce our own subsistence. Cotton and tobacco should be made surplus crops; mills and manufactories should be erected everywhere upon our water-courses suited to the purpose, and utilize those motive-powers which nature has provided, in the manufacture of everything we wear. At the world's fair in London, in 1852, let not the fact be forgotten that Tennessee took the premium both in cotton and wool.

The water-power for driving machinery is abundant in every county within the limits of the State. Her mountains, hills, and valleys furnish inexhaustible pasturage for sheep the year round. In most if not in every county cotton grows to maturity from one-third to two-thirds of a bale per acre. The means of transportation with small expenditure lies convenient to every portion of the Commonwealth. With her commercial and agricultural advantages Tennessee only needs the spirit of manufacturing to insure a glorious destiny.

This is the road to financial and commercial independence. The people will then be prepared to appreciate the appropriateness of the remark of John Randolph upon the floor of Congress, when he exclaimed that he had discovered the philosopher's stone, which was simply "pay as you go."

No slavery is worse or more abject than the slavery of debt. Benjamin Franklin said, "When you run into debt you give to another power over your liberty." If the South is ever relieved from the losses of the war and the debt forced upon her by the reconstruction policy; if she is ever rehabilitated, she must look to the future, and forget the past only as a bitter experience. And since she is utterly powerless to inaugurate any policy in Federal legislation, she must act with the West in throwing off those enormities, the protective tariff and the national banks, and under which both southern and western agriculturists are especially groaning and day by day becoming poorer, while these imperial corporations and festering rings are growing richer and more and more insolent every hour.

These are the vampires that are sucking the life-blood from the people. Where is the remedy to be found? One would naturally turn to the American Congress for the correction of these evils, since it is under and by means of Federal legislation that they had their birth and have grown to their present stature. But, sir, it is a vain wish and a delusive expectation, I fear. It would be strange, indeed, if a change is not imperatively demanded; and that the party or parties, no matter what their professions of equality and right, which fail to secure this meed of justice, will be swept away with the hand of the avenger.

In vain may gentlemen inveigh against the exactions and oppressions of the protective policy, and yet vote to so organize this House and construct the committees, which, under the rules, enable a half-dozen leaders to thwart the will of a majority—shrewd, experienced politicians, who are kept here from year to year and term to term on account of their familiarity and dexterity in the crooked arts of legislation, by which they manage to keep the masses saddled with a high protective tariff, and the lords of the loom, booted and spurred, with whip in hand, astride their backs.

The South, with her varied internal resources and facilities for diversified industries, may, nay, if she is wise, will be able to bear up under the load of taxation; but can the West, with all its boundless fertility of soil, remote from navigation and with less varied resources and industries, longer endure it without danger of bankruptcy?

Government, to be safe and free, must consist of representatives having a common interest and a common feeling with the represented.

If that political epigram of the great Virginian be sound doctrine, it necessitates a change in the political complexion of the majority in both branches of Congress in reference to these vital questions; otherwise the people are doomed to this worse than serfdom—a vassalage as abject and as burdensome as that which chains at this moment the tenantry of England, Ireland, Scotland, and Wales to the chariot wheels of a British landed aristocracy.

How many farms in the South and West in the last few years have been mortgaged to eastern capitalists? An answer to that inquiry would develop a startling disclosure of dependency among our agricultural population, which portends evil, and only evil, weighed down as are the people of the South and West under the accumulating burdens of taxation, with the intolerable drawbacks upon the value of their products in the form of exacting tolls for transportation, and seeing their capital melt away year by year, with a certainty at no distant day of bankruptcy overtaking them and overwhelming their families in destitution.

One of the leading objects of politics is the creation and proper distribution of a nation's industry. It can only be done by and through a well-regulated commerce, that consumes a very small proportion of the value of the products for interchange and traffic. Without a healthy and active commerce nations stagnate, decline, and fall into decadence, just as the physical man declines and dies for want of proper exercise. Commerce is the life-breath of the state.

As before suggested, one of the prime causes and controlling influences which led to the formation of the Union of the thirteen original States was for the better protection, regulation, and freedom of commerce. If you ask a western man to-day what was his principal motive for maintaining war with the southern confederacy, he will tell you that it was for the freedom of commerce, the undisputed navigation of the Mississippi River. History would not have to record the gallant charge of the six hundred at Balaklava, or recount the marshaling of hostile armies upon the sanguinary field of Sebastopol, and the trailing of the Russian banner in the Crimea, had it not been for the exactions with which the Ottoman fettered the limbs of commerce upon the Black Sea, and closed its ports against the subjects of the Czar. Then the rich harvests gathered from the grain-fields of the Crimea, Wallachia, and Moldavia no longer competed for the markets of Western Europe with the golden harvests of the United States. And when the allied armies had by heavy artillery closed up the Black Sea, the natural highway of commerce, and laid an embargo upon the freedom of the sea, and Russia, foiled, folded her arms, then the thought of connecting the Danube and the Rhine carried the point which neither Russian diplomacy nor valor could accomplish.

England, wise, far-seeing, and progressive, repealed her tariff and corn laws, and removed all restrictions upon foreign commerce, until free trade has become the policy of the advanced civilization of all Europe. With free trade, and that canal opened, Russia pours her wheat into the markets of Western Europe at cheaper rates than England can afford, and at less cost of transportation than is at present possible to the United States; and again Russia holds the vantage-ground.

Commerce is the handmaid to civilization, expanding its power and enlarging its benefits. Its protection and freedom in every land illustrate the pages of history with splendid feats of diplomacy or victories won by contending hosts on sanguinary fields. And yet our commercial marine, once the pride of the ocean, by a narrow, selfish, and mistaken policy, has been driven from the seas by foreign competition, and now comes tottering, knocking at the door of this Capitol, saying "Give me some drink, Titinius."

The present high rate of duties imposed upon foreign importations for the benefit of a few of the favored sons of Mammon in New England has driven our customers with their cheap goods to other more favorable markets, with whom they can barter upon principles approximating free trade, while our wares and products lie in our shops and rot jn our fields, and the masses of the people are forced to buy the American manufacture at ruinous cost to the consumer.

Our present prohibitory tariff, besides restricting our agricultural industries by preventing the freedom of exchange, has crippled our commerce and destroyed our tonnage, which in 1860 brought us in over $20,000,000, but which under the present order of things costs the American people $80,000,000, as stated by the President in his message last December to Congress; which sum is paid to foreign bottoms to transport our products, making a difference of $100,000,000 against us in adjusting the balance of trade.

With our present system of costly transportation our domestic exports have decreased $56,000,000 in the space of ten years. These figures speak volumes in condemnation of the policy of our prohibitory customs duties, and of our imperfect system of internal transportation, and the suicidal restrictions upon our navigation laws. The country has long groaned beneath these burdens. This policy of killing the goose to get the golden egg has at last aroused the just apprehensions of the farmers of the whole country.

The repeal of these obnoxious measures, which, like the baleful bohun-upas, sheds its seductive but poisonous perfume on all around, is imperatively demanded. But, sir, this Congress dares to turn a deaf ear to that demand. When the gentleman from Indiana (a democrat) proposes a reduction of the tariff, under the new rule which my colleague [Mr. MAYNARD] championed and put through by a strict party vote, even the yeas and nays are denied; and no record goes to the country showing how the friends of the people vote on the subject of taxes.

The so-called opponents of tariff monopolies, and all kinds of monopoly, voted against a resolution which proposed a reduction of the present high protective tariff, which—more than dear transportation, a depreciated currency, with a scarcity at that; gold-gambling, stock-gambling, stock-watering; extravagance and corruption in the collection and disbursement of the revenue, or all combined—retards the growth and prosperity of the agricultural interest, and eats up the substance of the people. It is the ghoul of American politics. So long as it stands as the policy of the country, just so long will the energies and industry of the rural population of the land be drafted upon to their utmost capacity; just so long will labor be taxed to the utmost limit beyond which subsistence fails, so that protected capital, oftentimes wholly untaxed, as in the case of the United States bonds, may continue to pile up its annual usurious percentage.

The tariff shows that many articles of prime necessity are taxed to the point of prohibition, and that leaves our consumers entirely at the mercy of the American manufacturer. Now, when it is understood by the masses of the people how small are the importations when compared with the home production—being, I believe, about $680,000,000 of imports, of which $199,000,000 are free goods, to $3,000,000,000 of home manufactures, upon all of which they pay an average duty of 45 per cent.—they will begin to see that the sum of $180,000,000, which they pay into the Treasury as customs duties for the support of the Government, sinks into insignificance, large as that sum is, when contrasted with the unaudited sum which lines the gilded pockets of a few thousand manufacturers and capitalists, the legislative pets of this country, who control the country through their Representatives, whom they have continued in Congress for many long years, and through a hireling press and a corrupt lobby, by diverting the minds of the people from these unjust and unequal laws to an insane cry about the wrongs done the black man and about the ulterior aims of the rebel democracy; and thus upon these myths, these political hobgoblins, as false as they are ridiculous, contrive to lead the people away from the consideration of their real interests to the contemplation of these false issues.

The duty upon railway iron for the fiscal year 1873 was $3,027,904.41. The profits of American manufacturers of iron rails can be easily estimated by subtracting two-thirds from the whole cost of production, and the remaining third is clear profit in the pocket of the manufacturers. So in regard to the very many constituent elements which are necessary to complete a railroad and put it in operation, the profits to the manufacturer are simply immense. Of course all this profit which railway companies pay to the manufacturers comes out of the people who employ the railroads to transport themselves or their products and wares. These heavy expenditures incurred by railroad companies, from the ax and pick and shovel that move the first pound of dirt to the harnessing of the locomotive, are thus increased, that tribute may be paid to the American manufacturer at the expense of the community at large. The farmer who ships a bushel of grain, or a bale of cotton, or a hogshead of tobacco, pays his share of the large profits which the manufacturer reaps by the protection afforded by the tariff, as before illustrated.

The legislation of Congress for the last ten years seems to have been based upon the idea of a rich government and a poor people, together with the concurrent idea that a few rich manufacturers, bankers, and bondholders are the only persons whom the Government seem to care for. In no other way can we hope for prosperity and material independence while forced to bear the onerous burden of taxation, which, although ever so indirect and insidious, is none the less grievous.

Any statesman who would propose to collect one-half the revenue now collected by customs duties by direct taxation would be considered a public enemy by the people, and would be indignantly driven from power.

A glance at its details will show its injustice, and in whose interests this domestic spoliation is framed. Rousseau said, "A great deal of philosophy is needed to understand the facts which are very near to us." So it is with the working of the tariff.

The people do not seem to realize that they are taxed at all when they pay for every pound of iron they use at the rate of $9 per ton on pig-iron, or 35¼ per cent.; upon bar-iron, 35 per cent.; upon steel, 35 per cent.; iron squares for carpenters, 56⅔ per cent.; sheet-iron, 31 to 45 per cent.; screws, 42 per cent.; round iron, 37½ per cent.; cast iron, 50 per cent.; railway bars, 30½ per cent. This is the duty *ad valorem*. Now take salt. Everybody uses salt; the farmer uses more than any other class of citizens, in this, that he requires it for the use of his stock. The average duty reduced to *ad valorem* on salt in bulk is 75 per cent. Manufactures of gold and silver, such as epaulettes, galloons, laces, knots, stars, tassels, tresses, embroideries, and wings of gold and silver, from 31½ to 35 per cent. Diamonds cut, cameos, mosaic gems, pearls, rubies, &c., 10 per cent. to 25 per cent. Laces, 31½ per cent.

The framers of the tariff laws seemed to labor to tax heavily articles of prime necessity and to put a light duty upon articles purely for ornament, and thus discriminate against the masses for the benefit of the few who are able to indulge in such luxuries.

If, instead of arranging a schedule at a percentage which in many instances is simply prohibitory, and taken as a whole yields only $180,000,000 of revenue, it is believed by those who have given the subject much study and reflection that if the duty on many articles was reduced 50 per cent., a much larger revenue would be derived, while at the same time our exports would be greatly increased to meet the foreign demand. It needs no argument to prove that, as it is accounted for upon the simplest law of trade, the principle of barter or exchange.

No one objects to a tariff which will afford sufficient revenue to pay the interest on the public debt, set aside the sinking fund, and defray the ordinary expenditures, economically and honestly administered; but the people have a right to object to a rate of duty which, while it may not swell the revenues of the Government at all, yet enhances the profits of the American manufacturer two and three fold. This is class legislation. It is unequal and unjust, and contrary to both the letter and spirit of the Constitution.

Upon no other principle can we account for the exemption of United States bonds from taxation, for the extra and peculiar privileges granted to bankers, and the endearing sympathy with which it has thrown its fostering arms around the manufacturer and made him the pet of the protective system, by which he has become a millionaire.

There are men in this country whose private fortunes sum up from twenty to thirty million dollars, pensioners upon Government bounty. Upon no other principle can we account for the tax of three cents per pound upon lint cotton for two years, which cost the poor and struggling people of the South $60,000,000. Upon no other principle can we account for the present invidious tax upon leaf-tobacco, which comes directly out of the pockets of every poor laboring man, white or black, who toils beneath a summer solstice and by his own hands does well if he can produce in one year's labor in addition to his subsistence for himself and family $100 worth of tobacco for market. Upon no other principle can we account for the favor shown to patent-right inventors by extending their patents and enabling them to demand from the public their royalty—very many of whom can scarcely compute their own wealth, or rather I should say their assignees; for the man of genius is generally swindled by some shrewd trickster out of the profits of his brain labor.

Nineteen-twentieths of all the farming implements and mechanical and agricultural machinery, as well as that used for commercial purposes, are this day paying tribute under patent-rights, many of which, after enriching the owners, have been extended, doubtless improperly. When this fact is pondered the people can begin to find out what they pay for the use of these various implements and machinery which intelligent labor is now compelled to employ in order to successfully compete with the more enterprising.

These are inequalities in our laws the injustice of which operates directly and peculiarly upon the farmers. They have a right to complain, and they do complain through their Representatives. This Congress has repeatedly been asked to remove from the statute-book these unjust laws. It remains to be seen whether it is done. Various propositions have been introduced to remedy this injustice in the many particulars to which I have referred. A vigorous effort has been made to repeal the law taxing leaf-tobacco in the hands of the small producer. My able colleague from the sixth district [Mr. WHITTHORNE] and the able and indefatigable member from the first Kentucky district [Mr. CROSSLAND] have especially insisted upon the repeal, to which I add my humble exertions.

If, instead of the policy of gathering taxes from the producer almost below the power of production; if, instead of arranging the internal-revenue taxes by the system of moieties and other corruptions, which irritate and fleece the people and benefit the Government but little, but which enrich the favored official of the Administration, (for instance, three Federal office-holders receive in the city of New York annually over $100,000 each;) if, instead of subsidies and extravagance, the creation of new and unnecessary offices for partisan favorites; and if, instead of the dishonesty and corruption—hard words, "pity 'tis, 'tis true"—that pervade certain branches of the public service; if, instead of all this, the policy of economy, with a tariff simply for revenue to meet expenditures, the currency settled and made uniform, our great national water-lines to the sea-board improved and opened, affording cheap transportation for freights, we would then hear no more appeals to Congress to take charge of railroads and regulate and fix the price of their freights and fares—powers which, if granted in the Constitution, may become exceedingly dangerous to the rights and liberties of the citizen if exercised.

The reforms which I have mentioned put in force, then this bill is unnecessary and pernicious. Had they been in force all along, this bill would never have existed, but as a people we should be enjoying the repose and prosperity which ever follow upon just and wholesome legislation.

Extravagance and corruption of officials have helped to swell this cry of distress.

I have compiled the figures to which I invite attention from the annual report of the Secretary of the Treasury upon the state of the finances. Take the last eight years, commencing with June 30, 1866, the fiscal year after the conclusion of the war, years of peace with all nations and with ourselves, and I find the expenditures for the Department of War ending June 30, 1873, foot up the immense sum of $755,278,693.65. Deriving my information from the same authentic source, I find the American Navy, of which the House heard so much at the beginning of the session—and which debate has about established the fact that it is but little better than a fleet of rotten hulks, which can scarcely resist the storms of wind and wave, much less oppose in successful combat the splendid navies of European powers—

has cost, inefficient as it is, the modest sum of $206,083,157.59 for the same years.

I shall not stop here to dilate upon the use and benefit which the people derive from these two arms of service. Of course it would be unwise to dispense with them entirely. War, it is hoped, for the balance of this century at least, if not for all time to come, upon this continent has "smoothed his wrinkled front." The plain citizen does not see the need or delight in viewing the splendors of a magnificently appointed army in a time of profound peace. He cannot see the necessity of expending in eight years $961,361,851.24 upon the Army and Navy. And this large sum is exclusive of property sold, amounting to over $100,000,000, since the war, and is of course to be added to these figures; a fact frequently brought to the attention of the House by the able and vigilant member from the Lexington (Kentucky) district, [Mr. BECK.]

And just here I might add, quoting the same unimpeachable authority, that our miscellaneous expenditures for the same years sum up to the enormous sum of $449,239,512.34.

I will attempt no analysis of the figures under the head of "miscellaneous." No doubt they were miscellaneous, involving extravagance and luxuries which eclipse in variety, magnificence, and splendor any court in Europe.

I might refer at this point to the Indian Bureau, and show that the red man of the West has caught the contagion of reckless extravagance. Reading from the same authority, I find that in those same identical eight years the Indians cost the United States $44,729,635.76. Costing double what they did ten years ago.

For many years the people have been hoodwinked and made the dupes of this partisan chicanery; made to believe, if they intrusted the democrats with power, they would undo what has been accomplished and settled by the war; indeed, that they would, if elevated to power, assault the very citadel of liberty itself and strike at the integrity of the Government. But the people, goaded by the burdens of taxation, see that, instead of diminishing, the amount they pay into the Treasury of the United States annually increases $10,000,000 to $12,000,000, having gone up in 1866 to $176,000,000; in 1867 to $164,000,000; in 1868 to $180,000,000; in 1869 to $194,000,000; in 1870 to $206,000,000, and in 1872 to $216,000,000, exclusive of the interest and sinking fund.

The official tables show that in five years General Grant's administration has collected from the people the enormous sum of $1,872,610,750.84. In the same years it expended $1,492,559,233.80. In the five years named the Government collected $380,051,517.04 more than it expended. I have taken these figures from the Finance Report of 1873, page 12. A sum larger by $285,166,282.63 than the entire cost of the Government from 1791 to 1861, being $1,587,444,468.21; including the Indian war, the war of 1812-'15, and the Mexican war; including the cession of Florida, the Louisiana purchase, by which an empire was added to our national domain; including the annexation of Texas and the vast area acquired under the treaty Guadalupe Hidalgo, stretching from longitude 105° across mountains of solid mineral to the golden shores of the Pacific, possessing a fabulous wealth, the increasing development of which will astonish generations yet unborn, and prove how wise and beneficent the forecast of that statesmanship which secured it will be viewed by the millions who are to succeed us.

Extravagance and corruption, as history informs us, have always crept into the walks of official life. Old nations especially are apt to become corrupt and extravagant. But I doubt not, if half is true that is charged, the present Administration stands without a parallel in any of its predecessors or in any government of like age in the civilized world. If we take only the testimony of some of the leading republicans themselves, this Administration cannot stand acquitted of either charge before the bar of public opinion. The leader of the House, the chairman of the Committee on Ways and Means, confesses to both. Other members of the same party admit the fact, and pledge themselves to bring the guilty parties to justice.

The favoritism shown to classes in exempting their property from taxation; in granting large subsidies and giving away vast areas of the public lands to corporations and investing them with peculiar and exclusive privileges; in protecting certain industries at the expense of others; allowing large salaries and moieties to Government officials and agents; with a general proneness among high officials to violate the laws and afterward to plead necessity as a justification of their unlawful acts, with many other wrongs that might be detailed, to say nothing of the disregard shown to the popular will of States and the prostrate form of freedom that lies bleeding within their limits under the heel of the petty tyrant, sustained by Federal bayonets, is sufficient to awaken the liveliest apprehensions of the patriotic of all parties.

I trust and believe that, whatever of corruption may have crept into the official walks of our political life as a nation, it has not yet extended its deadly virus to the popular heart; that as a people we have not yet reached the condition imputed by a distinguished English historian to the people of Rome during the eventful times of the contending factionists, Marius and Sylla, where he speaks of the "profound deterioration of the public morals."

Let us, Mr. Speaker, take warning by the fate of the ancient republic. While the eloquent appeals of Cicero and other patriots in behalf of popular liberty found a responsive echo in the intelligence and virtue of the people, Cæsar paused upon the banks of the Rubicon; but when ignorance, vice, and luxury entwined their fascinating coils around their necks, and they foolishly and criminally gave themselves over to the blind folly of worshiping these alluring but false gods, and became willing captives at the feet of ambitious and corrupt leaders, the usurper boldly crossed the sacred boundary, and marched his triumphant legions, covered with the splendors of foreign conquest, and planted the standard of his own personal government upon the dome of the Roman senate.

It is doubtless true that nations, like individuals, are apt to be enervated by the luxury which wealth affords, and feeling no necessity of effort lapse into decline.

It is of this healthy independence, this moral selfhood, peculiar to young men and young nations, of which greatness is born. Imbued with this energy, our country's future is clouded in no mystery if we but remember that the tree of liberty, which God planted only upon the soil of public virtue, can be alone nurtured and watered by the grateful dews which general intelligence and official integrity shall shower upon it. If the people would maintain and control this Government in practice, as it is theirs in theory, they must more than ever look to the capacity, identity in interest, and fidelity of their representatives. The power is yet in their own hands. Will they assert it?

Interstate Commerce.

SPEECH OF HON. JOHN COBURN,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

March 24, 1874.

The House having under consideration the bill (H. R. No. 1385) to regulate commerce by railroad among the several States—

Mr. COBURN said:

Mr. SPEAKER: Among the many questions presented for consideration to this Congress, no one surpasses in gravity that now under discussion. The prevailing dissatisfaction as to the manner, the supply, and the charges for transportation across our wide country has caused a demand unlike any ever made before for the interference and aid of the national Government.

The corporations created by the States cannot be confined in their operations by State lines, but in the matters of trade and travel almost invariably go beyond them and connect their business often with the remotest parts of the Union. The cars that run from Portland and Boston find their way to Chicago, New Orleans, Galveston, or San Francisco, and ten thousand intermediate points; and those that are loaded with the cattle of Texas, the wheat of Nebraska, the corn of Missouri, or the hogs of Indiana, wander far over the mountains to the East, and find the sea-ports of many States. All these States have different laws as to corporations, have a different line of legal decisions, have diverse interests, and have no power to go an inch beyond their limits for good or evil.

The business of transportation is essentially national, is an integral part of the general frame-work of our society, and in its very nature can only be advantageously controlled by the whole people. Whatever management in long lines is intrusted to mere local authority must in so far balk and hinder that general system which operates over the whole country; whatever the States may do is confined to their boundaries exclusively.

Combinations have overthrown on many lines all competition, and the carrying is done at the caprice of those who control the majority of the stock in the companies. Freights are carried or refused, charges are put up or down, trains are delayed or hurried through, places are favored or discriminated against, to contribute solely to the advantage of the carrier, regardless of the interests or profits of the owner of the articles transported. When water-lines are closed, freights are put up; where there is little or no competition, charges are greatly increased; and, in fine, every device that may be planned is resorted to to obtain the largest amount of profits on the stock, and is adopted to secure this end by a large number of roads.

That this matter of complaint is universal is by no means true, but a sufficient number of facts have been ascertained to authorize and justify action in the premises. In the interior the prices of all the surplus is thus reduced, and the profits on agricultural products, or articles manufactured for export, are almost entirely cut off, while the cost of all things brought from the sea-board is greatly enhanced.

This also operates with equal disadvantage to the inhabitants of the sea-coast States, who rely upon the interior for their supply of provisions and raw material. The man of the East and the arid ridges of the Atlantic slope stand side by side with the dwellers in the rich plains and in the great valleys of the Ohio, the Mississippi, and the Missouri, in demanding reasonable rates of transportation. Both alike know the value and importance of railroads, both point with pride to their construction, both glory in their prosperity, but both feel the necessity of saying that they shall not be used for the mere purposes of speculation, for extortion upon the business of the people, for the worst uses of monopolies.

What then can be done to protect the interests of the people without crippling the enterprise and marring the efficiency of the great lines of transportation? To fix absolutely freights and charges is a task beyond that which Congress can perform. The data which enter into the calculations necessary to do this are numerous, and can only be collected with great labor and the most assiduous care. The cost of construction, the cost of running, the cost of repairs, the wear and tear, the kind and character of business done, the amount of earnings, the amount of profits, and many other facts peculiar to each road and differing widely in neighboring localities, all enter into the matter of the consideration of reasonable charges, and would make the task an impossible one for a legislative body.

The most that Congress can do will be to adopt a few general principles of action, based upon experience and a just regard for the public welfare and applicable to the subject in hand. But at the very threshold it is denied that Congress has any power whatever to act in the premises.

Has Congress the power to do so? The often-quoted paragraph of the Constitution expresses that power in general terms:

Congress shall have power to regulate commerce with foreign nations, and among the several States, and with the Indian tribes.

Upon this rests the argument for the action demanded to-day. The power to regulate, thus expressly given, is a broad one, and clothes Congress with every attribute necessary to the complete control of the subject. What is commerce, the present subject of regulation? Need I prove that the business done on railroads is commerce; that the vast trains that pass daily, hourly, or rather constantly to and fro are the instruments of commerce? Need I point to the travelers who, by the million every year, pass up and down on these roads? Need I recall to mind the vast cost of these lines of trade and travel, and the enormous outlays to keep them open and in running order, or the still vaster proceeds and profits from their use, to show that it is all commerce? Commerce on land has outgrown commerce on water, and the flying car, not the sailing ship, is the fit emblem of that mighty interest that involves the prosperous progress of every civilized nation.

The highest courts of the land have recognized the power of Congress in the premises. I will quote from some of their decisions. The first decision, in the mouth of every advocate of the doctrine, is that of Gibbons *vs.* Ogden, in which Chief Justice Marshall says:

If, as has always been understood, the sovereignty of Congress, though limited to specified objects, is plenary as to those objects, the power over commerce with foreign nations and among the several States is vested in Congress as absolutely as it would be in a single government having in its constitution the same restrictions on the exercise of the power as are found in the Constitution of the United States. The wisdom and discretion of Congress, their identity with the people, and the influence which their constituents possess at elections, are in this, as in many other instances, as that, for example, of declaring war, the sole restraints on which they have relied to secure them from its abuse. They are restraints on which the people must often rely solely in all representative governments.

And again, in this decision, he says:

The genius and character of the whole Government seems to be, that its action is to be applied to all the external concerns of the nation, and to those internal concerns which affect the States generally; but not to those which are completely within a particular State, which do not affect other States, and with which it is not necessary to interfere for the purpose of executing some of the general powers of the Government. The completely internal commerce of a State, then, may be considered as reserved for the State itself.

Judge Miller, of the Supreme Court of the United States, in the Clinton Bridge case, says:

When these roads [railroads] become parts of the great highways of the Union, acting an important part in a commerce which embraces many States, and destined, as some of these roads are, to become the channels through which the nations of Europe and Asia shall interchange their commodities, there can be no reason to doubt that to regulate them is to regulate commerce both with foreign nations and among the States, and to refuse to do this is a refusal to discharge one of the most important duties of federal government. As already intimated, the shackles with which the different States fettered commerce, in their selfish efforts to benefit themselves at the expense of their confederates, was one of the main causes which led to the formation of our present Constitution. The wonderful growth of that commerce since it has been placed exclusively under the control of the Federal Government has justified the wisdom of our fathers. But are we to remit the most valuable part of it to the control of the States through whose territory it must be conducted and to all the vexations which they may impose? And must all this be permitted because the carrying is done by a method not thought of when the Constitution was framed?

Judge Redfield, of Vermont, says:

The power of Congress in regard to interstate commerce—that is, commerce between different States, whether two or more—is most unlimited, by the very terms of the national Constitution. It extends as far as the national sovereignty extends. In regard to the regulation of fares and freights upon existing railways, Congress has the same power to regulate commerce among the States, whether upon land or water, and to the same extent that any national legislature has to regulate upon its railways or its vessels or ships of any kind. This will become very apparent by the consideration that this power resided, to its full extent, exclusively in the States before the adoption of the national Constitution, and that it was transferred entire to the national Government by enumerating among the exclusive powers delegated to the national Government the power to regulate commerce with foreign nations and among the several States.

See, also, Story on the Constitution, volume 2, section 1067:

It has been settled upon the most solemn deliberation that the power (to regulate commerce among the States) is exclusive in the Government of the United States. The reasoning upon which this doctrine is founded is to the following effect: The power to regulate commerce is general and unlimited in its terms. The full power to regulate a particular subject implies the whole power, and leaves no residuum. A grant of the whole is incompatible with the existence of a right in another to any part of it. A grant of a power to regulate necessarily excludes the action of all others who would perform the same operation on the same thing. Regulation is designed to indicate the entire result applying to those parts which remain as they were, as well as to those which are altered.

In 15 Wallace the decision of Judge Strong, of the Supreme Court, contains the following definition as to commerce:

Beyond all question, the transportation of freight, or the subjects of commerce, for the purpose of exchange or sale, is a constituent of commerce itself. This has never been doubted, and probably the transportation of articles of trade from one State to another was the prominent idea in the minds of the framers of the Constitution when to Congress was committed the power to regulate commerce among the several States. * * * Nor does it make any difference whether this interchange of commodities is by land or by water. In either case the bringing of the goods from the seller to the buyer is commerce.

Here, then, we have the best judicial authority of the land to support the power of Congress to make the needful regulations of commerce; that they must be of such a nature as not to destroy commerce, as not to harm the people, as not to prohibit business, as not to bring distress and loss upon those engaged in trade. To do these things would be to go beyond the power conferred and to destroy that which was only intended to be protected, aided, and fostered. But to make regulations which prevent excessive charges, which secure fair rates, which restrain wrong-doers of all kinds in the management of commerce, is the very first duty of the Government expressly charged with this power.

It is not safe to leave the regulation of this matter of commerce among the States to them. We have had several memorable instances within a few years of the unjust and injurious interference of States in this very business. Look at the attempts of New Jersey to tax all commerce that traversed that State by rail; to its efforts to compel all trade and travel to pass over the Camden and Amboy Railroad, because the State had an interest in it. There was also a notable interference in Pennsylvania, at Erie, in which an effort was made to regulate all the lake-shore commerce that must needs cross by rail a little corner of that State. It led to riots and almost war. So likewise there was the struggle in Indiana where this same line of road passes to Chicago and the West around the head of Lake Michigan. There was the most violent opposition for years. Fortunately these things have passed away, but if the State had absolute power, and the United States none, the most serious consequences might follow. States are sectional, narrow, jealous, and essentially, in matters like the one under consideration, prone to assert a right to all local advantages. The United States alone should control here.

The question then arises, are these regulations needed, and shall the General Government intervene? Nothing could be more harmful than officious intermeddling, both to the business of the country and in its effect on the people politically. Unless there is a strong necessity the subject should not be touched, however great the powers of Government may be. Has an emergency arisen to call forth the exercise of these powers? I will state a few facts bearing upon this point indicating abuses that need a remedy or preventive.

First of all, many of the roads are at the very outset built upon a false basis and as speculations. Designing men unite together and form companies, without paying in a dollar upon their stock, but merely with an organization, and in many instances with very little personal credit, propose to the people to build roads upon subscription by them of a large sum to the mile; in many cases sufficient to do the grading; the road is then bonded for the iron and the rolling-stock, the shares are watered, and dividends must be made upon all the stock. This hollow and false basis is of course ruinous.

I will quote from a writer on this subject:

Prominent among the defects and abuses in our present system are:

1. The present method of undertaking the construction of railways without a paid-up capital.

2. The inflation commonly known as "watering of stock" by which its nominal value is largely increased, thereby making it necessary to unduly tax travel and commerce to secure it a value.

3. By rings in their management, through which both the public and the non-managing stockholders are fleeced to enrich a few prominent officials and managing stockholders.

4. The present system, which necessitates the operation of passenger and freight traffic over the same road-bed in which the passenger traffic has the right of way, thus making it necessary for freight trains to lie up two-thirds of the time when they should be rolling on to their destination.

5. The but partial representation of the stockholders in the boards of direction.

The first of the defects above mentioned has been forcibly illustrated by a recent writer, who says:

"The reckless and unprincipled manner in which some railroads are built would astonish many persons, and we give the following as a sample: A charter is obtained and a few men get together without a dollar in ready money, form a company, issue construction bonds 'secured by mortgage upon the road,' and a committee of directors is sent to New York to 'place' the bonds. The committee enter into negotiations with some prominent banker to undertake the placing of the bonds, he to get what he can for them and allow the road say 70 cents on the dollar, the road to pay the advertising bills. If the committee are honest the road ultimately gets 70 cents, less the advertising bills, but many committees are not honest, and as soon as they have found a banker to undertake the job at 70 they communicate with the board of directors at home, stating that the best they can do is 60, and ask for authority to place the bonds at that figure. Having their confederates at home in this inside ring, the authority is easily obtained, and by arrangement with the banker he settles with the road at 60, and pays 10 per cent. over to this syndicate for their personal use and benefit. If there is a happy combination of circumstances, such as absence of financial disturbances, suspension of the banker, &c., and if they get all the counties, cities, and towns along their route to issue bonds liberally, the road may be finally built and furnished with rolling-stock; then our worthy friends of the board of management divide the stock between themselves without equivalent, fix the rates for freight and passengers high enough to pay interest on the face value of the bonds and par value of the stock, and then, after voting themselves fat salaries, proceed to foist the stock off upon an unsuspecting public. As soon as the members of the ring manage to sell most of their stock they go to work and organize a 'fast freight-line,' to which they give a contract which soon impoverishes the road and enriches them, so that when the road passes into bankruptcy they are enabled to buy it in, issue new stock, and

repeat their little financial arrangement over again. In sketching the completion of this road we forgot to say that there was a 'construction' ring; this ring had their slice from every contract made, and not a mile was graded or tie laid, not a rail or engine or car purchased, not a depot erected or nail driven, but a percentage went into the pocket of the ring.

"As for the banker, by a free use of the religious press, (who lend the weight of editorial columns to the project,) he succeeds in 'placing' the bonds at 90 or 95 among the widows, orphans, and other unsophisticated persons of small means who have confidence in the banker and editor that recommends the conversion of Government bonds into the 'equally reliable and better paying railroad securities.' Everything goes smoothly until some morning the railroad stops paying interest upon its bonds, passes into bankruptcy, sells for little or nothing, and that is the end of it so far as the banker, the editor, and the persons of small means are concerned. In the mean time the managers of the road find it necessary to buy the usual number of legislators and retain all the best legal talent along the line of the road in order to 'protect their rights from the encroachments of the people' who have languished under extortionate freight charges and who have been groping blindly about to find a way to remedy the evils which, notwithstanding that they labor early and late and raise crops which are the admiration of the world, are making them poorer each year. Now, while we are far from desiring an indiscriminate war upon railways, we claim that public opinion must be awakened to these abuses, and that they must be eliminated from our present railway system. The people of this country are beginning to find that these defects in our transportation system are the 'Old Man of the Sea' upon the shoulders of the commerce of the country, and when they realize that the watered stocks and other swindles in this line are a greater burden than our entire national debt, we may be sure that they will work out a remedy, even if it bankrupts every stock-jobber and railway banker in Wall street."

As an instance of the watering of stock on one of our great railroad lines, a writer upon the subject, Mr. Abbott, says:

The Hudson River and New York Central Railroad, now united in one company, forms one of the most important lines of road there is upon this continent. Over this line flows a steady and constant stream of travel and freight, which is more than sufficient to employ its utmost capacity. Yet, with all this immense patronage, it is unsatisfied with its present rich-paying dividends, notwithstanding that it has several millions more of diluted stock than it has of honest or real capital invested. The waterings of this consolidation road are as follows: the Hudson River, $17,123,800; New York Central, $31,560,400; making a total of $48,684,200. The share capital of the consolidated roads, including the scrip dividends, is $90,000,000. The waterings, therefore, exceed the cash capital actually paid in by $7,368,400. The dividends annually paid upon the waterings, at 8 per cent., equal the sum of $3,894,360. To pay this dividend, extortionate charges are levied and collected upon every bushel of grain and every pound of freight that is carried over that road. In all these waterings, no part of this amount has gone into the roads, nor has their capacity to earn been increased a single dollar. At the time of the formation of the Central company, which was in 1854, waterings in the form of certificates, bearing 6 per cent. interest, were made, equaling $8,894,500. This sum, added to the more recent waterings, makes a total of $57,576,700. The interest and dividends accruing annually on this sum equal $4,228,030; and the total waterings equal $130,364 to the mile of the main line of these roads. The annual interest on this sum amounts to nearly $10,000 a mile.

Upon competent authority, coming directly from railway officials, he says that all freight and passengers can be transported by railway at one-fourth the present average cost. A shipment of five car-loads of corn which very recently started in Iowa and came to Chicago, via Chicago and Northwestern Railway, was then transferred to the Erie and North Shore line, and came directly through to New York, where it was sold. This shipment of corn sold at 56½ cents per bushel, the charges amounting to 48½ cents per bushel, leaving to the western shipper the sum of 8 cents per bushel for his corn. He says 10 cents per bushel of fifty-six pounds would pay a fair and legitimate dividend upon the actual capital employed for transporting corn from the interior of Iowa to the city of New York. Is it any wonder, then, when corn is worth only 56½ cents per bushel in New York, and 48½ of that must go for transportation and commissions, that the great producing class of the country are creating a revolution in the sentiments of the people that is destined also to work a revolution in the schedule of prices and in the control of this great monopoly!

It is stated on good authority that the outstanding stock and bonds of the Lake Shore and Michigan Southern Railroad Company is $75,000,000, for which not more than $25,000,000 were paid in by its stock and bond holders, only one-third of the amount which must pay dividends. This system of watering stock prevails everywhere, and its extent can only be ascertained by the scrutiny of men authorized by the nation to go through these corporations and sift their frauds.

It is said upon good authority that in 1869, while navigation was open, the railroad companies carried flour from Milwaukee to New York for 75 cents to $1 a barrel; when winter stopped navigation and closed the lake the price of freight was at once put up to $1.20. Then the price of wheat was low. Some time after this it rose to from $2 to $2.75 a bushel; the freight per barrel was put up from $1.20 to $2 and $2.75 per barrel. The railroad could carry for the same price at either time, and reaped all this profit; the farmer got none of it. It is also stated that the railroads carry wheat from the West at lower rates than flour, so as to discourage the manufacture of flour there, and encourage it in the East. The railroads in the summer, it is said, reduce their freights along the lake shore to the East in order to break down the carrying by water, and to continue in their own hands the monopoly. The prices of wheat, corn, pork, lard, beef, whisky, and flour in New York are regulated by the prices in London, but the prices of these articles in Cincinnati, Indianapolis, Saint Louis, Chicago, and Milwaukee are regulated by these less the freights, and they are high or low as the railroads say.

It is also said, on good authority, that another abuse in the railroad system arises from the fact that the managers of companies are largely engaged in speculations in articles carried, such as provisions, produce, grain, and flour; that they carry for themselves at cheaper rates than for others; that at the times their freights are on the way the rates are low; that they are hurried through, while the freight of others must wait. One can well see how the grossest outrages may thus be perpetrated upon the people. Whether a remedy can be applied is to be seen.

I beg leave to refer to the statement made in the New York Tribune of January 1, 1874, quoted by the chairman of the committee, [Mr. McCRARY,] going to show the extraordinary raising of the rates of freight this winter, after the close of navigation:

For some time past the subject of an increase of freight rates to the West by the trunk lines, as the New York Central, Erie, and Pennsylvania Railroads are known, has been discussed by the officials of the roads mentioned. Heretofore the rates have been raised when navigation on the lakes closed, as then the competition by steamers is abruptly ended. It is understood that this year the opposition of the Grand Trunk Railroad of Canada and the Vermont Central Railroad has been the cause of the delay in raising the rates to and from the West. The new rates go into effect from January 1. The following is a comparative statement of the old and new rates for the five classes of freights per one hundred pounds:

To Cleveland: old rate, 49, 46, 39, 30, 23; new rate, 65, 59, 49, 39, 30.
To Cincinnati: old rate, 70, 64, 55, 41, 32; new rate, 92, 83, 70, 55, 41.
To Indianapolis: old rate, 71, 66, 57, 43, 33; new rate, 95, 85, 71, 57, 43.
To Louisville: old rate, 86, 81, 71, 55, 44; new rate, 113, 102, 86, 81, 75.
To Saint Louis: old rate, 97, 91, 79, 61, 49; new rate, 128, 116, 97, 79, 61.
To Quincy: old rate, 97, 91, 79, 61, 49; new rate, 128, 116, 97, 79, 61.
To Chicago: old rate, 75, 70, 60, 45, 35; new rate, 100, 90, 70, 60, 45.
To Detroit: old rate, 53, 49, 42, 32, 25; new rate, 70, 63, 53, 42, 32.
To Toledo: old rate, 58, 54, 46, 35, 29; new rate 77, 64, 58, 46, 35.

These figures interest all shippers, either East or West. The increased rate has been anticipated for some time past, and therefore it will not cause much surprise. In consequence of this belief, large quantities of freight have been sent forward during the past two or three weeks, and it is probable that shippers will, during the next three days, forward all the freight they can, in order to take advantage of the old schedule of rates.

Now, every sane man knows that this great increase in the price of freight is owing to nothing but the fact that competition by water is shut off by ice, and that this is the repetition in 1874 of a game of grab that has gone on for so many years that the managers in these great corporations count their dollars by millions, and corrupt all the avenues of trade by their dishonest speculations. The men who produce at either end of the line and the men who consume, heretofore mute as sheep at the shearing, have submitted to these extortions. How long this shall continue is the question before us to-day. No one acquainted with business would say that there should be no discrimination as to freights both as to kinds, customers, distances, and seasons. All roads are not built at the same cost; all cannot be run at the same cost; all have not an equal share of business; all have not the same kind of business; all do not pass over the same kind of country. Some traverse sparse populations; some go through thick settlements and great multitudes; some have largely local freights; some have much through freight; some have freights in one direction and not in the other. These things must greatly modify charges. Wages are not the same at all points; the cost of living varies; the seasons vary; one year yields an abundant harvest, another a scarce crop; new interests are springing up at some localities—factories, mills, mines, farms, and gardens—which need and deserve help and some favoritism on the part of roads to nurse them into strength.

To increase business, to encourage growth, to urge forward enterprise is the prime object of railroads, aside from the full and fair remune ration they earn for their labor. So far they have done a mighty work; so far they have advanced the country beyond all the other appliances of modern trade. The world has witnessed nothing like it.

The incalculable strides of the last forty years astonish the gravest mindsa nd bewilder those who would look into the future. We have in this country over seventy-one thousand miles of railroad, which have cost over $3,728,000,000, mainly the growth of the last twenty years. And this investment has had the effect in that time to more than double all values of property, real and personal.

How, then, can these vast interests and this complicated system be grasped, regulated, and controlled so as not to cut off fair profits, so as not to hamper business, so as to protect those who do business with them. To fix absolutely the rates per mile for all the land will not do; a thousand varying circumstances must modify these rates, just as they modify the charges for all kinds of labor and goods. The facts connected with the various roads must be obtained and classified; in a word, their history written, their business defined, their ability measured, before anything just can be done. Sudden and arbitrary action is not to be thought of where such great interests are involved.

A mere glance at the enormous amounts of freights that pass annually eastward over the four great trunk lines of railroad and the New York and Welland canals will give a faint conception of the difficulties in the way of easy or early adjustment. It is said in the memorial of the Merchants' Exchange of Saint Louis, dated in January, 1874, that the quantity of grain thus moved amounted last year to 6,100,000 tons, and over 2,000,000 tons of other agricultural products, and in addition 13,000,765 tons of other freight. This alone is the surplus of the fields, the mines, and the forests, going to the seaboard over these lines. A large portion of the grain comes from the region adjacent to or west of the Mississippi River. Pennsylvania, Ohio, Indiana, and Illinois do not now produce the great proportionate surplus for market they once did; their heavy populations consume a large part of their products, and heavier production has sprung up in the West. The location of the surplus is farther west.

In 1850 Ohio, Indiana, and Michigan produced over 12,000,000 bushels of surplus grain, and all the other States West only 10,000,000 bushels.

In 1860 these States produced 17,000,000 bushels of surplus, and the rest of the States west produced 33,500,000 bushels.

In 1870 the States east of Illinois and Wisconsin produced 44,000,000 bushels of surplus, and the States west of the Mississippi 37,000,000,

and the line of equal division of surplus passed through the western portion of Illinois and Wisconsin.

Of the surplus of 1872, 20,000,000 bushels surplus were produced by the States of Ohio, Indiana, and Michigan, and over 35,000,000 surplus by the States west of the Mississippi River.

In 1850 the States of Iowa, Minnesota, Missouri, Kansas, and Nebraska produced but 4,000,000 bushels, and but 1,000,000 of this was surplus. In 1870 they produced 82,000,000 bushels, with a surplus of 50,000,000 bushels.

Now, what is said of wheat applies in a great degree to other farm products. The great surplus is on an average a thousand miles from the sea-board. The hog product is largely made at Cincinnati, Louisville, Indianapolis, Saint Louis, and Chicago, on an average eight hundred and fifty miles from the sea-board. The cattle are coming and to come from Texas, double this distance. This State must supply the bulk of the beef consumed or exported hereafter; States north and east of her cannot compete with her in cattle-raising; there they grow without feeding and fatten for the market without shelter upon the native grass.

The eastward-bound freights are to the westward as eleven to one, and this renders the charges higher than if an equal amount of freight was carried both ways. It may be safely said that this proportion is likely to continue with the increased development of the West and Southwest.

The nation is interested vitally in regulating such a commerce. There is no avoiding the responsibility, there is no shifting the burden to the shoulders of the States. The whole nation must get its bread and meat and much of its wool and iron from this rich region, and it must be carried across the lines of many States. No power but that of the nation is adequate to the task of adjusting the freights and protecting the interests of all.

How shall this be done? Shall we construct great trunk lines with double tracks to be used like rivers under certain regulations? This will be vastly expensive, but will, by competition, reduce rates to a reasonable standard. The cost seems too great for a present undertaking. Shall we buy the great east and west lines and run them in the interest of the nation? This will create still greater expense and an innumerable horde of officers, and it may prove a source of vast losses and frauds.

Shall we fix an arbitrary rate of tolls with an even scale of so much per mile? This would be grossly unjust.

The bill before the House provides that railroads engaged in interstate commerce shall charge and collect only a fair and reasonable rate of toll or compensation for the transportation of cars, freight, and passengers; which rates shall be fixed by a board of nine commissioners to be appointed by the President; that the board shall ascertain all the material facts in relation to the railroads and fix a schedule of fares, tolls, and charges. I will quote the eighth section, which provides that the schedule shall be *prima facie* evidence of the fairness and reasonableness of the fares and charges on a trial in any suit for penalties or damages incurred by charging unreasonable rates. The bill provides that the rates of fare shall not be unreasonable or extortionate, and that there shall be no unjust discriminations. These two provisions are but a reassertion of the principles of the common law. The eighth section is as follows:

SEC. 8. That any corporation, company, or person, being engaged in the operation of any line of railroad into or through two or more States, or parts of States, as aforesaid, who shall, after such schedule shall have taken effect in relation thereto, be guilty of extortion, by charging, collecting, demanding, or receiving more than a reasonable rate of toll or compensation for the transportation of freight, passengers, or cars over or upon any such line, shall forfeit and pay for each offense a sum of not less than $500, nor more than $5,000, to be recovered by action, to be brought in the name of the United States, in any district or circuit court of the United States, or if in a Territory, in any district court of the United States therein, in the form of an action of debt, or by such other form of action as may be provided by the law of the State in which such action is brought in like cases; and it shall be the duty of the district attorney for the proper district to institute and prosecute all suits for the recovery of the penalty aforesaid; and the corporation, company, or person being guilty of such extortion shall also be liable to the party injured thereby for the damages caused by such extortion, including a reasonable sum for attorneys' fees, to be fixed by the court trying the case, which such injured party may recover by action in his own name in either of the courts aforesaid; and the form of the action may be the same as in case of a suit to recover the penalty as herebefore provided. Either party to any action brought under the provisions of this act shall have the right to a trial by jury; and in any action instituted under the provisions of this act, whether it be a suit to recover the penalty aforesaid, or a suit by the party injured to recover damages as aforesaid, any number of separate and distinct violations of the provisions of this act may be stated separately in separate counts, and a recovery may be had upon each. If, upon the trial of any such suit, brought either to recover said penalty, or to recover damages as aforesaid, it shall be made to appear that the defendant has charged, collected, demanded, or received for the transportation of freight, or passengers, or cars, a rate of toll or compensation greater than that fixed by the schedule aforesaid, then and in that case such defendant shall be deemed and held guilty of extortion, and liable therefor, unless such defendant shall show affirmatively that the rate charged, collected, demanded, or received for such transportation was, nevertheless, fair and reasonable: *Provided*, That nothing in this act contained shall be deemed and taken to diminish or take away any common-law right of action on the part of individuals aggrieved against such railroad corporation or common carriers, or any action taken in the matter by any State so far as regards commerce within the control of such State.

This creates a rule of evidence, makes the schedule presumptive evidence of the fairness and reasonableness of the tolls and charges therein prescribed. If this schedule is unfair and unreasonable, if it makes improper discriminations, then it is open to be contested and overthrown in court. The burden of proof rests upon the railroad company to show that the rates are unreasonable when it has exceeded the rates in the schedule, and that is all. The company has the knowledge, the facts, the data upon which the evidence of reasonableness and fairness is based. It has them, and no one else has them so completely. The whole matter is to be settled by the jury, and they alone find the facts of the fairness and reasonableness of charges. At last the whole question must be settled there, and if the juries of the country overthrow the schedule, we can say that it has been done by a tribunal in which we all confide, and to which we all resort, and which is justly regarded as one of the great bulwarks of our freedom.

I shall vote for the bill as the best measure that is presented at this time. I hope that, in addition to this measure, outlets will be provided by water both to the South and the East.

The mouth of the Mississippi River should be opened for the largest ships, and I stand ready to vote for any appropriation that will secure this object effectually.

The route by the lakes and the Saint Lawrence to the ocean should also be opened to ships of heavy burden. Whatever the two nations can do to improve this route should be inaugurated at once. Five years should not elapse till large vessels could come and go from all of our lake ports to the ocean. These things accomplished, the railways will in some measure be relieved from the enormous pressure now upon them and yearly increasing.

The lakes should be connected with the Mississippi River, so that large boats could pass to and fro. This will be an enormous advantage, both in time of peace and war. Mere legislation as to railroads will not secure the desired object; the water-lines are of equal importance, and Congress will fall short of meeting the demands of business if it fails to make ample provision for them.

Interstate Commerce.

SPEECH OF HON. W. LAWRENCE,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

March 26, 1874,

On the bill (H. R. No. 1385) to regulate commerce by railroad in the several States.

Mr. LAWRENCE. Mr. Speaker, I do not suppose this bill is perfect, but it is in the right direction. It is not urged in any spirit of hostility to railway companies, but only as a means of securing great public interests without wrong to any.

The agricultural and grazing States of the great interior of the continent are interested in finding a *permanent market* and *adequate prices* for all their products. Some of the elements which enter into these, are a *demand* for all they produce, and *cheap transportation* to the place or places where required for consumption. The eleven States of Ohio, Kentucky, Indiana, Illinois, Missouri, Kansas, Nebraska, Iowa, Minnesota, Michigan, Wisconsin, and the Territory of Dakota produced for market in the year 1872—

Wheat, bushels	325,844,800
Corn, bushels	1,021,937,476
Hogs, head	22,660,040
Wool, pounds	70,292,814

In the same year they had—

Sheep, head	35,146,407
Cattle, head	13,362,492
Hogs, head	22,660,040

These were estimated at $706,168,624 in value where produced.

The demand for all this was either where produced, or in the New England States, or in the Southern cotton-growing States, or in the mineral regions, or in Europe.

It is a fact which we all know that the cost of freight to reach a distant market must be paid by the producer, and is a tax on his industry which too often consumes all his profit, and leaves him with nothing but unrequited labor. Even the cheapest form of transportation is a tax on the producer.

The best condition for producer and consumer is when they are side by side, or in close proximity. The best possible market is that created by an adequate demand at home. This cannot exist in our agricultural States except by a vast increase of our manufacturing industries. If such cities as Springfield and Piqua, in the district which I have the honor to represent, were scattered all over the great interior, the question of cheap transportation and foreign demand would soon be settled.

The manufacture of agricultural implements and water-wheels of surpassing utility at Springfield, and of some of these and other products of skill at Piqua, has built up beautiful cities, has diversified labor, has made homes for industrious, intelligent, skilled artisans, has made a demand for agricultural products, and sent out machinery to many parts of the world. A multiplication of such cities, and of these and other manufacturing industries, is now the greatest American need. The heart of the great agricultural regions, abounding as it does in water-power and coal and iron and other metals, should become the seat of manufacturing industry, and our national and State legislation should encourage this by reduced taxation, an ade-

quate currency, facilities of transportation by water-routes and railways, and all the encouragement which legislation can rightfully give to promote industry.

At no remote period a population engaged in manufacturing and other industries should furnish a market for our agricultural staples near by the place of production, and then our surplus would go abroad as exports to foreign countries, to turn the balance of trade in our favor, and maintain a supply of coin which would leave no question as to specie payments. But until this time shall come our products must seek other markets. Where shall these be?

If Europe could furnish a demand for all our surplus agricultural products it must always be an undesirable market. The cost of shipment must be an immense tax, to be paid by producers. Any continuous export would carry away the fertility of the soil and in time leave only a barren waste. But foreign countries cannot be relied on as a permanent market.

The total products of cereals, consisting of wheat, Indian corn, oats, rye, buckwheat, and barley, in the United States, amounted—

	Bushels.
In the year 1840, to	615,835,077
In the year 1850, to	867,454,032
In the year 1860, to	1,238,138,987
In the year 1870, to	1,357,230,096

The average exports of wheat and corn from this country have been:

Period.	Wheat, bushels.	Corn, bushels.
From 1820 to 1830	19,000	800,000
From 1830 to 1840	243,000	400,000
From 1840 to 1850	1,340,000	4,600,000
From 1850 to 1860	5,500,000	6,300,000
From 1860 to 1870	20,400,000	9,400,000
In 1871 and 1872	30,500,000	22,000,000

The result of this by percentages is the following, viz:

Period.	Wheat, increase per cent.	Corn, increase per cent.
From 1820 to 1830	1,000	100
From 1830 to 1840	120	1,100
From 1840 to 1850	100	.....
From 1850 to 1860	400	50
From 1860 to 1870	300	50
In 1871 and 1872	50	50

But one of the ablest statisticians in this or any country, E. D. Mansfield, tells us that, *while exportation has increased faster than production*, and especially under a temporary demand in Europe during recent wars, yet—

Two facts come out, which startle the farmers of the West, and which are the real causes of the excitement among them. They are, 1, that the *production* increases immensely, 2, while the *price* actually falls. The result is that the farmers get no more money for the increased crop than they did for the smaller one. The product of corn in the six States of Iowa, Kansas, Nebraska, Wisconsin, Illinois, and Missouri was—

	Bushels.
In 1866	272,989,900
In 1871	444,015,000
Increase	171,025,100

But when we look at the money value, we find this:

States.	Value per bushel.	Total value.
VALUE OF CORN, 1866.	*Cents.*	
Iowa	44	$23,000,000
Kansas	63	4,000,000
Nebraska	68	1,424,000
Wisconsin	82	7,720,000
Illinois	43	67,000,000
Missouri	58	27,000,000
Total	.....	130,144,000
VALUE OF CORN, 1871.		
Iowa	23	22,774,000
Kansas	29	7,160,000
Nebraska	25	1,407,000
Wisconsin	43	5,200,000
Illinois	32	65,000,000
Missouri	31	27,000,000
Total	.....	132,941,000

And Mansfield says—

That an enormous increase of the crop has brought the farmer little or no increase of money. For this there are two or three causes. The first is over-production in the States mentioned; a second is the want of a home market.

We cannot, then, look to foreign countries as a permanent adequate market.

The manufacturing districts of the United States furnish a nearer, greater, and more reliable market. It is shown by the census of 1870 that the New England States alone consume annually one hundred million bushels of grain over and above their own product. This demand is to be supplied from the States west, and this fact shows the importance alike to producer and consumer of cheap transportation. A saving of only ten cents per bushel on this would add $10,000,000 a year to the net receipts of the farmers.

But there is another market for western products—the cotton-growing States of the South. The four States of Georgia, South Carolina, Alabama, and Florida had in 1870 a population of 3,074,455. These States produced 57,215,600 bushels of grain, while their annual average consumption is 104,521,470, leaving to be supplied from other States 47,305,870.

In a report made to the House on the 13th of February, 1873, by the gentleman from Pennsylvania, [Mr. NEGLEY,] it is shown that these States produce 2,682 hogsheads of sugar, 172,232,812 pounds of rice, and 1,167,705 bales of cotton—nearly half the cotton product of the country. The census of 1870 shows the average prices in these States to be, per bushel of corn, 97 cents; wheat, $1.91; while in the cotton-belt corn frequently reaches $1.50 and even $2 per bushel.

The obstructions in the Mississippi River, the want of other adequate transportation, and the high cost of freight, make these high prices, and the result is, as we learn from the report to which I have referred, that in these States five million acres are devoted to raising grain which otherwise would be devoted to cotton.

In Miscellaneous Document No. 147, printed by order of this House at this session of Congress, it is said:

The South plants millions of acres in food crops, employs half their capital and labor in cultivating corn and wheat, depriving the West thereby of a market for fifty million bushels of grain, which remains wasting and worthless in that section while it enhances the cost of producing and manufacturing, and imposes additional hardships upon the agricultural laborer; and all this is due to the fact that we have no adequate means for the cheap interchange of our various products.

While the people of Iowa were burning fifty thousand bushels of corn a day it was selling in other parts of the country for $1.40 per bushel.

Millions of bushels of wheat remained upon the hands of the producer, while in the South flour was worth twelve dollars per barrel.

If our western river navigation can be improved, additional means of transportation created, and the freight charges sufficiently reduced, the farmers of the great interior will realize adequate prices for their products, the Southern States will convert their grain-fields into cotton-fields, a new and increased demand will be made for all farm products, our export of cotton will be increased, the annual balance of trade—now largely against this country—will be turned in our favor, the time for resumption of specie payments will come, and a new and advancing career of prosperity will be opened up to us.

There is a necessity for regulating railroad freights. Competition has almost ceased; combination has taken its place. Freights are regulated mainly by railroad combination, and here is the end of competition. By this means there was in January last on most of the great trunk lines of railway from the eastern cities an increase in freights of about 33 per cent., and this, too, when the whole commerce of the country was suffering from the effects of the recent financial panic.

In Miscellaneous House Document No. 140, printed at this session, it is said:

In the year 1873 about three hundred and fifty million bushels of grain raised in the valley of the Mississippi were transported by railroad to the Atlantic slope; the average freight per bushel was fifty cents. In the same year the average cost per train per mile on all the railroads in Massachusetts was $1.26. At this rate, the cost of moving a train of thirty cars, of ten tons each, from the Mississippi River to New York, by an air-line railroad, would have been $1,260, or twelve and eight-tenth cents per bushel. Allowing an equal sum for interest and dividends on the cost of a railroad connecting the same points, or 50 per cent. of the gross receipts, wheat could have been transported to New York at twenty-four and two-tenth cents per bushel—equal to a saving of $85,000,000 on the amount transported.

I now proceed to show in a few words that Congress has power to legislate on these subjects.

A person or corporation whose business it is to carry goods or persons for hire, and who holds himself out to the public as such, is denominated in law a "common carrier." The railroad companies of the United States are such common carriers, just as are the proprietors of steamships engaged in carrying commerce to and from foreign nations, or of steamboats engaged in our interior river commerce. It was determined as early as 1703, by the King's Bench in England, in Coggs *vs.* Bernard, (2 Lord Raymond's Reports,) that a common carrier "exercises a public employment;" and in Harris *vs.* Packwood, (3 Taunton,) it was decided, in 1810, that—

A carrier is bound by law to carry everything which is brought to him, *for a reasonable sum* to be paid, * * * *and not to extort what he will.*

Chief Justice Redfield has demonstrated, in the American Law Register for January, 1874, by an array of authorities which leaves no room for doubt, that this is the rule of law which applies in the United States to railroad companies and other carriers. (Fitchburgh Railway Co. *vs.* Gage, 12 Gray's Mass. R., 398; Clinton Bridge case, 1 Woolworth's Circuit Court R.; 12 Howard, 528; 18 Howard, 283–421; see House Report 31, first session Thirty-eighth Congress.)

In Olcott *vs.* The Supervisors, (16 Wallace, 678,) the Supreme Court said that a "*railroad is a highway.*"

Without any act of Congress, or any State legislation fixing freight rates, it is therefore the right of every person to have his goods carried by common carriers at a "*reasonable price*," and this is a *question*

of fact which does not depend upon, and is not controlled by, the regulations or freight tariffs prescribed by steamship, or steamboat, or railway companies.

But it is evident that there must be some mode of determining *the fact* as to what is a *reasonable price*, and some mode of enforcing an observance of this reasonable rate of charges. There is a remedy by action at common law against a carrier who refuses to carry when a reasonable price is tendered, or by action to recover back extortionate charges when paid under protest as a necessity to secure the carriage of goods.

But these remedies are slow and wholly inadequate for the evils which exist.

The questions therefore arise whether a remedy can be applied; and, if so, by what authority?

And these questions, too, have been determined by the Supreme Court of the United States. In the Pennsylvania State freight-tax case, decided in 15 Wallace's Reports, 232, it was determined in principle that the States have no power to regulate interstate commerce, but that this power is vested *exclusively in Congress*.

In that case the court said:

> Whenever the subjects over which a power to regulate commerce is asserted are in their nature national, or admit of one uniform system or plan of regulation, they may justly be said to be of such a nature *as to require exclusive legislation by Congress*. Surely *transportation of passengers or merchandise through a State or from one State to another is of this nature.*

I might multiply judicial authorities; but when a question is settled by the highest court, that ends the judicial controversy. (Gibbons *vs.* Ogden, 9 Wheaton, 1.)

And if the States may make regulations in the absence of any by Congress, the power of Congress may be exercised, and when it shall be it will be supreme and controlling.

It is perhaps not denied but that Congress may make regulations affecting the safety of persons and property, regulations as to seaworthiness of vessels or the capacity of engine boilers, &c. But it may be said the power "to regulate commerce" is not a power *to limit the prices of freights*. It might as well be said that the power "to establish post-offices and post-roads" is only a power to say what roads shall be post-roads, and does not include a power to carry mails and fix rates of postage, or appoint postmasters and fix their pay.

But this question of the power as to freight charges has in *principle* and effect been determined by the Supreme Court. In the great case of Gibbons *vs.* Ogden, Chief Justice Marshall said of this power:

> If, as has always been understood, *the sovereignty of Congress, though limited to specified objects, is plenary as to those objects, the power over commerce with foreign nations and among the several States is vested in Congress as absolutely as it would be in a single government having in its constitution the same restrictions on the exercise of the power as are found in the Constitution of the United States.*
>
> The wisdom and discretion of Congress, their identity with the people, and the influence which their constituents possess at elections, are in this, as in many other instances, as that, for example, of declaring war, *the sole restraints on which they have relied to secure them from its abuse.* They are restraints on which the people must often rely solely in all representative governments.

And in Olcott *vs.* The Supervisors, (16 Wallace, 678,) the Supreme Court said, as to the legislative power over a railroad:

> Its use can be defined; *its tolls and rates for transportation may be limited.*

This may be done upon the same principle that mills, ferries, turnpike roads, and other agencies for public convenience, which by their existence in some sense exclude competition, are limited by law as to their charges.

Many of the States have, by legislative provision, *limited* the price of freights on commerce carried *within the State*.

The English Parliament has always made such limitations. Chief Justice Marshall says in effect, as I have shown, that as to foreign and interstate commerce Congress has a power over railroads as plenary as Parliament. Hence Chief Justice Redfield has affirmed that—

> In regard to regulation of fares and freights upon existing railways Congress has the same power * * * and to the same extent that *any* national legislature has.

I might multiply these authorities, but this is unnecessary. They have been fully referred to in this discussion and in the able report of the Committee on Railways and Canals. (Report 28, first session Forty-third Congress.) I regard it as clear, then, that Congress may provide the means of ascertaining what are reasonable freight charges, and of securing the evidence thereof. Nor can railway companies claim, as against Congress, any right by *State legislative authority* to charge any *prescribed rate of freight* on interstate commerce. It has been shown that the power to regulate interstate commerce is, or may be, *exclusively in Congress*; and if States can exercise it in the absence of regulations by Congress, any such regulations must yield to the higher power of Congress when once exercised. In the Clinton Bridge case Mr. Justice Miller, referring to this power, said:

> I have no doubt of the right of Congress to prescribe all needful and proper regulations for the conduct of this immense traffic over any railroad which has voluntarily become part of one of those lines of interstate communication, or to authorize the creation of such roads, when the purposes of interstate transportation of persons and property justify or require it.

This is no new doctrine. On the 7th of February, 1828, forty-five years ago, the senate of Kentucky adopted the report of a committee which declares that the power of Congress to construct national internal improvements—

> Is to be found expressly delegated in the Constitution of the United States.

What, then, should Congress do? I answer, in my judgment—

I. Congress should require some one of the departments or officers created for the purpose and clothed with the powers to send for persons and papers and take testimony to ascertain from time to time what are proper rates of freight charges of every kind, and Congress should make these at least *prima facie* if not conclusive evidence of what may be reasonable. The Government, ordained as it was to "establish justice" and "promote the general welfare" on the subjects defined in the constitutional grant of power, is in duty bound, when other means fail, to secure freight charges *reasonable in amount*—no more, no less. This will require an inquiry into the real cost of constructing roads, their actual value, the economy of their expenditures, the honesty with which they are operated, &c. If "fast freight-lines" and "palace-cars" are given special privileges on railways, the profits thereof should not be permitted to inure to combinations of men controlling them for their own benefit, in disregard of the interests of stockholders in railway corporations, or of the public, nor should such combinations be permitted to rob the public or stockholders by fraudulent modes of furnishing machinery and supplies for conducting operations. The public should not be made to pay dividends on watered stock, representing neither money invested nor interest on capital paid in.

II. The operations, expenditures, income, profits, and dividends of railway, express, and telegraph companies should be ascertained and made public as fully as similar facts in relation to national banks or the revenue operations of the Treasury Department, because these are all agencies for public convenience, and whatever is essential to intelligent legislation should be known.

III. Congress should provide that way passengers and freight shall not be, as a general rule, subjected to higher rates of charge per mile than the lowest rates which may be charged on the same line for the same service over any part of the line, subject only to a just compensation for the necessary expenses of lading and unlading way freights.

IV. Congress should authorize any association to make railroads across State lines which may choose to do so, and thus secure new and competing lines of road. If it should hereafter be found an absolute necessity and practicable for the Government to construct or aid the construction of new lines of road, Congress can do so. But the public finances now will admit of no such inquiry, no such exercise of power.

V. Express and telegraph lines should, as agencies of commerce, be regulated for the same reasons applicable to common carriers generally.

VI. Congress should secure unobstructed navigation on the Mississippi River, and by such other channels of water transportation as may be practicable. A few millions expended for these objects would be vastly more beneficial, and in our present financial condition more desirable, than expensive granite buildings to adorn our great cities, or other schemes which are demanding millions with no promise of an equivalent in return.

I do not say these are all the provisions that should be made. The whole subject demands earnest, careful consideration, in no spirit of hostility to railroad companies, but for the purpose of doing justice to the whole people.

Currency and Free Banking.

SPEECH OF HON. M. C. HUNTER,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

March 27, 1874.

The House having under consideration the bill (H. R. No. 1572) to amend the several acts providing a national currency and to establish free banking, and for other purposes—

Mr. HUNTER said:

Mr. SPEAKER: There is no question that can or will be presented to this Congress that is of as much importance to the people of the whole country as the one involved in the proper adjustment of our finances. Money is the life-blood of the nation. To keep the nation healthy and strong, this money must be good, and, like blood in the human system, must circulate freely in every part of it; otherwise the parts thus affected, for the want of proper circulation, like parts of the human body from the same cause, become more or less paralyzed, and cease to perform their proper functions.

Many bills have been presented to Congress on the subject of finance; but the whole question seems to have resolved itself into three distinct plans, which deserve consideration at our hands. They are as follows, to wit:

1. That we should return to specie payments by a gradual contraction of the currency.

2. That our currency should be composed entirely of United States notes, commonly called greenbacks, the amount increased, and the national banks done away with.

3. That the national-banking system, should be retained, and the law so amended as to make it free as well as correct its evils.

In arranging a financial system, we have to take things as we find them, and not as we would have them. This the country should fully understand in order to appreciate the real difficulties that attend us in providing a plan that will meet the absolute requirements of the Government without violating the Constitution, and at the same time give satisfaction to the people. As each of the plans above named has its advocates in the press and among the people, and they cannot see why theirs should not at once be adopted by us, I propose to give to them, as nearly as I can, the substantial objections to each; then they can better judge of the merits of their respective schemes and of our action in reference to them. Let us now proceed to examine each in the order above stated.

Those advocating the first plan contend that gold is the only true standard by which the value of commodities can be properly measured, and therefore our circulating medium should be gold or a currency convertible into gold at the pleasure of the holder. They insist that our greenbacks, not being redeemable by the Government on demand, are but broken or worthless promises and not money; that their circulation as such is a positive injury to the country; that they inflate the currency and produce unhealthy speculation on account of their volume and depreciated condition; that they should be redeemed by the Government, even if it had to borrow gold for that purpose, and canceled, so as to contract the currency to a gold basis; contraction in their judgment being the only safe and sure way of returning to specie payments.

Mr. Speaker, I differ with this class of financiers. They believe we have too much currency, and favor legislation that looks to a contraction of it by the withdrawal of the greenbacks from circulation; insisting that it was the superabundance of currency in this country that induced the gambling and wild-cat speculations in New York last fall, which destroyed public confidence, and aided so largely in producing the late panic; when in fact this accumulation of money grew out of defects in our present banking law, that permitted three-fifths of the bank reserves to be deposited in New York which ought to have remained at home in their own vaults. It was this accumulation of money at New York, and not the superabundance of it in the country, that intensified the panic. The prevention of this injurious accumulation of money, and an increase of its volume, are what the country wants, and not a contraction of it.

As to the various causes that combined to produce the late panic, I will not stop to inquire. The immediate cause was the failure of Jay Cooke. His failure was not brought about by the superabundence of money in the country, but it grew out of a general hostility of the people to railroads on account of their oppressive tariffs in shipping the products of labor to market. This hostility soon affected the price of railroad securities. Jay Cooke, as the financial agent of the Northern Pacific Railroad, prior to this trouble, had disposed of a large number of the bonds of the company to raise money to build his road. To give these bonds value in the market, he had invested largely in them of his own means, as well as those of his banks. When this hostility commenced affecting them in value, he redoubled his energies to keep up their price, as he had too much money as well as reputation at stake to let them go down. In so doing he not only exhausted his own means, but all the available funds of his banks, hoping to tide over the storm and keep his pet enterprise in full life, and thus save his investments; but the demands for money became so great that he was unable to meet them and had to fall under their weight. His condition soon became public. When the depositors rushed upon his banks for their money it was not there. Neither could it be realized out of the securities. It was then for the want of money, and not on account of too much of it, to meet his obligations, that he failed.

When the great banker surrendered without means to pay his creditors, the people at once commenced losing confidence in the banks, and depositors everywhere rushed upon them to withdraw their money. So many of them being call-deposits (that is due on demand) most of the banks were unable to pay, and a general suspension ensued. It was a depositors' panic brought about suddenly when the banks did not expect it and were not prepared for it. It could have occurred under specie payments as well as the currency we had. It was not caused from a depreciation of the money, but from a sudden demand for it by depositors that could not be supplied. The bank reserves above referred to that were deposited in New York intensified the panic, but did not produce it. Neither can you trace the cause of the panic to our paper currency or its superabundance, by charging that the building of the Northern Pacific Railroad would not have been commenced; or Jay Cooke would not have failed; or the speculative fever that existed all over the country would not have been induced, had it not been for our irredeemable paper money, as it is styled, any more than you can trace the burning of Chicago to the owner of that unfortunate cow that kicked over the lantern that lighted the hay that burned the stable that set the city on fire, by charging that if the man had not kept the cow, the lantern would not have been kicked over, the stable would not have been burned, or the city consumed by the flames.

The panic was produced by a combination of circumstances and cannot be traced to our paper money as the real cause. The business of the country that was so prosperous prior to the panic, and which had added by its prosperity during the last ten years to the material wealth of the nation more millions than had been added during any fifty years of its existence prior thereto, and which was so severely injured by the panic, and so many millions lost to the country in consequence of it; the injury in every instance can be traced to the want of money and not to a superabundance of it. And yet it is insisted, that in order to restore the business of the country, which is suffering for money, we must take from it still more of its life-blood by contracting the currency beyond the dead-line of the panic. Contraction means death to business and a state of pauperism for the labor of the country. The people so understand it, and will never indorse it; they suffered too much of ruin, misery, and want during the last fall, from its cheerless and blighting hand to again welcome its return to their doors. Should we now adopt it as a policy it would stop the few new enterprises in the country still remaining; close most of our workshops and manufactories that survived the panic; throw out of employment thousands of laboring men, and reduce them and their families to beggary, as they are dependent upon their daily labor for a support. It would bankrupt every man of enterprise who had extended his credit beyond his present ability to pay. In short, such a policy would bring upon the country in the brief period of one year a loss equal to one-half the entire national debt. It must be remembered that labor produces the real wealth of the nation, and if not employed to its full capacity the country loses millions each day for the want of this employment.

A limited currency upon a gold basis, such as is contended for, may do for a country like England, small in territory and densely populated; with most of her people employed in the workshop; where the greater part of the business is done through drafts and bank-checks, and but little money actually passes from one to another in their daily transactions, and therefore but little money is needed as a circulating medium.

But when you take a country like ours, extending from ocean to ocean, covering almost a continent; divided by mountain ranges, rivers, and lakes; with populous cities thousands of miles from each other; with railroads equal in number of miles to all the rest of the railroads on the inhabited globe; with soil and climate of varied variety, adapted to the production of everything that the wants of man require for food and raiment; and under proper cultivation would produce sufficient in quantity to not only feed our own population were it increased an hundred-fold, but sufficient to supply the markets of the world beside; the earth filled with the richest of minerals, enough for the wants and industries of the whole human family; our people full of enterprise and energy, with views broad and comprehensive, who do everything on a grand scale and with railroad speed; the country still new and her vast resources undeveloped; to talk of contracting the present volume of currency and limiting such a people and such a country to a circulating medium not equal in amount to that of Great Britain, an old and finished country, whose population at present is at least ten millions less than ours, and whose territory is not equal to the thirtieth part of it, you might as well talk of limiting the freedom of our people, and would give about as much satisfaction as to talk of limiting the circulating medium to an amount that would dwarf their energies and destroy their business. The people of this country, should we adopt such a policy, would rise up almost as one man and drive from these walls every one who would dare support a policy that deprives them of the very life-blood that is necessary for the existence of themselves and families with any degree of prosperity and comfort, so as to make life in this world, as God intended it should be, a blessing instead of a curse.

A few weeks since the New York papers were deploring the fact that a part of the forty-four million reserve had been reissued, for the reason, as they urged, it made money too plenty there; and they insisted that the Secretary of the Treasury should call it in. Our New York friends must remember that the superabundance of money there now, and that was there prior to the panic, is not, or was not, on account of the volume of circulation being too great for the business of the country, but on account of defects in our present national banking law, as before stated, which enables all the country banks to keep three-fifths of their reserves in New York, and which are loaned there. I hope this Congress will make such a change in the law that not a single reserve of any bank outside of the city can go there and be deposited, and that the only money that shall find its way to New York as well as to all other business centers, shall be through the regular channels of trade. My impression is that when that is done you will hear no further complaints from that or any other quarter about having too much money, but their cry will be for more.

To make our circulating medium equal to gold, and at the same time keep the country in the highest degree of prosperity, is not by contracting the currency, but by giving to the people all the currency that the legitimate wants of business require. Stimulate home production, and home consumption of our own manufactures. That will give employment to labor, and a market to the farmer. Keep the balance of trade in our favor, if necessary, by prudent legislation, so that we will not be required to ship all the gold we produce from our mines each year to pay foreign balances against us. When that is done gold will accumulate here, and by the legitimate laws of trade the Government and the banks would soon be not only prepared to place our currency upon a specie basis, but to maintain it on that basis, and the number of banks in existence, or the amount of their notes in circulation, would make no difference. Then, and not

till then, can we safely resume specie payments. We are now shipping to Europe, and have been for some time, and I suppose will continue to do so, unless we learn wisdom, gold at the rate of more than $1,000,000 per week, to pay balances against us, because we buy from Europe more than we sell to her by that amount, including interest on our public debt. And yet we have men who insist that, with all this drain upon us, we should make preparations to resume specie payments by a contraction of the currency.

If we should resume, how long could we continue it? About as long as the Secretary of the Treasury continued, during the last fall, to redeem greenbacks with silver. That lasted, I am informed, just one week. Most of the capitalists from New England—at least those with whom I have conversed—like our New York friends, are impressed with the belief that we have too much instead of too little currency, and hence favor contraction. It is easily accounted for. New England, upon an average, has $31.68 *per capita*, bank circulation, while the Western States have $7.09 *per capita*, and the Southern and Southwestern States have $2.91 *per capita*. The ratio of circulation to wealth is nearly in the same proportion. The New England banks necessarily draw around them a large amount of money, as it is needed and kept there by the laws of trade in order to meet the constantly maturing bills that are due the banks. But because money is plenty there, and the pockets of these capitalists are well filled, is no evidence that the people West and South have a sufficient supply. Their reasoning is upon the same principle of that of the boy who was in a large open room on a cold day, which was filled with people. He was near the stove, and in consequence of it warm and comfortable. He regarded those on the outside of the room, who were suffering with cold, as very great fools, because they demanded that the room be made warmer in order that they might have some benefit from the heat.

New England has more than her share of bank capital, while the West and South have less than theirs. Legislation looking to equalizing this circulation, it strikes me, would be far better for the country than to contract it. The opinions of bankers and traders, who are skilled in monetary affairs and who favor contraction, will be arrayed here as evidence of the fact that contraction is the true policy for the best interests of the country. But I find that they are not generally the safest men from whom to derive such information. What is best for them, as a general rule, is not best for the great mass of the people, and especially is this so with reference to the producers of the West and South. It is often the case that capital reaps its richest harvests out of the misfortunes of the producer, and in order to enable it to do so it is necessary that money should be kept scarce in the producing districts, so that the products of the farm may be bought cheap. The pork and beef of the West were purchased this last fall, on account of the scarcity of money, far below their real value. The farmers did not realize as much by one-third, at least, for their pork as they would have done had money been reasonably plenty. During the next summer and fall, when this crop of bacon shall be disposed of by the capitalists who have purchased it, it will not be sold by them to the consumers any cheaper on account of the low price they paid for it to the farmers, but they will put on it the highest price, and hence they, and not the farmers, will make the money out of it. This loss to the producer and gain to the purchaser was on account of the scarcity of money West during the last season, while there was a full supply East.

It must be evident to every one that the effect of contraction would be to shrink the value of property and lessen the ability of the debtor class to pay their indebtedness, while the debts due the creditor class would remain the same in amount, and be payable in money nearer the value of gold. Contraction, then, would injure the debtor and benefit the creditor. If the debt due the creditor could be made to shrink in the same proportion that the property of the debtor is made to by contraction, then there would be more equity in the scheme. But looking upon the plan of contraction as I do, I can see nothing but ruin in it to the debtor and laboring classes of the country, who are the real working bees in the great national hive, that produce the honey upon which we subsist. Believing, therefore, that labor is the real basis of all national prosperity, and that contraction of the currency would tend materially to injure it, I shall oppose all legislation looking in that direction.

I come next to a consideration of the second financial plan, the advocates of which contend that gold should only be regarded as a commodity, to be bought and sold in the market the same as wheat and pork; that United States notes, commonly called greenbacks, being the promissory notes of the Government, secured by the entire wealth of the nation, should be the real money of the country and the only circulating medium; that gold is too cumbersome for that purpose, and is a mere relic of barbarism, and behind the progress of the age. They further insist that national-bank circulation should be withdrawn and replaced by greenbacks, for the reason that it is too costly to the people. This plan of issuing more greenbacks is exceedingly popular, because it is believed it will give to the country a sounder and cheaper currency than any other that can be devised. But there are three objections urged to it, either of which, if true, will condemn it before the people. They are as follows:

1. Its adoption would be a violation of the plighted faith of the nation.

2. That Congress has not the power, under the Constitution of the United States in time of peace, when no necessity exists for such action, to authorize the issue of United States notes, and make them *a legal tender*.

3. That it would depreciate the currency and in the end make money dearer to the people.

Let us examine these objections in the order in which they are stated, and see if either of them is well founded.

To authorize the issue of more greenbacks the Government would violate its plighted faith in this: On the 30th day of June, 1864, Congress passed an act authorizing an additional issue of greenbacks, so as to increase the amount to $400,000,000, and declared that the amount then issued and to be issued, should never exceed that sum except to redeem a small temporary loan that had prior to that time been made. The language of the act making the limit is as follows:

> Nor shall the total amount of United States notes issued, or to be issued, ever exceed $400,000,000, and such additional sum, *not exceeding* $50,000,000, as may be *temporarily* required for the redemption of *temporary loan*.

The reason of this limit was that the country at the time became alarmed at the great excess of money in circulation, and Congress feared that unless the people should be assured that no more than that amount of greenbacks would ever be issued, that they might refuse to accept them from the Government as money, through fear that they would become worthless in their hands as such; and hence it provided in the law authorizing their issue, and the people accepted them with that understanding, that the amount then issued, and to be issued, should never exceed $400,000,000, which amount we have now authorized to be put in circulation under that law. And from that day to this Congress has steadily adhered to that promise, and not a single greenback has been authorized to be issued since that time. Many persons now who own these greenbacks insist that this agreement upon the part of the Government shall be carried out. To issue more greenbacks would be a violation of the faith pledged in that act.

On the 18th day of March, 1869, Congress, in order to strengthen the public credit, passed another act, in which the following language is used:

> It is hereby provided and declared that the faith of the United States is solemnly pledged to the payment in coin or its equivalent of all the obligations of the United States not bearing interest, known as United States notes. * * * And the United States also solemnly pledges its faith to *make provision* at the *earliest practicable period* for the *redemption* of the *United States notes in coin*.

I submit the question to every candid mind whether an additional issue of greenbacks would not weaken the power of the Government to comply with the above act to the extent of such issue, and, therefore, would be a violation of that plighted faith? If so, should we do it? And especially when the interests of the people do not require it. The second objection is that a law now passed in time of peace by Congress, authorizing the issue of greenbacks and making them a legal tender, when no necessity for such a law can be shown, would be a violation of the Constitution of the United States.

Many persons both living and dead, whose opinions are entitled to great weight, sustain this view of the law.

Daniel Webster, one of the ablest constitutional lawyers that this country ever produced, in a speech in the United States Senate, the specie circular being under discussion, said:

> Most unquestionably there *is no legal tender*, and *there can be no legal tender in this country* under the *authority of this Government, or any other* but *gold and silver*, either the coinage of our own mints or foreign coins, at rates regulated by Congress. This is a constitutional principle perfectly plain and of the highest importance. The States are expressly prohibited from making anything but gold and silver a tender in payment of debts; and although no such express prohibition is applied to Congress, yet as Congress has no power granted to it, in this respect, but to coin money and regulate the value of foreign coins, *it clearly has no power to substitute paper or anything else for coin, as a tender in payment of debts and in discharge of contracts*. Congress has exercised this power, fully, in both its branches. It has coined money, and still coins it; it has regulated the value of foreign coins, and still regulates their value. *The legal tender, therefore, the constitutional standard of value, is established and cannot be overthrown*. To overthrow it would shake the whole system.

Can language be stronger than this, as to the power of Congress to make paper money a legal tender? And when we consider its author, is it not almost conclusive on that point, except when exercised as a *war power?*

Mr. Spaulding, of New York, who was a member of Congress from that State in 1862, and a member of the Committee of Ways and Means, and the gentleman who introduced the bill into Congress from that committee, authorizing the issue of our present greenbacks and making them a legal tender, made an able speech in favor of the passage of the bill. In speaking of this law in 1868, he said:

> Introducing the legal-tender bill early in January, 1862, immediately after the suspension of specie payments, in this great crisis I advocated the bill as a *war* measure, a measure of temporary relief to the Treasury, and on the ground that it

NOTE.—In the following table the money is reduced to its gold value, and shows that the United States has less *per capita* than either:

Country.	Active circulation.	Population.	Circulation per capita.
Great Britain	$683,000,000	32,000,000	$21.34
France	1,509,000,000	36,000,000	41.91
Germany	704,000,000	39,400,000	17.87
United States	587,700,000	41,000,000	14.33

was an imperative necessity to preserve the life of the nation. I conceded that it was a forced loan, and could only be justified on grounds of necessity. As a war measure, passed during war, continuing during the war, and as long as the exigency lasted, I believe it was necessary and proper to successfully carry on the war, and was therefore constitutional. I am equally clear that as a peace measure it is unconstitutional. No one would now think of passing a legal-tender act, making the promises of the Government (a mere form of credit) a legal tender in payment of all debts, public and private. Such a law, passed while the Government is on a peace footing, could not be sustained for one moment.

At the December term, 1869, of the Supreme Court of the United States—the court being composed of eight judges—the validity of the law was passed upon in the case of Susan P. Hepburn and Henry H. P. Hepburn *vs.* Henry A. Griswold, in error to the court of appeals of the State of Kentucky. The case was ably argued on both sides. Chief Justice Chase delivered the opinion of the court, four of the other seven judges coinciding with him. In summing up the case he used this language:

We are obliged to conclude that an act making mere promises to pay dollars a legal tender in payment of debts previously contracted is not a means appropriate, plainly adapted, really calculated to carry into effect any express power vested in Congress; that such an act is inconsistent with the spirit of the Constitution; and that it is prohibited by the Constitution.

At the December term, 1870, of the same court, Judge Grier, one of the five judges who decided the law unconstitutional, having resigned, his vacancy having been filled, and an additional judge added to the court, making the number of the judges nine, the validity of the same law was again passed upon by said court, and five judges out of the nine—being a majority of one—overruled the former decision and sustained the law as constitutional.

The court, in the majority opinion, use the following language:

The controlling questions in these cases are the following: Are the acts of Congress, known as the legal-tender acts, constitutional when applied to contracts made before their passage; and, secondly, are they valid as applicable to debts contracted since their enactment? These questions have been elaborately argued, and they have received from the court that consideration which their great importance demands. It would be difficult to overestimate the consequences which must follow our decision. They will affect the entire business of the country, and take hold of the possible continued existence of the Government. If it be held by this court that Congress has no constitutional power, under any circumstances, or in any emergency, to make Treasury notes a legal tender for the payment of all debts, (a power confessedly possessed by every independent sovereignty other than the United States,) the Government is without those means of self-preservation which, all must admit, may in certain contingencies become indispensable, even if they were not when the acts of Congress now called in question were enacted. It is also clear that if we hold the acts invalid as applicable to debts incurred, or transactions which have taken place since their enactment, our decision must cause, throughout the country, great business derangement, wide-spread distress, and the rankest injustice. The debts which have been contracted since February 25, 1862, constitute, doubtless, by far the greatest portion of the existing indebtedness of the country. They have been contracted in view of the acts of Congress declaring Treasury notes a legal tender, and in reliance upon that declaration. Men have bought and sold, borrowed and lent, and assumed every variety of obligations contemplating that payment might be made with such notes. Indeed, legal-tender Treasury notes have become the universal measure of values. If now, by our decision, it be established that these debts and obligations can be discharged only by gold coin; if, contrary to the expectation of all parties to these contracts, legal-tender notes are rendered unavailable, the Government has become an instrument of the grossest injustice; all debtors are loaded with an obligation it was never contemplated they should assume; a large percentage is added to every debt, and such must become the demand for gold to satisfy contracts that ruinous sacrifices, general distress, and bankruptcy may be expected. These consequences are too obvious to admit of question.

At another part it uses the following language:

We do not propose to dilate at length upon the circumstances in which the country was placed when Congress attempted to make Treasury notes a legal tender. They are of too recent occurrence to justify enlarged description. Suffice it to say that a civil war was then raging which seriously threatened the overthrow of the Government, and the destruction of the Constitution itself. It demanded the equipment and support of large armies and navies, and the employment of money to an extent beyond the capacity of all ordinary sources of supply. Meanwhile the public Treasury was nearly empty, and the credit of the Government, if not stretched to its utmost tension, had become nearly exhausted. Moneyed institutions had advanced largely of their means, and more could not be expected of them. They had been compelled to suspend specie payments. Taxation was inadequate to pay even the interest on the debt already incurred, and it was impossible to await the income of additional taxes. The necessity was immediate and pressing. The Army was unpaid. There was then due to the soldiers in the field nearly a score of millions of dollars. The requisitions from the War and Navy Departments for supplies exceeded fifty millions, and the current expenditure was over one million per day. The entire amount of coin in the country, including that in private hands as well as that in banking institutions, was insufficient to supply the need of the Government three months, had it all been poured into the Treasury. Foreign credit we had none. We say nothing of the overhanging paralysis of trade, and of business generally, which threatened loss of confidence in the ability of the Government to maintain its continued existence, and therewith the complete destruction of all remaining national credit.

It was at such a time and in such circumstances that Congress was called upon to devise means for maintaining the Army and Navy, for securing the large supplies of money needed, and, indeed, for the preservation of the Government created by the Constitution. It was at such a time and in such an emergency that the legal-tender acts were passed. Now, if it were certain that nothing else would have supplied the absolute necessities of the Treasury, that nothing else would have enabled the Government to maintain its Armies and Navy, that nothing else would have saved the Government and the Constitution from destruction, while the legal-tender acts would, could any one be bold enough to assert that Congress transgressed its powers? Or if these enactments did work these results, can it be maintained now that they were not for a legitimate end, or "appropriate and adapted to that end," in the language of Chief Justice Marshall? That they did work such results is not to be doubted. Something revived the drooping faith of the people; something brought immediately to the Government's aid the resources of the nation, and something enabled the successful prosecution of the war, and the preservation of the national life. What was it if not the legal-tender enactments?

From the above extracts it will be seen that the court regarded the making of our greenbacks *a legal tender* during the war, as an absolute necessity for the preservation of the life of the nation; and that they were also fully impressed with the overwhelming necessity of sustaining the law. Otherwise the whole business interests of the country were ruined beyond the hope of redemption.

The action of Congress in making the law, and the decision of the court in sustaining it, were not only indorsed by the people, but the action of each body was received by them with the profoundest gratitude, and hailed as the harbingers of financial safety. Yet, had it not been for that overwhelming necessity, it is difficult to believe that the first decision of the court would ever have been disturbed. But to prevent financial ruin, public necessity, the mother of law, demanded that it be overruled and the business interests of the nation preserved. Our present legal-tender act was a war measure, passed and sustained on the ground of public necessity; which action I indorse with all my heart, and hope that the power of Congress to pass such a law, under similar circumstances, will never again be questioned. But should Congress now go forward in time of peace, when there is no necessity for it, and enact a law authorizing the issue of an additional amount of greenbacks sufficient to supply the wants of the country as a circulating medium, and make them *a legal tender* and provide for the repeal of our present banking system?

With these conflicting opinions, and the fact of the judges being so nearly equally divided upon the validity of our present law, which public necessity demanded should be sustained, what would be the result? Many persons would refuse to accept these new greenbacks in payment of debts, claiming that Congress had no power to pass a law in time of peace making the promises of the Government money and a legal tender in payment of debts. The question would soon be brought into the courts, and doubts would rest on this new currency as to its validity, which would greatly depreciate it in value, seriously disturb business, and cause the people to lose millions of dollars. How would the courts decide the question? No one can certainly tell; our ablest lawyers and jurists are divided on the question. The decision on our present legal-tender act, above referred to, cannot be implicitly relied on as settling the question as to how the courts would decide on the new law, for the reason that the facts in the case are entirely different. The present law was passed, as before remarked, in time of war, when the necessities of the country imperatively demanded that the greenbacks be made a legal tender, otherwise debts could not have been paid. There was not enough gold or silver in the country, neither could they be had, and therefore the necessity was absolute and overwhelming that our greenbacks should be made a legal tender.

Judge Bradley, one of the *five* judges who decided the present law constitutional, delivered a separate opinion in the case. In it he used the following language:

It follows as another corollary from the views which I have expressed, that the power to make Treasury notes a legal tender, while a mere incidental one to that of issuing the notes themselves, and to one of the forms of borrowing money, is nevertheless a *power* not to be resorted to except on *extraordinary* and *pressing occasions*, such as *war* or other *public exigencies of great gravity and importance*; and should be no *longer exerted* than all the circumstances of the case demand.

From the above it is evident that Judge Bradley does not believe that Congress has the right to exercise the power to pass such a bill unless there is some great necessity for it. Yet as to the *necessity* of its exercise, Congress and not the court, say the majority of the judges, must be the judge.

It must be evident to every one that no such necessity as referred to by Judge Bradley now exists in time of peace for the exercise of such power; neither will any member base his action in voting for such a law at this time on the ground of any such necessity, but will place it on the broad ground of right under the Constitution to pass such a law at one time as well as another, without any reference to the question of necessity. Otherwise it could not get five votes in this House.

The question under a law passed now with that understanding would go to the courts under very different circumstances from the one under the law passed in time of war, when it was claimed to be passed by Congress on the ground of necessity, and would, therefore, make it a very doubtful one indeed as to how the courts would decide it. The doubt would be sufficient to affect very seriously the soundness of the new issue of legal tenders.

Let us next examine the third objection, which is, if we should pass a law authorizing the issue of greenbacks that it would be injurious to the country for the reason that it would depreciate our money below its present standard, and in the end prove a loss to the people beyond what they now sustain. That we may fully understand this subject, let us first inquire, what are these United States notes, commonly called greenbacks? They are nothing more nor less than the promissory notes of the United States agreeing to pay the holder of them the amount stated on their face; the same as the promissory note of any private individual. In what kind of money are they payable? The Supreme Court of the United States, at its December term, 1868, decided that they are payable in gold; and, in addition, Congress, in 1869, declared, by positive law, that they are payable in gold. Should the United States then issue her greenbacks and with them purchase her interest-bearing bonds to the amount of such issue, she would not thereby really pay or extinguish the debt, as many suppose. She would merely change its character from a bonded debt, not due, but bearing interest, to one which the Government agrees to pay, as construed, at its pleasure in gold. In others words, she would

take the load from one shoulder and put it on the other. In the common transactions of life, where a man is unable to pay his debts for the want of present means, which is the exact condition of the United States at this time, such an exchange of debts would not be desirable, but would be considered foolish in the extreme. Its only effect would be to embarrass the debtor, for it would place him in a condition to be forced to pay his debt on demand when he was not in condition to do so except at great sacrifice. The only difference between the United States and an individual in such case, would be, the individual would be forced to pay his debt on demand, while the United States could not be.

When we consider the amount of our liabilities, and that by express law, passed on the 18th day of March, 1869, the solemn faith of the nation is pledged, that our greenbacks and bonded debt, amounting to over two thousand millions of dollars, shall be paid in gold; that the interest on this debt is payable in gold, one-half of it every six months; and that all our foreign balances due from us for goods purchased abroad, as well as the principal and interest due upon all the railroads and other bonds of this country, held abroad, must be paid in gold, it raises a very serious question. Whether it is to the best interests of the people for the government to increase her promissory notes or greenbacks, to an amount sufficient to supply the wants of the people for a circulating medium, (when the very act of issuing them would depreciate their value,) for the reason that gold must be raised by the Government and people for the purposes above named, and there would be no way of getting it except by purchasing it, with the circulating medium such as we would have. The less valuable the currency, the more of it would it take to purchase the gold. The loss in its purchase, in the end, would have to be sustained by the people. It must be evident to every one, that these new greenbacks, if issued as above stated, would soon depreciate, for the reason, if the greenbacks now issued by the Government, and which are limited to four hundred millions, are not worth their face in gold, notwithstanding they have been issued more than ten years, and the faith of the nation has been pledged for their redemption in gold, for five years, the reason must be, because the nation is not able to redeem them in gold. If the nation then is unable to redeem her promises in gold, her pledge of faith to do so is not equal to gold; and hence, the greater the number of her promises out in the shape of greenbacks to circulate as money, the less in value they become, and especially would this be so if the Supreme Court of the United States should decide that Congress had not the power, *in time of peace*, to issue greenbacks, and make them a legal tender for pre-existing debts, and there are serious doubts on this point, as our present legal-tender act, *passed during the war*, was sustained by a majority of only one of the judges of the Supreme Court. If we should then go forward and issue greenbacks to the amount that would be required for a circulating medium, and they not legal tenders, nor in any way convertible into our present legal tenders, they would depreciate in value still more than our present greenbacks, which are legal tenders, and which are now at a discount of 12 per cent. below gold.

Some persons urge that the question of the redemption of the greenbacks by the Government has nothing to do with their value; that there is no real necessity for redeeming them; that we want them kept in circulation as currency, and not redeemed; that by so doing, the Government saves interest upon that amount of her debt, which she would otherwise have to pay. But I insist that this question of redemption does, and in the very nature of things must, enter into consideration in determining their value. If the Government was able to redeem her greenbacks to-day in gold, they would to-day be worth their face in gold. Or, if the Government was prepared, and their redemption in gold was fixed for the first day of July next, they would now be almost at par with gold. But as there is no time fixed for their redemption in gold, except as stated on their face, and in the act of March 18, 1869, and as all consider that the Government has not, nor cannot get the gold at this time, unless she borrows or purchases it at great sacrifice, and but few are ready and willing to make that sacrifice, they are worth to-day 12 per cent. less than gold. Hence I insist that this question of redemption is of the highest importance to the people. If the Government, instead of looking to the making of her present greenbacks equal to gold at the earliest practicable moment, which the solemn faith of the nation is pledged as beforesaid, that she shall do, but should inaugurate a policy to do away with national banks, and supply all the currency needed for business by an additional issue of her promises to pay, when she is not able to pay those already out, in my judgment they would depreciate in value, in one month after the enactment of such a law, 10 per cent. below what they are now, for the reason, that would be evident to every person, that having taken that step, no provision could or would be made within any reasonable time for their redemption, unless by funding them into bonds; and the very act of exchanging them for bonds, would be to again put them at interest as now, and take them out of circulation, and hence contract the currency, which would then be oppressive to the people. A moment's reflection must satisfy every candid mind that such a policy is not the true road out of our present financial embarrassments.

The Government is like thousands of individuals, it is amply able to pay, but needs time. To gain that time, it must not do an act that will violate its plighted faith. To authorize another issue of its promises to pay, in the shape of greenbacks to circulate as money, without first making provision for the payment of its present promises, is certainly a violation of that faith; and in no sense of the word can it be beneficial to the people. By so doing, we do not pay our debt, only change it from bonds to greenbacks; but in such change we increase the debt to the amount of the difference in value between the bond and the greenback. We are as much bound to pay one as the other, and both are payable in gold. The advocates of this issue say, by so doing we break down the banks and save the interest on the bonds that we pay to them. The argument is delusive, and if we suffer ourselves to be deceived by it, and adopt the plan, in my judgment it will prove a sad day to the people. What good do we accomplish by breaking down the banks? Will we save one cent of interest to the people by so doing? I answer, no, for the banks now pay to the Government and the States, in the shape of taxes, which is paying it to the people, as much, if not more than the amount of interest received by them on the bonds, that the greenbacks would purchase, if issued to take the place of the national-bank notes, as I will show when I come to the discussion of the bill now before the House. Would the new greenbacks be any better than the national-bank notes? I answer, not as good, as I will then also show. What benefit, then, do we accomplish for the people by this policy? I answer, none. But on the contrary, if we should adopt it, we would inflict upon them a positive injury. The country now owes the banks nearly a thousand millions. To force them to wind up would compel a collection of that amount from the people, by suit or otherwise; which would bankrupt thousands of them that would otherwise worry through with their debts. These collections would seriously derange business, and cause the country to lose millions. The greenbacks would certainly depreciate in value, as I have shown; but even if their issue saved to the people the interest we now pay the banks, (which it would not,) still, in the amount of business we do in the whole country, aggregating at least five hundred millions daily, the people would lose during the year, in consequence of their depreciation, a greater sum than the amount of interest that the Government would save by furnishing the circulation herself, instead of providing for it to be furnished through the banks; which I believe is, in the end, the cheapest, safest, and best, for the people and the country. To adopt, then, a financial policy by which the Government would furnish the currency, in order to save the interest on her bonds, which she now pays to banks, and at the same time lose more by way of depreciation of currency than the amount of interest thus paid, saying nothing of the loss of taxes now paid by the banks, I regard as neither wise nor prudent legislation.

For the Government to furnish the currency would make out of the national Treasury nothing more nor less than a bank; which would require more officers, create more expense, and subject the Government to greater losses. The Government may authorize banking and make the system a success; but when she undertakes it herself, it will prove a failure, and in the end disastrous to her and the people.

I come next to a discussion of the bill now before the House, reported from the Committee on Banking and Currency. It will be seen from the bill that the committee has not attempted to inaugurate a new system of finance, but has contented itself with making some important amendments to our present national-banking system. As the committee's bill favors a supply of currency to the country through national banks, instead of issuing greenbacks for that purpose, it is but proper and right that some of the reasons should be given to the country why this is done. Two of the important reasons are:

1. The national-banking system has been in existence for some ten years; during that time the country has had a better currency and enjoyed greater prosperity than it has for the same length of time during any period of its existence. The system has become so identified and thoroughly established with our people, that should we now break it down and compel it to withdraw its circulation we would most certainly derange our finances and seriously affect the business of the country. The people are largely indebted to the banks, and many of them cannot pay. To wind up the banks gradually as you may, will ruin and bankrupt thousands of them. The system has defects, and the committee believed that it was better for the country that Congress should cure these defects, than to undertake to inaugurate a new and untried system.

2. The committee believed that a well-regulated national-banking system would and could furnish to the people a cheaper and better currency than any other system that had been presented to Congress.

Before entering into a discussion of the merits of the committee's bill, having given the objections that are urged against the issue of more greenbacks, I desire to present some of the objections that are urged against the national-banking system, and then contrast the two, so that Congress, as well as the people, can judge of the merits of each, and decide which, in the end, is the cheapest and best for the country.

One of the principal objections to the national banking system is that it is too costly to the people. It allows the banks to deposit their Government bonds as a security for the bill-holders, and draw the interest on them; it then requires the Government to issue to the banks ninety cents on the dollar in currency on the par value of these bonds. This looks to many like paying a premium to the banks to loan money that the Government furnishes them; and they insist that the Government should take this money it furnishes the banks and purchase

its bonds, and save this premium in the shape of interest on the bonds which it pays the banks. At first blush, it looks as though the objection was well founded, but when you come to realize the responsibilities that the banks assume, and the burdens that are really taken from the shoulders of the Government in the arrangement, and then put its workings into practice, it shows a different state of affairs. It must be remembered that this currency that is issued to the banks are the promises of the banks to pay the amount specified on the face of the notes, and not the promises of the Government. These notes are to circulate as money, and the banks have agreed that they shall be at all times equal in value to the present greenbacks. If the Government, then, will make her greenbacks equal to gold, and her solemn faith is pledged by act of March 18, 1869, that she will do it at the earliest practicable moment, then the banks are pledged to make their notes equal to and redeem them in gold. And for the fulfillment of this promise they have pledged with the Secretary of the Treasury United States bonds worth their face in gold, at the rate of one hundred dollars for every ninety dollars of their notes that are put in circulation.

If the Government should undertake to issue enough greenbacks to answer the wants of the people for a circulating medium, and do away with national banks, it could not keep their value equal to the present value of our greenbacks, for the reason that their value would be regulated by its ability to redeem them in gold; and its ability to redeem would be decreased in proportion as it increased their amount, and hence the value of the greenback issue would be worth less than a national-bank issue to the amount of such depreciation, which would be an absolute loss to the people to that amount. Another important advantage in favor of the national-bank issue is that it would not be subject to the constitutional objection that would be raised against the *legal-tender* provision of the greenback issue, as I have before shown, which would make it much more desirable to the people, as no doubts about its legality would exist. It is as much a *national currency* as greenbacks, and would be more valuable than a new issue of them, as I have shown. And when the Government is able to make her present greenbacks equal to gold, the banks must make their notes equal to it, and then all the trouble and expense of redeeming our currency and keeping it equal to gold will be taken from the Government and thrown upon the banks, where it naturally belongs. These are the responsibilities that the banks assume for the seeming advantage given them by the Government in issuing the circulation to them instead of issuing it in the name of the United States.

Are these advantages above named, which are given to the banks, burdensome and unjust to the people? This is a question of the highest importance, and deserves our careful consideration. I shall discuss its application to my own State, (Indiana,) where the law allows 10 per cent. interest. If the banks are made to comply with the law, let us see how the balance-sheet would stand:

1. To start a national bank with a capital of $100,000, it would require the bank to purchase $100,000 in 5 per cent. gold-bearing bonds to deposit as security for the bill-holders. These bonds would cost in currency		$115,000 00
2. On these $100,000 in bonds the Government would issue to the bank in currency		90,000 00
3. The bank is required to keep out of this $90,000, 15 per cent. as a reserve, which would make		13,500 00
This would leave for bank to loan		76,500 00
4. On this $76,500 the bank at 10 per cent. (all it is allowed by law to charge) would realize in interest		7,650 00
On the $100,000 in Government bonds the bank would receive as interest in gold		5,000 00
Premium on this gold at 15 per cent., which is above the price, would make		750 00
Making amount received by bank		13,400 00
5. Out of this the bank has to pay a tax to the Government of 1 per cent. on its circulation, which individuals and private bankers do not pay. Its circulation being $90,000, the Government tax on that sum would be $900, (national banks pay to the United States a tax on their deposits and on their capital not invested in bonds, but as private bankers pay substantially the same I will make no note of them here)	$900 00	
6. In Indiana, stockholders in banks are taxed on their bank stock as personal property, (individuals owning money to loan are not liable to this tax,) which for State, county, and township purposes will never be less than 1 per cent., which on $100,000 of bank stock would make	1,000 00	
		1,900 00
Net bank profits		11,500 00

Which is precisely the amount that the $115,000 paid for the bonds would have brought if loaned at 10 per cent., without the trouble and expense of banking.

But says one in answer to all this, the bank loans its money only for sixty and ninety days at a time, and takes its interest in advance, and by that means it can make more than its 10 per cent. That is true; but in addition to the expenses I have stated above, banks must have office room to do business, must have officers, and bank-books, all of which cost money. Private individuals do not require these.

Says another, the banks charge more than 10 per cent. That is true, and so do individuals; in this respect both violate the law, and escape punishment because no one enforces the law against them. One will ask, where then is the advantage of banking? The money in banking s made principally out of the deposits. The bank loans them at a high rate of interest, while it pays for them but a small rate, and in many cases pays nothing.

Suppose national banks were done away entirely, and the money was furnished by the Government in the shape of greenbacks, and the courts should decide them constitutional. What would the difference be to the people who wanted to borrow money? They are the men I want to protect. Would they get money any cheaper then than now? There would be banks all over the country, but they would be private banks instead of national ones. When any one called to borrow money would he get it at any cheaper rate of interest from the private banker than from the national banker? I answer, no; and the experience of the money-borrowers throughout the country will sustain me in my answer.

No doubt some will say, if we would provide by law for depositing our present bonds with the Secretary of the Treasury, and drawing therefrom their amount in greenbacks as a loan, while the bonds remain there as security for it, then interest would be cheaper to the people, than through banks. Would it? It must be remembered that the men in this country, who own bonds which could be deposited for such purposes are lenders of money and not borrowers of it. Men who own bonds do not want to borrow money. Would they then deposit their bonds for the loan of this money, even if the Government had the money and could accommodate them? If it was to their interest they would, otherwise they would not. Would it be to the interest of a man to take, say $100,000 in Government bonds and deposit them with the Secretary of the Treasury and draw therefrom $100,000 of greenbacks to loan to the people? I should think not, when he could take those same bonds and sell them in the market for at least $117,000, and thereby have $17,000 more to loan. It will not do to say that such men who loan money, only want to loan it for a short time as an accommodation, and then want to draw and hold their bonds, and for that reason they would prefer depositing their bonds and borrowing the money, instead of selling them. It must also be remembered that Government bonds, bearing 6 per cent. in gold, (and they are the kind that are principally held by the people) and being free from all State, county, township, and municipal taxation, are equal to money in most of the States at 9 per cent.

Could men then owning these bonds, incurring the expense of depositing them and drawing the greenbacks, loan the money to the people at less than 10 per cent., if they loaned it at cost? Does any man suppose that an owner of bonds would go to all that trouble to procure money to loan unless he made a profit by it? If he made a profit sufficient to justify the expense and trouble would he not have to loan his money above 10 per cent.? Then where is the benefit to the borrowers of money? They are the men I want to protect. Capital is able to take care of itself. My object is not to provide protection for capital, but to protect the men who have to borrow it. Cheap interest is what I want, it is what the people want, but it must be evident to every one that this plan would not make money cheaper to them, even if it could be accomplished. The Government has no money to loan. If we should adopt such a plan, greenbacks would have to be issued, and then would arise all the objections I have stated against their issue, which would at once be fatal to the scheme. If no benefit can arise from it to the people, I can see no use in its adoption.

Do as we may, we will always find that there will be banks in the country. If not national ones, they will be private ones, and men who borrow money will be compelled from absolute necessity to borrow it from them. I am therefore satisfied that it is best for the people for us to perfect our national-banking system for the reason, as I think, money can be furnished cheaper to the people through national banks than through private ones, because the Government enforces her laws more stringently than the States, and I hope and believe tha this Congress will enact a law and require its enforcement, that will be strong enough to prevent *usury*, which is a curse to any country where it is tolerated. A living price should be given to the money-lender and with that he ought to be made satisfied. If usury can be prevented the people can and will be enabled to borrow money cheaper from national banks than from any other system that can or will be established.

Let us next ascertain whether all the money received by the banks from the Government in the shape of interest, is clear gain to the banks, and a loss of that amount to the people, or in other words, if the Government should do away with the national banks, and issue greenbacks to supply the place of the bank-notes, how much would she save in the operation? Let the figures speak, and they will tell:

On the 12th day of last September, (date of last report,) the amount of national-bank notes then outstanding, was	$339,081,797
Out of this amount the banks were required to purchase, and keep a reserve in greenbacks of 15 and 25 per cent., (in redemption cities 25, and outside of them 15 per cent.,) which would average 20 per cent., making	67,816,359
Amount banks were permitted to loan at that date	271,265,438

If the Government had then wound up the banks, and issued in greenbacks $271,265,438 to take the place of the bank-notes in circulation, upon which the banks drew an interest as above shown, (if they did not depreciate,) it could have purchased with that amount of

greenbacks bonds of the United States, (one-half bearing 5 and the other half bearing 6 per cent. in gold, counting them at a premium of 16 per cent.,) amounting to $227,862,968.

The interest upon these bonds in gold at 5 and 6 per cent., one-half at each, would amount to	$12,532,463
Premium on this gold at 12 per cent.	1,503,895
Making amount of interest Government would save by issuing greenbacks	14,036,358

We have now shown what the Government would save by doing away with the banks. Let us next inquire what the people would lose by it.

The capital stock of the national banks on the 12th day of last September amounted to $491,072,616. This stock under the law is taxable in each of the States as personal property.

In 1867, 1868, and 1869 the taxes in the States averaged about 2¼ per cent. I doubt if they are less than that now. But counting the tax at 2 per cent., the banks and stockholders paid to the States on this stock as taxes for 1873	$9,821,452
They paid to the United States taxes for 1873, as follows:	
On circulation	3,390,817
On deposits	3,113,427
On capital not in bonds	543,711
Making amount paid by banks	$16,889,407
Deduct amount saved by Government, as above shown	14,036,358
Amount Government and States would lose	2,803,049

The above statement shows that if the banks were done away and greenbacks issued to supply their place, the Government and States instead of gaining would lose $2,803,049. In answer to this it may be said that if the national banks were broken down the most of them would go into private banking, and would then pay a large amount of taxes to the Government as private banks now do. I suppose this loss of $2,803,049 would be made up in that way. But by breaking down the national banks you strike out of existence $491,072,616 of taxable property in the shape of bank stock, which now pays to the States a tax of at least $9,821,452, which private bankers would not pay. You also strike out of existence $339,081,797 of bank circulation, upon which national banks pay to the United States a tax of $3,390,817, which private banks would not pay. If these banks are to redeem our money with gold, when we return to specie payments, and save the Government all this trouble and expense, could they possibly do it upon terms more reasonable than the figures show?

I come now to a discussion of the defects in our present national-banking system, and the remedies I propose in order to correct them.

The first defect that I will suggest is, it limits the amount of bank circulation, which makes banking at present a monopoly, and none can bank except those engaged in it, as all the banking circulation is taken up. This limitation should be stricken out, and banking made free to all persons who shall organize for that purpose, and comply strictly with the provisions of the law, and deposit the requisite amount of Government bonds as a security for the bill-holders. This would remove the objectionable feature of monopoly, and also take from Congress the right to say how much money the country should have, and leave that question to be regulated by the laws of supply and demand. The people then could have money that would be good and as much or as little of it as they pleased, and have it East, West, North, and South, as they wished, according to the wants of trade. And as banks increased in number, and the currency increased in amount, they would naturally come in competition with each other, which would cheapen money to the people, and make the banks more useful and accommodating to them. The people would then cease looking to Congress for money; but would depend upon themselves for all they wanted. This feature of the system, leaving the amount of money in the country to be governed by the law of supply and demand, I regard as perfection, and the only true mode of solving that question.

Secondly, another defect is allowing banks to pay interest on call deposits. They should only pay interest on money that is deposited for a fixed period, say one month or more, as may be agreed upon, and the interest should cease the day the deposit is due. The object of this amendment is to prevent banks being taken by surprise. When a time is fixed for payment the bank must be ready, like an individual, to pay. If the depositor does not call for his money when due, and receive it or redeposit it again, the bank can afford to lay his money aside, as it costs nothing, interest having ceased. If, at the breaking out of the panic, the deposits had been on *time* instead of on *call*, the banks would not have suspended and the country would have suffered but little. I know some object to this on the ground that it interferes with the rights of the banks, that they should be permitted to manage their own affairs in their own way. My answer to that is this: Banks are chartered for the public good as well as their own, and they should not be permitted to do anything that is liable to break them down, and thereby seriously injure the public.

I know it is said that prudent bankers would not pay interest on call deposits, and therefore there is no use for this amendment. All bankers are not prudent, and hence the necessity of it. The prudent ones cannot certainly complain if they are restrained from doing a thing that they would not do if left free. It will be urged that by this provision you injure national banks, and drive all call depositors from them to the private banks that will pay them interest. There is but little money made on call deposits; and so soon as men whose deposits are valuable see that a bank is paying interest on them, they will shun such banks, and place their money with national banks, which refuse the risk of such deposits.

Thirdly. The present law requires all banks in certain cities to keep a reserve of 25 per cent. of their circulation and deposits, and all banks out of these cities to keep a reserve of 15 per cent. of their circulation and deposits. It also allows the banks out of the redemption cities to keep three-fifths of their reserves on deposit with banks in the redemption cities as available funds for the purpose of redeeming their circulation.

I see no necessity of banks being required to keep such a large reserve on their circulation, as the bill-holders are secured by the deposit of bonds with the Secretary of the Treasury. It keeps a large amount of money out of circulation that would be beneficial to the people. The banks should be required to keep a sufficient reserve in their own vaults to redeem their own bills at their counters when presented. Let the banks be the judges as to the amount that will be required. The amount of reserves on deposits is little enough, but each bank should be required to keep them in its own vaults and not allow them to loan or deposit them with any one.

Allowing three-fifths of these reserves to consist of balances deposited with banks in New York, is what drains the country of its money and takes it to New York, and hence the country complains for the want of money and New York grumbles because she has too much. To reqnire each bank to keep its reserves within its own vaults will correct this evil. Some insist that banks should not be required to keep their reserves in their own vaults for the reason that they cannot keep them as safe from thieves and fire as in the cities. That is the merest humbuggery. I know in cities they have the strongest vaults within which to keep money, but they also have a greater number of burglars and much more desperate ones, as also larger fires in cities, than in the country towns. So that upon the question of safety, money in the vaults of country banks is just as safe as if deposited in city banks.

The bill reported from the committee requires all banks to keep a deposit of 5 per cent. in the Treasury of the United States, for the purpose of redeeming their circulating notes in the city of New York by the assistant treasurer of the United States. My objections to this provision are twofold. First, it throws the burden of assorting the money that is brought in for redemption on the Government, which will cost the people each year for assorting alone (in the hire of clerks) a very large amount. And, secondly, it provides a means by which the New York banks and brokers can constantly run all banks outside of that city, and force them to redeem, when the other banks have not the power to force them to do the same thing.

It is contended that the money of all the country banks centers at New York. Suppose it does. It is just as good for all purposes as the notes of the national banks in New York. Then why should the country banks be taxed to redeem their money away from home any more than the New York banks should be to redeem theirs? The West and South use the money of the eastern banks the same as their own, and are glad to get it, and I have no doubt but what all the people East are glad to get the money of western banks, except the bankers and brokers, who desire to have all other banks under their control and make them play second fiddler to them. Unless a sounder reason can be given for the adoption of this part of the committee's bill than has yet been given, I hope it will not be done.

To prevent national-bank notes depreciating, and save the people from loss in consequence thereof, I favor the adoption of a redemption system similar to that suggested in a bill presented by the honorable gentleman from Wisconsin, [Mr. SAWYER.] It will save the Government from additional expense, and enable the banks to redeem their notes at some one of the redemption cities without additional hardship upon them.

The plan is simply this: to require all national banks outside of redemption cities to arrange with some national bank within one of the redemption cities to redeem their notes; and to compensate such banks for this extra expense in having their notes redeemed at one of the money centers, to allow them 91 per cent. of circulation instead of 90, as now proposed by law.

Fourthly. The late panic developed the fact that our present banking law is defective in a very essential point, and that is, when the panic was approaching, and was even upon us, we had no reserve fund provided from which aid could be had in order to prevent or carry us safely through it; and hence the whole business interests of the country were paralyzed, and hundreds of millions of dollars were lost to the people for the want of help in the hour of their distress. To prevent as well as crush panics in the future, there should be a fund of not less than $50,000,000 composed of Treasury notes, (not legal-tenders, but which should be replaced by our present legal-tenders when the Government redeems them,) provided and kept in the Treasury of the United States as a reserve, to be used for no other purpose than to loan to national banks in times of great financial stress, upon the pledge of United States bonds as security, and at a rate of interest not less than 10 per cent., the necessity of the loan to be determined by the Secretary of the Treasury, by and with the advice and consent of the President of the United States. Had such a reserve been provided and kept in the Treasury prior to the late panic, it could have been prevented, and hundreds of millions saved to the people, besides all the misery and want that they have suffered.

This reserve should be provided and kept by the Government, for the reason that all the people are interested in preventing panics. It would cost the Government nothing but to issue the money. It would be safe while loaned, as Government bonds would be pledged for its security. It would remain in circulation but a short time, as the amount of interest required to be paid would insure its return as soon as the necessity for its use had passed. And it could only be loaned to prevent a panic, which would be determined by the President and Secretary of the Treasury. The bill reported by the committee contains no provision for such a reserve. On that account it is defective, and should be amended by the House.

Fifthly. Under our present law usury is practiced by the banks, which I regard as a very serious defect in it. It should be amended and made strong enough to prevent it. One of the main arguments in favor of national banks furnishing the currency is, that they are under the power of Congress, and can be compelled to comply with the law. We should therefore provide by law for a fair interest to capital, and then compel a compliance with it. By that means we protect the people, and give to them money at such rates that they can do a legitimate business and not be eaten up by exorbitant interest. If Congress will set the example and enforce the laws, the States will soon follow, and usury will be prevented by the banks and by the people. I know many gentlemen will say that we cannot pass a law that will prevent it, and by undertaking it we will only make interest dearer to the people. I do not believe it. I know it was said with equal confidence that the Tammany ring in New York could not be broken up; yet it was. The great trouble with our usury laws is that they are not enforced when violated. It is our duty to see that this is done, and the people will hold us responsible if we fail in this important trust. The bill reported by the committee is silent on this point, and should be amended so as to embrace such a provision.

Sixthly. It is charged that under our present law persons who have organized a bank can take the circulation issued to the bank and add to it, and purchase more bonds and deposit them, and have circulation issued on them, and so continue the operation until with $200,000 in currency they might get twice that amount of bonds deposited, drawing them an interest, beside a large circulation, and thus realize large profits to themselves, without being of much benefit to the public. To prevent any such wild-cat banking, as well as to allay public feeling on that point, there should be an express provision prohibiting it.

Seventhly. Greenbacks as well as national-bank currency should be made taxable in all the States and Territories the same as personal property. By this we would add largely to the amount of taxable property in each State, and compel those owning money to pay taxes on it.

Eighthly. The greenbacks should be made as near equal to gold as possible, and for that reason at least one-tenth of all customs duties should be made payable in them. By this provision we make greenbacks more valuable and in the same proportion add value to all the national-bank currency, for it is redeemable in greenbacks.

Ninthly. I have desired that provision should be made in the law to secure depositors, but finding that impracticable, the best thing that can be done looking in that direction is to adopt a provision similar to that suggested by my colleague, Mr. WILSON; and that is, to require the examiner, in addition to his present duties, to ascertain if any bank has loaned its money upon any bonds or stocks of any corporation, association, or joint-stock company, or has purchased with its money any such bonds or stocks, or has in any way jeopardized its moneys or securities in loans or purchases of any kind of property not strictly used in a legitimate banking business, and to make publication of such facts, so that the public may know the real condition of every national bank; and then every man can make his deposits knowing the condition of the bank at the time he does it.

I have no doubt that many will oppose this provision, on the ground that the public have no right to know anything about the private affairs of banks. But I insist if banks hold out an inducement to individuals to deposit their money with them, the individuals have a right to know that they are sound and not engaged in all kinds of wild-cat speculations. If the public could have known the exact condition of Jay Cooke's bank, it would have received but few deposits, and many saved from loss. And such a law might have been the means of saving him, had it been in existence a year before his failure, for he would have been compelled to have kept his bank in New York in as safe condition as national banks in order to have gotten customers. The Ocean National Bank of New York, as well as most of the national banks that have failed, might have been saved by such a law, had it been properly enforced by the Comptroller of the Currency.

In addition I would require each national bank in the cities, at the close of each week, and the national banks in the country towns at the close of each month, to publish in the newspaper having the largest circulation in the city, town, or county where the bank is situated, a statement under the oath of its president and cashier, of the average amount of deposits received and reserves kept in each bank in the cities during the week, and the average amount of deposits received and reserves kept in each bank in the country towns during the month. By this means the people will be constantly advised as to the condition of the banks. Those that show prudent management will gain the confidence of the people and do an increased business. Those that show otherwise will soon go to the wall for the want of business to support them.

The eighth section of the committee's bill authorizes the Secretary of the Treasury to issue at the beginning of each and every month from and including July, 1874, two millions of United States notes, not bearing interest, payable in gold, two years after date, of denominations not less than ten dollars. These notes to be substituted for same amount of our present greenbacks, which shall be canceled and destroyed and not reissued. And any excess of gold in the Treasury or hereafter coming into it, after payment of interest on the public debt, and supplying any deficiency in the revenues provided to meet the current expenses of the Government, should be retained to redeem these gold notes. My objection to this section is that these gold notes would at once be hoarded, and that amount taken from circulation. The wealthy would be the only persons benefited by such an issue, as they alone could afford to keep them. Persons of moderate means could not hold them, as they have to keep all their money in circulation to make ends meet. The injury that the country would sustain by the contraction of the currency at the present time would far overbalance any supposed benefits to be derived from the issue of such notes. Requiring not less than one-tenth of the customs to be paid in greenbacks, as above suggested, is a better provision to add value to greenbacks than this. I therefore oppose this section.

To carry out the amendments I have suggested I have prepared a bill, and will at the proper time offer it as a substitute for the bill reported by the committee, or offer certain of its sections as amendments to the committee's bill where they differ from it.

Cheap Transportation.

SPEECH OF HON. LEWIS B. GUNCKEL,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

March 25, 1874,

On the bill (H. R. No. 1385) to regulate commerce by railroad among the several States.

Mr. GUNCKEL. Mr. Speaker, I do not know that many people are starving in the eastern cities or that much food is being burned by western farmers; but I do know that food is very dear in the East, and yet so cheap in the West as to be almost worthless. With all our railroads the producer and consumer remain, practically, far, very far, apart.

At a recent meeting of the National Grange the following facts, among many of like character, were stated: An Illinois farmer sent his corn to New York City, and received for it fifty-six and one-half cents per bushel; the railroad charges were forty-eight and one-half cents per bushel, leaving him eight cents per bushel for his corn. An Iowa farmer sent his to Springfield, Massachusetts, and sold it for sixty-eight cents; the freight charges were sixty-seven cents, leaving him one cent per bushel for his corn. Another sent his corn to some interior village in Maine, and got ninety cents per bushel, but the railroad and commission charges were more, and he fell in debt by an attempt to supply his old neighbors with cheap corn. Is it a wonder that the western farmer complains that he does not get a living price for his grain? Is it a wonder that we hear of "strikes" and "riots" by the poor laborers in the eastern cities, who, not without reason, complain that "bread is too dear, and human life and labor too cheap?"

It is reliably stated that three hundred and fifty million bushels of grain raised in the Mississippi Valley, and transported by railroad to the Eastern States, paid an average freight charge of fifty cents per bushel; and yet the corn so transported did not average to the farmer more than sixteen cents per bushel; so that it took three bushels of corn to transport one to the sea-board—the product of three acres to carry the product of one to market. Must these things be? Is there no remedy? It is known that grain can be carried over this very distance for from fifteen to twenty cents per bushel, and afford a very liberal profit to the capital really invested in the railroad. But how can reasonable rates be established and enforced and the producer and consumer brought closer together? Several plans have been suggested. One proposed by Hon. Amasa Walker, and approved at several recent meetings of cheap-transportation societies in the East, is that the United States Government (following what is claimed to have been successfully done in continental Europe) buy, own, and run all the railroads in the country. According to the most reliable authority there are now 73,539 miles of railroad in the United States, which cost, according to Mr. Poor, $3,159,423,057. If we buy the railroads, we must, of necessity, also buy all the telegraph lines. But we are complacently assured that the whole can be purchased for $4,000,000,000. But $4,000,000,000 is a large sum of money to be paid from an almost bankrupt Treasury. True, we might pay in bonds, or even borrow the money, but it would treble our national debt and entail upon us and our children an additional annual payment of $150,000,000 for interest alone. It seems to me the mere statement of these figures, waiving the many other grave objections that might

be urged against the Government engaging in the business of railroading and telegraphing, shows the utter impracticability of the proposed scheme.

Another plan, ably presented the other day by the honorable gentleman from Michigan, [Mr. WILLARD,] and advocated by some of the great metropolitan journals, is, that the Government build a great double-track railroad, for freight only, between New York and Chicago. But if you once begin building railroads, where will it end? Build the one named, and to satisfy the demands of other sections, you must build one between Cincinnati and Baltimore; and then another between Saint Louis and Norfolk; and still another between Memphis and Charleston. Then each of these trunk lines must have a great number of branches to reach the smaller cities. And then, as an inseparable part of any such omnibus internal-improvement scheme, you must dig the much talked of Niagara Canal, the James River and Kanawha Canal, and the Atlantic and Great Western Canal. And what will all this cost? I asked my liberal friend from Virginia [Mr. WHITEHEAD] this question when he was making his speech the other day in favor of these improvements, and he answered, "I don't care if it costs $500,000,000." But I *do* care, because I am very sure the people care, and care much more than gentlemen on this floor seem to appreciate. The people want cheap transportation, but at no such cost. They do not believe "the national debt a national blessing," and so do not want it increased and made permanent; for full well they know that with its increase come increased taxes and increased burdens.

But another fatal objection to both these schemes is, they would offer too much temptation and afford too many opportunities for dishonesty and wrong-doing; that they would open the way to any number of "rings," and "jobs," and all manner of corruption, and make easy the repetition of the "Credit Mobilier" and "Erie Railroad" swindles. Not that I would for a single moment countenance or credit the present hue and cry of universal public corruption. Never was greater injustice done, never greater falsehood uttered. I verily believe and confidently assert that, considering the increased wealth and population of the country, and the increased revenues and opportunities thereby afforded, there have been less dishonesty and corruption during this administration than during any administration since John Quincy Adams.

But I would not increase temptations or opportunities. I would gladly lessen both. For human nature and frailty are much the same in all ages and in all countries, and with all parties; and it is all the time and everywhere safest and best to remove temptation and opportunity, and so avoid not only the probability but the possibility of public corruption.

But what shall be done? For these monster evils there must be some sufficient remedies, and the duty is upon Congress to endeavor to find and apply them. With all deference to those who are older and wiser than myself, I see but two remedies that are just and practicable, and which promise the desired results:

First. A liberal and comprehensive, and at the same time a judicious and economical, system of lake and river improvements. Fortunately we are no longer troubled with the constitutional question as to the right of the Government to make internal improvements, which so much disturbed our fathers. Clay and Webster long ago demonstrated not only the right but the duty of the Government to improve her lakes and rivers, and ever since all parties have acquiesced therein. Experience, too, has shown that our natural water-courses afford for grain and heavy produce the cheapest and best transportation, and for that reason the most formidable and successful competition to the railroads. Let us, then, agree that all needful improvements upon our great upper lakes shall be speedily made, and that the obstructions in the Ohio and Mississippi and their tributaries shall be at once removed, and their channels deepened and improved. Let us also agree that the mouth of our noblest river shall, by the Eads jetties, Saint Philip Canal, or other feasible plan, be opened and the embargo removed which has so long crippled the commerce of the South and West, and injured the farmers of the Mississippi Valley.

Secondly. Government control of interstate commerce under which railroads carrying freight or passengers from one State to another shall be prohibited from discriminating between persons or places, and prevented from charging more than reasonable rates. This is attempted by the bill reported from the Committee on Railways and Canals, and now under consideration.

It provides that all railroad lines carrying freight and passengers between different States, whether owned by one or various corporations, shall be regarded as employed in commerce among the several States, and shall be liable for any violation of the act. They are forbidden to charge more than a fair or reasonable rate for transportation of freight or passengers, such rate to be ascertained and fixed by a board of railroad commissioners to be appointed by the President, with the advice and consent of the Senate, and to be residents of each of the nine judicial districts of the United States. They are to be disinterested persons, and not to have any interest in stock, bonds, or property of any railroad or any transportation company. This board of railroad commissioners is to institute thorough investigation and inquiry into rates and toll, and compensation charged for transporting freights and passengers over each of such lines of railroad, and into the reasonableness thereof, and is, as soon as practicable after such investigation and inquiry, to prepare for the owners and operators of each of such lines a separate schedule of reasonable maximum rates of charges for transportation of passengers and freight and cars on or over said lines respectively. The schedule is to be duly authenticated by the board of commissioners, and to be printed and kept posted up in each of the offices and depots of such railroad company, corporation, or person. They may from time to time, and so often as circumstances may require, change and revise the schedule, and shall give notice of such changes or revision in the same manner.

Any corporation operating a line of railroad through two or more States, which shall, after such schedule takes effect, (which is to be thirty days after it is thus filed,) be guilty of extortion, by charging or receiving more than a reasonable rate of toll or compensation for the transportation of freight, passengers, or cars over such line, shall pay a certain penalty.

It is made the duty of the United States attorneys to prosecute all such offenses. The company is also made liable to the party injured for damages caused by reason of overcharge. Upon any trial for violation of the law the schedule is to be received as *prima facie* evidence that the charges therein fixed are reasonable; yet the company is permitted to prove the fact of their being reasonable, and show that the charges, although exceeding the schedule rates, are nevertheless reasonable.

These commissioners are authorized to gather information and statistics upon the subject of railroads both in this country and in foreign countries, and to make recommendation in reference to further legislation.

Of course this bill does not attempt to reach railroads wholly within one State; their regulation and control must, under the Constitution, be left to the State Legislatures. Control of the one, however, will necessarily lead to control of the other, and if Congress shall lead, the Legislatures of the several States will soon follow, and the experiment of Government and State control be speedily tested.

I shall not stop to argue the constitutional and legal questions involved. This has been so ably and so fully done by the learned gentlemen who have preceded me that it is wholly unnecessary. I will only say that while the questions are new and not free from difficulty, the weight of the authorities and arguments are clearly in favor of the power of Congress, under the third clause of section 8, article 1 of the Constitution, which provides that Congress shall have power "to regulate commerce with foreign countries, and among the several States, and with the Indian tribes," to authorize the legislation proposed by this bill.

Is it necessary, is it expedient, to exercise this power? To decide, we shall want to know exactly what the railroads have grown to be in the United States, what their power, and how they have used or abused that power. The gentleman from Massachusetts [Mr. G. F. HOAR] in his able speech on yesterday so clearly and strongly stated the case that I beg the liberty of quoting therefrom:

> What are these railroads? In the first place, the Government has delegated to these railroads its power of eminent domain. They present themselves to the people with the sword of eminent domain in their hands, carving out for themselves great highways across the continent, over the land of the private citizen against his will, of which highways they enjoy a complete monopoly. The Government clothes them with vast corporate powers; it delegates to them powers of *quasi* legislation; it gives them the security and the vast strength of aggregation of wealth without personal liability under contracts.
>
> Now, what are the powers which these railroads exercise? They are not powers which the private citizen can wield. They are not private powers, but powers expressly derived from Government. The power of the American railroad to-day is one of the strongest forces on this earth. The railroad crossing a State, crossing the continent, can put its finger upon this or that spot of the earth's surface, upon this or that populous town and city, and say to it, "You shall grow, or you shall dwindle; poverty, desolation, hardship, or wealth, manufactures, trade, shall grow upon this spot at our will." It can say to the active politician and the able lawyer, and the most influential citizen, "Come into our service, and you shall have power, wealth, fame, prosperity; resist our will, and you shall be stricken down and destroyed in all the ambitions of your life."

And how has this great and dangerous power been used? If fairly, why this universal complaint? If justly, why this general demand for cheaper transportation? If honestly, why this uprising of the farmers and organization of the grangers?

The simple, undeniable truth is, the railroads have abused their power; abused it by unjust discriminations between persons and places; abused it by unequal and exorbitant charges, especially upon breadstuffs eastward bound; abused it by outrageous exactions, when the rivers are frozen and the usual water competition removed. They have themselves made necessary the legislation proposed by this bill. They have "sown the wind;" they must not complain if they "reap the whirlwind."

But we who support this measure have no vindictive spirit. We would prevent abuses and protect the people, but we have no intention or desire to injure, much less destroy, any railroad in this country. We want more, not less, railroads. We appreciate full well their necessity and usefulness. We would interfere with none of their vested rights. We would give them all needful and proper protection, and gladly see them receive not only fair but liberal profits on the capital invested.

But we believe the time has come when the Government must maintain its right of control, for the railroads have themselves raised the issue whether the Government shall control the railroads or the railroads the Government.

While I think this bill a move in the right direction and heartily

approve its general scope and purpose, I cannot bring myself to approve all of its details, and I trust the committee will consent to some amendments before it is put upon its passage. I specially object to sections 3 and 4, which are as follows:

SEC. 3. That there shall be appointed by the President, by and with the advice and consent of the Senate, a board of railroad commissioners, which shall consist of nine members, one of whom shall be selected from and be a resident of each of the judicial circuits of the United States. Said board shall be composed of disinterested persons, and no person shall be a member thereof who is in any manner interested in the stock, bonds, or property of any railroad or other transportation company; and the duties of said board shall be as hereinafter provided.

SEC. 4. That the members of said board shall hold their office for a term of six years, and until their successors are appointed and qualified, unless sooner removed by the President; and they shall receive, as full compensation for their services, the sum of $4,000 per annum each, and their actual and necessary traveling expenses, to be stated under oath, and audited as the Secretary of the Treasury may direct. At the first meeting of the board after their appointment, they shall divide themselves, by lot, into three classes. The members of the first class shall continue for two years; of the second class, for four years; of the third class, for six years, so that one-third may be appointed every second year, and whenever vacancies shall occur in said board, the President, by and with the advice and consent of the Senate, shall fill such vacancies by appointment for the unexpired portion of said term.

Now, I object that at a time when we are cutting down the number and pay of officers, and inaugurating a rigid system of economy in all the departments of the Government, we shall here establish a new and expensive bureau and create nine new and high-salaried offices. Do we need, to carry out successfully the provisions of this bill, nine commissioners at a salary each of $4,000 per annum? "Too much committee" was the criticism made by Kossuth on our American way of doing public business. Ordinarily, the way *not* to do a particular thing is to intrust it to a large committee, where there is a divided responsibility, and where "everybody's business" proves to be "nobody's business." True, banks and railroads have often nine directors, and our educational and benevolent institutions as many managers or trustees; but in almost all such cases it will be found that the general control is had and the real work done by the president or chairman, and that the remainder of the directors, trustees, or managers, are merely ornamental ciphers and respectable figure-heads. Now, the people want the work provided for by this bill done, and done promptly and efficiently, and to insure that are willing to pay liberally those who shall do it. But they want no costly "figure-heads," no mere sinecures, no "soft places" for personal or political favorites.

Again, it is fair to presume that the railroad corporations of the country, with their immense revenues and learned counsel, will combine and resist the law, with a view of testing its constitutionality, and that the litigation so commenced will not be finally terminated for one or two years to come. During this time the nine commissioners, with their three thousand dollar clerk, will have nothing to do but draw their salaries. But my worthy colleague [Mr. MONROE] says they can at least collect and arrange railroad statistics. But do you want nine commissioners for that? You had but one for the whole work of the United States census. And it must not be forgotten that the salaries are but a small part of the whole expense of such a bureau. Each commissioner will have a clerk, and their traveling expenses are to be paid by the Government. Add to salaries and traveling expenses office rent and expenses, additional clerk-hire, books, stationery, printing, postage, telegraphing, &c., and you will have an annual expense of at least $200,000.

Now, if permitted by the committee, I will offer an amendment, striking out of line 3, in section 3, the word "nine" and inserting the word "three," so as to make the board of commissioners to consist of three instead of nine members. I am satisfied that by providing for a smaller number we shall get men of higher character and ability; that the work will be more faithfully, more efficiently, and more successfully done; and that it will result in saving to the Government at least $100,000 per annum.

But it would be unreasonable to expect that new legislation upon so important and difficult a subject should be free from objection and criticism. If not perfect, it is at least a good beginning, and will be accepted by the people as an honest endeavor to remedy a great public evil. For this reason I had hoped that the measure would receive general support, especially from the Representatives of the West and South. I am disappointed. I find my democratic friends again troubled with constitutional questions, and inclined to doubt not only the expediency, but also the necessity, of the proposed legislation. I remember, too, that a few weeks ago, upon the resolution of my colleague, [Mr. J. Q. SMITH,] intended to test the sense of the House upon this question, the democratic members, with very few exceptions, voted in the negative. Are we then to understand that the democratic party is opposed to Government control over the great railroad corporations and monopolies of the country; opposed to this reasonable attempt to protect the people from exorbitant rates and unjust exactions; opposed to this practicable mode of affording cheap transportation, and, as a consequence, better prices for the producer and cheaper bread for the consumer? Is it a confession that the democratic party no longer follows Thomas Jefferson and Andrew Jackson; no longer pretends to oppose favored classes and special privileges; no longer assumes to be the special friend of the laboring classes and the people? It would seem so, if we are to credit Hon. W. M. Grosvenor, of Saint Louis, who was the democratic liberal republican candidate for Congress against our worthy friend from Missouri, [Mr. STANARD,] and who ought to know whereof he affirms. In a recent speech he is reported as saying:

Neither is the democratic party hostile to monopolies of banking or transportation. The chairman of its national committee, Augustus Schell, is identified with the Vanderbilt railroad interest and with banks. The democratic organization in Pennsylvania and Ohio belongs to Scott and the Pennsylvania company; in Maryland, to Garrett and the Baltimore and Ohio; in Virginia, to Mahone and his railroad ring; in California, to the Central Pacific and the Bank of California.

But I trust this will not be regarded as a party question, or as a matter in which the West alone is interested. It affects all sections and should interest alike all parties. This bill may not, probably will not, afford an immediate and perfect remedy. Future legislation may be required—other and better means adopted. But it is clearly in the right direction; it establishes a great and valuable principle; it makes a good beginning in the grand work of reform. Such a movement, once begun, will not, cannot end, until these great evils are fairly remedied and the rights of the people fully established.

Interstate Commerce.

SPEECH OF HON. JOHN A. KASSON,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

March 26, 1874,

On the bill (H. R. No. 1385) to regulate commerce by railroad among the several States.

Mr. KASSON. Mr. Speaker, at this late stage in the debate on the railway-transportation bill I will only beg leave to submit a very few observations upon the subject.

First. My faith in the constitutional right of Congress to legislate in a manner to regulate the transportation of articles of commerce in transit from one State to another, or between any State and a foreign country, is as firm as my faith in the constitutional existence of Congress itself. It flows from an express grant of power over the subject contained in the Constitution in plain words. Beyond this express grant is the reason that it is beyond the power of any one State, because it is beyond its jurisdiction, and the Constitution prevents the making of agreements between States by which the end might otherwise be accomplished.

Secondly. The necessity of exercising the power is equally clear; because the facts appear that enormous and oppressive exactions are levied upon this commerce under authority claimed to be derived from State charters, and altogether beyond a reasonable compensation for services rendered. These exactions have the effect not only to oppress the producer, and diminish the reward of his toil, but also to enhance beyond reason the price paid by the consumer, and to retard the wealth of the whole country, by reducing the amount of our exports.

Thirdly. I therefore support the principles upon which the bill rests, and the reason for early action. If I believed that the provisions of the bill contain, as alleged, a delegation of the congressional authority to legislate, or regulate, upon the board of commissioners, it would be, unquestionably, open to constitutional objection; for no one asserts our right to pass over to any creature of our laws our own constitutional duty and responsibility. But the subsequent provisions make the determination of the board of *prima facie* force only, and subject to judicial decision on demand of the railways, thus leaving their rules to be evidence merely, which may be overthrown by counter-proof.

Fourthly. But I confess that in my judgment the creation of these new offices, and the establishment of a permanent bureau in the Interior Department, are features which later reflection has led me to believe ought to be obviated. I incline to the amendment of the gentleman from Indiana, [Mr. HOLMAN,] who proposes to assign certain trained officers of the Army to do the duties imposed by the bill. Their character, the public confidence in their integrity, as compared with merely political appointments, and that peculiar and keen sense of personal honor which animates that corps of officers, as well as the economy of expenditures involved in their selection, as compared with the establishment of new offices—all these are potent reasons and have convinced me of the propriety of that amendment in the details of the bill.

Fifthly. There are certain regulations which we have the unquestioned right to make directly, now and here; and, in my judgment, they should be at once incorporated in the bill. I extract them from the bill which I introduced early in the session, and which is still before the committee. They are as follows:

SEC. —. That it shall be the duty of every railway, by their proper officers, agents, and employés, to receive, at all their freight stations in any State, Territory, or District, all lawful articles of commerce in proper condition, for the transportation of which such railway is adapted and equipped, and which are destined for transportation over such railway to or toward their final destination in any other State, Territory, or District, or in any foreign country; and to forward the same with all reasonable security and celerity to the point of final delivery if on the line of such railway, or otherwise to the point of transshipment for further transporta-

tion, as the shipper shall direct. The charges therefor shall in all cases be reasonable, and shall in no case exceed the amount allowed under the laws of Congress regulating the same.

SEC. —. That no railway shall make any discrimination between shippers of articles of commerce for interstate or foreign transportation, in quantities of not less than one car-load, more favorable to one than to another, either by addition, deduction, drawback, rebate, commission, or otherwise, in the rates of charge for service rendered in the receipt, transportation, and delivery of the like articles of commerce between the same points; nor shall any railway give any preference to one shipper as aforesaid over another in order of accommodation and shipment, except it be according to priority of delivery for transportation; but the most favorable terms allowed to any such shipper shall in like manner be of right conceded to all others.

SEC. —. That it shall be unlawful for any two railways not forming continuous lines of transportation one to the other, but being in whole or in part competing lines of transportation, to make or enter into any combination or contract by which either shall acquire any interest in, or receive any pecuniary benefit from, the earnings of the other competing railway, in the transportation of interstate or foreign commerce as aforesaid, or to make any agreement with the other competing railway, touching the rates of charge to be made by either railway for the transportation of freight or passengers in such commerce; and all combinations and contracts between two such competing railways in violation hereof shall be absolutely void, and any money paid thereunder by one to the other may be recovered at any time within ten years thereafter by the party paying the same, together with a penalty of 25 per cent. on the amount thereof: *Provided*, That nothing in this section shall be construed to prohibit contracts between railways relating to the business which one railway contributes to the line of the other in transportation of freight or passengers, nor to prohibit a common agency for such business.

SEC. —. That in all cases where railways shall receive merchandise in one State destined to any other State by all-rail transportaion, whether over one or more railways consecutively, the railway first receiving the same shall be responsible to the shipper for the delivery at destination of the whole amount shipped, inevitable loss excepted; and each successive railway on which any loss or damage to such merchandise occurs shall be responsible to the first therefor.

SEC. —. That it shall hereafter be unlawful for any judge of any court of the United States, or for the clerk of such court, or for any member of Congress, or for any executive officer of the United States appointed by and with the advice and consent of the Senate, to receive and use any free pass or free ticket upon any railway in the United States; and any officer of any such railway issuing to any of said officers of the United States any pass or ticket, during his term of office, on any terms not equally offered to the public, shall be held guilty of a misdemeanor, and shall, on conviction thereof, be punished as provided in other cases of misdemeanors.

The first section is intended to establish the duty of these common carriers to carry the articles of commerce regulated in the bill, and to deprive them of their claimed power to accept only shipments within a State, in case they choose to array themselves against the authority of Congress.

The second is intended to destroy the power of railways to control business men, destroy mercantile competition at any point, regulate prices in market, and rule elections even, by discriminating favors of great money value to individuals who obey their will.

The third is to prevent an evil which has assumed enormous proportions, doubled the force of monopoly, and destroyed even the partial benefit of competition in various parts of the country, the evil of combining competitors, and pooling their earnings from extortion.

The fourth has for its object to fix the liability for reclamation on lost or damaged shipments. Some judges are now inclined to establish the law as there declared. But there is uncertainty of which the various railways composing a long continuous line avail themselves to the great vexation and injury of the shipper, who finds it very difficult to ascertain, what the railways themselves could easily regulate at each junction of lines, the individual company responsible.

The fifth explains itself, and is in the interest alike of a high sense of honor among officials, and of peceniary benefit to the railway stockholders.

If my colleague, the chairman of the committee, will admit these amendments, I shall with greater pleasure support the bill. It is, nevertheless, my intention to vote for it, as a movement in the right direction, if he is not willing to accept them on the part of the committee or allow a vote on them. I am unwilling to see this session pass without some test vote to ascertain who is for and who is against this great demand from producers and consumers alike for protection against the grasp of now irresponsible monopolies.

Banking and Currency.

SPEECH OF HON. JOHN SCOTT,

OF PENNSYLVANIA,

IN THE SENATE OF THE UNITED STATES,

March 25 and 26, 1874.

The Senate having under consideration the bill (S. No. 617) to provide for the redemption and reissue of United States notes, and for free banking—

Mr. SCOTT said:

Mr. PRESIDENT: I am obliged to my friends for their consideration in proposing to adjourn. I was about remarking that it was originally my intention to discuss at some length financial questions, but sitting here during the long days that the resolution and two financial bills reported by the committee have been before us, and hearing all financial theories and all financial history discussed from Abraham and the cave of Machpelah down through Marco Polo to Stuart Mill, Bagehot, and Amasa Walker, I utterly and in despair abandoned the idea of throwing a single ray of light upon this discussion, and concluded to reserve what I had to say until a practical measure was before the Senate. And now, sir, I have abandoned all idea of discussing theories. I wish to say a few words upon what I think are the three practical questions that ought to be dealt with, and that I think are to some extent dealt with in this bill. I may deal in some general remarks upon these subjects, but it is not my purpose to discuss, as I have already said, in a general way, financial theories. There are, as I have said, three questions upon which the public attention has been centered, and to which I think the action of Congress should be directed. These three questions are, as I apprehend them—

First. How and when is the pledge contained in the act of 1869 to be redeemed?

Secondly. What character of currency is Congress to furnish to the people of the United States? and,

Thirdly. What shall be the quantity of that currency?

With these three questions settled, the business of the country will adjust itself to whatever determination we arrive at upon either of them. With either of these three questions unsettled, business will also remain unsettled; and therefore I propose to speak very briefly upon each one of them. I may notice incidentally under the third head, the legal question which has been so learnedly and earnestly discussed this afternoon, as to the power of the Secretary of the Treasury to issue what is termed the $44,000,000 reserve. That, however, will be as I shall feel when I reach that part of the question.

The first question, then, is, How and when is the pledge of the act of 1869 to be redeemed? And in order to answer the question it is necessary to see what the pledge is. Let me—not because it needs to be repeated, but for the purpose of getting it clearly before the Senate—read again this oft-quoted act:

That in order to remove any doubt as to the purpose of the Government to discharge all just obligations to the public creditors, and to settle conflicting questions and interpretations of the laws by virtue of which such obligations have been contracted, it is hereby provided and declared that the faith of the United States is solemnly pledged—

Here is the first pledge—

to the payment in coin or its equivalent of all the obligations of the United States not bearing interest, known as United States notes, and of all the interest-bearing obligations of the United States, except in cases where the law authorizing the issue of any such obligation has expressly provided that the same may be paid in lawful money or other currency than gold and silver. But none of said interest-bearing obligations not already due shall be redeemed or paid before maturity unless at such time United States notes shall be convertible into coin at the option of the holder, or unless at such time bonds of the United States bearing a lower rate of interest than the bonds to be redeemed can be sold at par in coin. And the United States also solemnly pledges its faith to make provision at the earliest practicable period for the redemption of the United States notes in coin.

I call attention to a difference in these two pledges. The first pledge covers all the obligations of the United States, bonds, notes of every character, and settles any ambiguity that might theretofore have existed as to the construction to be put upon the obligation of those bonds; but it pledges the faith of the Government to the payment in coin, or its equivalent, of all the obligations of the United States not bearing interest, known as United States notes, and I ask that the words "or its equivalent" be noted. The second pledge provides not for payment but for making provision at the earliest practicable period for the redemption of the United States notes in coin, dropping the words "or its equivalent."

Here are two distinct pledges: one, that the notes are to be redeemed in coin or its equivalent; the other, that provision will be made at the earliest practicable moment for the redemption of the notes in coin.

The first question, then, as to when this redemption is to take place, is answered, in the language of the act, when we can make that provision. Now, sir, when we approach that question and attempt to answer it, it must give any man pause. I read, for the purpose of showing how prophecy has been mocked on this subject, from a pamphlet published in 1869, in criticism of one of the Secretaries of the Treasury, and it commences thus:

The war had then but recently closed when an eminent ex-Secretary of the Treasury, now at the head of the judiciary of the Union, gave it as his opinion that "the true way to prepare for resumption of specie payments was to resume at once;" an idea which so forcibly and favorably struck a distinguished New York editor that for a long period of time its adoption was most strenuously advocated in almost every issue and every department of his journal.

Almost simultaneously with this expression of opinion on the part of the ex-finance minister, came a similar one from the minister then in office, Mr. Hugh McCulloch, that gentleman having then written to Mr. George Walker, his agent in Europe, authorizing him to give to foreign banks and bankers positive assurance that specie payments would be resumed before the arrival at maturity of the first issue of seven-thirties; that is to say, before the midsummer of 1868.

And Mr. McCulloch repeated that belief in his formal report to Congress made in December, 1866, that specie payments would be reached "as early as the 1st day of July, 1868." Now in view of the intervening years, almost six of them, and in view of the prophecies I have heard during this debate and of those which are published every day, I think it would be presumption for any man to undertake to answer the question when we can redeem the pledge of the act of 1869. I am satisfied that this question cannot be answered unless we are content to wait and let it be answered by the revolving years of time. What is before us in the convulsions of business, in the calamities that may befall this nation by fire or flood, by failure of crops, pestilence or war, no man can tell; and unless he can with prophetic vision look into these future years and see the course of trade, the adversity which may

depress or the prosperity which shall crown the industries of the country, all prophecy and all conjecture upon this subject are entirely idle.

In view of our present situation, let me ask, does any man believe that we can redeem in specie now the outstanding obligations of the Government? With three hundred and eighty-two millions (adding the twenty-six millions that have been the subject of controversy on the floor to-day) of legal-tender notes, 12 per cent. below par, and the admitted fact that there are but about one hundred and forty millions of specie in the country, no sane man will suppose that the Government could announce the policy of the resumption of specie payments, for no man who has an obligation 12 per cent. below par will hold it any longer than he can get to where it is to be redeemed by a currency that is par.

Then, sir, I turn to the equivalent which is granted in the language of the act of 1869, and holding the view that I do of unlimited and irredeemable paper currency, I think the first step that we ought to take to redeem that pledge is, if we cannot give that which we have promised, to give the best we can, the bond of the Government bearing interest, and to-day that bond is in the money markets of the world the equivalent of gold. Therefore my first desire would be that every outstanding legal-tender note of the Government should be redeemed as rapidly as we could do it without rudely disturbing the present relations of debtor and creditor, or the business of the people, in the bonds of the Government; and then I would go further. Having redeemed the notes in the equivalent of gold, is not the pledge fulfilled? The moment the legal-tender note is in the custody of the Treasurer of the United States it is redeemed. When the Government, instead of a citizen, is the owner of its own promise, has lifted the promise, it is within its own power; and believing, as I do, that the resumption of specie payments in the near future is impossible, believing as I do that hereafter a volume of paper currency will be needed for the business of this country, which can be redeemed in specie only when specie is not needed, in times of prosperity, and cannot be redeemed in specie whenever a panic comes or a demand for its redemption, instead of reissuing that legal-tender money in the form which it now bears, I would recognize that truth upon its face, and I would reissue it payable in coin or interest-bearing bonds of the Government, so that it should not be said, as it has been heretofore, that the plighted faith of the Government was not redeemed, or that the Government was dishonored by neglecting to pay its legal-tender notes.

I do not wish to burden the few remarks I have to make with statistics, but upon this one subject of the resumption of specie payments, looking at the course of trade, looking as I have done at the amount of the imports and the exports of coin and bullion from the year 1865 down to 1873, and finding that there is an annual average of $60,000,000 in round numbers exported from this country more than is imported; looking, again, at the fact that the production of precious metals in this country reached its maximum in 1852, when it was $90,000,000, that from 1848 to 1868 it averaged about $57,000,000 and has hardly maintained that average since; looking at the fact that 76 per cent. of our carrying trade is done upon foreign bottoms and 24 per cent. only upon American bottoms, and that amount of money taken from us; looking, moreover, at the amount of our national debt held in Europe, and the ordinary balance of trade against us, without reference simply to the question of the import and export of specie, I come to the conclusion, whether it be right or wrong, that an accumulation of gold sufficient for the purpose of redeeming the legal-tender notes and of continuing hereafter to redeem the amount of paper currency necessary to do the business of this country is in the far future.

Mr. HOWE. Will the Senator allow me to ask a question?

Mr. SCOTT. Certainly.

Mr. HOWE. I wish to ask him if the capital of the country does not furnish to-day, and has not all along through these years, that sixty millions to pay the balance which is said to exist against our trade, and to meet every other coin demand of the business of this country. Has it not been met?

Mr. SCOTT. Certainly it has.

Mr. HOWE. Now, I will ask the Senator if that does not prove that there is coin enough to meet every real demand for coin?

Mr. SCOTT. That depends very much upon what the Senator considers a real demand upon coin.

Mr. HOWE. A real necessity for it.

Mr. SCOTT. In the ordinary transaction of business, when confidence is unimpaired, when the holder of a note believes that he can have it redeemed in what he considers the equivalent of gold, then there is no difficulty about a sufficiency of coin to carry on business. But my point is, that for the last ten years I may safely say no civilized country has been able to have coin enough in the vaults of its banks to redeem the amount of bank-notes, of credit currency, which is necessary to carry on the business of civilization.

Mr. HOWE. And never will have.

Mr. SCOTT. And never will have. Therefore I am only expressing my desire that we recognize that truth, and that hereafter, in arranging the financial system which is to govern the business of this country, we shall provide against a panic brought about by our own preconcerted arrangement to have paper presented for redemption when we know it cannot be redeemed. Better to have the paper presented and the bond of the Government given with the full understanding on all sides that there is to be no unlooked-for calamitous suspension of specie payments hereafter; that when we have not specie to pay, the faith is to be redeemed in the next best thing.

Mr. HOWE. I perceive that my friend has got a specific, absolutely infallible, against suspension, and that is simply by providing that there shall never be any redemption.

Mr. SCOTT. No suspension of redemption in one or the other medium.

Mr. HOWE. There will be no suspension when you absolutely decree against all redemption.

Mr. SCOTT. The Senator and I may differ as to what redemption is. If he holds that the substitution of the bond of the Government, paying interest for an obligation which does not pay interest, is not a redemption, then the Senator and I perhaps differ very much. As I have said, if it cannot be redeemed in specie let us redeem it in the next best thing. If the Senator's idea is that the paper promise of the Government to pay is never redeemed at all until it is paid in specie, then he and I perhaps do not understand each other.

Mr. HOWE. I agree entirely that it is a perfectly fair and honest thing, since we cannot take up our demand promises with coin, as we agreed to do when we issued them, to take them up with an obligation which bears interest. But if we do that, I insist upon it it shall be the payment of the note.

Mr. SCOTT. So I say. I am for canceling that note; and then I am for going further and being honest in the future, and saying in any note we put out hereafter the Government acknowledges that a time will come when in all probability coin cannot be paid for this note; and in that event the promise is only to redeem in a bond bearing interest.

Mr. MORTON. I suggest to the Senator that that is an abandonment of the supremacy of gold indefinitely.

Mr. HOWE. Will the Senator from Pennsylvania be kind enough to explain in that connection?

Mr. SCOTT. I find myself in a cross-fire of triangular interrogation here, and I do not know which of the Senators I am expected to respond to; and so I will go on in the line I had marked out myself.

Of course, Mr. President, what I have previously said leads me to the conclusion and to the result, that the business of the country cannot be done with gold as a medium of exchange, as a currency for every-day business; and therefore it must be done with credit money of some form. As I have heretofore said upon this general subject, wherever you have credit, wherever you have debt, it is impossible for legislation effectually to provide against and prevent panic; and I have no idea that we can ever form a financial system which will prevent panic. Debt is the mother of panic; and it may be begotten by fire or flood, misfortune, war, calamity of any kind; and the extent of the panic depends upon the extent of the debt, and the extent to which confidence is shaken when the exciting cause occurs.

The second question presented is, What character of credit currency is to be furnished to the people? Bank-notes are but one form of credit. The bank-note issued by the old State corporations was one form of credit. The national-bank note is another form of credit. The legal-tender note is another form of credit. And the fractional currency a third form now in use. We come to the question, Shall all these forms be continued, or what form of currency in the shape of a note will we give to the people of the United States? This opens a wide field for discussion if I were disposed to enter it, and would permit me to do what I have disclaimed the intention of doing, namely, entering into all the theories with regard to the various classes of paper money, and the various schemes that are presented for issuing it.

It may perhaps seem to be illogical after the statement I have made, with my belief as to the amount of gold that can be secured and the inadequacy of gold for the purpose of transacting the business of the country, that I should follow it by the statement that I do desire to see the currency of the country uniform in value, redeemable in gold or its equivalent. I do say so for I have no faith whatever in making anybody rich by issuing irredeemable promises to pay. I have no idea that we can gratify what seems to be the desire of very many in the land; that is, start a volume of paper currency running past every man's door like the streams that carry him water, so that he can go out with his dipper in hand and take just what he requires to slake his monetary thirst, and make him easy and comfortable in his business. I have no such idea at all, for I am firmly satisfied that the issue of irredeemable paper money does beget extravagance and speculation, gives rise to fictitious values, to demoralization in community, to defalcations among those who are trusted with large amounts of money, and brings about the whole brood of evils which follow from the fallacious notion that men or nations can get rich by putting out their promises to pay.

But, sir, is this inconsistent with the idea that we can have a paper currency brought to par and used to as large an extent as necessary for the business of the country? I think not if we provide that that paper currency shall be redeemable either in gold or bonds, for if it be redeemable in either, the moment it begins to depreciate below par its redeemability will, of itself, regulate the volume which the country will tolerate. Then, sir, I arrive at the conclusion that the only currency which this country will receive after the experience of the past ten years, is a currency founded upon the national faith. No one wishes a better paper currency than the one we have had. No one wishes a better currency than the national-bank note redeemable in

the legal-tender note, if that legal-tender note were redeemable itself in anything better than itself. No one will ask a better currency if we make the legal-tender note the whole currency and have it redeemable in anything better than itself when it falls below par. No one would wish for one moment to go back to that period when the State Legislatures could incorporate banks permitting them to issue circulation to an unlimited extent beyond the capital which they had paid in, and to bring about that state of things which made the money in a man's pocket when he started from New York to Chicago be about as far below par when he reached Chicago as his watch was ahead of time. No one wishes a return to this state of the currency; and we all desire to see the national currency placed upon such security as will render it uniform in value and as will render it in volume just equal to that which will sustain itself at par.

I had intended at this point of my remarks to discuss the character of the note which I would prefer to see issued. I have indicated it to some extent already, by intimating that I should prefer to see a legal tender issued in the form which I have indicated.

[At this point the honorable Senator yielded to a motion that the Senate proceed to the consideration of executive business.]

THURSDAY, *March* 26, 1874.

Mr. SCOTT, (resuming.) Mr. President, had I risen with the ambition to make an elaborate speech, certainly that ambition would not be encouraged by the vote just taken in the Senate limiting debate. However, I take to myself this consolation, that I am not in the habit of making speeches for any other purpose than that of affecting action upon the measure under consideration; and as it is evidently the desire of the Senate that discussion should cease and voting begin, I shall forego some of the remarks I had intended to make. I have an additional reason for doing so, for since coming into the Chamber it was my intention simply to say that I did not feel well enough to proceed, and to defer the conclusion of my remarks for an hour or two, but I have since concluded to occupy a very few moments in disposing of the two remaining questions presented by what I said before the adjournment last evening.

I had spoken of the proposition contained in the act of 1869 and how it was to be met. I was proceeding at the time of the adjournment to consider the character of the currency to be furnished by the Government to the people. But I am admonished that but little should be said on any one of these subjects now; and I shall say but little.

We have now in reality five characters of currency, if I recall them correctly. We have, first, the Treasury certificate for gold deposits; secondly, gold notes authorized and issued by the three gold banks in California; thirdly, the national-bank notes; fourthly, the legal-tender notes; and fifthly, the fractional-currency notes. These correspond in some measure to bullion notes, the good notes, and the depreciated notes, which are mentioned by a recent writer (Seyd) as making up the different qualities of currency in England. Our bullion notes are not exactly in form the same as the bullion notes which are issued by the Bank of England. We have at present no other form of what is termed by that writer "good notes," except the notes issued by the coin banks, and they are to a certain extent of that character, being based not only upon Government bonds but also upon coin in the vaults, in a certain proportion to the amount of circulation. To the depreciated paper, the third character of notes mentioned by that writer, correspond the whole three classes of legal-tenders, national-bank notes, and fractional currency, for they are all below the par of gold.

I believe it would be much better if we could get rid of the diversities of circulation and have uniformity in its character as well as uniformity in value, and for that purpose I have already indicated that I would prefer seeing the note of the Government a legal-tender note, issued in the form to which I referred last evening.

There is one characteristic of the present national-bank circulation which I would wish to see remedied. It costs the Government and the people too much. To see what it does cost, I shall attempt to dispel the delusion that exists about the receipt by stockholders of the whole interest upon the bonds deposited to secure circulation. According to the last report made, those bonds consist of $235,017,150 of 5 per cents and $157,834,950 of 6 per cents, making $392,852,100. If we deduct from that the $354,000,000 of notes, which would be amply secured by an equal amount of bonds, we have deposited as security for circulation about $38,000,000 more than is absolutely necessary, now that the bonds are at par. The interest on the 5 per cents amounts to $11,750,857, on the 6 per cents to $10,470,097; and if you deduct $2,000,000 for the $38,000,000 which is in excess deposited over the circulation, it would make the annual interest paid upon these bonds $20,220,954. The supposition is that all this interest is paid, received, and enjoyed by the capitalists who own national-bank stock. But, sir, on the other hand, it appears by the report of the Comptroller of the Currency that, taking the authorized State tax and the tax upon circulation and deposits, those taxes amount to 4¼ per cent. upon the capital; so that there is less than 2 per cent. realized by the holders of national-bank stock out of the interest which they receive upon the bonds deposited. In effect, the General Government pays to the State governments the amount of tax which is assessed under the law of Congress authorizing those State governments to tax the national-bank stock, pays the State tax into the treasuries of those States, pays the State tax upon bonds which under the decisions of the Supreme Court of the United States cannot be taxed for State purposes, but indirectly this State tax is thus paid.

By sweeping away all delusion about the character of this taxation the whole circulation, legal-tender and national-bank notes combined, can be based upon a bond at a lower rate of interest, and the Government pay less interest than it now pays upon the national-bank circulation alone. If the bonds continue, as they now are, at par, the margin which was provided when the national-bank system was organized, between 90 and 100 per cent., would practically be unnece ⅔ ary, and a 2 per cent. bond would pay the holders of this national-bank stock as good an interest and they would realize as much profit out of their banks by taking their circulation upon bonds of that character, or exchanging those upon which it is now based for such a bond, as is now paid. We have $354,000,000 of national-bank currency, and assuming that the legal-tender issue was increased to $400,000,000, we would have in all $754,000,000. Now suppose the bonds upon which that currency is based to be exchanged for a bond bearing 2 per cent. interest, the whole of the interest upon those bonds would amount to a little over $15,000,000, whereas, as I have shown, the interest paid upon the bonds upon which the present national-bank circulation is based is over $20,000,000.

Why should not this machinery be swept away? Why keep up the delusion that the Government is paying to the owners of national-bank stock 5 and 6 per cent. upon these bonds; that they are realizing this profit; and why employ officers to get back to the national Treasury about 2 per cent. on this capital, paying out interest by one clerk and taking in tax by another? Why pay 2 per cent. into the treasuries of the States, whose citizens have paid it before in Federal taxes, and get it back through circumlocution? Why not say at once that the bond of the Government bearing 2 per cent. interest is a sufficient basis upon which to found this circulation? Is it not sufficient? The Bank of England issues its notes to any extent upon specie deposits, and fifteen millions over that upon exchequer bills. A 2 per cent. bond would be better than exchequer bills. Our 5 per cent. bonds are to-day in the market at par in gold. And, for the purposes of a circulating medium, does any one suppose that the holders of the franchises of the present national banks, and of any that may hereafter be organized, would not willingly exchange every bond upon which their circulation is based for a 2 per cent. bond clear of both State and national taxation? By this we would get rid of the delusion that stockholders receive this high rate of interest.

There would be this further advantage: It would not only reduce the actual amount that the Government is now paying for the present circulation, but upon any system of free banking which may be adopted it would also diminish to the extent that bonds would be deposited the amount of interest upon them. It would do more than that. If that were enacted and then free banking, either to the extent provided in this bill or general free banking were provided with redemption in bonds bearing the higher rate of interest, it would call home from Europe a large portion of our bonds held there, for the purpose of using them as a redeeming medium, and thus we would not only diminish the rate of interest upon a considerable portion of our national debt, but we would bring to our own shores another considerable portion of it, and keep here instead of sending abroad the coin interest upon it.

While I am upon this subject, let me speak for one moment about the feature of this bill which extends the privilege of national banking. It is not absolutely free banking until all persons without restriction are permitted to come in and invest their capital whensoever and wheresoever they see proper. But this provision in this bill authorizes an issue of national-bank circulation until each State and Territory shall have the same amount of circulation in proportion to wealth and population that the State of New York now enjoys. What would be the first effect of that? The complaint has been made that too large a proportion of national banking capital is enjoyed in the Eastern States. The effect of this provision is, that in every one of the New England and Middle States it prohibits any further use of capital for national-bank purposes. The second effect is that if it be true, as alleged, that there is not sufficient capital in the Western and Southern States to establish national banks, it compels the capitalists of the East and North, if they desire to avail themselves of this privilege, to give to the West and South the benefit of their capital. Otherwise, national banks will not be established under this bill.

This would to a large extent remedy for a time at least one of the evils complained of. That evil is a scarcity of circulation in the West and South. If eastern capital were to establish banks in the West and South, two other results follow: First, the advantages which banks give in utilizing money, it being a well-established result of experience that the more banks there are the less currency is needed; for $100 placed on deposit in a bank will perform in the course of a day or a week, as activity of the business may call for it, the function of $500 which is simply passing from hand to hand in the every-day business of trade. Secondly, it would settle a question much mooted in this debate, namely, whether currency thus furnished will remain where it is thus issued. We are apt to be misled by the figures we get in our statistical tables. When we look over them and find that so much *per capita* is apportioned to Rhode Island and so much to Illinois and so much to Iowa, we are liable to rest in the belief that that proportion of money is actually in those States, and I have found myself upon

occasions when looking over the table taking it for granted that the proportion there allotted *per capita* to the population of those States is actually there. It is allotted there and it went there, but we find all the time that this circulation is seeking the commercial centers and that many of those States are not enjoying even the amount of *per capita* circulation which the tables give to them. Hence we find even the West complaining that at times they have too much money and at other times too little; that when they have too much it flows to eastern cities. If this provision, then, be carried out, and eastern capital goes either West or South, it will solve the question as to whether that capital will remain in those localities or not.

As it stands at present the national Government is paying about 2 per cent. of the interest upon the bonds which are the basis of the national-bank circulation, as State tax into the treasuries of the New England States, on about $80,000,000. If this system be adopted it will prevent, for the present at least, the objection which I have heretofore urged, that if we throw open free banking in an unlimited way there may be at once such an absorption of the capital in the Eastern States that it will, by this feature of taxation alone, if there were no other, make the national-bank system more odious in the West and South than it has ever been heretofore, and be the very best instrument of driving it out of existence, and that it would have that effect I have no doubt.

If unlimited free banking (without redemption I mean) were thrown open to-day the capital which could be employed in the Eastern and Middle States would be so much in excess over that which would be used in the Western and Southern States that attention would at once be directed to the fact that the national Government was paying a large proportion of the State taxes of those States in which the excess existed. But the provision in this bill as an experiment to begin with on this subject of free banking would correct that evil.

Now, Mr. President, recurring to the second question presented in the beginning of my remarks, I would advocate a change of the whole form of our circulating medium to the character of note I indicated in my remarks yesterday, the note of the Government redeemable in coin or interest-bearing bonds. But I have tried that question to such an extent, at least in the Finance Committee, as to know that I could not at this time secure a favorable report upon that proposition, and whether I shall offer it in the Senate will depend upon the developments of the voting and the debate hereafter.

The third question that is presented is, let the character of the circulating notes be what it may, how much currency is to be furnished? That seems to be the troublesome question. Nobody has got money enough and everybody expects the Government to give them just as much as they need or to furnish it in some manner. If we could but do that, there would be no complaint about the delay of Congress or about the long discussion which would result in such a measure of relief. There are many persons in the country with whose embarrassments I deeply sympathize, and I am very sorry we cannot give them the relief they need, but that is beyond our power.

Some seek to solve the question by determining how much currency *per capita* is needed in the country, and we have had a great many disquisitions on the floor of the Senate about the amount that is enjoyed *per capita* in different countries. No rule whatever can be established upon that subject. Let me illustrate it if I can for one moment by a few figures from the census of 1870. I have taken the number of hands employed in mining, manufacturing, and agriculture in the United States and in the State of Pennsylvania, and I find the following to be the result: In the United States 154,328 men are employed in mining; in Pennsylvania 81,215, or a little more than 50 per cent. of the whole. In manufactures there are 2,053,996 in the United States, and 319,487 in Pennsylvania. In agriculture there are 2,885,996 in the United States and 260,051 in Pennsylvania. Now to the 154,000 men employed in mining in the United States there is paid in wages $74,464,044, and in Pennsylvania $38,815,276; a little more than 50 per cent. of the wages as well as a little more than 50 per cent. of the number of miners. There is paid as wages to manufacturing operatives in the United States $775,584,343, and in Pennsylvania $127,976,594. There is paid as wages for agriculture in the United States $310,286,285, and in Pennsylvania $23,181,944.

It is well known to every one familiar with mining regions that every man who works in the mines must have, to a large extent, his whole wages in money. He has no vegetable-garden. Sometimes he keeps a cow. But he has to purchase and pay for in money everything that he eats and wears. The agricultural laborer receives a considerable portion of his wages in kind; and the consequence is that a much larger proportion of currency *per capita* will be needed in manufacturing and mining regions than will be needed in an agricultural region for the payment of the wages of labor. How does it result? These figures make to each miner an average yearly of $482 paid in wages, and to agricultural laborers $107. So that the moment you undertake to determine the question of how much circulation is to be needed by fixing a *per capita* circulation, it is utterly impossible to do it, unless you take into consideration the employment, the manner of doing business, the facilities for banks, and the question of whether ready money or checks are used. All these questions have to be taken into consideration before you can determine the *per capita* circulation; and it is a fallacy to suppose that by quoting the amount of money which is given *per capita* in the several States injustice is established as resulting to that State which has the least.

To show this further, I will take the tables which were made in 1863 on the subject of the banking circulation in the United States. The Western States had $2.49 *per capita* in 1862; now they have $7.11 *per capita*. The Eastern States had $20.90; now they have $31.15. The Middle States had $9.97; now they have $12.80. I have not given here the *per capita* circulation of the Southern States, but taking the Western, Eastern, and Middle States, all of them had a much larger *per capita* circulation in 1872 than they had in 1862; and it will be observed, the proportionate circulation *per capita* increases most largely in the West, although in 1862 the amount to be issued was voluntary at the option of the banks, whereas now it is arbitrary and limited by the decree of the Government. The probability is, as I have already said, that some of these portions of the country have not in them now the *per capita* circulation which these tables assign to them; and that accounts for the cry which we hear that at one time in the year there is too much money in some portions of the country, and at another there is too little.

Now, sir, another fact appears from these tables, and that is, that every State in the Union that was not wasted by the war has a much larger *per capita* circulation to-day than it had before the war.

On the subject of the quantity of our circulation attention is frequently called to the fact that we have no remedy for the purpose of relieving a scarcity of currency. I think to a large extent that criticism is true. We fail in the feature in which they relieve a stringency for currency in Great Britain. I do not say that we fail altogether, for I think the attempt at relief has been made in both countries; in Great Britain by an intentional disregard of the law, and with us by an exercise in good faith of the power which the officer supposed he had. The difference between them is this, (and when it comes to a detailed system of banking instead of simply that of currency, it is a defect we ought to remedy:) In England when there is a panic and a scarcity of currency, and the government authorizes the directors of the Bank of England to disregard the law and issue more currency than they have bullion deposited or exchequer notes to secure, that additional currency is issued, and issued only for the purpose of enabling the bank to discount commercial paper, and it is used only for that purpose; and they verify what seems to be almost a paradox—that the remedy for a panic is free discounting. But in our system on that subject, instead of having a reserve which can be used for the purpose of enabling the banks to discount, our experience shows that what is called the reserve is useful only for the purpose of putting the currency where no discounts will be given. Our national banking law absolutely prohibits discounting whenever the revenues get down to the limit, as they always will in a panic.

This brings me to the question of the $44,000,000 reserve, as it is termed. I propose to say a few words on that question, although I concur with what my friend from Ohio [Mr. SHERMAN] has said, that in some respects it is not at present, so far as the $382,000,000 is concerned, a practical question. I can see, however, that it may have some bearing upon the votes of some members of this body upon the question of whether that legal-tender money was lawfully issued, and whether the remaining part of the $44,000,000, can also be lawfully issued; and that is my excuse for trespassing a little further than I intended to do in the beginning of my remarks on the attention of the Senate.

I take up that question, and I say in the beginning that I do not discuss, and I do not wish to be understood as discussing, motives in it at all. I concede to the Secretary of the Treasury in the exercise of that power the best of motives. I discuss it not as a question of motive, but as a question of power. What are the acts of Congress upon which this question turns? Viewing this dispassionately, simply as a naked legal proposition, does the power to reissue this $44,000,000 exist or did it exist, when it was exercised? There are three acts of Congress upon which this authority is claimed. That I may not misstate, I will read the words the Secretary of the Treasury himself used in his communication to the House of Representatives on the 13th of December, 1872, in response to a resolution of the House asking for his authority:

> The authority for the issue is found in the acts of February 25, 1862, (chapter 33,) of July 11, 1862, (chapter 142,) and of March 3, 1863, (chapter 73.)

There is the authority claimed for the reissue. I will take them up in their order, not to read them at length, but to summarize their contents.

First, the act of February 25, 1862, authorizes the issue of $150,000,000 of these notes receivable for bonds, and provides that they may be reissued from time to time as the exigencies of the public interest shall require. There is no doubt about the authority to reissue those notes.

On the 11th of July, 1862, another act was passed, authorizing the issue of $150,000,000, also receivable for bonds; and I refer to that act and call attention to some peculiarities about it.

First, it authorizes the issue of the $150,000,000. Then it proceeds:

> And any holder of said United States notes depositing any sum not less than fifty dollars, or some multiple of fifty dollars, with the Treasurer of the United States, or either of the assistant treasurers, shall receive in exchange therefor duplicate certificates of deposit, one of which may be transmitted to the Secretary of the Treasury, who shall thereupon issue to the holder an equal amount of bonds of the United States, coupon or registered, as may by said holder be desired, bearing interest at the rate of 6 per cent. per annum.

This authorizes the exchange of these legal-tender notes for bonds. That is the first point in the act. What is the second?

Provided, however, That any notes issued under this act may be paid in coin, instead of being received in exchange for certificates of deposit as above specified, at the discretion of the Secretary of the Treasury.

I call attention to that fact specially. The Secretary of the Treasury was authorized not only to exchange bonds for these notes, but he was authorized to pay these notes in coin.

Now comes the second provision of the act:

And the Secretary of the Treasury may exchange for such notes, on such terms as he shall think most beneficial to the public interest, any bonds of the United States bearing 6 per cent. interest, and redeemable after five, and payable in twenty years, which have been or may be lawfully issued under the provision of any existing act.

The third provision is that he—

May reissue the notes so received in exchange; and may receive and cancel any notes heretofore lawfully issued under any act of Congress, and in lieu thereof issue an equal amount in notes such as are authorized by this act.

Mark the distinction. He is authorized to pay notes in coin; he is authorized to exchange notes for bonds; but he is authorized in the first instance to reissue only the notes so received in exchange, not the notes that he has paid in coin; and I call attention to that distinction in this second act:

Fourth. He may cancel and reissue the notes heretofore issued; and, fifth, there is a reserve of $50,000,000 for the purpose of redeeming temporary deposits.

Then comes the act of March 3, 1863, for the issue of $150,000,000 more; and that act I wish to call attention to, for two purposes. The provisions are, first:

And any of the said notes, when returned to the Treasury, may be reissued from time to time as the exigencies of the public service may require.

Second:

And in lieu of any of said notes, or any other United States notes, returned to the Treasury, and canceled or destroyed, there may be issued equal amounts of United States notes, such as are authorized by this act.

* * * * * *

And the holders of United States notes issued under and by virtue of said acts—

That is, of February and July, 1862—

shall present the same for the purpose of exchanging the same for bonds, as therein provided, on or before the 1st day of July, 1863; and thereafter the right to so exchange the same shall cease and determine.

There is this feature about all three of these acts, that although every one of them was providing for the issue of legal-tender notes, and for the redemption of the outstanding interest-bearing bonds of the Government, down to that point there is no provision made in any one of them against an increase of the public debt. They may be received in exchange for the existing public debt, and may be reissued. There is no question, taking into consideration the act of 1864, taking into consideration all that has been said in reference to these acts by the Supreme Court, and by the Secretaries of the Treasury, that down to this point the power to reissue did exist to the extent given by these acts. But there was at that time no reserve, so called. The $50,000,000 provided in the act of July, 1862, was a reserve, as stated yesterday by the Senator from Delaware, specifically set apart for the redemption of the temporary deposits. They have been redeemed. The office of that reserve has been filled, and every Secretary of the Treasury who has spoken on the subject has put his construction upon that act, that that $50,000,000 is no longer under the control of the Treasury Department.

We had then the limit at $400,000,000 when the act of 1865 was passed. The act of 1865 authorized the redemption of the United States debt in certain forms, and the act of 1866, upon which this controversy turns, is "An act to amend an act entitled 'An act to provide ways and means to support the Government,' approved March 3, 1865." I only refer to the act of 1865 for the purpose of connecting the two together, and showing how their provisions have an effect one upon the other. This act of 1865 is entitled "An act to provide ways and means for the support of the Government," authorizes the borrowing of $600,000,000, authorizes the issue of bonds and of Treasury notes, and provides how bonds may be disposed of for notes of the United States, and closes with this proviso:

Provided, That nothing herein contained shall be construed as authorizing the issue of legal-tender notes in any form.

In 1865, after the limit of $400,000,000 had been fixed by act of Congress, there was no intention to authorize the issue of any more legal-tender notes, but, on the contrary, it was the intention to exclude the implication from any language which might be supposed to authorize it in any of the acts speaking of the public debt.

Mr. CONKLING. Will the Senator read that again?

Mr. SCOTT. Certainly:

Provided, That nothing herein contained shall be construed as authorizing the issue of legal-tender notes in any form.

Mr. CONKLING. "Herein contained?"

Mr. SCOTT. Yes, sir.

Mr. CONKLING. That is, in that act.

Mr. SCOTT. Nothing in that act is to be so construed.

Now I come to the act of 1866. The quotation which has been made from that act heretofore has only been the concluding portion of the first section. I will read the whole section, that all its provisions and purposes may be seen:

Be it enacted, &c., That the act entitled "An act to provide ways and means to support the Government," approved March 3, 1865, shall be extended and construed to authorize the Secretary of the Treasury, at his discretion, to receive any Treasury notes or other obligations issued under any act of Congress, whether bearing interest or not, in exchange for any description of bonds authorized by the act to which this is an amendment; and also to dispose of any description of bonds authorized by said act, either in the United States or elsewhere, to such an amount, in such manner, and at such rates as he may think advisable, for lawful money of the United States, or for any Treasury notes, certificates of indebtedness, or certificates of deposit, or other representatives of value, which have been or which may be issued under any act of Congress, the proceeds thereof to be used only for retiring Treasury notes or other obligations under any act of Congress; but nothing herein contained shall be construed to authorize any increase of the public debt.

Now comes the provision upon which the controversy is alleged to hinge:

Provided, That of United States notes not more than $10,000,000 may be retired and canceled within six months from the passage of this act, and thereafter not more than $4,000,000 in any one month: *And provided further*, That the act to which this is an amendment shall continue in full force in all its provisions, except as modified by this act.

And certainly that continues in full force the provision that there is to be no further issue of legal-tender notes in any form, unless the authority for it is found in some other act than the act of 1865 and the act of 1866; and, therefore, we are thrown back to the previous acts, and the question is, does the authority of reissue, contained in the first three acts authorizing these issues of legal-tender notes, continue notwithstanding the act of 1866?

Let me summarize this act of 1866 before I give a little of its history. It is, first, an act to amend the act of 1865, as I have already said; secondly, notes are to be received in payment for bonds; thirdly, the Secretary is authorized to dispose of the bonds for the lawful money of the United States; fourthly, the proceeds are to be used only for retiring Treasury notes or other obligations of the United States; fifthly, nothing is to be construed as authorizing any increase of the public debt; sixthly, there is a proviso limiting contraction; and the seventh provision continues the act of 1865 in full force.

Now, what was the origin of that act? I will not take time in reading much on that subject, but for the purpose of showing its origin let me quote the recommendation of Secretary McCulloch in his annual report of December, 1865:

It is the opinion of the Secretary, as has been already stated, that the process of contraction cannot be injuriously rapid, and that it will not be necessary to retire more than one hundred, or at most two hundred millions of United States notes, in addition to the compound notes, before the desired result will be attained. But neither the amount of reduction nor the time that will be required to bring up the currency to the specie standard can now be estimated with any degree of accuracy. The first thing to be done is to establish the policy of contraction.

Now, Mr. President, the limit had been fixed at $400,000,000. The policy of contraction was to be established. That was recommended. A resolution passed the House of Representatives, by 144 yeas to 6 nays, that "the House cordially concurs in the views of the Secretary;" that is, that the House will establish the policy of contraction; and for that purpose what did they do? They introduced this bill, and, if I am not mistaken, it was introduced by the honorable Senator from Vermont, [Mr. MORRILL,] at that time a member of the House, and the bill as originally introduced authorized the exchange to the extent of the whole outstanding legal-tender circulation at that time. That bill, let it be borne in mind, authorized the exchange of bonds to the extent of the whole legal-tender circulation. More than that, as was stated by Mr. Stevens in the debate on the floor of the House it authorized the retiring of $180,000,000 of the Treasury notes bearing interest. The authority was attacked as utterly unjustifiable; it was alleged that such a power lodged in the hands of the Secretary of the Treasury to withdraw this $180,000,000 and the whole of the legal-tender circulation would be utterly subversive of the whole genius and spirit of our institutions, and the bill was recommitted to the committee in such manner that the chairman in re-reporting it said that he considered it an instruction to put a limitation upon the power of contraction; and accordingly this proviso was added, that this power, which in its original form extended to the retiring of $180,000,000 of Treasury notes and $400,000,000 of legal-tenders at any time, in the discretion of the Secretary of the Treasury, should be limited to retiring $10,000,000 within the next six months and $4,000,000 a month afterward.

During all that debate it never was suggested, and it would have been suggested if such an idea had been entertained, that the antagonistic power of reissue would be a remedy for that contraction. My friend, the honorable Senator from New York, [Mr. CONKLING,] at that time was an active and influential member of the House of Representatives; and such a power certainly would not have escaped him. The argument was, "You put the whole business of the country at the mercy of the Secretary of the Treasury; he can retire $580,000,000 of circulating medium." There were $400,000,000 of legal-tenders, and if it had been alleged that he had the right to reissue them, surely the answer would have been made.

Mr. CONKLING. As my friend names me, he will allow me to interrupt him for a moment. This is the only part of his observations the logic of which I cannot appreciate. As he says, and I recollect very well as the Senator from Vermont will remember the phrase used in the House that it gave the Secretary of the Treasury power to make the whole nation laugh or make it cry either by expanding or by contracting, and the purpose was to limit his power as to contraction, it being known that he was in favor of contraction and was exercising that power. Now, how can the Senator jump to the conclusion that because it was also believed that he had the power to expand if he chose to do it, he was less the possessor of an utterly

dangerous power? My recollection is, and my understanding was, that the more power was lodged in the hands of the Secretary of the Treasury, the greater was the objection seen; and instead of the objection being answered as to his power of contraction by saying that he also had power to expand, it only aggravated the objection.

Mr. SCOTT. I take it for granted that neither the Senator from New York nor any of the gentlemen who participated in that discussion legislated upon the assumption that the then Secretary of the Treasury was forever to control the affairs of the Government; and it was not a question of the personal disposition of the then incumbent of the office, but a question of the power that existed in the hands of any officer; and what I say is this: that if it were the purpose of Congress to enter upon a policy of contraction—and the overwhelming vote of 144 to 6 shows that that was the policy adopted—would Congress pass this act authorizing any contraction, even this limited contraction, without taking away the power again to reissue, if they believed it existed? Contraction was the policy, not a whim of this officer or that officer, of the present incumbent or some other incumbent; but a policy was established, and that policy was to diminish the then authorized volume of legal-tender notes, $400,000,000; and this act was passed for the purpose of inaugurating that policy of pursuance of this recommendation. And now what would be thought of the wisdom of Congress speaking of inaugurating a policy in contraction, sending out a law announcing that $10,000,000 might be withdrawn in six months and that a contemporaneous power existed of reissuing the ten millions at once?

Mr. MORRILL, of Vermont. If the Senator from Pennsylvania will allow me to enter a word of explanation here, I should like to do it.

Mr. SCOTT. Certainly.

Mr. MORRILL, of Vermont. The act as reported in the first instance provided for the retirement, as has been stated, of the entire amount of our indebtedness that was not funded. It was to be funded into interest-bearing bonds, and included the entire amount of non-interest-bearing notes as well as those that bore interest. This came in as a proviso, merely to limit the amount that could be retired under the previous parts of the same law, and it provided that not more than ten millions of the United States notes may be retired and canceled within six months, and four millions a month thereafter.

Now, what would be said if at the time we were disbanding our armies and expecting to return to a peace establishment it had been provided that not more than ten thousand men should be disbanded at the end of six months, and thereafter not more than four thousand a month? Would anybody claim that there was a law prior to that which authorized the Secretary of War to increase our Army up to the war standard? It seems to me that common sense ought to come in here and satisfy everybody that there is nothing in the argument when it is contended that there was lying back a power to restore the amount of currency to the war standard.

Mr. CONKLING. The Senator thinks there is no difference between men and money.

Mr. MORRILL, of Vermont. The law applies to one as well as the other.

Mr. SCOTT. I thank the Senator from Vermont for the suggestion which he makes; but I had nearly concluded what I had to say on this subject. There is, however, one other feature which I wish to emphasize in commenting on the act, and that is, that although there had been two preceding ones providing for the redemption of the public debt and the receipt of legal-tender notes in doing it, there had been no restriction upon an increase of the public debt, and in this act for the first time appears the provision that nothing in the act should be construed to authorize an increase of the public debt. When these bonds were issued in exchange for the legal-tender notes, and the legal-tender notes received into the Treasury for them, how can this power of unlimited reissue for any purpose exist in the Secretary of the Treasury and be exercised and preserve inviolate that provision that he shall not be authorized to increase the public debt?

Mr. CONKLING. Will the Senator please read that clause?

Mr. SCOTT. "But nothing herein contained shall be construed to authorize any increase of the public debt."

Mr. CONKLING. Now the argument is, not that that act permitted an increase of the public debt, but that other acts did; and, therefore, I submit that that does not answer it at all.

Mr. SCOTT. Now, Mr. President, taking what I have already said into consideration, that this is a supplement to the act of 1865, which was also an act for the redemption of the public debt, that the act of 1865 expressly puts in the precaution that it shall not be construed to authorize the issue of legal-tender notes in any form, I confess I cannot see where the authority contended for for a reissue of these United States notes can be gathered. It is, however, a subject upon which there may fairly be difference of opinion. The very fact that the Senator from New York contends that this authority exists, that other Senators of eminence upon this floor—learned lawyers—also make the argument that this power exists, it seems to me is of itself enough to disarm all hostile criticism of the Secretary of the Treasury. I only speak of it as a question of power, one, too, of so delicate a nature that I am free to say, when attention was called to it by the action of the House in 1872 and by the resolution of the Senate in 1873, and a report was made upon the subject, if there be blame to be attributed about it, we are open to our full share of it. With the knowledge that the Secretary of the Treasury claimed this power and had exercised it, if we believed it did not exist and found that he had been transcending his duty, we, as members of the legislative department, are just as censurable for not correcting it by legislation then, when we were inquiring into it, as the Secretary of the Treasury may be in the eyes of any gentleman for exercising a power which, although questioned, he believed to exist. I am not here to censure him. I am here arguing this question of power, as upon this may turn perhaps the votes of some members upon one provision of this bill as to legalizing the legal-tender limit at $382,000,000. It will not govern mine, for I have already indicated in my remarks that I do not entertain the doubts that some do about the power of the Government to issue these legal-tender notes, and that I have a very high estimate both of their expediency and of their value.

There are other questions, the solution of which may to some extent affect the quantity of currency available for actual use. Such is the question of reserves upon circulation and deposits. This, as well as other details of the banking system, I forbear to discuss at present. Treating the national-bank system as now too firmly established to be rudely disturbed by sudden or radical changes without great danger to business interests, the surest mode of furnishing an adequate and safe volume of currency is to make the system free from its present restrictions, and provide for such redemption of the legal-tender notes as will prevent their depreciation and the consequent depreciation of the notes of the national banks.

Returning to the three questions just propounded, let me say in response to them—

First. Believing it inexpedient to do so, I would not fix any specific time for the absolute resumption of specie payment.

Secondly. I would provide for the redemption of the legal-tender notes now outstanding in bonds bearing interest, and thus take measures to bring the notes to par, which would be equivalent to specie payments.

Thirdly. I would have the whole paper currency furnished by the Government in its own notes redeemable in gold or interest-bearing bonds, issued through the banks, redeemable primarily by them, and ultimately by the Government, and based upon a bond bearing a low rate of interest.

Fourthly. Let banking be free and the quantity would be regulated, and redundancy guarded against by this feature of redeemability.

By this system we could secure uniformity in value, and stability in our own currency, and gold sufficient for our international exchanges and our customs duties is all that we need be anxious about.

We should be desirous, however, to place our industries upon such a basis of prosperity that as a nation we can do what is essential to the success of the individual, make money or produce value and save it, or, in other words, import less than we export. Upon these cognate questions of taxation and revenue, and their connection with and influence upon the character and quality of our currency, I will not enter.

I have said, Mr. President, more than I intended when I first arose. The bill as reported from the Finance Committee is one which does not command my entire assent, and indeed upon any question involving so many interests, presenting so many phases as this financial question does, I never expect to see any bill reported in the Senate that will command my entire assent; but I am disposed to accept what is practicable when I cannot secure are that I think is desirable, even if what I accept is accompanied with some things which my judgment cannot entirely approve. I endeavored in committee (I trust I am not transgressing propriety in saying so) to have incorporated my views on this question of fixing a day for the resumption of specie payments. But my proposition failed, and I have given my assent to the report of the committee with the understanding that, as this debate shall develop the temper of the Senate, I shall be governed by circumstances whether I will again attempt to bring that or other amendments before the Senate, or whether I shall acquiesce in the bill, supporting those features of it to which I can give assent, supporting it as a whole if that becomes necessary, or if it be found that more obnoxious provisions will be likely to take its place.

I take this occasion to say that my colleague, [Mr. CAMERON,] who is detained from the Chamber by the death of a member of his family, has desired me to pair with him upon this bill. There are some features of it, perhaps, upon which we should vote together, but he, viewing the whole bill together, is opposed to it and desires me to pair with him. Where I do not vote on any question I shall consider myself as paired with him; and where I vote upon amendments or otherwise, I will vote upon the assumption that he and I would vote together.

Commerce by Railroads among the States.

SPEECH OF HON. M. H. DUNNELL,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

March 25, 1874,

The House having under consideration the bill (H. R. No. 1585) to regulate commerce by railroads in the several States—

Mr. DUNNELL said:

Mr. SPEAKER: During the earlier stages of the debate upon the bill now before the House I had prepared a written argument, intending

to give the same at some hour before the discussion should close, quite largely devoted to a consideration of the constitutional questions involved in the measure at issue; but since then have decided to disregard that preparation and address the House upon some points which have been made prominent during the debate.

It will not be denied that the debate on the pending bill has been one of far more than ordinary interest. The speeches to which we have listened have been unusually able and exhaustive, and the many speeches which have been made by members representing different sections of the Union have but evinced the very great interest that is felt in the great question of interstate commerce. Members who have been in this House during this and the last Congress, will fail to recall any question that awakened a profounder interest than this. There have been reasons for this, and to some of these reasons it is my purpose to allude.

After the unusually able manner in which the gentleman from Iowa, the chairman of the Committee on Railways and Canals, [Mr. McCRARY,] discussed the power of Congress over commerce among the States, it is indeed wholly unnecessary for me long to dwell upon this branch of the general subject. The positions which he took, have, in my judgment, remained unshaken. They have not been answered, nor do I think they can be. The main question, the power of Congress, was met at the very threshold; it has not been evaded or avoided by the friends of the bill. They have boldly declared their belief in the power of Congress to regulate commerce among the States carried on by railroads. They have brought forward the decisions of the Supreme Court of the United States, and on them relied for arguments in support of the bill. These high authorities, the highest and only proper authorities to guide us, are so affirmative in their character and so wholly free from ambiguity that they compel my recognition. They will not permit me to go back in history and learn what even Jefferson and Madison said about the Constitution in general, and when even the thought of interstate commerce by railroads, could not have been with them the foundation of a dream.

The eloquent gentleman from Kentucky, [Mr. ARTHUR,] early in the debate, in making, I think, the second speech on this question, went far into the history of the Constitution, and read what Jefferson and Madison said about the Constitution in this respect; and yet it could not fail to have occurred to every member of the House that however ably, however wisely, these fathers may have written upon the Constitution at that early day, and written in general terms about the power of Congress over commerce, even those men, with all their wisdom, with all their prescience, could not have foreseen the attitude of the question now before the country; could not have foreseen an interstate commerce carried on, not as then, but by railroads—railroads extending from one end of the continent to the other—a commerce that they could not then have dreamed of, a mode of transportation of which they could have had no conception or thought.

The recent opinions of the court upon this question are such as ought to claim the serious attention of Congress and of the country. It will not be and cannot be doubted that at the present time the people of the country are calling upon Congress to grapple with this question. The people are not satisfied with the present order of things. They sincerely believe that there does lurk within the Constitution, power to regulate commerce given to the Congress of the United States, and this question is therefore not here unnaturally, but naturally. The people will not let the subject alone until we have an unambiguous, a certain, clear, and unmistakable opinion from the court that Congress has the right and the power to regulate commerce carried on by railroad among the States, if any just doubt may now exist. In speaking of the opinion of the court upon this subject, I refer to the decision given in the State freight-tax case, an opinion which was given by Mr. Justice Strong. It is as follows:

> Beyond all question the transportation of freight, or of the subjects of commerce, for the purpose of exchange or sale, is a constituent of commerce itself. This has never been doubted, and probably the transportation of articles of trade from one State to another was the prominent idea in the minds of the framers of the Constitution, when to Congress was committed the power to regulate commerce among the several States. * * * Nor does it make any difference whether this interchange of commodities is by land or by water. In either case the bringing of the goods from the seller to the buyer is commerce.
>
> It is not necessary to the present case to go at large into the much-debated question whether the power given to Congress by the Constitution to regulate commerce among the States is exclusive. In the earlier decisions of this court it was said to have been so entirely vested in Congress, that no part of it can be exercised by a State. It has indeed often been argued, and sometimes intimated by the court, that so far as Congress has not legislated on the subject, the States may legislate respecting interstate commerce.
>
> However this may be, the rule has been asserted with great clearness, that whenever the subjects over which a power to regulate commerce is asserted are in their nature national, or admit of one uniform system or plan of regulation, they may justly be said to be of such a nature as to require exclusive legislation by Congress. Surely transportation of passengers or merchandise through a State, or from one State to another, is of this nature.
>
> Yet, if they can, why may they not add regulations to commerce with foreign nations, beyond those made by Congress, if not inconsistent with them? For the power over both foreign and interstate commerce is conferred upon the Federal Legislature by the same words. And certainly it has never yet been decided by this court that the power to regulate interstate, as well as foreign commerce, is not exclusively in Congress. Cases that have sustained State laws, alleged to be regulations of commerce among the States, have been such as related to bridges or dams across streams wholly within a State, police, or health laws, or subjects of a kindred nature, not strictly commercial "regulations."

The foregoing extracts contain sentences which do not admit of doubt. They are clear and unmistakable in their meaning. They tell us what commerce is, in the meaning of the Constitution, and that Congress has the right to regulate it. And to complete the argument, as if for this debate, the court said:

> For the power over both foreign and interstate commerce is conferred upon the Federal Legislature by the same words.

Railway-cars are loaded with wheat in a Western State and are unloaded in New York City. They have passed through many States. The cargo was taken "from the seller to the buyer," which, as the court says, is "commerce."

I have failed to notice that the opponents of this bill have grappled specifically and directly with these utterances of the court. They have read about what was said elsewhere and under other circumstances, and in different cases. These *dicta* have not been overcome in this debate up to this hour. Let me again call attention to one single sentence in this decision:

> In either case the bringing of goods from the seller to the buyer is commerce.

It is this class of commerce that is now under consideration. Cars are loaded in a trans-Mississippi State and are unloaded in Boston. The sound of the engine is heard in every State along the route. The grain that is taken from my own State is landed in the State of Massachusetts. No intermediate State can interfere with that train of cars as it passes from the Mississippi and is unloaded at the sea. This must be interstate commerce; this must be commerce among the States. It is not the commerce of my State, or of Illinois, or of any other single State; it is the commerce of the country; it is national commerce, and as such I insist it is subject to regulation by Congress.

Attention is now asked to another opinion of the same high tribunal, in a case very frequently cited in this debate—the case of Gibbons *vs.* Ogden. The selected portions of the opinion are as follows:

> To what commerce does this power extend? The Constitution informs us, to commerce "with foreign nations and among the several States, and with the Indian tribes." It has, we believe, been universally admitted that these words comprehend every species of commercial intercourse between the United States and foreign nations. No sort of trade can be carried on between this country and any other to which this power does not extend. It has been truly said that commerce, as the word is used in the Constitution, is a unit, every part of which is indicated by the term. If this be the admitted meaning of the word in its application to foreign nations, it must carry the same meaning throughout the sentence, and remain a unit, unless there be some plain, intelligible cause which alters it. The object to which the power is next applied is to commerce "among the several States." The word "among" means intermingled with.
>
> A thing which is among others is intermingled with them. Commerce among the States cannot stop at the external boundary line of each State, but may be introduced into the interior.
>
> It is not intended to say that these words comprehend that commerce which is completely internal, which is carried on between man and man in a State, or between different parts of the same State, and which does not extend to or affect other States. Such a power would be inconvenient, and certainly is not necessary. Comprehensive as the word "among" is, it may very properly be restricted to that commerce which concerns more States than one. The phrase is not one which would probably have been selected to indicate the completely interior traffic of a State, because it is not an apt phrase for that purpose; and the enumeration of the particular classes of commerce to which the power was to be extended would not have been made had the intention been to extend the power to every description. The enumeration presupposes something not enumerated, and that something, if we regard the language or the subject of the sentence, must be the exclusively internal commerce of a State.
>
> The genius and character of the whole Government seem to be that its action is to be applied to all the external concerns of the nation, and to those internal concerns which affect the States generally; but not to those which are completely within a particular State, which do not affect other States, and with which it is not necessary to interfere for the purpose of executing some of the general powers of the Government. The completely internal commerce of a State, then, may be considered as reserved for the State itself.

The plain and clear utterances of the court in the above cited opinions, shut out any just ground of doubt, and drive the enemies of this bill from any foot-hold in the first stages of this discussion. At no time in the history of the Government has there been any lack of doubters, of obstructionists, of men calling the Constitution but a rope of sand, of men who deny to it those inherent powers with which the fathers, in their matchless wisdom, made it so pregnant. No national emergency has ever found that immortal instrument wanting in the powers needed. The Supreme Court has found no lack of power to regulate commerce among the several States.

The growth and magnitude of interstate commerce had but given birth to the crises which secured to its service and protection these decisions. At the adoption of the Constitution this commerce was as nothing, while now its value annually is thousands of millions. Then it was chiefly between contiguous States, but now it is between every State from the Atlantic to the Pacific. The buyer is in the extreme East and the seller in the extreme West, and every State is shaken by the engine which takes the commodity from the scene of its production to the scene of its consumption. Interstate commerce is to-day substantially the commerce of the Republic. The friends of this asked-for legislation declare the reasons why this commerce should receive congressional regulation. If they can give no good reasons for this control, then they should suffer defeat, for while they cannot admit that Congress has not the power to regulate it, they would not ask for the exercise of it when there exists no occasion.

We have seen in the discussion of this subject what I presume we will always see in the discussion of a new question. We will always find a certain number of men ready to hesitate, ready to doubt, ready to distrust the power of the national Government under the Constitution. There are men who in legislation will be practical obstructionists, men so eminently conservative that they take hold of a question like this with great reluctance, and are unwilling to pass

from the older methods to the newer ones; men who find it almost impossible to accept new starting-points in legislation.

There are also in this House men who are troubled with the doctrine of State-rights. That insidious doctrine, taught for many years, has yet a certain lodgment in this country. It has manifested itself in this debate by a clinging to the rights of States, an unwillingness to concede that the Federal Government has power, dreading power in the Federal Government, and insisting that whatever power there may be in the Union shall largely reside in the States.

Now, for one, I do not fear this increase of Federal power, especially when demanded by the exigencies of the Republic as it passes on in its growth and development. The growth of the internal commerce of the country cannot fail to have attracted the attention of every member, from the statistics which have been presented here. Consider the commerce as it was when the Constitution was adopted. It was then merely as nothing, beween a few States, and those contiguous. There was no commerce from a remote, new State, to another State on the other side of the continent. The internal commerce of the country now amounts, as the gentleman from Kentucky [Mr. ARTHUR] has said, to $5,000,000,000 annually. And yet, what is that compared to what it will be in a few years to come? Take the State of Iowa, of which, in 1870, but one-fourth was now under cultivation; take my own State, of which but one-tenth was under cultivation, and yet these two States are sending this year to the markets of the world fifty million bushels of wheat. What they send to-day is but a trifle compared to what they will desire to send in a very few years. Take the Northwestern States that have agitated this question in conventions, by resolutions, and otherwise. They have a capacity to supply the wants of the world. The capacity of the eleven Northwestern States is almost beyond conception.

I will here make reference to another decision, pronounced by Mr. Justice Miller, of the Supreme Court, in the Clinton Bridge case:

> Another means of transportation, equal in importance to the steamboat, has also come into existence since the Constitution was adopted. By it merchandise is transported across states and kingdoms in the same vehicle in which it started. The railroad now shares with the steamboat the monopoly of the carrying trade. The one has, with great benefit, been subjected to the control of salutary congressional legislation. Is there any reason why the other should not be? However this question may be answered in regard to that commerce which is conducted wholly within the limits of a State, and which is therefore neither foreign commerce nor commerce among the States, it seems to me that when these roads become parts of the great highways of our Union, acting an important part in a commerce which embraces many States, and destined, as some of those roads are, to become channels through which the nations of Europe and Asia shall interchange their commodities, there can be no reason to doubt that to regulate them is to regulate commerce both with foreign nations and among the States, and to refuse to do this is a refusal to discharge one of the most important duties of the Federal Government.

Attention is asked to the closing words of this decision as quoted:

> And to refuse to do this, (namely, to regulate this commerce among the States,) is a refusal to discharge one of the most important duties of the Federal Government.

To a discharge of this duty is this Congress called by no uncertain voice. The larger portion of our internal commerce now carried on by railroads is subjected, as the friends of this measure insist, to extortionate rates. The producers demand that now this commerce shall receive the considerate attention of Congress. They ask for the passage of this bill, or some like measure, by which the commerce among the States shall be carried on agreeably to the just requirements of the producers and the consumers. Is it an unreasonable request that we seek to do away with, or at least lessen, the burdens to which all classes and interests are subjected?

I wish now for a few minutes to ask the attention of the House to some of the provisions of this bill. Some of these provisions receive the especial condemnation of the enemies of the bill. They have been debated much more ably than I shall be able to do. I trust that the points which were raised last evening by the gentleman from Vermont [Mr. WILLARD] will receive the attention of the gentleman in front of me from Massachusetts, [Mr. G. F. HOAR,] who without doubt will be able easily to overthrow the positions taken by the gentleman in regard to the power of Congress to regulate our interstate commerce carried on by railroads, and also the power of Congress to prepare schedules of rates and use the same in court as *prima facie* evidence of what is a fair and just compensation.

The first section of the bill declares that each and every line of railroad extending into or through two or more States, and employed in carrying freight or passengers between points or places in different States, shall be regarded as employed in commerce among the several States.

The second section provides that no railroad company, corporation, or person engaged in operating a line of railroad into or through two or more States shall charge, collect, demand, or receive more than a fair and reasonable rate of toll or compensation for the transportation of freight of any kind or passengers between places in different States. This section declares the grand object of the bill. It assumes what has already been abundantly shown, and what I shall attempt further to demonstrate before I close, that much of the interstate commerce of the country carried on by railroads in too many sections of the Union is subjected to extortionate exactions. The fair and reasonable rate which the common law calls for is well-nigh unknown. It is this burden upon the commerce among the States that has brought this bill before the House and aroused to indignation many States in the Union. The producers are doomed to exactions by the carriers which they cannot and will not bear without a struggle to throw off; a struggle that will be memorable in the history of the country.

The Northwestern and grain-producing States are a unit in this war against extortion. They know its reality and feel its power. They are solemnly pledged to its overthrow. They deem themselves but loyal to the highest weal of the Republic when now they ask and demand that the commerce among the States, the chief commerce of the country, the commerce that should and can enrich every section and every State, and indeed all carriers, shall be conducted honorably, fairly, and in keeping with the behests of the common law. This is our aim, and nothing more: that the State which has in any given year its thirty million bushels of wheat beyond its own wants, and needed in some other State, shall not be the prey of corporate monopoly; shall have a just chance, protected by the equities of the common law of the world.

The second section of the bill is then but a blow at extortion. If this does not exist, then no harm can follow from the passage of the bill. No right is invaded. The privilege to fix unjust rates is invaded. The friends of this measure are not the enemies of railroads. Many of them have been their conspicuous friends. They insist, however, that the people and their interests shall have the fullest protection against the encroachment of corporate power. The people of the West believe, and I can but agree with them, that the through and way freights on their produce on its way to the East and the seaboard are extortionate, are violative of the common law. If in the execution of this law they should not be found by the court to be so, then no harm can come to either party in the contest. If the railroads should, on the other hand, be adjudged guilty, the interests of the people will have been subserved, and the Government will then have discharged one of its highest duties.

The fifth section provides that the commissioners shall institute a thorough investigation and inquiry into the rates of toll and compensation charged for transporting freight and passengers over each of such lines of railroad as are described and designated in the bill, and into the reasonableness thereof, and shall prepare for the owners and operators of each of such lines a separate schedule of reasonable maximum rates of charges for the transportation of passengers and freight, and cars loaded and unloaded.

This provision in the bill is the one chiefly assailed. If Congress attempts to regulate, it must prescribe rules; regulation implies the use of rules. This schedule of reasonable rates shall become the rule. Such is the contemplation of the bill; this we do not deny. This is the rule to which, in keeping with the principles of the common law, we contend that the railroads doing an interstate business should be made to yield obedience.

It is claimed, Mr. Speaker, by the opponents of this bill that these nine commissioners, however able they may be, would be wholly unable to prepare these schedules; that they must utterly fail in this their chief work, and that the preparation of these schedules must be the work of many years, if indeed it be among the things possible. If this objection be well taken, then the roads have little to fear. This bill if passed into a law can do no harm. I confess, however, to my inability to see any just grounds for this position. A schedule of rates must be based upon the data which will be within their reach or procurement under the powers conferred in the bill itself. There will be to the commissioners no lack of material. There will be to them the same data the railroad officers have who now fix the rates. While we concede ability and tact to the railroad managers of the country, we claim that there are many men in the States, outside of this great interest, who, by education and experience, as well as observation, would be amply fitted for this duty, men of known integrity, whose appointment would at once give an earnest of a just and fair oversight and protection to this vast and rapidly growing internal commerce.

If the railroads carrying the commodities from the West to the East are not satisfied with a reasonable return, they not only inflict a penalty upon the producers of the West, but also upon the consumers of the East. There is not an interest that does not suffer when capital, thus interwoven and connected in this important business, seeks an unjust and unreasonable return. The debate upon this bill, earnest and animated as it has been, is the result of a deep-seated conviction in the minds of the people of the States of the Northwest. This conviction has grown with the growth of years. The farmers of the West demand, if the demand shall be found just, that their productions shall find a cheaper transit to the States of the East and to the ocean, and that the manufactured articles of the East shall come to the West at a cheaper rate of transportation.

This is the question. It is a simple one. It has been brought upon the country by the logic of events; and it is not to be thrust out of this Congress by anything else than a distinct consent on the part of Congress. If this Congress fails to do its duty in this respect, others will take our places, and heed this demand of the people. Now, in this bill, Mr. Speaker, I cannot see that anything unreasonable is asked. Other sections provide for the appointment of commissioners. Some members on this floor say that these nine men will be unable to make a schedule. Indeed some go so far as to say it will be to them a physical impossibility. Then certainly no harm can come from the bill. If the nine men shall find themselves loaded down beyond their ability, then no hurt can come to the railroads or to the commerce of the country, or to any interest of the country. Our labor

will simply have been an indication of our intention, our good-will, our purpose.

A gentleman near me suggests that the statistics which shall be gathered by these commissioners, will be well worth all the cost. If we but consider the condition of the country at the present time, with all the data within the control of the railroads, and thus locked up by them, none can fail to see how valuable would be the statistics that would be drawn out by the powers conferred upon these commissioners. The country will then have something that it can look squarely in the face, and from which it may make wise and safe deductions for future legislation. If this bill shall not be successful in its operation, the experience of the year will enable these commissioners to come before Congress and recommend such a modification of this law, such an addition to it, or such a subtraction from it, as shall meet, and justly meet, the demands of the internal commerce of the country, this commerce which is now as four to one compared with the foreign commerce of the country. As our material resources become developed in the different States of the Union, as we become a more self-supporting people than we are now, when our importations shall largely decrease, and when we shall be to a great extent a nation within ourselves, as majestic in developed wealth as we are in political character, how immense then will be our internal commerce!

Gentlemen say we can overcome the evils under which we are suffering by water communication. So we may to some extent; but it is not to be forgotten that the water channels formed by nature or by the Government, in more than one-half of the Republic, for one-half of the year will be sealed by the ice of winter; and the railroads, whatsoever we may do in the line of water communication, must for a long time to come, indeed always, be the important agent in the carrying trade of the country. We here admit that we seek by this bill to control these railroads and ask them to conduct their business agreeably to the requirements of the common law. We must make this request, or say to them, in the language of the gentleman from New Jersey, [Mr. SCUDDER,] "Hands off!"

We admit that railroads have been the principal agent in our national development and growth. We wish more of them. The people have looked for the results of competition, and have realized only the fruits of combination.

In my own State we have nineteen hundred miles of railroads, all completed since 1862, costing over $80,000,000. The question now before Congress, and thrust before it by the people of the country, is whether the railroads, built in the different States under State charters, shall combine and carry on the interstate commerce to so large extent as they do and be let entirely alone, or whether they may not in some way or by some law be controlled.

The gentleman from New Jersey [Mr. SCUDDER] made an able and eloquent speech, and the point in his speech was that this commerce must be free; that no matter what the railroads may initiate or how they may attempt to carry on this commerce, the cry must ever and anon be, "Hands off!" "Hands off!"

Now, Mr. Speaker, let me express my belief that the American people are not the kind of people to accept such a decision, when they deem themselves deeply interested, and so interested that it takes hold of their very life and their very growth. Take the farmers of my own State. They have twenty-two millions of bushels of wheat the present year to sell. They believe that wheat ought to find a market at twenty-five or twenty-seven cents a bushel, while they are made to pay fifty-four cents for every bushel sent to market, making some $12,000,000 which they are compelled to pay on that one production.

Is it a matter of wonder that they favor a cheaper transportation? It is with them a vital question. When the products of so young a State are subjected to an overtax of from five to ten millions annually, it should surprise no one that the producers are a unit in seeking remedies. While they seek improved and multiplied water communications, they cannot forget that their chief reliance will be upon the railroads. When they see these railroads combining for this freight, and always increasing their rates when the crops are pressing for shipment, and when the rivers and canals are freezing up, they very naturally set themselves to debate and question whether Congress may not break the force of these combinations, and compel the railroads to accept a reasonable and fair compensation. When these producers know that some of the roads forming a part of these continued through lines have, by watering processes, increased their original stock, the cost of construction, from $24,000,000 to $84,000,000, they have food for a just indignation. They make no war upon capital when satisfied with a just return; they abhor the combinations which defy competition and which recklessly trifle with the fruits of their toil; they look to this Congress for some relief, and for such relief as the Constitution guarantees to them. As one of their Representatives on this floor, I could not so forget my duty to them as to allow this debate to close without raising my voice in their defense.

I will now allude to some of the remarks of the gentleman from Pennsylvania, [Mr. STORM,] made on the 6th of this month. Among other things he said:

> It is well known to-day that one of the greatest difficulties on this whole subject is the power which railroad corporations have over legislative bodies. It is difficult now for the thirty-seven different Legislatures of the Union and Congress to circumvent the grasping tendencies of these soulless and heartless corporations; but when you take away from those thirty-seven States, and take away from ourselves, all control over this important subject and place it in the hands of nine men, I cannot conceive of any more monstrous proposition. * * * *
>
> Mr. Speaker, I have just as much faith in man as the history of fallen humanity compels me to place in him—no more and no less; and I say that this is placing in the hands of a few men powers and responsibilities that I am unwilling to assent to. If it is difficult now, with all our various State Legislatures and with Congress, to circumvent and control the grasping tendencies of these corporations, what will be the effect when the whole subject is placed under the control of nine men?

The gentleman admits it is difficult for the State Legislatures to circumvent these corporations, and yet resists a measure which seeks to do this very thing. While he sees fit to call the railroad corporations of the country "soulless and heartless corporations," yet he opposes a bill seeking to make these "corporations" less "soulless and heartless."

We admit that the State Legislatures are unable to grapple with this through commerce. Suppose there should be a railroad combination reaching from Minnesota to Massachusetts. A car of wheat starts from the West to the East and passes through Illinois. Will any one undertake to say that the Legislature of Illinois can stop that train and seek to regulate that through trade? I insist not. It is interstate commerce, and the gentleman from Pennsylvania should be willing that Congress may circumvent these soulless and heartless combinations.

He also confesses his want of faith in fallen humanity, as though men who would be appointed under this bill would be placed in a position in which nine men were never placed before. It would not be difficult, Mr. Speaker, to find in the machinery of this Government twice nine men who have more power than these nine men would have; twice nine men who are under far more temptation than these nine men would be. When we deny to men the integrity needed for official position, even for such position as this, then we deny that the Government may exist. There is not a department of it that does not rest upon the character and integrity of the men who have it in charge. The men upon the supreme bench of the United States have vaster interests at their disposal than these nine men would have.

The Secretary of the Treasury has ten times the power and wields ten times the wealth these men could have or wield. There are men in the country, an army of them, who would execute the duties imposed by this bill squarely and honestly, who would honor their country and their humanity.

I have more faith in men than the gentleman from Pennsylvania. The gentleman also said in his remarks that the new constitution of Pennsylvania had put these corporations, the railroads, within the grasp of the people in that State. Now, is that so? Are the railroads to-day of his State more within the power of the people than they were in the year prior to the adoption of the constitution? If it is so, Mr. Speaker, I fail to discover any change in the attitude of the gentleman from Pennsylvania.

The prime objections to the pending bill raised yesterday by the gentleman from Vermont [Mr. WILLARD] are completely answered by the Supreme Court of the United States in the case of Gibbons *vs.* Ogden, and the recent case of Olcott *vs.* The Supervisors. Take the following sentences from the former case:

> It is the power to regulate, that is, to prescribe the rule by which commerce is to be governed. This power, like all others vested in Congress, is complete in itself; may be exercised to its utmost extent, and acknowledges no limitations other than are prescribed in the Constitution. These are expressed in plain terms, and do not affect the questions which arise in this case, and which have been discussed at the bar. If, as has always been understood, the sovereignty of Congress, though limited to specific objects, is plenary as to those objects, the power over commerce with foreign nations and among the several States is vested in Congress as absolutely as it would be in a single government having in its constitution the same restrictions on the exercise of the power as are found in the Constitution of the United States.
>
> The wisdom and discretion of Congress, their identity with the people, and the influence which their constituents possess at elections, are in this, as in many other instances, as that, for example, of declaring war, the sole restraints on which they have relied to secure them from its abuse. They are restraints on which the people must often rely solely in all representative governments.

Also take the following words from the latter case:

> Whether the use of a railroad is a public or a private one depends in no measure upon the question who constructed it or who owns it. It has never been considered a matter of any importance that the road was built by the agency of a private corporation. No matter who is the agent, the function performed is that of the State. Though the ownership is private, the use is public. So turnpikes, bridges, ferries, and canals, although made by individuals under public grants, or by companies, are regarded as *publici juris*. The right to exact tolls or charge freights is granted for a service to the public. The owners may be private companies, but they are compellable to permit the public to use their works in the manner in which such works can be used. That all persons may not put their own cars upon the road, and use their own motive-power, has no bearing upon the question whether the road is a public highway. It bears only upon the mode of use, of which the Legislature is the exclusive judge.

And in the same case the court say:

> The railroad can therefore be controlled by the State. Its use can be defined; its tolls and rates for transportation may be limited.

It is this decision of the court to which I ask especial attention. It meets squarely this question, that the State Legislature may regulate or limit the rates and tolls of any State railroad doing business within the State. The advocates of this bill claim that what a State Legislature may do in the regulation or limitation of the rates and tolls of railroads doing business within a State, Congress may do with regard to railroads doing an interstate business; that Congress is the proper and only power that can do it.

Now, Mr. Speaker, for the argument's sake, we will suppose that this question of the power of Congress to regulate by rates, by tolls, railroads carrying on this interstate commerce is unsettled, that the courts have not decided it; admit that it is uncertain what might be

the decision of the courts; yet, sir, I ask whether under the very natural interest which is taken in the question, it is not incumbent upon this Congress, in view of the great future and rapidly increasing magnitude of our internal trade, to meet this question, and whether it is not its duty to meet it just now?

I fail to find in this bill anything that causes me to hesitate or doubt as to my vote in relation to it. Its friends would not claim that they had struck at once upon just the measure in all its provisions that is required, yet they insist that the features of the bill, at least in the main, are correct; that its provisions are such as will be for the interest of the country. It will meet a demand of the people in relation to our interstate commerce; for the people, as I say, do demand that Congress shall take some action in relation to it, and initiate measures that shall definitely settle the question whether the vast internal commerce of the country shall be regulated solely by the capital that is invested in the carrying trade, or whether it shall be regulated by Congress, where the Constitution lodges the power of regulation. Nothing would be gained by a postponement of a decision. An early decision would be in the interest of all parties interested.

Some gentlemen say that this is a war against the capital invested in railroads. I deny that it is. Many friends of this measure have been among the conspicuous friends of railroads; and those gentlemen on this floor who advocate the passage of this bill have voted land grants to aid railroads; have hailed their building into the frontier country and have contributed to their building. I need not speak of the value of these railroads and of the trade they have developed in the great West.

No man should be deemed an enemy to the railroads who should say to their managers, "Gentlemen, take all the business which shall come to you, but conduct that business honorably and in keeping with the demands of the common law." Labor which produces, as well as capital, should have a just protection. The fact that this question is before Congress at the present time has been to some a matter of wonder. I cannot conceive how it can be a matter of wonder when we consider the immense growth of the Northwest, and its immense prospective power and wealth, if it be not crippled by shackles forged by capital not held to obey just restraints.

I notice in the remarks of the gentleman from Missouri [Mr. STANARD] a reference to some of the States that are legislating at the present time upon this subject. It is true that within the last thirty days, the Legislatures of Wisconsin, Minnesota, and Iowa have passed laws upon this subject. In two of the States the new State railroad laws are almost a transcript of the bill now pending before this House. The Legislature of my own State has passed a law almost word for word the bill now before us. I think it will be found that this bill has provisions in it that will not only be sustained by the court, but will be to us a source of great national prosperity.

I was alluding to the speech made by the gentleman from Missouri, [Mr. STANARD,] and will read the following extract:

Sir, in 1840 the so-called cereal-producing States of the Northwest produced 166,304,000 bushels of grain; in 1850 the increase was nearly double, or 311,580,000 bushels; in 1860 the increase was to 577,255,000 bushels, and in 1870 to 812,155,500 bushels. I desire to show the increase in production in some of the comparatively new States, in what is now the great central cereal-producing region of this country. In 1850 Illinois produced 77,527,000 bushels of grain; in 1860, 156,543,000 bushels; in 1870, 292,036,000 bushels. Wisconsin, in 1850, produced 10,060,000 bushels; in 1860, 35,863,000 bushels; in 1870, 64,199,500 bushels. Minnesota produced nothing in 1850; in 1860, 7,564,000 bushels; in 1870, 35,450,000 bushels. Iowa, in 1850, produced 11,809,000 bushels of cereals; in 1860, 57,613,000 bushels; in 1870, 121,951,900 bushels. Missouri in 1850 produced 44,557,000 bushels; in 1860, 81,504,000 bushels; in 1870, 97,793,000. Kansas in 1860 produced 6,483,000; in 1870, 23,725,000 bushels. Nebraska produced in 1870 8,372 bushels; there are no statistics for 1850 and 1860; no production.

Now, there are some gentlemen who seem to think that our western country is pretty well filled up and about finished, and no provision necessary for the future. I have some figures here to show the whole number of acres of land in each of these six States, the number of acres that are in cultivation, the number that are not cultivated, and the percentage of that cultivated to the amount of the entire area of these six cereal-producing States. In Illinois there are 35,459,200 acres of land, 19,329,952 of which are cultivated, it being only 55 per cent. of the entire area of that State. The area of Wisconsin is 34,511,360 acres, of which 5,899,343 are cultivated, or 17 per cent. of the area of that State. Minnesota has 53,459,840 acres; under cultivation, 2,322,102, or only 4 per cent. of the entire area. Iowa has 35,228,800 acres; under cultivation, 9,396,467, or 26 per cent. Missouri has 41,824,000; under cultivation, 9,130,615, or 22 per cent. Kansas has 50,187,520; under cultivation, 1,971,003, or 4 per cent. Nebraska has 78,084,480; under cultivation, 647,031, or less than 1 per cent. of its entire area.

These statistics are for the year 1870. For the year 1873 the cereal products of the eleven Northwestern States were about fourteen hundred million bushels. If but five hundred million bushels seek a market, and twenty cents a bushel can be saved either by a regulation of existing railroads or by increased water communications, or by double-track railroads, $100,000,000 annually are saved. This money would be saved to the laboring classes, the farmers of these States, and the consumers of the East, and not go to make millionaire railroad kings. Will these producers let alone a discussion of the modes to be adopted for affecting a cheaper transportation? They cannot and should not. The best interests of the whole nation are involved. It would here be very easy to show how completely unable existing railroads are to transport readily and when needed, these cereals, and also to furnish arguments for a systematic improvement of the Mississippi River from Lake Itasca to the Gulf of Mexico; the completion of river improvements and canals already begun, the commencement and early construction of other canals.

The internal commerce of the United States justly demands immediate attention. The people of the Northwest, the first to feel the unequal burdens, are the first to raise their voice. They ask action of us. If the dominant party in this Congress has not the courage, the moral and intellectual force, to grapple with the conditions and needs of this commerce, the people will hold it unfit for power. They will hardly turn to the democratic party for help, for they can but see how insanely that party clings to governmental theories long since condemned by the people themselves. It is a party of the dead past, with no element of real popular progress in its creed or policies.

While we of the West have first spoken, the people of the East will very soon join their voices with ours. The gentleman from Massachusetts in front of me [Mr. G. F. HOAR] a few weeks ago made the very happy and just remark that "we of the East want a prosperous West." I thanked him in my heart then for these true and generous words. The people of the East, as I have already said, are interested in this question with us of the West, if twenty, or thirty, or forty, or one hundred million dollars annually may be saved in the transmission of the products of the West to the East, and the merchandise of the East to the West. The producers and consumers of each section may divide this sum between them; it will help the laboring artisan and mechanic of the East, while it shall do but justice to the producer of the West. Just policies will produce the largest measure of substantial prosperity; capital invested in railroads, with the immense traffic that many of them now enjoy, and which they will have in the near future, should have no favors granted to it which are not given to the laborers who stand back of this traffic. The toilers in the shop and on the farm should be protected as well as the managers of railroads, who by a word can now raise tolls on the through lines that shall take millions from the fruits of labor and add them to the unjust accumulations of capital.

I have alluded incidentally to the duty of this Congress. Our legislation up to this hour has not met the expectations of the people. It has for this reason done too little for the party which will be held responsible. When the salary question was settled, though took weeks to do it, the people then looked for legislation which should bring relief to the business of the country, and yet not till two days ago did we come to a vote on a measure affecting our national finances. The business interests of the country have been neglected. It is time to act, and act promptly. The business of the year should be no longer delayed. What the people now want, is final action on those measures which affect their business. What we may do no one can tell; what we ought to is not difficult to tell.

When we have added to the action of the House on the volume of greenbacks a properly guarded system of free banking, we may then let the money measures alone and turn to the interests of our internal commerce.

Timid policies never please the people. They applaud radical, progressive measures. A well-considered and extensive system of internal improvements would receive a hearty indorsement in every section of the Union. To use a common expression, it would pay. Suppose, to illustrate, this Congress were to legalize the issue of forty millions of internal-improvement bonds, running twenty years at 5 per cent., for the improvement of the navigable rivers of the country, the commencement and completion of canals in such sections of the country where commerce called for them; what would be the result of this action? It would augment the productions of the country in a single year more than the entire principal of the bonds; it would be an earnest of a bound forward in a career of material prosperity. The laboring men would find work, and every branch of industry would start as with the pulsations of a new life. We now need legislation full of hopefulness; our country is too full of the elements of wealth to lie prostrate a single day.

Mr. Speaker, in closing let me say that those largely moral questions, which in the recent past agitated the country and made parties, have been chiefly settled, and those now claiming attention are mainly material. It will not do to cling to these past policies and measures, but we must show our fitness to legislate by an unmistakable appreciation of the exigencies of the hour, and by the prompt adoption of measures suited to meet them.

Finance—Currency.

SPEECH OF HON. J. O. WHITEHOUSE,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

March 27, 1874,

On the resolution offered by the Committee of Ways and Means to legalize the issue by the Secretary of the Treasury of the $44,000,000 reserve.

Mr. WHITEHOUSE. Mr. Speaker, I voted against the resolution offered by the Ways and Means Committee to legalize the reissuing of the forty-four millions of legal-tenders by the Secretary of the Treasury. I thought it ought not to be legalized by this House. The Treasury may require the amount to meet its maturing obligations;
